When, from whom, and how this volume was obtained, with the price paid, if any, may be found opposite the above number in the Register of Books, which is always open to inspection.

Extract from the Political Code.

SECTION 2296. Books may be taken from the Library by the MEMBERS OF THE LEGISLATURE, DURING THE SESSIONS THEREOF, and by other State officers at any time.

SEC. 2298. The Controller, if notified by the Librarian that any officer has failed to return books taken by him within the time prescribed by the Rules, and after demand made, must not draw his warrant for the salary of such officer until the return is made, or three times the value of the books, or of any injuries thereto, has been paid to the Librarian.

SEC. 2299. Every person who injures or fails to return any book taken is liable to the Librarian in three times the value thereof.

No person shall take or detain from the General Library more than two volumes at any one time, or for a longer period than two weeks. BOOKS OF REFERENCE SHALL NOT BE TAKEN FROM THE LIBRARY AT ANY TIME.—[Extract from the Rules.]

☞ The Foregoing Regulations will be strictly enforced. ☜

INV. 1898.

PACIFIC RURAL PRESS

TWENTY-PAGE EDITION.

Vol. XXXIII.—No. 1. SAN FRANCISCO, SATURDAY, JANUARY 1, 1887. $3 a Year, in Advance. Single Copies, 10 Cts.

Our New Citizens.

The House in passing the Senate bill allotting lands in severalty to the Indians has covered itself with credit. There was no opposition to the measure, and the only danger it incurred was that of being talked to death, as nearly every member had views on the Indian question. This bill goes a long way toward atoning for our errors and blunders in the past. It changes the whole attitude of this people toward the Government and furnishes a powerful incentive to civilization. Under the old system no Indian owned any land in particular; what rights and interests he had were merged in the tribe. The tribe owned the reservation. The Government dealt with the tribe and not with individuals. They were not responsible to the Territorial courts for violating the law. They paid no taxes. They had no votes. Even their persons and property were not secured and protected by the civil tribunals. In short, they were almost wholly outside the pale of civilization, and treaty compacts, big talks and pow-wows and assumed guardianship only tended to perpetuate the tribal instinct, and hereditary nomadic, savage, lawless habits.

Now all this will be changed. The bill as it now stands provides for the survey of the reservations and the allotment of the lands in severalty to the members of the tribe. To each head of a family, one-quarter section; to each single person over eighteen years, one eighth of a section; to each orphan under eighteen years, one-eighth of a section; and to all other persons under the age of eighteen now living, or who may be born prior to the date of the order of the Secretary of the Interior directing an allotment, one-sixteenth of a section. If the reservation does not contain land enough to go around on this basis, then it shall be allotted pro rata, and all lands unfit for agricultural purposes, only adapted to grazing, the allotments are doubled in quantity. All the rights and privileges of citizenship are conferred upon every Indian who has been made the recipient of such allotment, or who voluntarily adopts the habits of civilization. A precautionary clause prevents any conveyance of these allotted lands for the period of 25 years, a length of time, it is believed, to be sufficient to teach each Indian the value of their possessions and beget industrial habits. They are made subject to the State or Territorial laws as other citizens. It is believed, with these advantages and incentives connected with the existing educational privileges, the Indians will ultimately solve the problem which has so long been an "elephant" in legislation and vexed the white settlers.

Drawback on Grain Bags.—A dispatch from Washington states that Acting Secretary Fairchild has approved the recommendation made by the Collector of Customs at S. F., that manufacturers of grain bags entitled to drawback on bags exported be required to reimburse to the Government all expenses attending the ascertainment of the amount of drawback due.

Jack-Rabbits are as great a nuisance in Eastern Oregon as in portions of this State. So, according to an exchange, W. L. Geary & Co., of Ontario, propose to kill them off wholesale and ship them East. They have secured the low rate of $1 per hundred from the Union Pacific from Ontario to Chicago, and will consign a carload to a Chicago commission house by way of experiment. If the scheme succeeds, the firm writes that they can ship two carloads weekly, of 9000 rabbits per car, for the next three months. This will be a godsend to the poor of Eastern cities, who, for 25 cents, can have a big rabbit for dinner, and it ought to succeed. The firm pay hunters four cents apiece and ship in refrigerator cars.

Riverside is to have its first street-car line in a few days. The track is being laid and the cars are now en route from New York.

Agricultural Directors.—On the 28th ult., Gov. Stoneman made the following appointments of Directors of Agricultural Districts: District No. 9—S. F. Pine, vice S. S. Ricks, term expired; R. J. Bugbee, vice G. A. Dungan, term expired. District No. 2—James A. Louttit, vice self, term expired; R. C. Sargent, vice self, term expired. District No. 12—J. M. Mannon, vice B. B. Campbell, resigned; F. O. Townsend, vice P. J. Muir, term expired; Maurice Keating, vice R. F. Miles, term expired.

The new bridge across Bear river is a fine piece of work, and will be a decided convenience to the people of Yuba, Sutter and Placer counties. The work, however, was paid for by Yuba and Sutter counties. It is 901 feet in length and 18 feet wide. The spans are each 60 feet in length, and there are 15 of them.

A RAMBLE ON A SUNNY NEW YEAR'S MORNING IN CALIFORNIA.

A New Year's Outing.

California climate, universally kind, is perhaps kindest to the babies, and the jolly health of our youngsters is the admiration of tourists and the pride of parents. Even the city babies, who do not have the best California climate, nor a good chance to enjoy what they have, compare favorably with city babies the world over, and the health and rosiness of the rural and suburban children of California are becoming proverbial. With a little care in keeping them within doors while the heavy storms are on, and protecting the younger ones from the chill of damp mornings and evenings, the child can practically lead an out-of-door life in California, even during the months marked winter on the calendar. Contrast the picture on this page, which fairly represents such a ramble as the little ones might have with the milkmaid on New Year's morning in California, with any New Year's morning scene which could be drawn in the open air at the East, and one can easily assure himself of the blessing the California climate is to the children. Of course with our vast area and great altitudes we have some parts of the State where the snowshoe might be the symbol of winter sports, but over nine-tenths of the settled portions of the commonwealth the children have full opportunity for what are summer sports at the East. Baseball playing, hoop-trundling and marble games are standing winter avocations, and are diligently pursued except when the heavy rains drive the youngsters to the shelter of the home.

Pomology in Los Angeles.—The seventh quarterly meeting and fair of the Los Angeles County Pomological Society will be held at Spurgeon hall in Santa Ana, Jan. 6, 1887, at 10 A. M. The program, as arranged by the committee, includes an essay on the question, How to make an alfalfa patch of one acre and what may be expected from it, by W. Z. Cook; papers on Red Scale, by D. W. Coquillet; Raisin Grapes, by D. Edson Smith; and Apricot Culture, by J. B. Parker. After the reading of each essay by its author, five-minute speeches will be allowed members of the society in which to ask and answer questions on the subject. A lively time is anticipated.

Grape-Growers' Meeting.—Mr. E. H. Rixford, secretary, sends us the announcement that a regular meeting of the Grape-Growers' and Wine-Makers' Association of California will be held at the rooms of the Viticultural Commission, 204 Montgomery street, San Francisco, on Tuesday, January 4, 1887, at 11 o'clock. Prof. Hilgard will show the results of nine different modes of fermentation, with samples and with large diagrams, by which the facts can be readily shown to the eye. We believe that all vine-growers are invited to attend.

A farmer of San Joaquin county, has harvested 50,000 sacks of potatoes from 500 acres of land, and expects to realize $50,000.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Artisan Farmers.

EDITORS PRESS:—It has been frequently said, and currently believed, that a Jack-of-all-trades was master of none, and therefore rather under the ban of society.

In these modern days of machine work, there is but little use or employment in factories for master mechanics, except in the general management, when it is necessary for the superintendent to know almost everything about the work in hand, while the remaining employes are specialists and only expected to know a very few things concerning the work of the factory.

This kind of a mechanical education is of very little use outside the factory, and for this reason there are so many helpless persons seeking employment during the hard times, when the factories are closed.

A Jack-of-all-trades meets no such difficulty, as he can turn his hand to meet the situation, and is therefore more secure in a living than the ordinary mechanic of to-day.

A farmer that only knows how to plow, seed, and harvest his crop is greatly handicapped in his business, as his dependence on his fellowmen for everything else required in connection with farming will, perhaps, cost more in time and money, and through losses from ignorance in the use of his implements and machinery, than he can possibly make by his farming.

Such farming would become monotonous to any one, and it is not surprising that in time the young men on such farms will desire to leave. Besides, in this country the making of a crop of grain or hay requires but a small portion of the year's time, and unless there is something else to do, much time is not only wasted, but lazy and dissolute habits are formed that will wreck them effectually in a short time.

Mixed farming will, of course, occupy more of the farmer's time. Yet, not all, but every spare moment of a farmer's time could be utilized, if he has a good shop with a motive power in it, and with an assortment of good tools.

Rainy and broken day—long winter evening, can all be made profitable, with a good, comfortable, well-fitted shop, near the house, so that the good housewife, and her sons and daughters, may be as comfortable there as in the house. The children can be learning from the father the handicraft of the farm, and become interested in the various ingenious methods that may be adopted, in the absence of the right thing, to temporarily surmount a difficulty. These difficult questions arise constantly in the country, and will arouse all the ingenuity of the whole family at times.

The constant exercise of the brain in this direction, together with good facilities in the way of tools and material, would necessarily educate the farmer and his family gradually, until the boys at manhood would have a good, all-round, mechanical education, that would insure them a good living in any country.

The constant employment of the boys, in securing such an education, would make them contented and useful on the farm, and independent for life. They would become more valuable as citizens and parents, after an industrial life, than if allowed to roam about without anything to do much of their time.

With boys having a natural bent toward mechanics, there is nothing, perhaps, that would so agreeably engross their time and attention so profitably as a nice shop, with good tools and plenty of material.

A small library of books on mechanics would be of great advantage, and to start a shop with power a Jack-of-all-trades would be found very useful to give the business a good send-off. There are thousands of places on this coast where water-power can be had with a moderate investment, and there is no power more convenient, economical and valuable in all respects than water.

The great drawback to nearly all farmers' shops is the difficulty and labor in keeping the tools in order—and nothing will be remembered longer by the farmer's son than the drudgery of turning the grindstone. With a stone of good grit, well balanced and smooth and true on the face, attached to a water-power that any boy could manage, the work of keeping tools in order would be a pleasure, and the tools would be in order, and with those in good shape the use of them would be a pleasure also as well as being effectual.

Tools used by various persons on a farm will soon become dull, rusty and useless, and the hand labor required to keep them in order is so great that most persons will naturally get tired of trying to keep them in order, and for this reason shops without convenient motive power are likely to be abandoned.

Technical art training is growing rapidly in favor throughout the world, for the reason, no doubt, that a better knowledge of the mechanical arts, by persons generally, will assist them materially in making a living.

A man who should receive his education on a farm, having grown up thereon from his boyhood, properly surrounded with books, machinery and material, with a constant practice upon work that is necessary and useful, and having a real current value when done, would be more likely to turn out a complete mechanic than one who simply went through the forms of a technical school practice, wherein the article produced would have no practical value.

Technical art schools in mechanics would be very useful, and so is professional bookkeeping; but the scholar knows but little about real bookkeeping until he has had considerable practice in bookkeeping, connected with a real business house; and while I would not discourage technical schools for those not on farms, I certainly would prefer to educate the farmer's boy at home, in preference to sending him away from the farm to a city school, unless it would be for a short time only.

It is no credit to modern civilization that so large a proportion of the young men of our day should be so utterly unfit to battle with the world for a livelihood. There are no doubt millions of men in middle life now dependent upon the axe and shovel alone for a living, and yet seem contented with their lot so long as they can get such employment. "Their ignorance is bliss," but how can parents feel a pride in such sons? It is better to dig and shovel the earth than do nothing, but the man who has no higher ambition cannot claim to be of much importance or value in his citizenship.

I admit that a division of labor and the establishment of large factories for the manufacture of specialties in the farmer's line can do the work much cheaper than the farmer can himself, provided their time is valued equally; but when the farmer's time is valueless because he cannot utilize it all on his farm, then the farmer certainly has the advantage. But it is not altogether a question of present economy, by any means, as the constant employment on the farm of the whole family is conducive to habits of industry and good morals, and without these qualities the farmer's life would be a failure.

Artisan labor quickens intellectual ability in all directions, and will relieve the monotony of farm life to a degree that will make it interesting, simply by the exercise of a more intelligent brain. With the dull work, and in the interest of humanity, it is important that the rising generation should be taught to use their brains as well as hands. R. G. SNEATH.

Jersey Farm, San Bruno, Dec. 20, 1886.

Hillside and Valley.

EDITORS PRESS:—It is a great but very common mistake with many farmers on high and dry land to allow their crops to grow too thick. The blades or plants rob each other and all fail. Plant your crops at "magnificent distances," as is said of Washington City. Don't try to shade the ground; leave plenty of room to harrow and cultivate. Good seed is necessary for good crops, yet with poor conditions and cultivation, it is no better than poor seed.

Owners of poor, high land often wish for a fertile, moist valley. Now the true value of any and all kinds of produce should be determined by its nutritive qualities, or the amount it takes to support and improve animal life. Upon moving into the valley, I found by careful observation that my horse consumed over one-third more hay. Beets, tomatoes, etc., grew large and fine-looking, but lacked that rich, nutritive quality of higher land. It is not easy to compare the cereal crops, but probably the same differences exist. This may seem strange to some who always thought that wheat was wheat.

It would seem these considerations ought to reconcile the owner of the most high and barren land. But there is one point of far greater importance than these—the superior intellectual and moral progress attained by the use of higher and more refined food.

By means of fossil remains in different strata we trace back in geologic history (which, by the way is far more reliable than ancient written history) to the time of a swampy, steaming, fertile earth with a rank, coarse growth of vegetation, but no refined, nutritious or condensed seeds, grain or fruit. All animal life was then low, gross, reptilian organizations, with no active, high, intelligent forms. As the land became elevated through the lapse of ages, higher forms of vegetation were evolved. Then higher and more intelligent beings, including man, kept advancing with the more refined foods.

I heard a man the other day inquiring for cheat or chess for seed to sow on his low, wet land. This man will probably feed his cows, pigs and hens on cheat, and his family will eat the milk, eggs and pork. After awhile, when his children are going to school, he will wonder why they are not among the best and at the head of their classes. It is unfortunate for the progress of the human race that the commerce of the world requires the cities with dense population at low altitudes for the convenience of navigation.

Drainage, undoubtedly, taken in a wide view, is of far more importance than irrigation. There are, of course, difficulties to overcome; tiles sometimes clog and ditches fill in and are troublesome to cross. A very cheap, simple plan is to leave the dead furrow in the lowest place every year, and the ridge or double furrow nearer or farther away on either side, as may be necessary for a gradual slope. From my experience and deductions from science it is evident that drainage, in connection with railroads, is the most powerful lever to elevate the human race. Since writing the above I was greatly pleased to read your vigorous article last week on drainage, the importance of which it seems hard to make men realize.

C. P. SCRANTON.

Lower Lake, Lake Co., Dec. 20th.

Vaca and Adjacent Valleys.

EDITORS PRESS:—Thinking perhaps a short description of Vaca valley and the valleys adjoining it would be interesting to many of your numerous readers, I will give it the best I can.

Vacaville lies on the Vacaville & Clear Lake railroad, five miles from Elmira, which is 50 miles north of San Francisco. Vaca valley lies to the west and north of Vacaville, is from one to three miles wide, and about six miles long, and contains about 6000 acres, the most of which is set out to orchards and vineyards. It is bounded on the east and west by ranges of hills and mountains, a large part of which is cultivated.

Pleasant valley lies north of Vaca valley, and contains some of the finest orchards in Solano county. The Pioneer or Miller ranch, Thurber, Pleasants, Brink and Thissell ranches contain each from 200 to 400 acres of orchard and vineyard, and have for many years raised the first fruit that goes to San Francisco or is sent East, cherries excepted.

Putah Creek lies two miles further north and sends the earliest vegetables and canteloupes to the San Francisco market. South of Vaca valley lies Lagoon valley, which contains about 3000 acres, and probably 800 acres of orchard and vineyard. West of Lagoon valley lies a small valley where are the famous Bassford cherry orchards. The Bassfords have about 300 acres in trees and vines, about half of which is in cherry trees; the balance is in peaches, figs, pears, apricots, oranges and vines.

Apples are not generally regarded as a success in these valleys, except early varieties, of which enough are raised on the Miller ranch to supply the San Francisco market while they last. H. Bassford shipped some red Astrachans East last summer which brought good prices.

The water is generally good, and is found by boring from 10 to 35 feet. Oak wood is plenty at from three to six dollars per cord. There is almost any kind of soil that a man could want for trees or vines, but generally in the valleys it is a loamy, made soil, from 5 to 20 feet deep. Some of it is very wet in winter, but it can be drained. A good many tiles have been put in this fall. It is thought by many that the wet, heavy soil is the best for pears, but it takes them two or three years longer to bear.

Vines used to be put out 6 and 8 feet apart, but now the right distance is thought to be 10 and 12. Trees are set out 16x18 and 20 feet apart. Some put vines between the trees, but I think that is much like the man riding the horse and carrying the bag of meal on his shoulder to lighten the load for the animal.

The varieties of early grapes are Black June, Fontainebleau, White Chasselas and Madeline; then come Tokay, Muscat and Rose of Peru, with Cornichon and Emperor to wind up on. There are many other kinds of grapes raised here, but these are the main kinds. Not many raisins are made here, but a good many wine grapes are raised which bring good prices.

The principal pears are Bartlett and Winter Nelis. Bartlett pears, from some cause, probably on account of heat which stops the flow of sap, when from one-half to two-thirds grown, stop growing, and then come in after the pears from the Sacramento river and Suisun valley. [It is more probably owing to moisture conditions in the soil.—EDS. PRESS.] Peaches and apricots, however, ripen here before they do in other places. By coming in late the pears are much more valuable to ship East.

Berries have not been tried here very extensively, but are not likely to prove profitable to raise. Good judges say that not more than one-tenth of the fruit belt of California will raise good peaches, and not one-fourth of that will raise peaches like Vaca and Pleasant valleys. This is proved by the fact that the canners will always pay from one-half to two cents per pound more for peaches and apricots from here than from any other part of the State. The Benicia cannery made a contract, a few weeks since, for a large part of their fruit for the next five years in Vacaville. Mr. Groom, of Napa, was here last week trying to make the same kind of contract.

There is more rainfall in Vaca valley than north or south of there. The climate is generally pleasant. There is seldom enough fog here to hide the sun. Almost all kinds of trees that are raised in the State do well here, including oranges, lemons, persimmons and olives.

It must not be thought that it is all profit and pleasure raising fruit here. Last year many trees died from some unknown cause. There are some vineyards in which the phylloxera has a very large hold, and we have quite a sprinkling of scale bugs and other fruit pests which the owners of orchards are fighting the best they know how.

There are three driers in the vicinity of Vacaville and several small canneries. J. Gates has one with which he can put up from 80 to 100 dozen per day. Messrs. Bassford, Blake, Pleasants and Thissell have each a cannery.

Land set out to trees and vines is worth from $100 to $600 per acre. Many of the farms contain only from 15 to 30 acres; some from 200 to 400, but not many are large farms. Help is always plenty, except once in awhile in fruit-picking time. The greatest drawback here is the employment of Chinese. Some prefer white labor and will hire no other. Probably the labor question will be righted in time. The wages paid are from $1.50 to $2 per day, or $50 and $60 per month, a man boarding himself, or $1 per day and $25 to $30 per month. G.

THE FIELD.

Distribution of Seeds and Plants.

University Experiment Station, Bulletin No. 61.

Owing to the lateness of the season it is deemed advisable to combine this year the distribution of seeds and that of plants, which have for the last two years been made by separate announcements. We have retained in the lists some growths which have done well on the University Experimental Grounds, and have been given good reports by those to whom we have sent them for trial, in order that the experiments might be still more widely extended to secure a wider knowledge of the adaptation of the plants to California conditions. A number of new growths are offered this year which have set up a claim to value in this State. As has been described in previous bulletins, this distribution is made for the purpose of ascertaining the adaptation and practical value of the several kinds, in the different climates and soils of the State; and persons receiving them are requested to report results, whether success or failure, and if the latter, from what apparent causes.

Terms.—As there is no appropriation available to meet the expenses of packing and postage, applicants are requested to send the amounts specified in connection with each description below. If they desire seeds sent by express, applicants need not send the amounts specified for postage, *but all orders for seeds by express* must be accompanied by a remittance of 10 cents to pay for packing. Applications may be made for one or more kinds of seeds. In case any kind of seed becomes exhausted, the money sent will be returned unless a second choice is mentioned by the sender.

Plants will be forwarded by express (unless specially otherwise requested), in lots consisting of the number hereinafter mentioned for each kind, on remittance of 25 cents for each lot of plants and 10 cents additional for each additional lot to pay expenses of packing, etc. Postal notes, payable at the Berkeley postoffice, are requested to be sent in lieu of stamps whenever practicable. Any surplus left after filling orders as far as possible will be returned to the senders, deducting letter postage.

Wheats Resisting the Hessian Fly.

The distribution of cereals this year is restricted to three varieties of wheat, which proved resistant to the attack of the Hessian fly (*Cecidomyia destructor*) in our experiments during the past season. An outline of these experiments was given in Bulletin No. 58 of the University Experiment Station, and a full report will be found in the forthcoming report of the College of Agriculture for 1886. Out of 100 varieties of wheat sown there were but six in which no trace of the fly was found, and of these we have sufficient seed of three varieties for distribution. It is desired to send these wheats only to the localities where the fly is known to exist, because we want the experience of experimenters in other infested localities to compare with our own observations. The varieties offered are "Volo," "Bearded Missoyen" and "Greek Atlanti." These wheats all have solid stems, the straw being filled with pith. They all belong to the *hard* wheat type (*Triticum durum*), having rather long-pointed grains, almost translucent, and a horny consistency, owing to their richness in gluten, though when grown in this State they rapidly change in this respect and become starchy. These wheats are chiefly grown in the countries bordering upon the Mediterranean and the Black seas. They do not succeed in the north of Europe, nor are they of much account even in the middle of France. They are, however, quite hardy and productive in California, and with the change in their character noted above, promise to be of considerable value. Samples of the grain were submitted to experts in milling and shipping wheats and pronounced good, merchantable wheat, and salable in the market at about two and one-half cents per cental less than No. 1 shipping wheat. As they are naturally of strong growth and productive, it is expected that they will be found valuable in those localities where other varieties are rendered unprofitable because of the Hessian fly. Applicants will each be furnished with one pound of each of the three varieties, or a single pound of either variety. Send 20 cents for each pound ordered, if to be sent by mail.

Textile Plants.

The progress which inventors seem to be making in devices for extracting the fiber from various textile plants promises to make such growths profitable in this State. While we do not, of course, guarantee the success of the machines which are now becoming prominent, nor promise that a market is yet open for the sale of crops which will yield fiber, we deem the outlook favorable enough to warrant general experiment with the plants to ascertain the adaptability of certain localities of the State to them, so that those who may in the future deem such crops worthy their attention may have full data of their growth and probable yield. It is probably generally understood that the secret of profit in these crops lies in the solution of the problem of extracting the fiber by mechanical means so that the product may profitably compete with that produced by the cheap labor of Asia and Europe. For ramie fiber there is a steady demand by the English manufacturers if

the fiber is extracted to suit their wants. For flax fiber, we are assured by local manufacturers that there will be a demand here for all the properly prepared fiber, as only the lack of the material prevents a large local manufacture of twines, etc.

Ramie.—We have grown from imported seed a stock of plants of *Boehmeria candicans* which is, however, said by experts to be inferior to the *Boehmeria tenacissima*, although the fiber of the *candicans* is of value in making coarser fabrics. The tests of this species will probably serve to determine the conditions favorable or otherwise for the growth of the other. Most satisfactory results have been reported with plants sent to growers in the upper San Joaquin valley, and experience generally seems to indicate successful growth of the plant in a great variety of soils and climates. Ten small plants will be sent to each applicant; 25 cents per lot.

Fiber Flax.—We have gathered a good quantity of seed of four European varieties of flax (*Linum usitatissimum*) which are grown on the continent especially for their fiber. They grow about three times as tall as the variety commonly grown in this State for the seed. When sown in February in Berkeley, a good growth has always been attained without irrigation, and fair results have been secured by sowing as late as April. The following varieties are offered in 1-lb. sacks; 20 cents each if forwarded by mail: "White Flowering," from France; "Royal," from Germany; "Russian," from Pskoff; and "Yellow Seeded."

Esparto Grass.—Stipa tenacissima, the grass so extensively used in the Mediterranean countries for cordage, baskets, etc., and lately exported in large quantities as a material for paper-making. It grows naturally on sandy beaches, within reach of salt water, but will doubtless be found adapted to many saline and alkaline lands now unreclaimed or occupied by the common tule. It should be thoroughly tested in sandy coast lands southward of the bay, and in South California. Ten plants to each lot; 25c. per lot by express.

New Zealand Flax, so useful to gardeners and vineyardists for the purpose of tying with the ribbons into which the leaves readily split, and which are exceedingly strong, is again offered for distribution. Reports received from the interior of the State point strongly to the conclusion that the plant is unadapted to the hot interior valleys. From all coast regions the reports are good. Although fond of moisture, it is not a marsh plant and will not succeed in a swamp. Two plants to the lot; 25c. per lot by express.

Forage Plants.

The forthcoming report of the College of Agriculture for 1886 will contain a detailed account of the results attained with a number of plants sent out for trial to different parts of the State. The following are offered for further trial:

Schrader's Brome Grass (*Bromus Schraderii* or *unioloides*): Valued in Australia as resisting drought, and in Texas as giving good feed in winter and early spring. We have received reports from many in this State to whom we sent seeds two years ago, declaring the grass a success. It is among the first grasses to start, grows vigorously, and matures an abundance of heavy seeds almost like oats. Its seed stems being two or three feet high, and leafy, it can be used for either hay or pasture. Four-ounce packages by mail, 5c. each.

Milium multiflorum: A perennial millet grass, growing about two feet high with seed stems two feet higher. It is a plant of slow development, but strong. Owing to the fineness of the seed, it should be planted very carefully and covered lightly. It should not be pastured the first year, as it is easily pulled up by the roots. After being well established, if grazed down, there is an abundant growth of fine leaves, which resist winter frosts to a remarkable degree. We have had favorable reports from the plants from different parts of the State, although some experimenters have complained of its failure. This is perhaps owing to the fact that it is hard to start, and because the season was unfavorable. Two-ounce packages by mail, 3c. each.

Japan Clover (*Lespedeza striata*), a plant which is highly commended for drouth-resisting properties in some of the Southern States. We have but a small quantity of seed, which will be sent in 1-oz. packages; by mail, two cents each

Various Trees.

Kikar.—We have grown from seed imported from India a few hundred plants of the Kikar or gum-arabic (*Acacia Arabica*). This tree is reported by the Director of the Department of Agriculture, at Cawnpore, India, as "unable to withstand frost; will do well on heavy soil, and thrives even on gravelly land. The gum has commercial value and the wood is used in making handles of tools and heavy wagons. The trees should be planted 40 feet apart, or afterward thinned out to that distance." This tree should be tried in the thermal belts and milder parts of the State. Lots of five trees will be sent to each applicant; 25 cents per lot by express.

Black Wattle (*Acacia decurrens*).—Reports of trees sent out in previous years are very favorable. The black wattle is shown to be fully adapted to the coast region of the State from San Francisco southward, and even in many interior points. It promises to be of much value for fuel, as well as the source of bark for tanning. The tree is a rapid grower, and the bark is usually stripped in its eighth to tenth year, when the tree is 30 to 40 feet high. Does well on heavy as well as on light soils, provided they are deep. We send seed in two-oz. packages, five cents each by mail. A few young trees can be furnished in lots of five to each applicant; 25 cents per lot by express.

The seed of the black wattle is hard to start, and may lie dormant a long period. We insert the method which Mr. K. McLennan, foreman of the University Agricultural Grounds, finds to yield good results with seed of the black wattle and with other hard leguminous seeds, like the various species of acacia, the carob, locust, etc. :

Prepare the beds or boxes and fill with nice sandy loam. Tie the seeds in a piece of cloth or a little bag and put them into a can of boiling water. Examine them often, and when they become soft and swollen they should be taken out and sown immediately, covering the seeds up, if in boxes, one-fourth of an inch; in outside beds three-eighths of an inch. Care should be taken not to allow the seeds to become dry during germination. If they are exposed to the winter rains, cover lightly with straw; remove the straw when they are well sprouted. After the seedlings are furnished with the first or second set of leaves they should be thinned and transplanted at a distance of three inches apart. This gives a chance to cut them out separately and leaving a little ball of earth to each whenever it is desirable to plant them out in their permanent places.

Olives.—We have a small number of olive trees of the "Nevadillo," a medium-sized olive of oval shape, rivening very early, and the Manzanillo, a rather large olive of more rounded shape, also of early maturity. These varieties were secured through Mr. Pohndorf's importation. We can send one tree of each variety to each applicant; 25 cents for each pair by express.

Guavas.—A limited distribution can also be made of three guavas, *Psidium pomiferum*, *P. Cattleyanum* and *P. aromaticum*. The first named is the "pear-shaped guava" which we have sent out before and which is reported as doing very well in sheltered places in Southern California, and a desirable fruit. The second is the more hardy "strawberry guava," and which promises to succeed wherever the orange thrives. The third is a species from Guiana. As the adaptation of the varieties is quite well defined we will select according to location of applicant; three plants to each 25 cents per lot by express.

Miscellaneous.

Insect Powder Plants.—As there seems a continued desire for small packets of these seeds for trial, we still offer *Pyrethrum cinerariæfolium* and *P. roseum*, the Dalmatian and Persian insect powder plants. The former is the one most to be recommended as an insecticide, while the latter is quite ornamental, having flowers resembling single chrysanthemums, of four or five different colors. The seed should be sown in boxes in light, porous soil, and kept shaded, but in a warm place and moist. Under favorable circumstances the seed will germinate in two or three weeks, and the plants, when of sufficient size to be handled, should be set out like cabbage plants. We can furnish the seed in one-oz. packages, two cents.

Quinoa: Chenopodium quinoa.—Of this plant we have two varieties, the seed of one from Germany and the other from Peru. The seed is a common article of food in the high plateau and mountain districts of Chile and Peru. Unfortunately it is grievously infested by the leaf-mining larva of a fly which interferes with its prospects in this region at least. We would like to have it tried in other parts of the State to determine its growth and value. Seed will be sent in two-oz. packages, five cents each by mail.

Bamboos.—A number of varieties of bamboo are now attainable in quantities to suit from nurserymen and importers. We have a collection of varieties which are growing well in the Garden of Economic Plants, but we have only the *Arundinaria falcata* for distribution. A few can be furnished single plants of this species; 25 cents each by express.

Kaffir Corn.—A variety of dhoura, or Egyptian corn, introduced by Dr. J. H. Watkins, of Palmetto, Georgia. It differs from the "Egyptian corn" grown in this State in bearing upright heads and in somewhat different characteristics of growth, as will be described in the forthcoming report of the College of Agriculture. The grain much resembles the White variety grown in this State. The plant has matured seed in Berkeley, which the Sorghum family does not usually do; the grain is, however, much inferior to that which may be expected in the interior of the State. We would like to have this variety tried by those who are growing Egyptian corn profitably. Seed will be sent in 2-oz. packages; 5 cents each by mail.

A bulletin announcing a distribution of cutting scions, etc., will be made next week. All applications should be addressed to

E. W. HILGARD,
December 23, 1886. Berkeley, Cal.

PHOTOGRAPHING CANNON-BALLS.—It is well known that cannon-balls have been most successfully photographed when on their flight from the cannon's mouth, but it seems that quite recently such photographs have been obtained, many of which show, in a remarkable manner, the head of condensed air which precedes the shot. It is this head of condensed air which makes it almost impossible, even for the most skillful rifleman, to hit an egg-shell suspended by a longish thread; and doubtless it is this "head" of condensed air which first wounds when an animal is hit by a rifle shot.

POULTRY YARD.

Food for Thought on Several Topics.

EDITORS PRESS:—As I go about from place to place, I enjoy (sometimes) seeing how others do business that are in the same line of work as myself.

Some one might ask the question just here, Well, what do you see, and how are people generally doing business? Were I to answer in two words for the whole list, they would be *very poor*, but to stop right there would be but to cast scandal upon a noble few who are doing a grand work in the poultry world, and should have credit for it.

Why is this thus? Are there good reasons for the present condition of things? I would answer no, for in the first place there is no overproduction in this country either of fowls or eggs; if there was, why is it that there are annually shipped into this country millions of dozens of eggs and many thousands of pounds of dressed poultry? Poultry and eggs are things in the provision line which this country fails each year to fill its home demand, while in almost if not quite every other line they have enough and a surplus to export.

It appears to me that too few of our farmers are posted, or, if posted, fail to realize the magnitude of this part of the farm, and the result in dollars that they might put in their pockets year by year were they to give it their careful attention.

Others seem to have chickens about the place, but are so careless and shiftless with them that it is a wonder that they have chickens left to their names. Don't think for a moment that it pays any better dividends in the poultry business than any other to be shiftless and careless, for it does require good judgment, thrift, good stock, care and a moderate capital to meet with success.

Now let me tell a secret of the business, and I *know* it will prove itself by trying. Commence with full-blooded stock, or if already in business, with mongrel stock, then get rid of them as soon as possible, and stock up with full-bloods, for in poultry, as with beef or milk cows, horses, or sheep, the full-blooded stock is far more profitable than the scrub, and it costs no more, and oftentimes less, to keep the full-blood than the scrub, and a man will take a vast amount of pride and good solid pleasure in a flock of full-blooded hens, while he will feel that scrub stock is of no account. I have tried both and know just how it works.

I find that some folks think that scrub stock half cared for, or not cared for at all, will fill the egg basket, and because they don't, out they go from the chicken business, with no good opinion of it and many hard words against it. Well! no wonder; what business would be a success in their hands under the same treatment?

I think too many have the idea that it is a business that can be picked up by any one on short notice, and run on a large or small scale, according to taste; that there is little or nothing to learn, and that there is a mint of money in it. Well, there is a mint of money in it, sure, but he who would get the money must either drive or hold the plow, in other words, commence with a few fowls and learn the business, and advance in numbers as you learn the care required for them, and by all means do not be afraid to take off the coat and work among the fowls.

Don't be afraid to feed your own mind in regard to all matters relating to the poultry yard. Much can well be learned by practical work in the yard, and great help can be found among the many poultry papers and books of the present day. Of the latter, "Poultry Culture," by I. K. Felch, is a book costing $1.50 and is as well worth the money as any book I know of, as it covers about the whole field, and is written by a man who has a fine reputation as a breeder, and has over 30 years' experience. There are other books at less price and covering less ground, and on special subjects, in price from 25 cents to $12.

As to papers, aside from the RURAL PRESS, there are many, and can be had from 50 cents to $1.50 per year. Perhaps the best cheap paper is the *Poultry Keeper*, of Parkesburg, Pa., 50 cents a year; it comes monthly and is full of life and information, and has about 100,000 readers, which speaks well for it. There are others of merit, but they cost $1 or more a year.

Now I am not advertising this book and paper, but am just speaking a word for what I believe to be honest worth, and to help those who are in search of honest, reliable information.

Don't expect to be an expert in the poultry business at once, it will take time, but there is reason to believe you can be if you try.

As I look back over the years I have been in the business, I can see a marked advance for the better; a better quality of stock is wanted and more of it; breeders who have good stock and deal square have plenty of business; the signs of the times are good. Cleanliness, watchfulness and *care* are magic words, and speak much for success in the poultry world, and he or she who cannot apply them had better stay forever out of the business.

"Read, see and think," "live and learn," are mottoes worth following. Strive for the top round of the ladder. E. C. CLAPP.

South Pasadena, Cal.

ARBORICULTURE.

The French Walnut Varieties.

EDITORS PRESS:—I wish to add something to corroborate the statements made by Mr. Felix Gillet in the RURAL PRESS in regard to the French walnuts; they have proved so satisfactory on my place that I feel bound to recommend them to all who wish to plant nut trees, either for home use or for crop.

After growing the Los Angeles seedlings for many years without any remuneration for my trouble, and having the French varieties prove so fertile, I feel that the problem is solved and that only the latter should be planted in the northern portion of the State.

A history of my French varieties may be instructive. They were imported from Fransom Bros., Orleans, France, in 1874. I received a few dozen grafted trees of the following kinds: the Præparturiens, A Bijou, and Serrotina; afterward the Mayette and Cheberte. They have all fruited, and I am able to judge of their value. The Præparturiens was, of course, the first to have fruit, and there are in our county several trees, grown from seed that was produced on my place, that have borne crops of nice, well-flavored nuts; they were exhibited at a meeting of the Horticultural Society last fall and pronounced excellent.

The A Bijou is a large nut, the largest known; it produces a moderate crop of well-flavored nuts. The Serrotina is late in coming out in the spring, and will be valuable for that reason; it is an abundant bearer. The Cheberte and Mayette are both valuable to grow for their nuts. All these kinds have proved to be hardy, productive, and well-flavored.

Experience has taught us that the Los Angeles seedling is a very unreliable tree, only giving fruit under the most favorable circumstances in Northern California; it grows very thrifty when young, but does not ripen its wood sufficiently to withstand the severe winters that we sometimes have, and if, by chance, a series of mild seasons follow the planting, and the tree attain a good size, it is unfruitful, and seldom pays for the room it occupies.

Now, the French varieties are entirely different. They are fertile from the first of their life. I have seen a tree of the Præparturiens, three years old, showing female blossoms, and where they can be impregnated by the male catkins of older trees they will mature nuts. I have gathered nuts from a tree scarcely four feet high. Their growth is slow and the wood ripens fully. I have never lost an inch of wood from any frost that has occurred since they were planted, while the Los Angeles trees, near them, have been cut to the ground many times. As to the quality of the nut, there can be no difference of opinion—the French nuts are decidedly superior, the shell is thinner and the meat is very sweet and rich, with none of the bitter skin which always accompanies the Los Angeles kind.

To those who are planting a home orchard I would say plant at least a half of a dozen of these early-bearing nuts for the children. Nothing will pay better.

To those who have a deep, rich, moist soil, and wish to plant for profit, I would recommend these nuts. They are not hard to grow, the crop is easily gathered, and, if properly planted and attended, will pay well. It is a mistake to think that they are difficult to transplant. They do not have the long tap root of the native walnut, but will transplant nearly as well as an apple tree.

My trees have not suffered from any insect pest; they are remarkably free from them in the midst of an orchard of prunes, abounding with red spider, aphis and scale. The only thing which has given me any anxiety is the tendency of the leaves to scald or sunburn during the hot spells which sometimes occur in the summer. They would not be apt to be affected in this manner if the soil was more moist.

There is no reason why Northern California should not be a large producer of walnuts. They would be especially at home in the coast counties; there are thousands of acres in Mendocino, Humboldt, Sonoma and Santa Cruz counties, that now produce but little income, which are especially adapted to their culture. These trees can be procured from all the leading nurserymen of the State, and I hope planters will not neglect them the coming season. They are no experiment, as I have had favorable reports from trees in many parts of the State, from Red Bluff to San Diego.

Stockton, Cal. W. B. WEST.

[We are glad to have Mr. West's statement about the walnuts. We saw the collection for which he was awarded a premium at the Citrus Fair, and shared in the general admiration of it.—EDS. PRESS.]

LIFE AND DEATH.—At a late meeting of German naturalists and physicians, Prof. Cohn, of Breslau, read a paper on "Questions of Life" which showed that the great problem is not yet solved, and that in the living organism there are forces which, though they must be mechanical, as they put bodies in motion, yet cannot be split up into components of atomic molecular forces. "The gulf which separates life from death, organic from inorganic bodies, is not closed, and none of our hypotheses will help us to bridge this gulf."

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Government Telegraphy.

With each meeting of Congress there is a revival of interest in the scheme for transmitting telegraphic messages under the supervision of the Government. The discussion is not so general and earnest this winter as the importance of the question demands. Still, enough is said to show that a great deal of interest is felt in the subject by the people at large.

Our attention has been called to a paper contributed to the *North American Review* two years ago by Dr. Norvin Green, President of the Western Union Telegraph Company, presenting arguments to show why the Government should not control the telegraph system of the country. His argument, stated as briefly as possible, is: That the Constitution gives the Government no power to construct and operate telegraph lines; that if it be assumed that the Government has such power, then in all fair dealing the Government is bound to purchase the present lines. Not to do so would be a violation of good faith and an unwarrantable interference with private and corporate rights. That the companies now engaged in the business hold all the patents for telegraphic instruments, and the Government could not equip new lines. That if the Government proposes to set up in the telegraph business there is no other alternative than to buy out the present lines and their various patents at a fair valuation.

But this is a plausible misstatement of the case. It is not contended that the Government should go into the general telegraph business, but merely have in possession a system of lines in connection with the postal service of the country. In this respect there could be no question as to the constitutionality of the measure. It is one of the powers expressly conceded to Congress by that instrument. This could not be construed as an unwarrantable interference with private rights any more than the present system of third-class mailable matter can be construed as an encroachment upon the express companies. The monopoly of telegraph patents is a sheer bugbear. New companies find no trouble in that direction. The great Mackey-Bennett lines have been partly built and equipped since the above article was written. The desirability and practicability of such a postal telegraphy is demonstrated by the example of Great Britain, Germany, France and Austria. In commenting on this subject, Prof. G. G. Hubbard, of Cambridge, Mass, a statistician of high ability, in the *North American Review* says:

Congress could create a postal system, using the present postoffices and delivery system, either constructing its own lines or contracting with parties to furnish all necessary lines for transmitting telegrams, the contractors receiving the rates fixed by Congress in full compensation for constructing, maintaining and operating the lines, the postoffice furnishing such additional facilities as might be required for the purpose of transmitting, at low rates and with greater economy, business of a less urgent nature than that now sent over the Western Union lines. The Western Union would continue to perform a large part of the commercial business, on account of greater dispatch, and the business of the railroads. It would be inexpedient to adopt a low and uniform rate at once, as it would increase the business beyond the ability of the postal department or of any company to handle it. I believe that a uniform night rate of 30 cents between all offices, and a day rate of 25 cents between offices east of the Mississippi and offices west of that river and east of the Rocky mountains, and a rate not exceeding 50 cents between any two offices in different sections, would give the people what they need, and make the postal telegraph self-supporting. There are now at least 50,000,000 messages transmitted yearly by existing companies, requiring not less than 150,000 miles of pole lines. In six years, at the ordinary rate of increase, 100,000,000 messages will be transmitted. If a postal system with low rates should be inaugurated, the number would be increased to 150,000,000 messages, which would give business enough for all the lines and employes of the Western Union and the postal system.

AT the recent harvest feast of the Grange in San Jose, which appears to have gone off right merrily, Bro. I. A. Wilcox, Assemblyman-elect, spoke at considerable length on the reduction of the railroad rates on fruit shipments East. In closing, he said: "In my experience with the railroad officials, I have found them always willing to listen to reason. They realize that their interests are identical with those of the people, and in these matters it is a wise policy to confer with them and folly to antagonize them." The remarks of Mr. Wilcox were listened to with attention, and at the close were heartily applauded.

ENTERPRISE GRANGE.—In the list of officers-elect of this Grange, as published last week, the name of Thomas Waite, the retiring Chaplain, was inserted by mistake. The former Secretary, Mrs. M. L. Plummer, desires to have this correction noted.

Grange Elections.*

AMERICAN RIVER GRANGE.—Dec. 11: D. W. Taylor, M.; J. E. Beach, O.; M. Pike, Sr., L.; A. A. Harris, S.; M. Pike, Jr., A. S.; W. H. Giffen, C.; M. Lauredson, T.; J. C. Cornell, Sec.; J. C. Brewster, G. K.; Mary Cornell, Ceres; Mary Cox, P.; Martha Criswell, F.; Etta Cornell, L. A. S.; Maggie Cox, Org.; J. Cornell, Sr., Trustee.

CERES GRANGE.—Dec. 24: Vital E. Bangs, M.; M. J. Hall, O.; Sister H. M. Whitmore, L.; P. P. Stiles, S.; H. W. Brouse, A. S.; Sister A. Chapin, C.; M. M. Hall, T.; R. K. Whitmore, Sec.; Maria Lewis, G. K.; Nettie Brouse, P.; Susie Bangs, F.; Alice Whitmore, Ceres; Sarah Whitney, L. A. S.; Mary Williams, Org.

ELK GROVE GRANGE.—Thomas McConnell, M.; Geo. S. Williamson, O.; James Caples, L; W. J. Bader, S.; John Winkelman, A. S.; Gillis Doty, C.; Geo. T. Carr, T.; Delos Gage, Sec.; L. Shelmeyer, G. K.; Anna McConnell, Ceres; Mrs. Mary Kerr, P.; Mrs. S. Stelter, F.; Mary Chalmers, L. A. S.; E. W. Stickney, Trustee.

SNELLING GRANGE (reorganized).—Installed: Geo. P. Kelsey, M.; John Ivett, O.; Geo. W. Thomason, T.; S. K. Spears, Sec.; Mrs. Susan Fowler, L.

WASHINGTON GRANGE.—Dec. 18: Samuel C. Waters, M.; R. S. Pardoe, O.; Sister Blyther, L.; James Ritchie, S.; Chas. Child, A. S.; Sister Pardoe, C.; J. C. Blyther, T.; Chas. Bamert, Sec.; H. C. Little, G. K.; Minerva Holman, P.; H. C. Little, G. K.; Silvie Northrup, F.; Amy McIntyre, Ceres; Sister Bamert, L. A. S.

WATSONVILLE GRANGE.—N. A. Uren, M.; Sister E. Z. Roache, O.; Sister M. E. Tuttle, L.; A. Cox, S.; D. Tuttle, A. S.; Sister Hickman, C.; W. R. Speegle, T.; Sister S. J. Kidder, Sec.; J. F. Freels, G. K.; Josie Roache, P.; Nan Tuttle, F.; Sister Uren, Ceres; Anabel Tuttle, L. A. S.; Sister Roadhouse, Org.; O. Tuttle, Trustee.

WEST SAN JOAQUIN GRANGE.—Dec. 19: Alanson P. Stocking, M.; Jno. M. Kerlinger, O.; Wm. G. McKean, L.; Rufus Saddlemire, S.; Jas. L. Williams, A. S.; Mrs. J. M. Kerlinger, C.; Jas. Field, T.; Jas. C. Allen, Sec.; Washington Haynes, G. K.; Mrs. R. Saddlemire, Ceres; Mrs. J. G. Dean, P.; Mrs. A. P. Stocking, F.; Mrs. J. L. Williams, L. A. S.; W. Haynes, Trustee for three years.

YUBA CITY GRANGE.—Dec. 18: C. E. Williams, M.; C. C. Newkom, O.; Mrs. M. C. Smith, L.; N. Nelson, S.; A. S. Barr, A. S.; Mrs. S. E. Walton, C.; E. S. Wadsworth, T.; Geo. Ohlever, Jr., Sec.; E. C. Frisbie, G. K.; P. E. Newkom, P.; Mrs. Carrie Barr, F.; Nettie McCready, Ceres; H. S. Jones, L. A. S.; F. Cooper, Trustee; W. D. Woodworth, Org.

*Secretaries, or other officers, are invited to send us lists of officers elected, date of installations, and all other interesting matter for publication.

Installations Coming.

Within the next few weeks many Granges will install their officers-elect for the coming year. These ceremonies are often, and should be universally, made the occasion of gladsome social reunions. They should be well attended and by earnest endeavors made of lasting advantage to the Order. We notice the following announcements:

To Install Saturday, Jan. 1st.

Bennett Valley, 10 A. M.
Sebastopol, " "
Watsonville, " "
Wheatland, " "

Saturday, Jan. 8th.

Eden & Temescal (joint) at Haywards, 10 A. M.
Magnolia.
Sacramento & Sacramento Co. Pomona (joint) at Sacramento, 11 A. M. (W. M., Johnston to officiate as installing officer.)
Santa Rosa, 1:30 P. M.
South Sutter.
Stockton, 10 A. M.
Yuba City.

Saturday, January 15th.

Alhambra, 10 A. M.
Danville.

There are others, doubtless, of which we have not been advised; and we would thank friends and Patrons in all quarters to send us word of any such good occasions, whether in joyous anticipation or pleasing retrospect.

Several of the Granges above named have issued a general invitation and assurance of welcome to all Patrons in good and regular standing; and those who have not done so formally are, we feel confident, doing so silently in the spirit of fraternal hospitality. Let all who can attend such a gathering feel themselves cordially bidden.

A GRANGE CALLED FOR.—It strikes the *Herald* that a Grange, where farmers and others interested in tilling the soil could hold regular meetings and discuss the various branches of business, would be a good thing in Livermore.

WHEATLAND GRANGE has invited the officers and members of Yuba City Grange to visit them on New Year's day, to witness their installation ceremonies and partake with them of a Grange dinner in their hall.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

For many years agriculture has been compelled to contribute largely to favored interests without an equivalent return; farmers are paying taxes for others better able to pay them than they. By the operations of pools and schemes favored with monopolies he is legally "sheared" of the products of the soil. Agriculture pays much the largest share of public indebtedness, local and national, and after meeting the numerous demands upon it there is frequently no profit left as interest on the investment, often not even paying for the labor. The remedy is a thorough organization by farmers.

The first lesson a candidate learns as he enters a Grange meeting for the first time, is, "An honest man is the noblest work of God." We need honest men in these days, and we need them badly. A constantly growing procession is on the road to Canada. Will not the teachings of the Grange at least help—not alone as a prevention, but as a cure?

The regular annual meeting of the Colorado State Grange commences on the second Tuesday in January. The State Granges of New York and Illinois commence on the third Tuesday of the same month.

At the meeting of the Connecticut State Grange at Hartford this month, the morning and afternoon sessions of the second day were open to the public, and a well-arranged programme was carried out, led off by the Lecturer, J. B. Olcott. Each Grange in the State contributed something, either in the way of a short address or carefully prepared paper, and all interspersed with music and songs. A portion of the third day's session was devoted to a discussion of the tariff as it relates to the farmers of Connecticut, with good talkers on both sides to speak as invited guests.

"The indifference of those engaged in agriculture, and the other industrial pursuits, to matters of legislation and public affairs, has, in other times and in other countries, been the primary cause of class legislation, which has degraded labor and robbed it of its just rewards, and built up a moneyed aristocracy and monopolies which own and control not only the wealth of the country, but the Government itself. Such a condition of affairs can only be averted in this country by educating the wealth-producing classes to understand their privileges, and in the full exercise of their political rights to demand a fairer representation in the legislative departments of the Government and equal protection to their interests. In this great work of educating and elevating the agricultural classes of the country, and to save them from the impending fate that has befallen the agriculturist of the Old World, was our Order created." —*J. J. Woodman, Michigan, Past Master of the National Grange.*

Question for discussion by a subordinate Grange, "What are the causes of the hard times to the farmer, and how can he best meet them?"

The hall of Lebanon Grange, Connecticut, is a handsome building 40x60 feet, occupying the finest site in the town, contains upon the first floor a library and reading-room, with quite a collection of valuable books, and in the rear of this a large and convenient store-room. The second floor is occupied by the hall and ante-rooms, all finished in hard wood, with inside blinds of the same material. The hall will comfortably seat 400 persons. This Grange has nearly 200 members.

C. L. Whitney, of Michigan, has been lately doing some effective Grange work in Nebraska, organizing new Granges and reorganizing old ones. He is out officially, and under the direction of the Executive Committee of the National Grange.

"There is a tide in the affairs of men, which, taken at the flood, leads on to fortune." This is true of nations as well as of individuals. There are times in a battle when everything depends on the action of the moment. There are times in the life of nations when the same is true. The student of political science may easily see that we have reached a point where almost everything depends on the action of the next few years. Some one has said that "Five hundred years of time in the process of the world's salvation may depend on the next 20 years of the United States history." There are points in history where all lines seem to converge, and then from which they seem again to radiate. The closing years of the 19th century is such a point, and wise and good men, who care to be instrumental in shaping the political destinies of their country, can do more in the next few years than can be accomplished in centuries later.

"Let every heart and hand unite
In the benignant plan,
The noble purpose, just and right,
To aid our fellow-man."

A FARMERS' PORK COMPANY.—A correspondent of the Dixon *Tribune* urges the farmers of Solano county to form a protective association. He thinks that the aggressions, exactions and oppressions of the San Francisco pork-packers render some concerted action upon the part of the producers necessary, unless they propose to abandon, as unprofitable, this important industry. The packers have combined for the past three years, and the prices they have paid, ranging from two and a half to three cents per pound, are ruinous, and will not pay the expense of raising pigs to be eight weeks old. It will not do to say that the packers cannot afford to pay more. The price of bacon, hams, etc., gives the lie to such an assertion. The farmers can easily protect themselves from such imposition. "My remedy," he continues, "is to call meetings, form joint-stock companies, build slaughter and packing houses—say at Rio Vista, Suisun and Collinsville, or other convenient points—elect necessary managers, and procure the services of men who thoroughly understand the business of butchering and curing meat. In this way we will be able to save freight and the inconvenience and danger of long shipments, as well as protect ourselves against combinations. Such companies, properly organized and managed, could afford to pay farmers five cents per pound for hogs, and then double their investment. In this way, the money will be kept in circulation in the county, and employment may be given to many needy and deserving men."

Manly and Gentlemanly.

The Grass Valley *Tidings* speaks in a straightforward, handsome way of the late visit from the editor of the *Sutter Farmer:*

George Ohleyer came to Grass Valley at the invitation of the Grass Valley Grange. When here, Mr. Ohleyer was the guest of A. G. Peterson, who is a daily worker in the Idaho mine and who is, at the same time, a member of Grass Valley Grange. Mr. Ohleyer was shown around town by Alexander Henderson, a member of Grass Valley Grange, and one among the most reputable old citizens of the place. Mr. Ohleyer visited the Idaho mine and had a long conversation with the Messrs. Coleman, and he was shown over the mill and works at the Idaho by one of the Messrs. Coleman. Mr. Ohleyer then went to the Empire mine and looked at everything. He did not act in any underhand way. He was the guest of gentlemen who do not have that sort of acting. There was and is no "information" to be obtained at Grass Valley which can be used in the Legislature or anywhere else against mining. All the Grass Valley mines will bear the fullest scrutiny by any person from any of the valleys. Grass Valley mines invite the fullest scrutiny. They will be all the better, safer and stronger by having such men as George Ohleyer look at them. This is not because Mr. Ohleyer is any better or stronger than many other men, but because he has great weight in communities where he is known. The *Tidings* is not one of the papers that is drumming up lawsuits against quartz or any other mining. Therefore, when a man like George Ohleyer comes this way and looks at our mines, we are glad to see him, for he will see a great and beneficial industry of which he had no previous proper conception. We would like to see Green of the Colusa *Sun*, Short of the Fresno *Republican*, McClatchy of the Sacramento *Bee*, the Woodland editors, or anybody else from the valley, come up here, under their own names, and look at our mines. All such visitors will advance the mining industry, and many of such visitors would not only approve of mining, but would also invest in our mines.

RESOLUTIONS OF RESPECT.—The late Warren A. Smith is spoken of, by the committee of Placerville Grange, as a brother who was ever ready to proffer the hand of aid, and the voice of sympathy; an active member of the Order, whose utmost endeavors were for its welfare and prosperity; whose advice and counsel have been treasured up, and whose life was upright, noble and one that we might well emulate.

SNELLING GRANGE has been reorganized by the aid of Bro. E. Kelsey, so he writes the *Patron*. A partial list of the officers installed appears among our Grange elections.

HEALDSBURG GRANGE, a correspondent says, shows signs of reviving. We hope those signs are true forerunners of her return to a life of useful and glad activity.

A Libel on the South.

George Cary Eggleston writes home to the New York *Commercial Advertiser* from Los Angeles that the present boom in Southern California, which has blown Los Angeles into a city of 45,000 inhabitants in a few months, has the flimsiest of supports—the hope of a steady influx of consumptives from the East. He believes that that part of the world has a fine future, but that it will have to succeed a collapse.—*Springfield Republican.*

That there may be inflation in some directions in the south, and that reaction may follow to a certain degree, may be possible. In every rapid advance there is a chance of temporary reaction, though it does not always come. But to declare that the prosperity of the south is based upon a "hope of a steady influx of consumptives from the East" is a libel. The true statement is that which we quoted from Mr. Estee's speech at the Sacramento Citrus Fair, and which we reproduce once more to meet the false statements above. Mr. Estee said: "Southern California had no boom until that lovely country deserved it, and now the world knows Southern California by heart. It has promised much, but Southern California has done all it promised. Look at the carloads of oranges and lemons raised there and sent away to market; the wines and brandies that every month are sent to the East and Europe for sale; the raisins in almost unlimited quantities that it makes, and you will learn the secret of the success of Southern California."

PROF. J. G. LEMMON and wife have preempted 160 acres of fine grazing and fruit land in Chalame valley, San Luis Obispo county, where they intend to make headquarters for botanizing next season. Many friends will wish them good health and abundant success in their home-making undertaking.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

LEMON, GUAVA AND OLIVE.—Livermore *Herald:* Chas. A. Wetmore has on his Cresta Blanca vineyard-ranch a number of lemon trees in the fourth year, which are now well set with ripening fruit of good size. They have been raised without either irrigation or protection, on sidehill land. Mr. Wetmore has in nursery 2000 guava plants which he raised from seed, and will put out on his hillsides when sufficiently grown. The guava is a tropical fruit, but the plants thrive well on Mr. Wetmore's place. In fact, these tablelands and hills are never visited by frost, and the lowest point touched by a self-registering thermometer in his olive orchard last winter was 38 degrees. His olive orchard is now in its fifth year. Last season he made two quarts of oil, and this season 60 gallons from 200 trees. He says olives bear earlier here than in San Diego county, and he believes they will thrive better. Mr. Wetmore's place is well worth a visit, and should be seen by every one who desires to appreciate the resources of Livermore valley.

Contra Costa.

CAT, CATAMOUNT AND COYOTE.—Nortonville Cor. Concord *Sun:* Coyotes and wildcats are numerous in this desolate camp. Jas. Bryant trapped inside of a week four wildcats and five coyotes. The county should pay a bounty on the killing of one as well as the other. It would be well for the Supervisors to attend to this. A California lion was seen near McBride's mine, and Wm. N. Jones set a large trap with a double chain for his lionship. But the noble brute got away with the trap.

Inyo.

SHEEP TAX WANTED.—*Independent:* The Grand Jury recommend the imposing of an annual license on sheep pastured in Inyo county during any portion of the year, "as we well know that the county suffers materially from the grazing of predatory bands of sheep owned in other sections of the country, and to the great detriment of our citizens."

Los Angeles.

FRUIT SHIPMENTS EAST.—Santa Ana, Dec. 25: Up to date 225 cars of oranges, lemons, grapes and raisins have been shipped to the Eastern markets from this place this season. Oranges are just beginning to come in, and the outlook is favorable for a large crop.

ORANGES. — Anaheim Cor. Los Angeles *Times*, Dec. 22: The shipment of oranges is becoming quite brisk. The crop is of unusual quality, bright and clean, and the prices realized thus far give good satisfaction to shippers. The crop of several orchards has been sold on the trees at $1.50 per box.

A CABBAGE PLANTATION.—Anaheim *Gazette*, Dec. 25: Mr. Whitaker has planted on his Contra Costa ranch 17 acres of cabbages, and they are growing with the rapidity characteristic of the soil. A well-known commission house of Los Angeles has guaranteed him one and a half cents per head, and as there are 8000 head to the acre the profit promises to be about equal to that of semi-tropic fruits. The cabbages will be ready for the thrasher or header (we don't know how such things are harvested) by March.

PRUNES THAT PAY.—Pomona *Times-Courier:* James Loney has five acres set to French prunes, three and four years old, which yield him annually eight tons to the acre. In drying they lose about half their weight, leaving four tons to the acre. The dried fruit sells from seven to eight cents per pound. Mr. Loney, however, has been more successful than others who have engaged in prune-growing, and we hear of no one who has had his phenomenal success in prune-growing.

Merced.

FINE FIELD OF WHEAT.—Merced *Argus*, Dec. 25: The large field east of town belonging to C. H. Huffman, sowed to wheat on summer-fallowed soil, presents the handsomest appearance of any that we have seen on the plains this season. The ground was deeply plowed, harrowed three or four times, then sowed and harrowed in well, rendering the surface perfectly smooth and the soil thoroughly pulverized. The young wheat is up two or three inches high, looking bold, thrifty and as promising as could be desired at this time of year. Should the season prove favorable we expect to see harvested from it 40 or 50 bushels of prize wheat to the acre. Thorough cultivation on Mr. Huffman's farms around Merced in the past 15 years has proved universally profitable and demonstrated that those who till their farms well will reap a rich reward for their labor and the money invested.

San Benito.

ORANGES.—*Free Lance*, Dec. 24: B. B. McCroskey has in his garden several seedling orange trees heavily laden with their luscious fruit. The soil on which they are grown is the ordinary soil of the valley. The trees are healthy and of large size. There are not more than 25 orange trees in the valley, but they all do well, bear abundantly, and produce fruit of the best quality. Who will plant the first orange grove?

APPLES.—A. S. Murphy has brought us samples of some of the finest apples we have seen in California. They were raised in the foothills of the Lone Tree district. They are large, solid, of fine flavor, and entirely free from pests of any kind. The codlin moth, which has made such havoc among apple trees in various sections, is here unknown. The cultivation of the apple ought to be a most popular and profitable industry among our foothill ranches.

San Bernardino.

MALAGA RAISINS.—Ontario *Record:* We have in our office a box of Malaga raisins grown by L. S. Dyar, which to our taste compared favorably in color, plumpness and flavor with any Ontario Muscats we have seen. The Malaga is certainly a surer-producing grape on the foothills than the Muscat; it also gives a much higher per cent of layers, and many of our fruit-growers are of the opinion that it is the coming grape for mesa lands.

CHAMPION ORANGE.—*Press and Horticulturist*, Dec. 25: Wednesday H. M. Beers brought down from Crafton a Washington Navel orange which measured 16½ inches in circumference and weighed 1 pound and 10 ounces. This orange so far takes the blue ribbon for size, and if any one can beat it we would be glad to have him report to this office.

San Diego.

OSTRICH FEATHERS.—*Telegram*, Dec. 22: The first invoice of feathers was received at San Diego to-day from the American ostrich farm at Fairview, near the Fallbrook R. R. depot. The feathers are very fine. Many of them are from chicks 15 months old. The prices are $3 to $5 each, not cleaned.

San Joaquin.

EDITORS PRESS:—We are having delightful holiday weather so far, although we would all prefer, of course, to see clouds and rain. We hear much less grumbling because of the long delay than usual, and surely, after the bountiful harvest of the present year, we should take cheerfully from the hand of Providence a less prosperous season. However, we are still hoping for abundant rains later; it is not yet too late to expect it. As I write, December 28th, the wind is blowing and there is fair prospect that the new year will be ushered in with a storm.—MRS. J. M. K., *Tracy*.

Santa Barbara.

EDITORS PRESS:—We begin to get a little uneasy on account of the long delay of the rains. It is quite foolish, but I suppose we cannot help it. As long as there is plenty of time before us for abundant rains, which is the case at present, no one should look or feel gloomy. We have had sufficient to start the feed, which is growing below ground, if not much above, and at this moment the prospect for more rain is good. Doubtless we shall have sufficient in good time. A Happy New Year to all the readers of the good, stanch RURAL.—S. P. SNOW, *Santa Barbara, Dec. 27, 1886.*

Shasta.

ARTESIAN WATER.—Cottonwood *Index*, Dec. 21: Last week, while boring a well for Andrew Johnson southwest of here, Harry Polsley was surprised to find the water rising rapidly. It rose 70 feet in a few minutes, and is now within eight feet of the surface.

Sonoma.

CHESTNUTS.—*Democrat*, Dec. 25: It was announced last week that the first chestnuts raised in this section were grown on Mr. Whitaker's ranch in Yulupa valley last fall. This was soon contradicted by another gentleman who has had trees bearing for two years. Now it is learned that fine crops of chestnuts have been gathered from trees on Kohler and Frohling's land near Glen Ellen for four years past. These gentlemen also have bearing pomegranate trees upon their property.

Tulare.

A CHANCE FOR CHEESE-MAKERS.—*Times:* Is it not strange that in this alfalfa-growing county, where cows have the best of milk-producing feed, no one has engaged in the cheese-making business? It certainly could be made profitable. Stranger still, at certain seasons butter has to be shipped from S. F. to supply this market; and at any time first-class butter is hard to obtain. Here are two profitable industries that men of small means might engage in.

DRAFT DONKEYS.—*Delta*, Dec. 23: H. Barton's boys were in town yesterday, with their team of jennies, attracting nearly as much attention as a circus. The boys brought a cart-load of eggs and poultry almost as heavy as the diminutive animals which pulled it. They make 25 miles a day with their team, while the expense of feeding them is but a trifle.

MOUNTAIN APPLES.—George Dillon, of the north fork of Tule river, brought to town on Saturday 1600 pounds of fine apples from his orchard. He has 300 trees now four years from planting, and has thus far irrigated them. The apples are as fine and well-flavored as any grown in the cold Eastern States. The orchard is at the foot of the pines, about 2600 feet above tide level, where frost and snow abound, the latter falling six inches deep during heavy storms. The orchard thus far has not been molested by insect pests, and Mr. Dillon is bound to keep it clean if possible. The apples brought were contracted at three cents per pound, but would have sold readily at four cents, and even higher.

CORN CROP.—*Times*, Dec. 23: Heretofore persons engaged in raising corn in this county have given it little care, generally letting it go after one plowing and never "suckering" it. But this season they have given the crop thorough cultivation and care, and the result has been a yield of from 40 to 60 bushels to the acre. J. H. Thomas, just northeast of town, harvested over 60 bushels to the acre, all of it large fine ears and kernels. W. H. Blain, on his ranch two miles east of town, gathered about 50 bushels to the acre, and a large crop of pumpkins beside. Mr. Thomas, while having 10 bushels to the acre in excess of Mr. Blain, says that the latter's crop of pumpkins would more than offset his increase, though he thinks his corn would bring the best price in market, because the pumpkins undoubtedly took from the soil the nutriment required to fully develop the corn; yet he acknowledges that the money value of a crop of corn and pumpkins grown on the same ground would exceed that of a corn crop only. J. H. Johnson, A. I. Weston, Ben Hicks, J. W. Oakes, and many others living in what is termed "the swamp," have all raised large crops of corn, and in all their fields could be found stalks of corn 14 to 18 feet in length, bearing from two to three ears. The great value of these lands lies in the fact that corn and vegetables can be grown here in any season, whether a wet or dry one, and dry seasons are rather preferable, as it increases the price of the commodity.

ARIZONA.

GRAPES.—Phœnix *Herald*, Dec. 16: Yesterday the editor had the pleasure of eating a fine dish of ripe Muscat grapes, picked from his own vines a day or two previously. Fruit was ripe on the same vines July 1st, and since that time there have been two additional crops, three in all, and all good. Fifty vines, second year from cutting, have borne more fruit than could be used, and enough canned to last a family a whole year, besides what was given away. What will happen when the vines are five or six years old, or in full bearing, we are not ready to predict.

OREGON.

CRANBERRIES.—Portland *Rural Spirit:* There are between this city and Salem several tracts of land to be seen from the cars that ought to be yielding $250 to $400 worth of cranberries per acre every year. Men of means seem disposed to engage extensively in the sheep business. J. H. Sherer, of the Deschutes toll road and bridge, has some 14,000 sheep; and Messrs. Brayman and Summerville's 15,000 will soon be 30,000 or 40,000, if rumor is correct.

WASHINGTON TERRITORY.

THE PALOUSE COUNTRY. — W. M. Lee in Tacoma *Commerce:* The famed Palouse country is one of the greatest granaries of the Territory. Here great prairies stretch out for 150 miles, forming one of the richest agricultural sections of the Northwest. It is dotted with substantial buildings, fences, orchards and stock, indicating thrift, comfort and growing prosperity of the people. These prairies are quite unlike eastern prairies, the land being a succession of depressions and knolls. The soil on the hights is fully equal to that of the valleys, being largely composed of lava and volcanic ashes, containing ingredients favorable to the growth of grain, fruit and bunch grass; in short, to diversified farming. With mild and healthful climate, clear skies, short winters and cheap lands, Eastern Washington seems to be one of the most desirable spots for farmers to locate comfortable homes. Probably one-tenth of the prairie is cultivated, which is capable of producing 30 or 40 bushels of wheat per acre.

THE salt crop around the Bay of San Francisco, for 1886, is about 27,000 tons, being about one-third less than the crop of 1885. The cause of the shortness of the salt crop of this season is accounted for by the salt producers in consequence of having so much late rain and the smallness of the tides in the months of May, June and July. The tides were so small that the salt producers failed to get water into their reservoirs. The salt is of as good quality as in former years, and perhaps better. No stained or discolored salt was manufactured this year. The salt season generally begins in the month of May and ends in October.

THE tanning industry on this coast is developing many new features, and the efforts of the manufacturers to improve the quality of leather and produce such varieties of material as will tend to keep the trade in this line at home are particularly noticeable. Fancy leathers were not produced here to any great extent in former years, but at present the wholesale dealers and shoe manufacturers are largely supplied with skins which are tanned in this city and State.

GETTING MIXED ON THE BUTTER QUESTION.—A Government inspector at Des Moines recently placed the Federal tax for oleomargarine on a sample of genuine butter which had been submitted to him for inspection. Eight samples of butter were submitted, only one of which was the pure article, all the others being a very good quality of oleomargarine. All the latter were passed as genuine and the only genuine sample was taxed as oleomargarine.

MORTALITY AMONG SHEEP.—A Buenos Ayres paper says more than 20,000,000 sheep, or 12 per cent of all the herds in the province, have died from disease and exposure, entailing a loss, it is said, of $22,500,000.

Sonoma County Notes.

EDITORS PRESS:—The greatest of holid. has come and gone. With it the family reunion, the fatted turkey, the happy children and the pretty presents have each in turn been in full possession of the "man of business and the lady of the house." Christmas is truly the grandest of all holidays. Who would wish it otherwise? That holy day is the one of all the year, when farmer, merchant, lawyer, banker, doctor, teacher, preacher, mechanic, mother, sister and sweetheart, are each willing and able to lay away the cares of daily life which so much torment them and enjoy the pleasure of which they are all other days in the year more or less deprived. It is therefore a most glorious good thing that Christmas comes at least once each year.

For many years the weather has not been so pleasant at this season of the year as it was Christmas, 1886. The roads were fine, the day was bright, the sun shone warm, the wild birds sang sweetly, the flowers sent their perfume everywhere, and verily "December lay in the lap of May." How the contrast stands out when we think of an Eastern Christmas day! Oh, who would not live in California? As for me and mine, give us a home by the shore of the restless, health-giving, boundless, beautiful Pacific.

Sonoma county has a long line of sea coast; this portion of the county is noted for its fine potatoes, excellent butter and unsurpassed timber resources. These three items bring a great deal of money into our county every year.

There has been but little rain up to this date; the ground is not wet to any great depth, yet the farmers have managed to get a good deal of plowing done, and it seems to be done well. The grain is looking well, owing, no doubt, to the fact that in this section heavy fogs have been prevailing.

In many vineyards the work of pruning has already begun. Many others will wait till the New Year has come, before they will cut away the surplus wood, believing that if the new wood is cut away too soon the vine is thereby weakened. There are as many theories about pruning vines as there are about pruning trees, which is one for every orchard and one for every vineyard. The proposed railroad from Santa Rosa to Benicia seems to be an assured fact.

Already the contract for building the road has been let. Messrs. McBride & Noonan are the contractors. They propose to complete the road within one year. Santa Rosa will surely have a boom. A feeling of joy pervades every breast, and everybody hurrahs for the "Santa Rosa & Benicia Central Railroad."

The Santa Rosa Fruit Cannery, which was destroyed by fire some weeks ago, will be rebuilt in time for the fruit crop of 1887.

Cherry trees are in blossom. One lone blossom was seen on a pear tree last Sunday, but it was certainly out of place.

Live-stock is doing fairly well. Early lambs may be seen skipping here and there as one passes the pasture field.

The wine crop of Sonoma county will not be quite as large as it has been estimated, but it will be of most excellent quality.

Coal, in considerable quantities, has been discovered both north and south of Santa Rosa, about 2½ miles each way; which mine will prove the better one is the question the respective owners are trying to demonstrate. Good luck to both is the earnest wish of your

OCCASIONAL.

Santa Rosa, Dec. 27, 1886.

A New Grain-Cleaner.

The policy and practice of the grain-growers of the interior valleys in using the combined harvesters in gathering their crops has enlisted the best efforts of inventors in providing appliances and additions to perfect and improve this system of harvesting. Ashley Bros., of Stockton, have built a grain-cleaner and applied it to several combined harvesters with very satisfactory results. Its chief feature as a grain-cleaner is an arrangement of sieves that are moved by a quick, jarring motion, and on which the grain passes over as it comes from the separator cylinder, allowing the small seeds to sift through and be gathered into a sack. The wind is applied after it passes over this sieve and the chaff winnowed from the grain. It is claimed that most of the foul seed from weeds is thus gathered and saved from being scattered on the land. A RURAL representative recently witnessed experiments being made at the Agricultural Works at Stockton with this cleaner, with gratifying results. Several farmers and master mechanics who were present at this trial gave it a hearty approval. It was used on several combined harvesters this season, one of which was owned by Mr. Ross Sargeant, of Stockton. Several farmers have made arrangements to use this grain-cleaner at the coming harvest. Mr. L. E. Ashley has also invented a sack-holder that is highly praised by those who have used it.

A LARGE deposit of marble has lately been discovered in San Bernardino county, and but three miles from the railroad. It covers 600 acres and has 11 different colors and shades so far as yet discovered. It is said to be of the finest quality and can be laid down in Los Angeles for $1 a cubic foot. It is a remarkable find.

Farewell to the Old Year! Hail to the New!

[Written for the RURAL PRESS by MALLIE STAFFORD.]

Within the sober silence of the woods
The dying year has trailed her garments gray;
Her robes of flame, from autumn's changeful moods,
Around her in their beauty softly lay.

The oak has laid aside its russet crown,
The maple's lovely leaves of burnished gold
Sadly and pensively are drifting down,
Heaping the dim wood paths with fold on fold.

Where erst the buckeye tossed its waving plumes,
Where the low murmur of the bee was heard
Sipping the rare nectar of the scented blooms,
By every light wind of the forest stirred,

There is naught left but naked branches grim
And spectral boughs, the ghost of beauty fled,
No sweet perfume around it lingering;
Silent it stands, the wraith of beauty dead.

The grass that sprung along the Old Year's aisles,
By gentle rains has cast its weight of seed;
And now a tender verdure, sweet and wild,
Springs up—the harbinger of early feed.

It is as if the Spring walked hand in hand
With Winter, blustering and stern of frown;
For lo! a verdure mantles all the land,
Tho' sere and withered leaves are drifting down.

It is as if the New Year came apace
To light the wearied footsteps of the Old;
In every ray of sunshine we can trace
The bud and blossom that shall yet unfold.

Midwinter and the Old Year dying fast,
And still she weaves a dainty robe of green
Ferns and rich mosses and the early grass
To dress the hills and sodden fields between.

We look adown her sweet, well-trodden ways,
Where Spring, the elfin, brought us bloom and flowers,
And trailed her perfumed robes through all the days—
The long glad days of sunshine and of showers.

We well remember how the hills were clad
In all the verdure of a radiant clime;
And darksome woods, and somber glens made glad
With beauty, deftly touched by days divine.

How fresh the winds came from the waterfall,
And all the woods were rife with dreamy song;
And from afar the myriad wild birds' call
Echoed the emerald vales and hills along.

Then summer's brightness, come with ling'ring feet,
And all her airs with bird-notes were atune;
And the green fields of waving corn and wheat
Sang whispers to the roses of sweet June.

There was a languor on the floating breeze;
A deeper tint upon the blushing rose;
While sang the oriole thro' the glistening leaves
That rustled in the golden orange groves.

By warm soft winds and summer sunshine kissed,
The vineyard drop't its weight of fragrant blooms
And purple clusters, gold and amethyst,
Slow ripened in the cloudless harvest noons.

Where erst the "header" moved among the wheat,
And the tanned toilers garnered shining grain,
The plowman now wooes Nature to repeat
The generous bounty of her yield again.

There is the barn, well filled with plenteous cheer,
With window in the loft that opens wide—
Round which the white-winged pigeons circling near,
Essay their noisy young to feed and chide.

The open sheds, where feed the lowing kine;
The flocks and herds that sport upon the hills;
Near by the stream whose noisy waters wind
Their music with the thunder of the mills.

It was a bounteous year; praise be to Him
Who showers blessings on us manifold;
Albeit some days grew dark and strangely dim,
When sorrow sought us with its gloom untold.

We will not dwell on them. The year is past!
Fold up our glooms and lay our griefs away;
Spring flowers will bloom—after the winter's blast,
New joys are waiting for the coming day.

For lo! the sun has lit the blue-draped hills,
Verdure and blossoms crown the grateful earth.
Rejoice! rejoice! our hearts re-echo still,
New hopes and joys come with the New Year's birth.

Arcadian Hights.

PERFUME FROM FADED ROSES.—Instead of throwing away bouquets of faded roses, or other flowers of special perfume, place the faded or dead dry leaves in a convenient dish and sprinkle a little alcohol over them, and the room where they stand will be filled with their odor. In England it is a common practice; very large vases are kept about rooms, into which all the faded rose-leaves are thrown and sprinkled with alcohol, and thus a very pleasant atmosphere is secured about the house. There is no other way of preparing rose perfume, except by the regular process of distilling. Rose flavor can be given to cake, if any one fancies it, by putting the butter to be used in the cake in a saucer or plate, and setting it for some hours inside a vase filled with rose-leaves that are pri nkled with alcohol.

Fireside Chats.

[Written for the RURAL PRESS by HILDA DELESTHER.]

There are two sides to a shield and two sides to a question; and we cannot expect our neighbors to view either one or the other with our eyes, or see it in the light we do, till it has been turned fairly around so as to present the special side for which we may be tilting.

Now, about the question of encouraging children to know and remember the names of our best authors. It seems not only a desirable, but a very essential part of the many things they ought to learn from their very first acquaintance with their well-beloved story-books. I do not mean that they should be set the task of learning a list of names which would be to them meaningless, but when you have read to them one of Miss Alcott's stories to which they have listened with eager delight, then if you tell them who wrote it, and that she always writes capital stories for children, they will remember her name with a love and enthusiasm that will make them eager for every book she writes. Just so it will be with the names of Susan Coolidge, Sophia May, J. T. Trowbridge, Jacob Abbot and Bayard Taylor. I remember how my children fairly bubbled over with rapture when they began to read Trowbridge's stories, and it was just as easy to add his name to their list of authors as it would be to remember any other dear, delightful friend. If, while they are young, you choose books which are good and yet interest them, they will begin to rely, almost unconsciously, on your judgment, and wish to know the authors you love; and if you have the means to gratify your taste they will come to value, as you do, Whittier, Longfellow, J. G. Holland, Mrs. Stowe, Miss Woolson, Dickens, Geo. Macdonald—but there, I will stop at that author, as I cannot mention all, and ask if you have read any of his works? People talk about the greatness of Dickens, but certainly Macdonald rivals him in beauty and poetry of composition and description of character. Some say they cannot understand the Scotch dialect which occurs in Macdonald's books, but any one who can sing a Scotch song will come to like it after a little, and will find himself repaid for their careful reading. I should think it was not more difficult than the dialect used to a greater extent in "That Lass o' Lowrie's," by Mrs. Burnett.

As to the good it will do children to become familiar with the names and works of our best authors, it will help to keep them from reading poor, trashy books which are sometimes worse than nothing. Your correspondent who thinks "all novels, even the poorest, are nothing more nor less than heart histories," has not perhaps thought that many of the poorest must be written by persons who care nothing for the heart, morals, or life of their readers, but do care for the money sensational stories bring, and try very little to help tempted humanity to the best and most noble ways of living.

I visited our Teachers' Institute and heard the superintendent recommend the teachers to direct their scholars' attention to our poets and best authors and get them interested in the best literature. That seems a step in the right direction, for most of them are sure to become interested in literature of some kind. And if it is well to have a care as to the books we read, so is it well to have a care as to the language we speak and not readily adopt slang phrases; in that I agree with the "Woman of 4—" most heartily.

I have read with pleasure the articles from our pleasant "Girl" writers, and am glad they show an interest in good books—travels and descriptions of different countries—and that when they do read stories they try to get the best. I would suggest that "A Girl of Twenty" take some "nom de plume" more easily referred to than her present signature, for I hope she will continue writing for years to come. I think she, and "Working Girl" and "Wake Robin," and others who have written for the RURAL, are among the sensible girls such as I am always delighted to meet; for I do often meet girls who are willing to work, who help their mothers and have sensible views of life, and I say, "Here is another one to prove my theory that good girls are in the majority, are the rule and not the exception."

Our Women.

Some of our newspapers are altogether too sweeping in their denunciations of women, as, for example, take the following which I clip from a California publication:

Man is supposed to be the noblest work of God. Perhaps he is designed to be, but alas! they fall far short of noble manhood and for the sake of money do many contemptible things. Woman is little better. Her greatest ambition is to outshine some one else in society, consequently she spends wakeful nights in planning new conquests and her days in arranging pretty toilets to gain admiration from any man but her husband, her father, or brothers. From girlhood to womanhood, from youth to old age, she spends the precious moments of life in frivolity, and finally passes from earth to the unknown land and is soon forgotten by all. Alas! for the misspent days, alas! for the wrecked homes.
* * *

It is possible that the writer of the above does not intend to include even the majority of women under this head, yet he makes no exception. For married women who do flirt his words are none too hard, no, not severe enough, for they ought to have passed their days of thoughtlessness and to have some reverence for truth and honesty, and the strength of character to live up to the right standard of womanhood. Girls can have plenty of real enjoyment, fun and laughter, without flirting. One of the "Girl" writers seems to think we old women are altogether too serious with our anxious admonition "don't flirt;" but just think of the evil it has led to in some cases and then say if you blame mothers for their anxiety.

Hospitality.

"Old Californians are very liberal," remarked a talkative friend; "they don't think so much of a dime or of giving away a meal of victuals as Eastern people do."

I do not know about that. I remember with delight true Eastern hospitality, but I think the ingratitude and impositions of tramps are making people everywhere chary of trying to entertain angels unawares, and even causing them to look coldly upon strangers who come driving about in carriages. Think of a wealthy man whose business takes him all over the State; he drives up to your door about noon and you ask him to dinner, and he talks all the time he is eating of how he gets his meals for nothing, and laughs at the way he "sponges" his living from the country people; and finally stops on the doorstep to tell you seriously how many hundred miles he and his wife have traveled, and it never cost them a cent for board or lodging. The next time he comes, do you think you would feel the same free-heartedness when you ask him to dinner that you did the first time? I believe you would not. If there is to be "old-fashioned" hospitality in the land, the guests must do their part toward it.

Shirtmaking.

It is actually becoming fashionable in England for aristocratic men to wear colored shirts, but it is a satisfaction to remember that it has been fashionable among farmers in this country for many years, and farmers' wives have been saved many hours of hard work at starching and ironing. Perhaps the miners of '49 really set the fashion, as they universally adopted the colored woolen shirt, and blue cotton and the more fanciful gingham and cheviot naturally followed.

It was different when I was a girl—then my father and brothers and all other farmers I knew wore white shirts, and worked in their shirtsleeves at the roughest work on the farm; so the washing, you may be sure, was very tedious. Still we were not inventive enough to make colored ones for them. I have just been making cheviot shirts, and I made the undersides of the sleeves of double cloth as far up as above the elbow and more than half-way across the sleeve. It will save mending so soon, and it is such a little work to stitch it on before putting the sleeve together. Probably the aristocracy wear cloth of superior quality—the traditional "purple and fine linen," perhaps—but whatever it is, our home folks may take the comfort of knowing that they are really in the hight of fashion now, and that they set the fashion themselves.

Soquel.

The Man in the Kitchen.

EDITORS PRESS:—As I see so many notes on housekeeping, I wish to say a few words in regard to a man in the kitchen. I think it an honor for a man to know how to cook a good meal of nice-flavored victuals. My good husband is as handy in the house as some of our women. As for my two sons, I teach them how to be ready to do any kind of labor in or out of doors; it will be good for them by and by to know how to keep house. Cooking is a delightful calling, even if at times one has but little to make a dinner or supper of for the hungry.

My family consists of four—myself, husband and two sons. I have my kitchen and dining-room in one, thus saving many steps; water near the door, and wood just as handy and plenty of it. As my method is to have a nail or shelf for everything and everything in its place, a meal can be got up quickly by the slowest person.

If some of those that dread housework would go where it is healthy, it would be a great deal better. I found this out by my own experience, and know it to be so. Health gives wealth and comfort.

I must close for this time. If this doesn't find its way into the waste-basket I will give some of my experiences in life—that is, as to health and labor. Will some one of your many readers please to give a recipe of our German grandmothers' way of making soap?

MARIA C. SHOEMAKER.

Ono, Shasta Co.

BEECHER says the country is getting to be full of 8 hour men and 14-hour women. Old H. W. struck a keynote in that remark. We have never heard of an instance of any labor organization of men denouncing less hours of work for their wives, but the clamor of the men for less work and more pay ascends to the heavens.—*Santa Ana Standard.*

A SCIENTIFIC writer tells how hot water can be boiled in a sheet of paper. We don't doubt it. We have known a man to write a few lines on a sheet of writing paper that kept him in hot water for three years.—*Burdette.*

The White Cross Movement.

The object of this organization is so high and elevating that it should engage the earnest co-operation of every man and woman who believes in whatsoever things are pure, lovely and of good report in the world. Even the habitual scoffer at righteousness must bow low his head in honor to a society whose purpose is to secure respect for all women and endeavor to protect them from wrong and degradation, and which couples with this the endeavor to suppress all indecent language and coarse jests. It matters little that the article of the society's creed that maintains "the law of purity as equally binding upon men and women" may be considered by self-indulgent men as the profession of an impossible belief. Every man who orders his life by such a creed must grow toward the virtue of the man without sin.

Were all homes and schools and colleges what they should be, there would be no field for a society to teach men Paul's message to Timothy: "Keep thyself pure." With the memory of a mother's watchful care and gentle ministrations to influence his life, the man must be a monster who treats any woman with less than outward respect or whose sympathies do not respond to the distress or injury of any mother's daughter.

There must have been something wrong in the home life of a man who does not treat all women with respect, or who is not interested in protecting them from wrong and degradation. A son is naturally, though perhaps imperceptibly, influenced by the example of his father. Let this be one of petulance, arrogance or inconsiderate harshness toward the wishes and feelings of the mother, the son, without knowing it, loses that chivalric bearing toward all women which marks a gentleman in overalls as in doeskin. As a man sees women treated in his home, so he will generally treat them away from home. Of course, education and subsequent association may modify his manners, but they seldom change his heart.

Touching the use of indecent language and coarse jests, there can be but one opinion. They defile the mouth that utters them and the mind that is not closed against them. Too many men beguile their leisure hours in the interchange of obscene stories or coarse jokes. Against this the White Cross sets its face, and all society that loves purity and detests indecency should espouse so worthy a cause.—*Chicago News.*

Bad Boys and State Discipline.

In their final report, rendered the 11th instant, to the Superior Court, of Santa Clara county, the grand jury makes these wise remarks and recommendations:

We respectfully call the attention of our legislative delegation to the urgent necessity for a radical change in our penal laws in respect to juvenile offenders. Before our criminal courts boys, who are mere children in years and appearance, are constantly being brought charged with offenses of the gravest character. To discharge these boys without punishment is, in effect, to instruct them that they have complete immunity for such offenses, to encourage them, as well as others, to repeat such crimes, aad thus to insure their ruin; while to sentence them to either the State prison or the County Jail, is to confine them with old and hardened offenders, whose examples, precepts and association are equally fatal to any hope of reformation. It is from this condition of affairs that the community suffers in present depredations and lawlessness, and from it abundant recruits are assured for the criminal classes of the future. In many of these cases home influence and parental carelessness, or perhaps parental influence, is largely accountable for the character and conduct of the children; so that the complete severance of these pernicious relations is indispensable to any system of reformation. Believing, as we do, that the moral obligation resting upon the community calls for interference as to these unfortunate youths, we think that the lower consideration of mere economy points in the same direction; that it is cheaper to reform two boys than to guard against or punish one mature criminal. We therefore urge upon our legislative representatives the imperative necessity of the establishment, by the State, of a Reform School, of the character and conducted upon the system found so beneficial in nearly all the States, for the detention and reformation of youthful criminals.

A COW DIES OF GRIEF.—Joseph Perrin lost a fine young Ayrshire cow a few days ago under peculiar circumstances. The cow, which was three years old, had her first calf, for which she manifested more than ordinary affection. When the calf was three months old it was taken away from the mother and sent to the butcher block, but from the moment of separation the cow refused to eat, although food was constantly accessible to her. The animal continued to evince great mental distress, bawling almost constantly for several days and nights, and finally lay down and died, although being in excellent condition and showing no symptoms of disease. The animal grieved itself to death for the loss of its calf. Mr. Perrin says that in his long experience with cattle he never knew or heard of a similar case.—*Grass Valley Union.*

Smoking Infants at Livermore.

The trustees of the town of Livermore have passed an ordinance prohibiting the sale of tobacco, cigars and cigarettes to certain persons and the smoking thereof by such persons in public places, as follows:

SECTION 1. Every person who, within the town of Livermore, sells or gives, or causes to be sold or given to another, under the age of 16 years, any tobacco, cigars or cigarettes, to be smoked by such minor person, is guilty of a misdemeanor and punishable by fine not exceeding $20 or by imprisonment not exceeding 10 days, or by both such fine and imprisonment; provided that nothing herein shall be deemed to apply to the parents or guardians of such minor persons or to physicians.

SEC. 2. Every person under the age of 16 years who smokes any pipe, cigars or cigarette in any public street, square, grounds, hall or other public places within the town of Livermore, is guilty of a misdemeanor and punishable by fine not exceeding $10 or by imprisonment not exceeding five days, or by both such fine and imprisonment.

SEC. 3. This ordinance shall take effect from and after the date of its passage.

In referring to its passage the *Herald* observes: "We consider the purpose a good one. The average cigarette is rankly poison, and has a decidedly injurious effect upon a growing boy. Whether the practice can be entirely broken up in this way, we know not, nor do we assert that even a better result cannot be arrived at in some other and less energetic way. But this seems the readiest method of getting at the evil, and we do believe that it will tend to largely decrease, if not prevent it altogether. There should be no trouble in enforcing the measure, and we anticipate none."

ANTIQUITY OF MAN IN THE UNITED STATES.—Col. Charles Whittlesey has obtained evidence of the existence of two races of man, and possibly of a third intermediate race, as having held possession of the northern portion of the American continent—the more recent of them being the North American Indian or red men; the earlier race he terms the mound-builders. The antiquaries of Europe regard the people who used flint instruments as being prior to those who had implements of stone; and the latter, again, as older than the races using bronze or other metals. In the United States, the race next prior to the white man had very few implements of stone; their knives and arrow heads, their war implements and their agricultural tools, were almost entirely of flint; they had very few and rude instruments of native copper. The mound-builders, on the contrary, who preceded the red men, produced and used tools in the reverse order; their axes, adzes, and mauls were very numerous, and sometimes of stone; their copper tools abundant; but those of flint, very rare. Hence, in this instance, the most ancient people were the most industrious; they cultivated the soil; they possessed more mechanical ingenuity, and left more prominent and permanent monuments. On the Atlantic coast, from Nova Scotia to Florida, are numerous shell heaps, identical with those of Sweden, Norway and Denmark, and known as kjœkkenmæddings. The examination of several caves gave bones of the wolf, deer, bear, rabbit, etc., mixed with skulls of the red race, and not dating back apparently more than 2000 years. Col. Whittlesey estimates 2000 years as the period also of occupation by the mound-building race, which does not take us back as far as the beginning of the historical period in Asia and Africa.

How to Succeed in Business.

Don't worry. Don't overwork.
Don't make the field too broad.
Be wary of dealing with unsuccessful men.
Make friends, but don't encourage favorites.
Keep down expenses, but don't be penurious.
Keep a high vitality. Sleep well, eat well, enjoy life.
Stick in your chosen pursuit, but not to chosen methods.
Don't tell what you are going to do—till you have done it.
Enter your charges when the goods are sold. Don't wait.
Make plans for a little way ahead, but don't cast them in iron.
Be content with small beginnings—and be sure to develop them.
Don't take fresh risks to retrieve your losses. Cut them off short.
Be cautious; but when you make a bargain, make it quietly and boldly.
A regular system of sending out bills and statements is more effective than spasmodic dunning.

FORCE OF HABIT.—"There is nothing in the world that shows the inborn tendency of mankind to run in a rut more than the architecture of the modern shirt." So said a young man of iconoclastic tendencies. "For years men's vests have been buttoned almost up to the chin, and the little piece of shirt front that would be left exposed has been covered by a necktie. And yet men go on wearing shirts with fronts down to the waist starched and ironed till they are as stiff as a boiled plate, and they pay every week for getting two or three of these things carefully polished. A man might as well have the back of his vest laundried every week."

YOUNG FOLKS' COLUMN.

Look Up, My Boy.

There is hope in the world for you and me;
There is joy in a thousand things that be;
There is fruit to gather from every tree,
Look up, my boy, look up!

There is care and struggle in every life;
With temper and sorrow the world is rife;
But no strength cometh without the strife;
Look up, my boy, look up!

There's a place in the land for you to fill;
There is work to do with an iron will;
The river comes from the tiny rill,
Look up, my boy, look up!

There are bridges to cross, and the way is long,
But a purpose in life will make you strong;
Keep e'er on your lips a cheerful song;
Look up, my boy, look up!

Speak ill of no one; defend the right;
And have the courage, as in God's sight,
To do what your hands find with your might;
Look up, my boy, look up!

—*Good Cheer.*

The Turkey Pa.

[Written for the RURAL PRESS by MRS. J. M. H.]

Mamma thought as we had moved into the country where there is lots of room for everything, she would raise some turkeys. The first year she raised but one. She didn't understand just all about them, you see, and somebody told her hens made better mothers for little turkeys than a mother turkey. So she put the turkey-eggs under an old black hen; but just as soon as that old hen saw what queer-looking things came out of those eggs she was just as mad as she could be, and before we knew what she was about she had scalped five of the poor little things. That left us only three. Mamma then found a hen that wasn't such an Indian, and gave them to her. She was good to them, but two got sick and died and then there was but one.

He grew finely. The next year mamma bought a hen turkey and she hatched eight little turkeys. An ugly rooster killed one of them and—we had chicken for dinner the next day—the rest all grew splendidly. They were the hungriest little things. Mamma said they were always presenting their bills.

One morning, when they were a few weeks old, we found their mother stiff and dead in the bottom of the coop. Mamma didn't know what in the world she would do with those poor, motherless turkeys; but while we were standing there, feeding them and talking about it, along came the old gobbler, the same one we had raised the year before, strutting and gobbling, his feathers all puffed out, his tail spread and tilting from right to left. The little turkeys saw him and ran up to him, peeping and trying to get under his wings. He looked astonished. He folded up his tail, drew up his wings and laid every one of his feathers flat and smooth. He stuck out his red head and looked as if he didn't know just what to make of the situation. His neck turned purple and then white, then red. He looked as if he were embarrassed and was blushing. Finally, he began to step around very cautiously, the little turkeys following him and crying "peep, peep."

At last he seemed to understand about it and let them follow him. It was too funny to see them trying to get him to hover them. He couldn't seem to manage that, but after awhile would hunt bugs for them and give the alarm, which sounds like "quit, quit," when a hawk came sailing along.

Those little turkeys learned to strut and gobble when they were little bits of things, and sometimes, when a little gobbler would be strutting along with its tail all spread out so fine, a little hen turkey would dart up behind him and give one of the inside feathers a tweak, and that little gobbler would shut up his tail in a jiffy.

Well, that old fellow took care of them until they were grown, and then fought with the gobblers till you would think their necks would be twisted off. He was a fine bronze turkey, and when standing in the sunlight his feathers were lovely gold, red and brown; he had a golden band around his tail, and he loved to spread his tail and swell himself up just as big as he could, so as to show off fine when any one was looking at him.

After he took care of the little turkeys, we called him *The Turkey Pa.*

Lynden, W. T.

SAN JOSE REBUKES SANTA BARBARA.—Santa Barbara has permitted the celebration of its centennial to be disgraced by a brutal bullfight. The horns of one of the bulls exhibited were sawed off, after he had given proof of prowess, and those of the next bull were sawed off in advance by the cowards who managed the affair. Two horses were lifted in the air and another terribly gored. These cruelties were followed by a barbarous exhibition of the riata, in which one of the wild horses had his neck broken. After this, residents of Santa Barbara should be dubbed barbarians—without the *Santa.—S. Jose Times.*

GOOD HEALTH.

The Danger of Kissing.

There is danger in promiscuous kissing, especially in the very common practice of grown people, particularly strangers, in kissing little children. A physician lately said to a friend that he never allowed it in his family. "The danger," he said, "is so complicated and yet so certain that it would take too much time to describe it here. In my case, all kinds of people come to my house and office to consult me, and they often wait hours. If one of my children happen to come in they are almost certain to talk to it, and you know almost the first impulse with people who notice children is to kiss them. Bah! it makes me shudder—tainted and diseased breaths, lips blue with cancer, foul and decayed teeth. You would kill a stranger who would waylay your young lady daughter and kiss her by force, but the helpless, innocent, six-year-old child, susceptible as a flower to every breath that blows, can be saluted by every one who chances to think of it. I tell you it wasn't Judas alone who betrayed by a kiss. Hundreds of lovely blooming children are kissed into their graves every year."

"But, doctor, how can a mother be so ungracious as to refuse to allow people to notice her sweet little children?"

"There need be no ungraciousness, or, if there were, which is the more important, the safety and well-being of the child or the permitting of a habit of ill breeding and doubtful morality at best? Let the mother teach her child that it is not a kitten or a lapdog, to be picked up and fondled by every stranger, and instruct it to resist any attempt to kiss it. Why, there are agents, peddlers of household wares, who make it a custom to catch up a prattling child, kiss and pet it, and so interest the mother that she will buy something she does not want. I tell you there is death in the kiss! The beloved and lamented Princess Alice of Hesse took diphtheria from the kiss of her child and followed it to her grave. Diphtheria, malaria, scarlet fever, blood poison and death lurk in these kisses."

HINTS ON EATING FRUIT.—A correspondent of the San Diego *Union* furnishes the following very useful and suggestive hints on eating fruit, the latter portion of which we would call to the special attention of our city retail fruit dealers:—"The Health Officer some time since called attention to the danger of eating old or partially decayed fruit. This matter cannot be too strongly urged upon the public. There is still another source of alimentary diseases which seem to me equally dangerous, viz.: the eating of raw fruit over which innumerable flies have crawled. How often have we seen boxes of grapes on the sidewalk literally swarming with flies! When we think of the unspeakably filthy quarters from which those flies have gathered and the ease with which disease is thus carried from the sick to the healthy, we may well hesitate to buy and eat grapes thus unprotected. I speak of this fruit especially, because it is nearly always eaten raw, and the ordinary rinse does not at all remove the dangerous specks from its skin. Will not our fruit dealers, especially on warm days, make a more liberal use of netting?"

A NEW DISINFECTANT.—A new disinfecting compound for purifying the atmosphere of the sick-room has recently been presented to the Berlin Medical Society. Oils of rosemary, lavender and thyme, in the proportion of 10, 2½ and 2½ parts respectively, are mixed with nitric acid in the proportion of 30 to 1½. The bottle should be shaken before using, and a sponge saturated with the compound and left to diffuse by evaporation. Simple as it is, the vapor of this compound is said to possess extraordinary properties in controlling the odors and effluvia of offensive and infectious disorders.

EARTH INFECTIONS.—A barrel of kerosene oil buried 10 feet under ground will, it is said, contaminate every well within a quarter of a mile, and the oil will be apparent to the taste. The accumulations of privy vaults will extend their pernicious influence even a greater distance, although the water which it affects may not indicate to the taste the presence of any impurity. Whether privy vaults are open or plastered with cement, they cannot keep the poisonous gases and substances from penetrating the surrounding soil.

COFFEE AND EGG FOR SICK PERSONS.—A sick person wanting nourishment and having lost appetite, can often be sustained by the following, when nothing else could be taken: Make a strong cup of coffee, adding boiling milk as usual, only sweetening rather more; take an egg, beat yolk and white together thoroughly; boil the coffee, milk and sugar together, and pour it over the beaten egg in the cup you are going to serve it in. This simple receipt is used frequently in hospital practice.

DEATHS FROM ALCOHOLISM, so the New York *Herald* asserts, have decreased during the last 15 years from a ratio of 111 to 45 in each 1000.

DOMESTIC ECONOMY.

APPLE CHARLOTTE.—Butter a deep dish thickly. Cut smooth slices of bread and spread them with butter, and line the bottom and sides of the dish. Fill it with sliced sour apples. Sprinkle each layer of apples with brown sugar and any spice you prefer, also a few small bits of butter. Soak some slices of bread for a minute in milk or water; lay them on the top and cover them with a plate that will fit close, and lay a weight upon that. Bake two and a half hours in a moderate oven. It should turn out whole into another dish. Serve with cold sauce.

RICE CAKE.—One cup of cold boiled rice, three eggs, a tablespoonful of melted lard and the same of sugar; three large cupfuls of warmed milk, a cupful of flour, one teaspoonful of baking powder sifted twice with the flour, one even teaspoonful of salt. Beat the yolks light; rub the sugar and lard together and add to these, then the milk and salt, and lastly the whipped whites and flour alternately; beat hard one minute. Bake in a quick oven in two "birch" tins, and eat before it falls.

ORANGE MARMALADE.—Six large, sweet oranges and juice of two lemons; shred into fine pieces with a sharp knife, leaving out the seeds; put into a preserving kettle with two quarts of cold water, and let it stand all night; boil for one hour and add five pounds of sugar and boil one hour longer, or until the syrup is quite thick; fill jelly tumblers or small jars, and when cool, cover closely. I like this better than when made with bitter oranges. It will keep a long time and is easily made.

DUMPLINGS.—One cup of sweet milk, one egg, one heaping tablespoonful of butter, salt, one teaspoonful of soda, two teaspoonfuls of cream of tartar; rub the butter with a little flour to a cream, then add the remaining ingredients, with enough flour to make it very stiff. Drop the batter by tablespoonfuls on a greased pie tin, and steam about 30 minutes. This will make seven good-sized ones, which can be divided, and they cannot fail to be light.

SUGAR CAKES.—Half a pound of dried flour, one-fourth pound of fresh butter, one-fourth pound of fine, white sugar; mix the flour and sugar together, and then rub in the butter and yolk of an egg beaten with a tablespoonful of cream or new milk; make it into a paste, roll and cut into small cakes; bake upon a floured baking tin or shallow tin pan. A little grated nutmeg improves these cakes; a cake expressly for the wee folks.

COCOANUT COOKIES.—One grated cocoanut, one cup of powdered sugar, the whites of three eggs beaten to a stiff meringue, one tablespoonful of cornstarch wet with the cocoanut milk if sweet, if not, with water; one teaspoonful of rose water; whip meringue and sugar together, add cornstarch, cocoanut and rose water. Stir well and drop on buttered paper by the spoonful. Bake in a quick oven. Eat cold.

STEWED APPLES WITH RICE.—Scoop out the cores and peel some fine russet apples and stew them in clarified sugar. Boil some rice in milk with a pinch of salt, and sugar enough to sweeten it. Leave on the fire until the rice is quite soft and has absorbed nearly all the milk; place in a dish; arrange the stewed apples on the rice and put in the oven to remain until they are of a golden color.

BOILED CIDER APPLE SAUCE.—One-half bushel sweet apples, four pounds of sugar, a few quinces; put in sweet cider enough to cover the apples; boil and skim for four or five hours. This is superior to the old-fashioned boiled cider apple sauce, which was made of cider that had been boiled down separately, instead of doing all the cooking in the same operation.

MILK MUSH.—Three cups of hot milk, one cup of boiling water, one scant cup of white Indian meal, one even teaspoonful of salt. Scald the salted meal with the boiling water, and stir into the hot milk; boil in a farina-kettle for 20 minutes, stirring all the time; beat hard at the last, and serve in an uncovered dish. Eat with sugar and cream.

PLAIN MINCE PIE.—Two quarts of chopped meat, two quarts of chopped apples, one quart of sugar, one pint of molasses, one pint of water in which the meat was boiled, one quart stoned raisins, one tablespoonful of ground cloves, two of cinnamon, two nutmegs, two tablespoonfuls of salt; moisten with cider.

BREAD FRITTERS.—Cut thin, round slices of bread, butter them very thinly, spread with jam and stick together in pairs. Fry in boiling lard, after dipping them in a batter of one egg, one pint of milk, a pinch of salt and flour enough to make a pancake batter. Pile high on a dish and sprinkle with sugar.

WHITE MOUNTAIN CAKE.—Four eggs, two cups of sugar, one cup of butter, one and one-half cups of milk, four cups of flour and two teaspoonfuls of yeast powder. This makes two loaves.

WHITE CAKE.—Whites of three eggs, one cup white sugar, two teaspoonfuls of cream of tartar, one of soda, one-half cup of sweet milk, butter size of an egg, three cups of flour.

The Week.

The rain has come, although up to this writing, Wednesday afternoon, it does not appear how wide or deep the downpour may prove. The manner of its coming affords a timely illustration of the fact mentioned in the RURAL two weeks ago that the rains come from the north, while the wind blows from the opposite direction. The statement is, of course, not new, and yet many people do not realize the fact. This storm was telegraphed from Shasta and Butte counties several hours before the first drop fell in this latitude. It is to be hoped that the storm will prove an earnest and effective one. It is not too late to do much good, although probably the shortness of the working season will restrict the area which can be seeded in time for profitable growth. Along the coast the rain will refresh the pastures, although they have been growing well and could have stood a longer drouth.

The coming of the rain, if it prove as generous as we now hope, will add much to the happiness of the New Year's holiday. It will wake up business, bring courage to the Legislature and to the people, one to do and the other to bear, and generally minister to confidence and activity.

A Happy New Year.

The friendly greetings we toss so freely about at the opening of a new year have a beautiful meaning and value. They mean that we have, for once at least, risen so far above the narrow life of self as to wish others well. This is no small thing to do. When one can sincerely wish only good for all others, he has got beyond self and come into the great, warm life of humanity. He has conquered enmity, envy and jealousy. This does not mean to overlook the wrongs and vices of others, for that would not be well-wishing. No greater evil can befall many people than to go on happy and content in their present way of life. It means when we can wish all others well, that we desire for them all honorable success and all proper enjoyment. There is a real value in this state of mind. It is a blessing to the one who possesses it as well as to others. It increases the joy of one who lives in that state, and it goes out in fragrant helpfulness and encouragement to all others. And how much we all need encouragement, and what a sweet inspiration there is in the thought that in the hurry of life we are not forgotten. Blessed will be the day when every human soul can say from the heart, "A Happy New Year!"

What a strange glow of enchantment always hangs over the dawn of a new year. We are not invited to move over old ground. The eye opens upon a new landscape and the ear bends to new music. There is no routine in real life. The external outlines may seem the same. We live in the same houses, do business in the same old office, shop, or store, and pass along the streets we have traveled for years; but the heart and mind do not remain the same. If the years are repetitions with any one, it is because the enthusiasm of the heart has been killed. Nature hates a stationary life as she does standing water. It is the activity of the ocean that makes its purity and cures the invalid who breathes its washed and filtered air. Hence the true soul is willing to let the past slip away, for the future is so fresh and new. So let every one make his calls, and pass around gaily his Happy New Year's greeting.

Those who aim at the highest ideals, who earnestly desire to make the most of themselves, have it as a habit to recall the past, and in the light of experience try and shape a better future. It may be well for us all, at least once a year, to let this busy world stand aside and take a thought of self, try and find out our bearings and see if we can make out where we are, and whither going. There is an indication of the fitness of things that prompts men to begin new studies, enterprises of business, or start on a journey at some fresh period of time. The clock-work of the universe is so arranged as to furnish many favorable opportunities. Time is not so much a line as a circle, and when one cycle is complete, a new day, week, month or year comes to start us all in new movements or enterprises. And there is no better time than at the opening of the new year. All men instinctively feel that this is a good time to close old books and open new ones. That it is a fitting hour to open a new account with Time. True, we may have made many good vows and resolutions and soon forgotten them. But it is better to flutter a broken wing than not attempt to fly. It is better to sail toward better things in a leaky boat, bailing it out all the way, than not to sail at all. Forward! is the word of command borne in upon us by the new year. It says to us all, make amends for the errors and follies of the past year by extracting all the honey out of the coming one. Let not the dead past stand between us and the fair promise of the future. It is an old saying that it is easier to preach than practice, but the RURAL sincerely wishes all its patrons, friends and readers a HAPPY NEW YEAR.

IRRIGATION.—It is now rumored that Lux & Miller and Haggin & Carr have agreed to a division of the contested waters and will stop litigation. Nothing is definitely known of such an arrangement, however, at this writing. If these two contending parties hold themselves aloof from Sacramento this winter, it will possibly aid in fair discussion and decision on the questions involved.

Fruit Movements in Southern California.

The inability of the various competing transportation lines to agree on rates, and the frangibility of the numerous compacts into which they enter, bid fair to do California producers good service again. As a matter of fact, if it could be demonstrated that competition would always exist between different companies, the transportation question would quickly settle itself. There should, of course, be free scope for competition in carrying, as in other lines of business, and then rates would soon adjust themselves upon a fair basis.

A turn of affairs which now seems imminent promises to help our Southern California orange-growers in quite a satisfactory way. The following statement of affairs is given by an exchange:

Complications have arisen between the Southern Pacific Company and the California Southern by which the orange shippers of this State are bound to profit, although to what extent is not known as yet. A stiff rate of $300 a carload on oranges to Chicago, not affected in the slightest degree by the overland traffic war, has been maintained for a long time on both the roads and their Eastern connections, although other freight of greater value has gone at as low a rate as $60 a carload. It is now made known that the high rates were the result of an agreement on honor between the Los Angeles traffic agents of the California Southern and the Southern Pacific Company, made under the instruction of their head officials. Subsequent to this agreement on orange rates an understanding was reached between the two roads that no green fruit or raisins should be shipped on passenger trains at freight rates. Not long ago General Freight and Passenger Agent Wilkins, of the California Southern, made the discovery that, acting under instructions from Fourth and Townsend streets, the Southern Pacific Company's agent at Los Angeles had made a promise to a number of heavy orange shippers that if they would stand by the Southern Pacific during the present season they would be given a rebate of $25 a carload on all the oranges sent to competitive points. To this the shippers readily agreed. By careful inquiry Mr. Wilkins also learned that the Southern Pacific Company had contracted with the leading firm of raisin shippers in this city to transport all of its raisins on passenger cars at freight rates. By this action on the part of the Southern Pacific Company the California Southern feels justified in making what rates it chooses in order to get the business out of the southern points of fruit shipment this season. It is no longer inclined to make terms with the Southern Pacific Company regarding agreed rates, and all traffic agreements between the two lines are off.

If all these statements are true it will help the orange-growers materially in their contest for the Eastern markets. It is announced that Florida growers are hurrying their fruit northward for fear another freeze will catch it on the trees, and that there are large supplies arriving from the Mediterranean region. The Atlantic seaboard cities do not count upon California fruit reaching them in any considerable amount, on account of the high freights. A war in rates would send California oranges to all parts of the East, though the Western markets properly belong to us, and would naturally be supplied first.

There are many rumors arriving of great fruit enterprises in Southern California in the shape of canneries and drying establishments. Some of the rumors are denied, but there is no doubt that the industrial growth of the South will be magnificent during 1887, if a fairly prosperous season invites investments. It is announced by telegraph that Riverside will have a large cold storage concern, to be called the Inter-Ocean Cold Storage Company, and that they are putting up works at a cost of $40,000, having a capacity to cool for shipment 10 carloads of fruit per day. The fruit after being cooled is shipped in refrigerator cars and arrives in the Eastern market in as good condition as it was when first picked from the trees or vines. The company has experimented at Santa Ana during the past season to such an extent as to make sure of their position.

IMPROVED CATTLE IN OREGON.—The *Farmer and Dairyman* of Portland says that T. A. Fletcher, of the Indiana Blooded Stock Company, recently arrived at the Portland stock yards with two carloads of pure-bred cattle, 40 head of them Herefords and 4 Polled Angus. They were sent from the company's breeding farms near Indianapolis. The cattle all arrived in fine condition, in spite of their long journey.

ANOTHER overland railroad rate war seems imminent—whereat the tourist will rejoice. While the S. P. folks profess to be holding up to their schedule rates, cuts of $10 to $20 are said to have been made on the A. & P., with prospects of speedy increase.

CERTAIN parties have in contemplation the establishment of a flax factory in Menlo Park.

Better Rates for Payment in Advance.

Wanted—20,000 New Subscribers in 1887.

We are desirous of furnishing the RURAL PRESS to subscribers at as low a price as possible without sacrifice to ourselves or lessening its good qualities as a clean, handsomely printed and valuable reading journal. While we cannot see our way to reduce the regular price below its present rate of $3 per year, we have determined to try the plan of offering greater inducements for all subscribers to pay as far in advance as possible, hoping thereby to greatly increase the number of our patrons, and, if possible, improve its issues from time to time.

Therefore, during a period of sixty days from date, to all subscribers paying $3 in advance we shall give thirteen and a half months (one year and six weeks) credit. For $1.50 in advance, six months and three weeks. Subscribers delinquent less than one year will be charged at the rate of $3 a year up to the time of paying, and will be allowed two months and an extra No. for each fifty cents paid in advance. In case any arrearages should occur beyond 12 months, $3.50 a year will be charged. All agents and clerks are required to adhere to these terms. No new names entered on the list without payment in advance.

All our premiums are offered under these terms, except that for seeds.

It is not at present possible for any firm on this coast (if indeed anywhere else) to offer better rates than these, for any length of time, and do justice to themselves while furnishing as good a paper as the PACIFIC RURAL PRESS.

Jan. 1, 1887.

Life, Liberty and the Pursuit of Happiness.

It is doubtless the right of every man to decline to work for any other man or any corporation if he be not satisfied with the terms they offer, but it is not his right to forcibly interfere with others in working on such terms as they choose to accept; and when men conspire and resort to violence with the purpose of compelling another to carry on a business for their benefit on such terms as they may dictate, they become enemies of society.

The rioters in San Francisco who last week attacked peaceable citizens in the pursuit of their lawful avocations, destroyed property and even assaulted municipal officers, have injured the noble cause of labor incalculably by their mad outlawry. They tend to prove the truth of the assertion that "the tyranny of organized labor is full as remorseless as that of organized capital." And the perpetrators of such murderous acts as have been attempted here the present week, by those who deny other men's right to "life, liberty, and the pursuit of happiness" except on such conditions as these lawless banditti themselves prescribe, should be hunted down by the combined powers of the whole community and meet the speedy fate of J. Wilkes Booth and like assassins. The representatives both of labor and capital should join the officers of the law in detecting and bringing to justice these cowardly masked miscreants.

GRAPES FROM SPAIN.—Weinstock & Lubin, of Sacramento, have recently favored us with a sample of Almeria grapes which grew on the Mediterranean coast of Spain and came, packed in corkdust, across the sea and through the wintry weather of our Eastern States. The berries are of a light-green color and shaped much like the Cornichon. They are watery and insipid in flavor even beside the Flame Tokay, and have little to commend them as a table grape, save their capacity for enduring a long journey. But, considering that they have traveled 7000 or 8000 miles, they are in wonderfully fresh condition, and we watch with no little interest and curiosity to see how long, in their corkdust stronghold, they will withstand decay. It may be added that these are the grapes which have hitherto found so large a market on our Atlantic Coast. The arrivals from Almeria in New York for the season of 1883 were reckoned at 112,000 50-pound kegs; for 1884, 50,000; for 1885, 56,000; and for 1886 (Sept. 15th to Nov. 15th) 159,000 kegs. (The falling off of shipments during the years 1884-85 was chargeable to heavy rains in the vineyard region.) Wherever our native fruit can be laid down beside the imported, the California grapes must be given a decided preference to the Spanish.

The Wool Interest.

As Congress has reassembled, we are greeted with new rumors of the purpose of the reformers, either to put wool on the free list, or to still further reduce the protective duty upon it. The telegraph announces that "free wool" is one of the items in the scheme of the Secretary of the Treasury, and almost at the same time comes the following timely announcement from Washington, by telegraph:

If the revenue reformers can revise the tariff this session, they propose to put wool on the free list. The report issued to-day by the State Department on the woolen mills of Scotland, by Consul Malmrose, of Leith, shows what the laboring men of the United States must contend with to compete with foreign woolen manufacturers who have free wool. The average weekly wages paid men in the Scotch mills is as follows: Carders, common hands, $4.38; second hand, $5.11; spinners, $6.08; weavers, $7.30; scourers, $5.11; shearers, $4.38; pushers, $4.38; overseers of dyes, $8.51; slushers, $4.38; blacksmiths, $6.08; knotters, $2.92; darners, $3.89.

One would think that these figures would open the eyes of the reformers to the evil which such a scale of wages would work in this country. Can we afford to reduce our wool interest to competition with such priced labor?

J. D. Weeks, in his special report on the late national census, furnishes some interesting matter concerning the woolen industry of the country, which is summarized by the Boston *Journal of Commerce*, as follows: The data which he was able to gather were, to him, quite satisfactory, which, of course, make it more acceptable to the general reader. With very few exceptions, the running time of woolen mills is from 10 to 11 hours a day, the latter time being mostly in vogue in 1880; but within the last year or two several States have legislated to the effect of constituting 10 hours as an average day's labor, which probably brings the 10-hour and 11-hour plans about on an equality, as to the number of establishments adopting them. It appears that in some parts of the country, mills are operated from sun to sun. Mr. Weeks does not discover any special change for the better, in the efficiency of labor, except that which follows experience. Improvements in this respect relate more to individuals than to the entire labor force. The manufacture of higher grades of goods impels the employment of efficient labor, or the best that can be secured, and when this cannot be obtained from the local population, recourse to the factories of Europe is not infrequently made. But the lack of gain in the efficiency of labor is more than made up by the great advance in the efficiency of machinery, which has reduced the occupation of the mill hand, in many particulars, to that of a mere tender of a machine. Where skill is mostly observed is in the directing power of the person in charge, whose education must be derived from a theoretical and practical training in the technics of his vocation, for the accomplishment of the best results. Perhaps no improvements in machines have been so noticeable as in the devices for spinning and weaving. In the first respect, the changes for the better have been the work of comparatively very recent years, by reducing the cost of labor for spinning yarn fully one-half. In the second respect, the progress has been only less marked, by effecting a reduction in the cost of labor and increasing the amount of production, without diminishing the earnings of the employe.

One of the principal woolen factories in the country is the Fitchburg, Mass., mill. That mill is taken by which to show the progress which has been made in the economy of woolen manufactures during the last 20 years. At this mill the "cost of labor per yard of 3–4 standard cassimeres" was 25 cents in 1865, 25½ cents in 1870, 18½ cents in 1875, and 19¾ cents in 1880. Though the cost of labor was less per yard in 1880 than in 1865 or in 1870, the percentage of wages to cost of the manufactured goods was the reverse, being 12¾ per cent in 1865, and 12½ per cent in 1870, to 29⅓ per cent in 1880. The same relative condition has been the experience of a number of other mills in New England. This is to be accounted for in the less cost of the materials that enter into the fabrication of the goods. It further shows that wages have not suffered in reduction, in proportion to the fall in the prices of merchandise, raw or otherwise, and to this extent labor is better paid to-day than it was 20 years ago.

To carry out the scheme for free wool would be to turn the course of wages backward and to make unprofitable the invention and investment which have brought into existence our improved mechanical appliances. More than that, it would reduce the price of wool so that our grand wool-growing interest would be swept away. We do not think the country is ready for any such sacrifice, in fact the November elections clearly declared that it did not favor such a course.

Twine in California.

In the announcement of seeds offered for distribution by the University, which we publish on another page, will be found mention of fiber flaxes and the intimation that the growing of the crop may be profitable if suitable machines and processes are used to prepare the fiber for the twine-makers. We are assured that the manufacturers are quite ready to use the material when it is offered them in suitable form.

One of the specialties of the Oakland cotton factory is the manufacture of twine—the curiously wound balls of white cotton twine which are so much used by traders in tying up little parcels, and by the ladies in crocheting many of their little table and mantel ornaments, etc. The process of winding these balls is curious and interesting, and is done by an ingeniously devised piece of machinery, by means of which one girl or boy may wind 20 or 30 balls—according to the size of the machine—in less than five minutes. There are twines and twines in great number and variety. Few persons have any idea of the immense consumption of this article. One of the greatest demands comes from the farmers in the Eastern States, who, it is said, consume 35,000 tons annually on their self-binding harvesters.

In California we use twine-binders too, especially in the coast valleys where the fields are not large enough for the profitable use of the combined harvesters, and it would be quite an advantage to have the twine manufactured on this coast. The twine used on the self-binder is generally made either of Sisel or Manila hemp. The Sisel is the cheaper material, but is not so strong or durable as the Manila. In some twines a mixture of the two is employed. For binder purposes the twine should have 16 turns to the foot, and a length of three feet would have a breaking strength of not less than 70 pounds. The twine must be carefully made, free from swells or knots, or it will not run smoothly through the knotting device of the binder. The average consumption of twine on a binder harvester is two pounds per acre. About 1200 feet of twine per acre is required. It costs the farmer about 25 cents an acre for his twine. Allowing 5 pounds to the mile in length of twine, the total consumption of Eastern farmers would make a length of string sufficient to go more than six times around the earth. Manila hemp makes much better twine than any other fiber, being stronger, smoother and more durable. The raw material costs more and its twine sells for more than Sisel hemp, but the Manila twine goes further and is actually cheaper in use for the farmer; but this fact, however, is not appreciated by him, and he sticks to the Sisel twine because offered a little less per pound than the better article of Manila. Then, again, the Sisel twine breaks much oftener while running through the binder than the Manila. At every break the farmer must stop his machine and spend 10 or 20 minutes to fix up. He never thinks of charging his lost time against his poor twine. As long as he gets it for a cent or two less than the better article he is perfectly satisfied, no matter if it does bother him.

If we do not use such a large amount of twine in proportion to our wheat crop in our way of cutting it, we use far more in sacking than they do at the East, and thus the use of twine by the sack-sewers on the combined harvesters or with the ordinary thrashers becomes a large item. After this comes the large consumption of twine in nets, in wrapping bundles, etc., and it becomes quite apparent that it will be an important consideration to have it manufactured here. We trust the growth of fiber flax and other textiles may be found profitable in this State.

THE building of the Santa Rosa & Benicia Railroad is now contracted for. The work is to be commenced within 60 days and finished by January 1, 1888. It will give employment to 500 or 1000 men. The people of Santa Rosa appear in fine spirits at the state of the enterprise.

California Climate and Buckskin.

THERE are 20 glove factories in this State, half of which are in San Francisco. The extraordinarily rapid growth of the glove-making industry is due to peculiar advantages we possess, the principal of which is that California-tanned buckskin is the best in the world, as is universally acknowledged. Most of the gloves manufactured here are made from this buckskin, and the market for them has extended to all parts of the Union. The reason for the superiority of our buckskin is that our tanners employ the best-known method of tanning the skins. It was learned from the Indians, and is a close imitation of their method, with some improvements. This is what gives to our buckskin the widely-known name, "California Indian-tanned buckskin." This process of tanning is much more dependent on the climate for its success than would ordinarily be supposed. An even temperature and mild weather is especially desirable, and on this account the business has been much more successful in this city than elsewhere. One firm, employing 50 hands, is now engaged exclusively in tanning glove leather and dressing the various kinds of furs used for trimmings and linings. This tannery alone turns out about 100,000 buckskins, 6000 sealskins and 5000 dogskins every year. From one-third to one-half of this amount is sent to Eastern manufacturers, and that business is rapidly increasing. In one shipment made to the East last spring there were 100,000 pounds of buckskins. The principal reason for the popularity of California buckskin is because it is thinner and softer than the Eastern oil-tanned buckskin. In the latter process lime is employed, which makes the leather thick, thereby detracting from its wearing qualities and adding to the clumsiness of the gloves. Attempts have been made in the East to tan buckskin by the California process, but with very indifferent success. The leather is never so pliable and is harsher to the touch. It seems as impossible for Eastern tanners to equal our buckskin as it is for American tanners to equal the superior glove-kid leather that is imported from France. The constantly increasing popularity of California buckskin is proved by the advertisements of Eastern manufacturers who all claim to make their gloves of genuine California buckskin. This is true even in New York, where most of the gloves are made. Consumers in those States soon learn of the superiority of our leather, and invariably call for gloves made of it.

ALL ABOARD FOR CHICAGO!—The last carload of citrus and other fruits for the display at Chicago was started from Sacramento attached to the overland train on Thursday of last week. The *Record-Union* says there was a large number of people at the depot to witness the departure. The shipment was accompanied by P. E. Platt, J. J. Morrison and R. B. Blowers, directors of the Citrus Fair Association, who go to conduct the Chicago Citrus Fair, in connection with E. J. Gregory, who left for the East on Monday evening, and D. N. Honn, of Red Bluff, and Mr. Cutter, of Oroville, who were to follow on Friday or Saturday. At Auburn the train was greeted by the firing of guns, music by the brass band, the waving of torches and transparencies, and cheers from the assembled populace. The demonstration was intended as a compliment to Mr. Morrison in particular, and to cheer and stimulate the committee in general by assuring them of the people's interest in their mission.

WHOLESALE ENGINE-BUILDING.—The *Bee* of the 24th ult. states that the Southern Pacific Company has ordered the construction in its Sacramento workshops of 37 engines, some of which are to be 19x30 and others 20x30—the largest-sized engines in use. Their construction will cost more than $450,000, which amount will be expended principally among Sacramento workmen. These engines are for use on the Oregon & California, California & Oregon, and other Southern Pacific roads, and work upon them will be begun at once. There are now nearly 2000 men employed at the shops in Sacramento, and there is a great quantity of work on hand. The construction of 37 additional engines will give employment to many more men and add vastly to the already large sum paid out monthly by the company.

ENTOMOLOGICAL.

Worms in the Apples.

EDITORS PRESS:—It is a good time now to talk about the codlin moth. The past year has been noted for the abundance of this insect nearly all over our State. Some of our horticulturists in Santa Cruz county had a pet theory that this moth would not flourish so near the sea, or in our peculiar climate, or for some other mythical reason. That theory has been exploded. In Ventura county they have another theory, the smell of coal oil which comes from the submarine oil springs is supposed either to kill or prevent these insects from spreading.

In our neighborhood an experiment has been tried. An orchard, isolated, about one mile from other trees, in which the insect had become very abundant, was cleared entirely of its fruit in June, when it was supposed the eggs were all hatched and the worm securely in the apple. It was thought that this would make a clean sweep of the animal, and quarantine afterward would prevent its reintroduction. This was done on the theory that the codlin moth can *only live* on the apple, pear, and fruit of that kind.

Who can enlighten us on this point? I have an idea that the codlin moth cannot be disposed of in that way. While there are wild roses, manzanitas, and other plants in the woods that bear fruit similar to the apple, may not this insect forage on them?

Again, the means of transportation of the codlin moth are so numerous that quarantine is very difficult. They may be carried in an old coat, or wrapping about goods, furniture, trees, and a thousand other ways. In fact it is strange they have not spread more rapidly. And I fancy if we depended alone on our intelligence and skill in trapping, destroying, and preventing them from reaching our orchards, we would be overrun and eaten up by the codlin moth larvæ.

But there are environments of seasons and of foes, that come to our aid, often when we least expect them. Standing on the plank sidewalk one early morning after a rain, I saw swarms of winged insects (not codlin moths) coming out from under the boards. The air was full of them, flying and spreading in all directions. And while I stood considering the source, direction and destiny of these things, I noticed some small sparrows coming out of the garden near by and raiding the insects.

The sight was suggestive; for only a little while before the gardener had been shooting these birds because they plucked a few cherry blossoms for the honey they contained; and later when his apples were grown, behold! they had worms in nearly every one.

May it not be that one bird will destroy more codlin moths in one day than two hired men? And suppose the birds destroy some fruit—that is not half as bad as a worm in each apple.

Santa Cruz. C. L. ANDERSON.

Remedies for the Codlin Moth.

EDITORS PRESS:—I would like to give two remedies for the codlin moth, and if used as directed am sure it will clear an orchard of those pests. I have used them both in Pennsylvania, and think they will work fully as well in California.

The first is: One tablespoonful of Paris green to two gallons of water (or about one pound of the same to 45 gallons of water). It is best to use the small quantities, as they can be mixed better. The trees want to be sprayed when the fruit is set and about the size of a pea, and before the calyx turns down. The wash is perfectly harmless, as the growth of the fruit and the winds throw it off before the fruit is ripe. It will prove of very little use if used at any other time than above stated, and one application is enough.

The other remedy is to make a strong solution of tobacco water, and to every five gallons add one-fourth pound of whale-oil soap, and after spraying the fruit and foliage, wash the trunk to the ground. After the last rains paint the trunk with a solution of cow manure and sulphur mixed in the tobacco water. This serves as a preventive in keeping the larvæ from climbing up the tree. This latter remedy is as good as Paris green, if used as directed.

The method for making tobacco water is to put the stems into a sack and pour boiling water on and let it stand in a barrel for a few days before squeezing out. JAMES O'NEIL.

Haywards, Dec. 20th.

OUR venerable friend and correspondent, John Taylor, of Mt. Pleasant, favored us with a call in person not long ago. His agricultural and ethical contributions from Tuolumne county these many years have made him as a familiar acquaintance to the readers of the RURAL. He bears the recent demise of his wife with the resignation of a Christian and spiritual philosopher. Since our issue for December 25th went to press the mail has brought us some sweet and kindly Christmas thoughts in his handwriting, which we have on file against the return of the holiday season.

FRUIT MARKETING.

The Fruit Problem.

EDITORS PRESS:—Since you have so kindly opened the columns of your paper for the candid discussion of the problem of Eastern shipment of fruit, I will give a few of my ideas. Of course, we will now have plenty of prophets who will point their finger at the Union and exclaim: "I told you so. I knew it. I told you that the California Fruit Union would be a failure," who, at the same time, never did anything to encourage or favor the Union, but have done all they could to antagonize the Eastern shipper and the producer, and the result has been a disastrous season to the fruit industry.

We opposed the Union from the start. But, as it was, we submitted cheerfully to the voice of the convention, and joined hands in good faith with the Union; took stock and shipped the first 4000 boxes of early apricots and peaches through the Union to Chicago. While shipping through the Union was satisfactory to some, to many it was not.

That some other plan must be adopted is evident to all. Just what that plan is, no one seems able at present to explain. We heartily indorse the auction plan for selling our fruit as the next experiment, and would recommend Porter Bros. Company as the commissioned agent for Chicago.

That the 15-car train was wrong, everybody is now ready to admit. That it was the death-blow to the fruit market, no one pretends to deny, and so will the 10-car train prove disastrous to the fruit industry. To furnish even 10 cars of green and perishable fruit when the mercury is standing at 110° in the shade, the producers or shippers are compelled to crowd in fruit that is too green, fruit that is too ripe, fruit that is too small, fruit that is picked in the heat of the day and packed when it should not be, in order to make up the train so the producer or shipper might have the benefit of the reduction—the train rate. (I know of my own personal knowledge that shippers bought and shipped fruit that was not fit to feed to hogs so as to make up the train.)

Many producers shipped much inferior fruit under the impression that they could make it pay at the 15-car train rate. Hence the great quantity of poor stuff sent East the past season. To make up a train of 10 cars, 10 tons to the car, 200,000 pounds of green and perishable fruit would be gathered promiscuously and thrown together in the shade, rushed and thrown on a market after a nine-days' journey. How much better will the 10-car train be than the 15-car train? Just one-third, no more. Many of the producers preferred to pay $600 per car the past season and have their fruit go when it was ready and go on passenger time, than wait and ship on the fruit train at $300 per car. If this proves anything, it proves that what we want and must have is a uniform rate on fruit, whether for one car or for 10 cars. The question is asked, how are we to obtain from the railroad the proper concessions? The easiest thing in the world! Let the fruitmen unite, and, like old Gen. Jackson, swear by the Eternal that they will neither ship nor sell to any man one pound of green fruit to be shipped over the railroad till they give the shipper and producer a reasonable reduction on fruit and move the fruit as it should go, one car or a dozen cars, at a uniform rate. Can it be done? Certainly it can. Did not the canners a few years ago combine and form an exchange to rob the producer of his fruit? They were not willing to pay even a living price—in fact they would not offer anything. They knew it was a perishable product and set a snare, but were caught in their own trap. A few of the leading apricot-growers in this early locality just quietly bought material, made trays, and when the 'cots were ripe, went to drying. The canners kept still, took a walk each morning down to the store—but no apricots. The mercury rose to 112°; still no apricots. The canners now got uneasy and rushed up here, glad to pay two cents for 'cots. So ended the Exchange. And now, after years of planting out multiplied thousands of apricots, thousands of young trees having come into bearing, the canners have come and contracted with four of our largest apricot-growers for their crops at two and three-eighths (2⅜) cents per pound for five years, delivered at depot.

Can the railroad be brought to time? Certainly they can. Don't you know the soul of the corporation lies in their pockets? Touch that and you touch them where it hurts. There have been 100 cars of green and perishable fruits shipped this season, at $600 per car, or $60,000; there have also been 300 cars shipped, at $300 per car, or $30,000, making the nice little total of $150,000, while the producers and shippers, as a rule, have lost money or not received a cent net proceeds. Relieve the corporation's pocket of this enormous sum, and if it doesn't regulate the fruit and accommodations, nothing will. However, before adopting my plan, I would suggest that the committee appointed by the fruit-growers at Sacramento secure from all the leading shippers their account sales received from the East this season, lay them before Mr. Stanford and the railroad magnates for their examination, and if they don't move the soul of the corporation, nothing but my plan will. Then let the producers unite and swear by the Eternal that they will neither ship nor sell, to be shipped over the railroad east of the mountains, one pound of green fruit till proper reductions are made on rates for moving our fruit; it may be that this and this only will do it.

We will now notice the sixth paragraph of Mr. Weinstock's preamble; also the third paragraph in his resolutions—not that we desire to criticise, but that we condemn them as being impossible to carry out. Here is the sixth paragraph of his preamble: "The need of proper inspection at this end of the line, vast quantities of inferior and imperfectly packed fruit having been permitted to go East, thus not only causing its owners serious losses, but also depressing the price of such good California fruit as happened at such time to be in the same market." And here is his third resolution: "That said management also establish regulations to control the quality, the weight and the manner of packing all fruit offered for Eastern shipment, and that its inspectors reject such fruits submitted for shipment as do not come up to the established requirements."

That sounds well, and looks nice on paper; but it is one of the impossibilities to carry it out. And I, for one, am glad of it. What right has any man, because he is more fortunate than I in obtaining fine fruit, to say mine shall not go into the same market to compete with his? No, sir! every man must and will ship whatever he wants to, and of just such quality as he has. That is every man's right. It is my privilege, and so it is every other man's privilege, to ship green fruit, ripe fruit, large fruit or small fruit. There is such a combination of difficulties in these two paragraphs that they must be left entirely to the producer and shipper. His gains and losses will regulate him in the quality and quantity as well as the packing. There is but one kind of fruit that can be condemned—that is, fruit that is over-ripe and leaking at the time of shipping, and likely to injure other fruit. And that must be done by the parties loading the car, and not the Exchange—which should have nothing to do with it. What right has any exchange or set of men to say how my neighbors and I shall pack our fruit, or what kind of fruit we shall ship? That must be left to the producers and the local organizations.

What! talk about condemning my fruit because it is not packed right? Why, even Porter Brothers and Mr. Earl don't know it all. I knew good fruit packed by their orders, every apricot wrapped in separate paper; and when it arrived in Chicago, only five days en route, every box was rotten, more or less, in the center of the box. Then I knew a Pike county Missourian who packed his apricots in a small 20-pound box without even a piece of paper, and they arrived in Chicago in splendid condition. Now I claim that both modes of packing are correct, and yet they are directly opposite to each other. Who shall be the judge whether the fruit is wrapped or not? The man who owns the fruit. The trouble is, the Union, or Exchange, wants to do too much. We must clip its wings and not let it soar too high. Let us come down to good, practical, common-sense business. What we want, and no more, is a well-regulated plan for moving our fruit when it is ready to go. There are two central ideas that should be kept in view by the Exchange: First, a well-regulated and practical plan to move the greatest amount of fruit at the lowest possible freight rates; second, it should open up the most extensive market it could, then leave the local organizations to arrange the minor affairs, giving every member, shipper or producer all the privileges that an Exchange could.

We submit the following resolutions, having embodied those of Mr. Weinstock that we could indorse and added others that practical experience has proved must be added to and carried out, though they are in a crude form and subject to amendment:

Resolved, That the fruit-growers, in State Convention, do hereby modify the by-laws of the California Fruit Union, so as to embrace the following resolutions, namely:

1. That all persons raising or shipping fruit for Eastern market be eligible to membership.

2. That such association, through its management, appoint a commissioned agent, in every town and city, that can use a carload or more of California fruit at a time. The commissioned agent shall be a commission merchant.

3. That the commissioned agent or commission merchant receive his pay out of commissions on produce consigned to him.

4. That each and every market be open and free to each and every member of the Exchange, whether producer or shipper.

5. That all subscribers to the California Fruit Union, with all the other subscribers, shall have the right to reserve the privilege to sell to whomsoever they please.

6. That members of the Exchange shall have the privilege of naming points of destination for their fruit; but all fruit sent through the Exchange must be sent to the commissioned agent, who is a commission merchant.

7. That all shippers, shipping through the Exchange, shall have the right to say how their fruit shall be sold by the commissioned agent, either by commission or by auction.

8. That the auctioneer's charges be paid out of the commission allowed the commissioned agent.

9. That there shall be one general manager; that he shall be located at Sacramento; that all cars ordered by any member of the Exchange shall be ordered through the general manager; and that the general manager shall be notified, at the time of ordering car, of its destination.

10. That it shall be the duty of the general manager to provide cars for the Exchange. It shall also be his duty to cause to be placed on a bulletin board, at every shipping point, each and every morning, the number of cars ordered the previous day and their destinations.

11. That it shall be the duty of the general manager to ascertain the freight rate per car for green fruit from Chicago to New York; also to Boston, to Philadelphia, St. Paul, Cincinnati, and every other city where the Exchange has appointed one commissioned agent, and to have all the rates of freight from Chicago to the other cities printed and kept on the bulletin board, at each and every shipping point in the State where a member of the Exchange resides.

12. The general manager shall ascertain the length of time required for a car to go from Chicago to New York, also to any other city where the Exchange has a commissioned agent. It shall be his duty to have the time printed and placed on bulletin boards, as the freight rates are at every shipping point where there is a member of the Exchange.

13. That the general manager shall act as secretary for the Exchange. That there shall be no salaried offices, except the general manager and directors.

14. That no producer nor shipper that does not belong to the Exchange shall have the privilege of the reduction of rates granted to the Exchange by the railroad.

15. That the commissioned agent of the Union in every city shall telegraph to the general manager in Sacramento every day the price of California fruit in his city, specifying each kind of fruit; that the general manager shall cause such information to be daily posted on the bulletin board in every shipping point whence there has been a carload of fruit shipped.

In behalf of our resolutions, they tie no man's hands, they take no market from any one, they give every man the same privilege. The small producers have the same privilege and same advantage that the large producer has. The unfortunate man with poor fruit can send it, providing he pays freight and expenses on it. All markets are open alike to producer or shipper; every member can ascertain, by going to bulletin board, where every car is destined, and can select his own market. If we understand the object of the Exchange or Union, it is not to enrich a few, but to find a market for the surplus of California fruit. In other words, we must have the utmost possible reduction in freight, that our fruit may reach the markets where multiplied thousands of hungry people are ready to consume it at a living price.

Winters, Dec. 10, 1886. G. W. THISSELL.

Mr. Weinstock Proposed for Manager.

EDITORS PRESS:—It is a fact generally conceded by all the stockholders, in order to preserve the existence of the Fruit Union, a general reorganization of its system and officers will have to be effected. With this object in view, we beg of you to give publicity to the inclosed from Mr. H. Weinstock, who, after urgent solicitation, has agreed to serve us as manager, and, we think, as president too, as the two offices should be combined, with a board of advisors composed, as he states, of at least a minority of shippers, as the last season has more than proved to us that their co-operation is necessary to success. It would occupy too much of your space to attempt to give the many reasons why Mr. Weinstock should be placed in this position, as the letters he has published and the explanations of his proposed plans made at the horticultural meetings at Sacramento expose a part and parcel of what will be introduced at the semi-annual meeting of the Fruit Union, to take place the 20th of January, 1887. After diligently searching the whole list of stockholders, we find no one more capable for the position. R. H. CHINN.

Vacaville.

Mr. Weinstock's Letter.

SACRAMENTO, Dec. 13, 1886.

Mr. R. H. Chinn, Vacaville—DEAR SIR: Your favor of the 12th inst. is here. In response permit me to say that I trust I merit the compliment your letter contains. I certainly do feel a deep interest in the future welfare of California fruit culture, not alone as a grower, but also as a business man and citizen. I know of no other industry upon which the future prosperity of our State so much depends, and I know of no other industry that has such excellent prospects before it as California fruit culture, provided the markets of the East are properly developed and controlled.

Regarding the question of officers for the Union, I fully realize the grave importance of making wise and judicious selections. The best systems that man can devise will miscarry and prove of no avail if executed without judgment or intelligence.

At present I am not prepared to suggest names for the positions of president and manager of the Union, as I do not know enough about the business capacity of the stockholders generally to warrant an intelligent opinion. I have been strongly urged by members of the Union to allow my name to be used in connection with the position of manager. I know of no work that I would perform with deeper interest and with more pleasure. Notwithstanding all the difficulties and obstacles that are sure to arise in the carrying out of the plan advocated, I have so much confidence in its merit that, with a unity of action between growers and shippers once established, I feel morally certain that the plan can be made much more successful, the markets of the East greatly enlarged, and the returns to shippers and growers more largely increased than by any other system hitherto attempted. But I am so situated that at present I do not see how I can do the work justice without doing serious injustice to other large business interests to which my time and energies rightfully belong.

Regarding the selection of directors, I would say that if a unity of action between growers and shippers is secured, it would be very advisable that the shippers have a fair representation on the Board, for the following reasons: First, because, as a rule, they are business men of wide experience. Secondly, they represent large interests and ship by far more fruit than even the largest grower. Thirdly, because they are thoroughly familiar with the Eastern market, the methods of packing, shipping, distributing, etc., and, as members of an advisory board, their knowledge and experience will be of much more value than that of an average grower. And lastly, I favor some shippers being selected as directors because it would bring more harmony and a better feeling between what last season were contending factions, and, if possible, would identify more closely the interests ot grower and shipper.

As to which of the shippers shall be selected for directors, I am not prepared at this writing to say. Personally, I have no preferences to express. But since they nearly all can be named on the fingers of one hand, and since all of them are well and more or less favorably known among the growers, it can be no difficult matter to select the best from among them.

I shall always be pleased to hear from you. Very truly yours, H. WEINSTOCK.

What the New Yorkers Think of It.

NEW YORK, Dec. 27.—H. S. Dewey, of the winehouse of Dewey & Sons here, in an interview to-day regarding the high prices charged for California grapes in this city, said: "There is really no reason why we should not have the beautiful Flaming Tokays and Black Hamburgs retailed all through the season, from 12 to 15 cents per pound. Some man with push and energy could take hold of the enterprise, organize it properly and make a fortune out of it, while supplying the public with the best and most healthful fruit that grows."

Mr. Everett, of the fruithouse of Miles & Everett, said: "The trouble is that there is no organization in the business. At present there is no one in the market who buys California grapes outright and sells them at reasonable advances. All grapes sold here are handled on commission, at every step of the way, from the grower in California to the hawker on the streets. Some commission man in San Francisco takes grapes to sell for what he can get for them, returning a certain percentage to the grower, who sends them on similar terms to some big commission-house in New York. The big house then turns them over to the little houses, and the little houses in small lots to the hawkers, and every time they change hands an increased sum is fixed, which must be returned by the persons who take them. In this way it happens that the lowest price for a carload of California grapes in fair condition in New York City is eight cents per pound. That rate, it may be thought, would leave a margin for great profit in handling the fruit, but every man who sells, all the way back to the commission-house in San Francisco, has to allow a percentage for somebody else; so there is not much profit in the business, and prices are inevitably high. Furthermore, the number of growers in California who are willing to let their fruit go on the commission system is small, and for the risks of business they must demand a rate equal to four or five times what they would sell at for cash. Let a company be organized, which will keep its agents among the California vineyards supplied with funds and ready to buy on the spot with cash; then let the grapes be brought here by quick freight and sold directly to retailers. There will be not only an enormous profit in it, but a business far beyond that done by the largest commission-house in New York during the season."

NEW YORK, Dec. 28.—In an editorial on the California fruit crop, the *Herald* says: The *Herald* offers its congratulation to the Golden State, the picket guard of the Republic on the West. We drink her wine, eat her grapes and admire her energy and patriotism.

FLORICULTURE.

Notes on Roses, Etc.

EDITORS PRESS:—It is with pleasure I notice the inauguration of a "Floral Exchange" through the medium of your valuable columns, and hasten to assist in the good work by offering a share of my modest garden for exchange.

There are, every planting season, hundreds, yes, thousands of plants uprooted and discarded from overstocked gardens throughout the State, which, could they be transplanted in ones less well stocked, would prove a mine of beauty to many of "us flower-lovers."

Now, Mr. Editor, there is only one way in which this thing can be accomplished, and that is for every one to come forward and send in his little list. I would not object to sending a big list, but if every one sends even a small one it will be the cause of transferring a large amount of beauty from one portion of the State to another.

The clipping submitted by your correspondent from San Mateo county, on the subject of rose pruning, is evidently written with the idea in view that the roses were on their own roots and not budded as most of the roses sold in our California nurseries are. It would certainly be a questionable proceeding to prune budded roses so severely as to send out shoots from the roots.

The advantage of a budded rose lies in the fact that, in our climate, you can make a tree of most any of the good growers; hence you do

not want shoots from the roots. On the other hand, roses on their own roots are easily managed, as they do not require so much care to produce bloom; but cannot be maintained as "standards" so readily, on account of their tendency to throw up shoots from the roots.

It would be quite disheartening to find your Marechal Neil producing choice Castilian or your Wm. Francis Burnett producing day roses; the latter phenomenon would not be so surprising as the former. ROLLA BUTCHER.

Santa Clara, Cal.

Exchanges.

Rolla Butcher, Santa Clara, will exchange from 26 to 50 named chrysanthemums, comprising a choice assortment of Japanese, Chinese, anemone flowers and pompon from Hallock & Thorpe, the great chrysanthemum growers, for an equal number of named chrysanthemums of other varieties or roses. Also a fine lot of carnation slips, pelargonium, myosotis, pyrethrum roseum, helianthus multiflora, plena, cobea scandens and a small lot of cosmos, and this latter is a fine autumn flowering plant, for dahlia tubers, bulbs of named lilies, tigridias, and named pelargoniums and carnations. List of chrysanthemums given on appplication.

Belle Ames, Sebastopol, Sonoma county, offers cuttings of roses, Prairie Queen, Baltimore Belle, Souvenir de Malmaison; and wants in exchange cuttings of Gen. Jacqueminot, Catherine Mermet; Bon Silene, La France and Marechal Neil.

Mrs. Julia Wightman, Booneville, Mendocino county, will exchange double white and pink hollyhock seeds, cuttings of *Ampelopsis Veitchu*, passion vine, Gen. Jacqueminot, Bon Silene, and Lord Macaulay roses, 10 varieties of chrysanthemums, for any of the following: Marechal Neil and Andre Schwartz roses, variegated and silver-leafed geraniums, and any double geränium, fuchsias, double and single varieties, or any very choice named roses.

Our Agents.

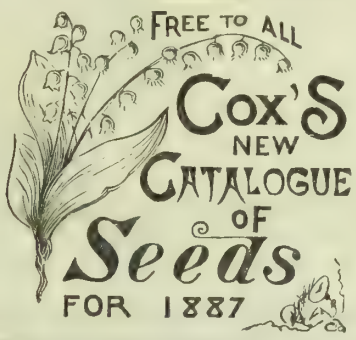
The Latest Fashions.

Ladies' Toilette.

In this instance the toilette is pictured as made of a soft, warm cloth, showing a stylish mixture of several colors. The drapery entirely covers the four-gored skirt and is unique and stylish in effect. On the left side gore is arranged a panel that is hemmed at the bottom and has seven deep tucks formed in it, each tuck being surmounted by a row of fancy buttons. The rest of the skirt is covered nearly to the belt by a kilted drapery that has a deep hem and two deep tucks at the bottom, the plaits being quite wide and all turning one way, except the one nearest the left side back seam, which turns forward over the seam. A short round *tablier* is arranged on the gores, and its pretty draping is made by plaits at the belt and in the side edges. The upper-back drapery reaches nearly half-way down the skirt and is tucked and hemmed to correspond with the lower drapery, and its top is laid in kilt plaits and gathered, the result produced at the back being that of two deep flounces of about even depth. The basque is narrowly double-breasted and closed in the regulation style, with button-holes and buttons. The basque is shortest at the closing and square at the lower edge, and back of the closing it is somewhat deeper and falls in a point at the back edge of each side back. The center backs fall in two narrow tabs that are hemmed at the bottom and have two tucks made above the hem. The center and side back seams, under arm gores and double bust darts perform the fitting. The coat sleeves are ornamented at the back of the wrists with a row of three buttons. The collar is high and in standing style, and linen collar and cuffs are worn. For tailor costumes the mode is simple yet stylish, and will be developed in all kinds of cloths, the smooth, rough, lined and checked varieties being all favored. Camels-hairs, serges and woolens of all seasonable varieties are also effective made up in this way, and the panel may be made of contrasting goods if a combination be desired. Bead trimming, cord, pipings, etc., will often edge the plaits at the left side and in front, and may also edge the tucks and the *tablier*. In the event of such a decoration being chosen, the edges of the basque will be finished to correspond.

LADIES' TOILETTE.



A Blessing.

Nothing adds more to the security of life, of happiness, and of health, than a safe and reliable family medicine. S. L. R. has won for itself the appellation of "the family blessing." If a child has the Colic, it is sure, safe and pleasant. If the father is exhausted, overworked, debilitated, it will restore his failing strength. If the wife suffers from Dyspepsia, Low Spirits, Headache, it will give relief. If any member of the family has eaten anything hard to digest, a dose of the Regulator will soon establish good digestion. It gives refreshing sleep even in cases where narcotics have failed. It is a preventive, perfectly harmless, to begin with, no matter what the attack, it will afford relief. No error to be feared in administering; no injury from exposure after taking; no change of diet required; no neglect of duties or loss of time. Simmons Liver Regulator is entirely vegetable and is the purest and best family medicine compounded. J. H. Zeilin & Co., Philadelphia, Pa., sole proprietors.

HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

AGENTS WANTED to sell the **MISSOURI —STEAM— WASHER**

Active, honest persons all over the country, with or without team.

[*Extracts from Reports of Purchasers.*]

MARY J. TAPPAN, REYNOLDS, NEB.: They excel all other washers I ever saw. JOHN R. DODGE, JR., NORMAL, ILL.: The best machine ever invented by man. H. H. DURANT, COTTAGEVILLE, S. C.: Everybody likes them and everybody wants them.

S. B. ADAMS, ASHTON, D. T.: My wife would not take a quarter section (160 acres) of land for her machine, if she could not get another.

MRS. JOSEPH SWIFT, STATE CENTER, IOWA: The most useful article about the kitchen. ANNA RAMSEY, MILFORD, TEX.: Have thoroughly tested it on articles from lace collars to bed quilts; gives entire satisfaction.

ST. CLAIR INKSTER, JR., EGYPT, WASHINGTON TER.: Sells itself and can not be spoken of too highly. JOHN DETTON, BRIGHAM CITY, UTAH.: Have given it several severe tests and it came out triumphant every time.

JNO B. WHEELER, KANSAS CITY, MO.: They have proved treasures to the families who secured them. A. P. SHIVELEY, TOANO, NEV.: Gives entire satisfaction. Rather handle the Washer than anything I have seen.

E. M. MASSEY, LOCKPORT, TENN.: Has proved a better Washer than I ever thought would be invented. JOHN C. EVANS, STOUTSAND, MO.: If you will get up any instrument that will take as much labor off of men as this Washer takes off the women, and cost no more, I could sell one at every house.

MRS. M. C. DOBBINS, CALDWELL, N. J.: Gives perfect satisfaction. I do my washing alone in same time I used to with hired help. MRS. M. MOORE, NEWARK, VT.: Will do more than it says, especially washing flannels.

MRS. F. G. SINDEN, SHERMAN, N. Y.: Would not take $50 for mine if I could not get another. Washes quicker and better than it can be done by hand. MRS. FRED. H. HARRIS, BRATTLEBORO, VT.: Is all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. POND, NORTHFIELD, CONN.: Have used it nearly four months. Am perfectly satisfied. I freely recommend it to all housekeepers MRS. MARY E. VAIL, PATOKA, ILL.: Saved me $35.00 per year for 18 months I've had it.

MRS. C. W. TALCOTT, NORTHFIELD, CONN.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, STANTON, MICH.: I had rather give up my Jersey cow than part with my Washer.

I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

SPECIAL OFFER.

I will ship, in localities where, as yet, I have NO AGENT, 1 sample "New Becker" Washer and "Empire" Wringer at WHOLESALE prices. E. W. MELVIN, Prop'r. Office, 806 J St., Sacramento, Cal.

Lands For Sale and To Let.

$10.00 PER ACRE.

On the C. P. R. R., in Placer county; one-half mile from Applegate; one-half hour from Auburn; fine climate; plenty of water; school, postoffice and telegraph near; easy terms; title perfect. Apply to

S. C. OSBORN,
Applegate, Placer Co., Cal.

A NEW COLONY

On the new extension of Southern Pacific Railroads, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. **20,000** acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; $20 to $30 per acre. INTERNATIONAL IMMIGRANT UNION, 401 California St., San Francisco.

A Great Bargain!

A Remarkable Chance Offered.

124 acres of as good Fruit Land as there is in this State. About 40 acres improved and a good Orchard on it. Also two tracts of 160 and 166 acres each. Title guaranteed. Homestead and a pre-emption. The right to the two latter tracts will be relinquished. These pieces lie right in the mountains, and 200 acres can be cultivated when cleared up. There is plenty of good timber valuable for shakes, posts, or pickets; 1000 inches of the best water in the world for drinking and irrigating purposes; plenty of fish, deer, grouse, and bear. Also, 10 miles of the best mountain range for stock in the Northern part of the State. Twenty-five miles from the railroad and seven miles to the nearest village. A good price can always be obtained for produce; never less than 2 or 2½ cents per pound for potatoes. Water free on all the land.

Correspondence invited. Apply soon. Address, Ranch Owner, Box 2361, S. F.

Farmers and Travelers

Sojourning in Marysville will find the Western Hotel the best in the city, being clean, quiet, comfortable and reasonable in prices. Geo. Wappel, proprietor.

FRESNO COUNTY.

BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R, towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being 2½ times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about $3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for $150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, $25 to $37.50 per acre, on very easy terms to actual settlers.

THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from $10 to $30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from $100 to $200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

TITLE, U. S. PATENT.

TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of $25 will be required in all cases to cover expenses of sale.

EDUCATIONAL.

School Library Funds.

EDITORS PRESS:—The Committee on Education at the State Grange made the suggestion, presumably for advocacy before the next Legislature, that school "library funds" be made available, under certain restrictions, for the purchase of furniture and other uses, on the ground that most schools have an adequate library, etc., and that other uses for the fund should be found.

Let us look into the case a little. It may be, as the speaker suggested, that there are schools which have libraries suitable in every way, but in 20 years' experience, 15 of them as teacher in our school system, the writer has not found one district with a library such as should have been provided by the fund expended, or even fairly suited to the requirements of a country district, and he further makes the assertion that in such districts, taking an average, one-half of the fund is squandered; and, further, that, aside from a few series of standard literary works, a few juveniles and works of reference, the selection of books is generally pernicious.

As regards apparatus, a better state of affairs exists. The frequent changing of teachers, the large percentage of inexperienced teachers and ignorant and selfish trustees, are accountable for the situation in a great measure.

The intent of the law, providing a library fund, was to provide instructive and interesting reading matter and apparatus for those who were unable to fully supply themselves, and, as in all such cases, the providing of suitable cases or receptacles for the books, etc., the ruling of the State Superintendent of Public Instruction to the contrary notwithstanding.

County Boards of Education are authorized by law to make, and do adopt, list of library books, apparatus, etc., from which selections must be made by trustees. This law is universally ignored and the fund is expended according to the intelligence, ignorance or cupidity of one or more members of the Board of Trustees. Let the suggestion of the speaker become a law, and the door would open for any use of the fund, and for every school that would first consider the legitimate use of the fund, 20 would not consider it at all; the library would not be thought of till every other desired use of the fund was exhausted.

The tendency of legislation is to specify every use for every fund, and, in certain cases, even the time in which fixed portions of the fund may be used. It is generally admitted that such restrictions are wise, though occasionally working hardships.

Instead of trying to divert the library fund to other uses, would it not be well to enlarge its scope in its legitimate direction? Cabinets of natural history specimens would be the best of all instructors, being but sample leaves from the book of nature, and in the hands of competent teachers could be made of vastly greater use than libraries are now. Such collections would at once cause the addition to libraries of botanical, entomological, geological and other works on natural history. Exchanges would be made between districts, remote and near, and the many pupils of the Normal school would see that its collections would soon become the most complete possible. That the making of such collections would be of the greatest educational benefit to pupils, no intelligent person will deny; but the advantage to the State would be vastly greater, not only in a knowledge of its natural history, but in the number of investigators it would be training to observe and develop its natural resources.

I have spoken of competent teachers—there are hundreds of such in the State, but they cannot be expected to undertake and bear the expenses of such work. Country schools are allowed $500, or less, to each teacher, and when from this are taken the library fund, fuel, pencil, crayon, ink and other running expenses, beside insurance, painting, repairs of building, fences, etc., the remainder will vary from $300 to $400 to provide an eight-months' school.

As an illustration of benefits that would accrue to the State from such a course, let us refer to some of our insect pests. Does any one doubt for a moment that, had specimens of our insect enemies been properly placed in our country schools, they would have been recognized and attacked to far better advantage than they have, or that in many instances their ravages would have been nipped in the bud? I have seen a statement that, in Germany, the Colorado potato-beetle was recognized and summarily squelched by this course, and that their schools are provided with complete collections of such noxious insects as are liable to cause trouble or be imported.

I am glad to see a Grange official wake up to something that interests our schools. There is plenty of room for improvement in the country schools, and with a slightly increased outlay in teachers' salaries, to keep the better class of experienced teachers in the ranks, the efficiency of our system would be quadrupled.

It would be well for Grangers to wake up, to discuss the country school thoroughly, try to make it more useful, and instead of wasting the school fund by mismanagement, as is now done to a far greater extent than the public has any idea of, strive to make your schools efficient.

JOHN GRANGER.

John A. Logan.

The death of General Logan reminds us that the group of distinguished men born of our nation's great struggle has become very small. Lincoln, Stanton, Sumner, Wade, Wilson, Chase, Meade, Hooker, Thomas, Garfield, Hancock, Grant and others have gone, and so small at last has this group become that upon each new invasion of death we all wonder if any one remains to be a golden link between the past and present. So rapidly have our noble chieftains fallen into the tomb that many of the young men of to-day will only know their valiant services from the hearsay of history. Those who were fortunate enough to see Gen. Logan on his recent visit to this State may well be proud of the memory, for he was one of the illustrious group whose names are embalmed in history.

The death of General Grant was not a surprise. From the hour it was announced that he was seriously ill till he breathed his last among the tall pines of Mt. McGregor, the progress of the deadly disease was hourly telegraphed all over the land. The nation almost stood in silence around the bed of the dying hero and listened to his calm, brave words. But the death of General Logan was sudden and unexpected except to a few intimate friends who were advised of his danger. Though 61 years of age, he had the appearance of a man in robust health and the prime of life. His jet

THE LATE SENATOR JOHN A. LOGAN.

black hair showed no touch of frost. His face was full and unwrinkled. There was a certain spring and elasticity of movement that indicated the unimpaired vitality of a vigorous, well-preserved manhood.

Though Logan had for some time been a conspicuous figure in the local politics of Illinois, he first came to the front as a national character during the Civil War. No one untrained in the military art made a better record. That he had the genius to command is the tribute of Gen. Grant, under whose eye the most of his gallant services were performed. At Champion Hill he covered himself with glory. At the storming of Vicksburg he evinced the most deliberate courage. With a major-general's commission he was appointed by the President to the command of the 15th Army Corps on the death of McPherson.

From the close of the war until 1871 he filled various positions of honor. That year he was elected United States Senator, and was serving his third term at the time of his death. In the last Presidential campaign he was second on the Republican ticket, and many of his friends and admirers predicted he would head the ticket in 1888. Like most self-made men, Logan's mental powers grew slowly as the oaks grow. Perhaps his greatest intellectual achievement was the three-days' speech in the Fitz John Porter case. His work, "The Great Conspiracy," will become a standard in our literature. Senator Logan was a man of fine presence, magnetic, of indomitable will, a steadfast friend and a manly foe. He was extremely happy in his domestic life. On November 27, 1855, he married Miss Mary S. Cunningham, a daughter of Capt. Cunningham, of Shawneetown, Illinois, a lady of fine culture, rare social powers, who always took a deep interest in her husband's career and did much to aid him. She is not forgotten by a grateful people in this hour of her greatest affliction. His loss is more than that of a great party leader; it is a national calamity. Perhaps there is no man in the Senate who will be more missed.

A Neglected Market for California Raisins.

EDITORS PRESS:—Compelled by circumstancea, I have been loafing around the streets of this city since 5:30 A. M. this morning. Ever solicitous for Californian interests, I strolled round the groceries to take observations. I did not see one box of California raisins in the whole city. Only one grocery had a box of California prunes in the window. All seemed to have Malaga raisins of at least two grades, besides seedless raisins or Sultanas. I note, also, that the Spaniards intend to hold the fort as long as possible. Their raisins are finer and better packed than any I had previously seen. The top layer is now packed, each separate berry pressed circular and placed in rows, as we pack cherries. The labels are more decorative than formerly, gay chromos of bull-fights with edgings of gold lace have replaced the old Arcadian lithographs. Surely here at our own doors it would be possible to get some grip on the market, especially with the suspicion of cholera, hanging round Spanish products, to work in our favor.

I came over from the new Vancouver City, the proposed Pacific terminus of the Canadian Pacific Railroad, last night. There also is another market that might absorb largely of California produce. The railroad has not yet reached Vancouver; and the rising city was destroyed by fire June 13th. Already some 400 houses demarcate a city that is no doubt destined to be another Pacific metropolis. Nature has provided an ideal site, and art (C. P. R. R.) is profusely assisting nature. Already a Catholic church crowns the hight, and a large hotel, masonry and brick, shows its first story on the ridge's crest.

Hotels, banks, stores and residences, some quite fine structures, are springing up rapidly, and there is a probability that the first cars of the Canadian Pacific Railroad will enter the town in a few weeks. Round-houses, workshops and wharves of the Canadian Pacific Railroad will alone suffice to make a town of most creditable dimensions, and if our Fruitgrowers' Union could send a drummer up this way, he would readily get orders for large quantities of California produce. Don't let us overlook *near* markets in our ambition to develop those wh ich are remote.

EDWARD BERWICK.

Victoria, B. C., Dec. 10th.

More Money for Your Work.

Improve the good opportunities that are offered you and you will receive more money for your labor. Hallett & Co., Portland, Maine, will mail you, free, full information showing how you can make from $5 to $25 and upwards a day and live at home, wherever you may be located. You had better write to them at once. A number have made over $50 in a day. All is new. Capital not required; Hallett & Co. will start you. Both sexes; all ages. Grand success attends every worker. Send your address at once and see for yourself.

Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with samp, naming this paper, W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in DEWEY & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING DECEMBER 21, 1886.

354,691.—SAW SETTER AND SHARPENER—J. P. Cobb, College City, Cal.

354,703.—SHINGLING SEAT—C. B. Huestis, Ukiah, Cal.

354,654.—SHEET METAL SEAMING MACHINE—Chas. Puddefoot, S. F.

354,809.—AMALGAMATOR—Rowe, Holmes & Wells, Eureka, Cal.

354,873.—CABLE GRIP—C. T. Ryland, Jr., San Jose, Cal.

354,667.—MOTOR—G. Sutro, S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

PRESERVING EGGS.—The first prize on eggs preserved for three months at the London dairy show was won on a lot of eggs packed in sweet bran with the small ends down. The second prize lot had been rubbed with a mixture of olive oil and beeswax and packed in coarse salt. The third prize lot had been rubbed when new laid with mutton dripping, and then put in powdered dry lime. All these were in good condition for cooking at the end of 90 days. According to *Mittheilungen Landwirthschaft*, vaseline is a good preservative for eggs. The eggs should be thoroughly washed and rubbed with vaseline previously melted with three-tenths per cent salicylic acid. The operation should be performed twice, the latter one month after the former. On boiling, the skin of vase-

In the cure of severe coughs, weak lungs, spitting of blood, and the early stages of *Consumption*, Dr. Pierce's "Golden Medical Discovery" has astonished the medical faculty. While it cures the severest coughs, it strengthens the system and *purifies the blood*. By druggists.

For colds, fevers and inflammatory attacks, as well as for cholera morbus, diarrhœa, dysentery or bloody-flux, colic or cramps in stomach, use Dr. Pierce's Extract of Smart-Weed, composed of best Grape Brandy, Smart-Weed or Water Pepper, Jamaica Ginger and Camphor Water.

Our Progress.

As stages are quickly abandoned with the completion of railroads, so the huge, drastic, cathartic pills, composed of crude and bulky medicines, are quickly abandoned with the introduction of Dr. Pierce's "Pleasant Purgative Pellets," which are sugar-coated, and little larger than mustard seeds, but composed of highly concentrated vegetable extracts. By druggists.

THE ROLLER ORGAN.—The Roller Organ is one of the most melodious of the many modern automatic musical instruments of late introduction on this coast. Much ingenuity has been displayed by inventors who have sought to make an instrument which could be recommended as substantial and serviceable, but fine tone has always been the greatest desideratum in this class of instruments, and manufacturers have seldom been more than partially successful. In the Roller Organ, however, which is now being sold in this city by C. H. Hammond, General Agent, at 2224 Mission street, between 18th and 19th, and at 108 Third street, it is claimed that a combination of the three most desirable qualities in these instruments has been secured. It is apparently a compact and durable instrument, and, judging from the indorsement it has received from music-loving people, its tone is all that could be desired in such an instrument. The Roller Organ employs no paper; but its music is obtained from a roller furnished with pins similar to those of a music box. These pins operate upon valve keys, made of hard steel, the roller being driven by suitable gearing, which also works the bellows. All the working parts of the instrument are easily accessible, and are made of solid metal, the rollers and keys being mounted on iron castings, and the whole as durable and well made as the best sewing machine Nothing has been omitted to give this beautiful instrument its crowning qualities of extreme simplicity and durability. The instrument performs all kinds of music—sacred hymns and popular songs as well as operatic selections, and has been strongly recommended for adoption in Lodges where it is desirable to open and close with singing, the organ being an excellent instrument for an accompaniment for the voice. The instrument is sold in this city by C. H. Hammond, General Agent. Depot, Eureka Bazaar, 2224 Mission street, between 18th and 19th streets; also at 108 Third street.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

The advertisement of the old reliable establishment, The Storrs and Harrison Co., Painesville, Ohio, appears in this issue, offering flower and vegetable seeds, roses, plants, grape vines, fruit and ornamental trees. They are running one of the most complete nurseries in the world, and issue a large, attractive catalogue which they will mail you free, on application. They have no traveling agents, and are only responsible for orders sent direct. Give them a trial and save dealers' commissions. They guarantee satisfaction.

GOLDEN GATE INCUBATOR.

"Seeing is believing." Parties who contemplate using incubators, or who have been unsuccessful in their use or in the rearing of chickens, should inspect our incubator and brooding-house. This is the only satisfactory showing in this period of distrust of incubators—a distrust brought about, for the most part, by cheap and inefficient contrivances for the purpose. We have a long and strong list of recommendations, with the written testimony of people who have made the largest average percentages you ever heard of; we have a large number of medals, diplomas and what-not from various Fairs; we have the finest-looking machine you ever saw, with a magnificent record of more than four years' duration—but we are quite willing you should discard all these weighty evidences after once seeing the daily hatching of our machine and the hundreds of beautiful, strong and healthy birds, without vermin or blemish, now in our brooding-house. **We show what we can do,** and you are cordially invited to **know what that is.** It is worth your while to witness the results of our more than six years' successful experience. Boats from San Francisco every half hour; fare, 15 cents. Large circulars mailed free. **G. G. INCUBATOR CO., East Oakland, Cal.**

HORSES AND CATTLE.

FRENCH DRAFT STALLIONS,
Kentucky Jacks and Jennets,
Work Horses and Mules
FOR SALE.

Some of the Stallions were imported from Europe, others from Illinois, and some young ones were bred in California from imported stock. The prices will be less than animals of equal value can be purchased elsewhere.

Call at or address Patterson's Ranch, Hueneme, Ventura County, or Patterson's Ranch, Grayson, Stanislaus County, or for further information call on or address JAMES M. PATTERSON, No. 8 Davis St., San Francisco.

JOHN D. PATTERSON.

SHEEP AND SHEEPWASH.

Recommended by Professors Hilgard, Cooke, etc.

Powdered Potash & Caustic Soda

KILLS GOPHERS, INSECTS, Etc.

Makes a pure Soap at a cost of $1 per 125 lbs. Send for directions to T. W. JACKSON & CO.,
304 California St., S. F.

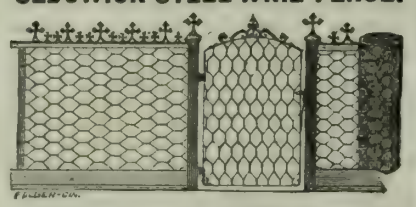
Calvert's Carbolic

SHEEP WASH

$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. T. W. JACKSON, S. F., Sole Agent for Pacific Coast

LITTLE'S CHEMICAL FLUID SHEEP DIP.



Price Reduced to $1.25 PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for SCAB in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yolk. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

B. V. CUTTINGS.

Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M., 200.000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M, all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

WHITE ADRIATIC,

SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Præparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE.—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.
STOCKTON, CAL., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

W. R. STRONG & CO.,

SACRAMENTO, - - - CALIFORNIA.

What Mr. Beyer says:

"Please accept my best thanks for the splendid seeds received from your firm. It would be a rather lengthy list if I should name all, but will say that amongst 38 first, and 3 second premiums awarded me at our fairs in Northern Indiana and Southern Michigan, 28 first premiums were for vegetables raised from your seeds. What firm can beat this?"
AUGUST BEYER, So. Bend, Ind.

Seed of this quality I am now ready to sell to every one who tills a farm or plants a garden, sending them **FREE** my Vegetable and Flower Seed Catalogue, for 1887. Old customers need not write for it. I catalogue this season the native wild potato. **JAS. J. H. GREGORY,** Seed Grower, Marblehead, Mass.

S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Dec. 29, 1886.

The past week has been interrupted by the Christmas festivities, consequently only such trading was done as is usual for the season. Absence of rains stimulated trading in feed cereals and hay. The rains of to-day have not, at this writing, disturbed values. The English wheat market has ruled strong, with a strong closing to-day, as follows:

LONDON, Dec. 29 —Cargoes off coast, firm, awaiting arrivals. Cargoes on passage and for shipment, firm, but of a holiday character. Cal. wheat off coast, 37s 6d to 37s 9d. Cal. wheat just shipped, 38s 3d. Cal. wheat nearly due, 37s 9d. Liverpool wheat, spot, firm. Liverpool wheat, Cal., 7s5½d to 7s 8½d.

Foreign Review.

LONDON, Dec. 24.—The *Mark Lane Express*, which was issued to-day instead of Monday, the regular day of publication, in its review of the British grain trade for the past week, says: The wheat trade was limited, but prices were steady. Foreign wheat was quiet. The increase of American supplies tends to depress the market, but the disturbed condition of affairs in the eastern part of Europe counteracts this influence and strengthens the market. There is a good prospect of increased business with the new year. At to-day's market the tone of wheat was firm. Flour was 6d dearer. Corn, barley, beans and peas were steady.

Eastern Wool Markets.

BOSTON, Dec. 24.—Wool is firm, with a good demand. Michigan X, 32c ₩ lb; choice Montana, 25@27c; medium Wyoming, 23c@25c; fine do, 20@22c; others unchanged.

NEW YORK, Dec. 24.—Wool is generally steady. Domestic fleeces, 30@38c per lb; pulled, 14@38c; Texas, 9@25c.

NEW YORK, Dec. 26.—The markets here and at Boston and Philadelphia are quiet and practically unchanged. There has been a little more looking around by buyers and some increase in sales of small lots as samples. The indications are that the present situation will remain unchanged until about the middle of January. Considering the continued dullness of trade, holders have maintained their views with remarkable firmness. The sales of the week included 40,000 lbs of Western Texas, at 17@19c; 1000 lbs fall California, at 17c. In Boston, large lines of California wool are held above the market. Territory wools are quiet, though some large sales of Montana medium have been made on the basis of 60 cents for fine medium and 55 cents for medium. Oregon wool is dull. Among the sales at Boston were 537,000 pounds Territory at 21@25 cents, 35,000 pounds California spring and Oregon at private terms; at Philadelphia—3000 pounds Territory fine at 25 cents, 3000 pounds Oregon fine at 30 cents, 1000 pounds California fall at 15½ cents, 9000 pounds Territory black at 22 cents.

NEW YORK, Dec. 28.—Wool is steady but quiet. Domestic fleeces are quoted at 30@38c, pulled 14 @35c, Texas 9@25c.

Philadelphia Market for California Products.

PHILADELPHIA, Dec. 20.—Dried fruits are in eager demand and, with light supplies, it is a sellers' market. Fancy evaporated apples, 12@12½c; good to choice, 10½@11½c; prime to fancy sliced, 6½ @7½c; do., quarters, 4½@5½c. Fancy evaporated peeled peaches, 27@28c; poor to choice, 25@26c; choice to fancy, sun-dried, 17@18c. In California raisins the feeling is quieter on account of the heavy foreign invoice due New York for auction; nominal quotations continue $2@2.25 for Londons and $1.75 @2 for L. M.

Oranges are easier on account of the preponderance of common stock and the late auction sales; such stock as had met regular private sales at $2.75 @3.50 was knocked down at auction last week at $1.80@2.70—principally $2.10@2.25. New California lima beans sell on arrival at $1.80@1.90.

The Chicago Fruit Market,

CHICAGO, Dec. 24.—The dried fruit market is firm, and the arrivals continue light. No peaches are offered, for there were very few dried owing to a short Southern crop this year. No offerings of importance were noted. California Dried Fruit—Raisins are easy, but other kinds rule steady. The trade is fair. Prunes, French, ₩ lb, 9c; plums, pitted, 12c; peaches, quarters, 12c; halves, pared, 25c; nectarines, 9c; pears, 8@12½c; raisins, London layers, 20-lb boxes, ₩ box $1.75@1.80; raisins, loose Muscatel, ₩ box, $1.50@1.60.

Dried Fruit in New York.

NEW YORK, Dec. 26.—Raisins—Moderate jobbing demands have prevailed at easier prices. Of California stock, at the auction sale on Thursday, only about 400 boxes were sold, the balance being withdrawn, owing to the low prices offered. Sales of California layer were reported at $1.12½; do loose, $1.12½; do London, $1.60@1,75; do seedless, $1.10. Prunes, Turkish, are firm at 5¼c; French, strong at 7¾@8c for 60's and 90's. Currants are easier at 5¾@5½c. Citron is selling at 17¾@18c. Figs are jobbing in a moderate way at 6½@13c, as to quality.

New York Wheat Market.

NEW YORK, Dec. 26.—Spot has been in fair request; although the increased firmness in the market has tended to check the export demand, nevertheless prices are 1c and 2c better. Options have been fairly active and firmer, closing as follows: December 90 cents, January 90¾ cents, February 92⅛ cents, March 93¾ cents, May 96¾ cents.

Hops.

NEW YORK, Dec. 26.—Hops quiet, without new features. Coast crop, 1886, prime to choice, 25@27 cents; do., fair to good, 22@24 cents; 1885, good to choice, 10@13 cents.

Local Markets.

BAGS—The market has a stronger, advancing tone for Calcuttas, due chiefly to the warlike reports from Europe. The market is quotable as follows:

Bean	@ 4¼c.
New Gunnies	9½c@10c.
Second-hand Gunnies	@ 6¾c.
Calcutta Standard, May-June delivery	5⅜c@ 5¾c.
Potato Bags, No. 2	3c@ 3¾c.

BARLEY—The market weakened off under threatening weather up to to-day, when it was stronger, notwithstanding the rains, owing to a report of a large short interest on Call, and also that the supply in the State is less than thought. Transactions on Call the past week were free, with to-day's sales as follows:

Morning Session: Buyer season—100 tons, $1.07¾, 100, $1.08; 200, $1.08¼; 300, $1.08½; 100, $1.08¾. Seller 1886—100 tons, $1.04 ₩ ctl. Afternoon Session: Buyer season—600 tons, $1.08¾. Seller season—100 tons, $1.00¼; 100, $1.00½; 100, $1.00¾; 100, $1.00⅞, Seller 1886—100 tons, $1.04; 100, $1.04¼ ₩ ctl.

BUTTER—The market is dull and demoralized. The quality of the fresh butter coming in is poor. The market closed weak.

CHEESE—Last week's remark covers this week's market.

EGGS—A free demand, with lighter receipts, cause a strong market at a slight advance.

FLOUR—The market in sympathy with wheat is very strong, with a further advance at an early day not at all improbable.

WHEAT—Buyers are pursuing their usual tactics of depressing the market, but without effect, as holders who have not sold are firm in their asking prices of from 2½ to 7½ cents per cental above bids. Heavy sales were made the past week; one holder placed 10,000 tons, but at an advance on quotations; the quality averaged fair to good. On Call, transactions the past week were unusually large, with full prices paid. To-day's sales are as follows:

Morning Session: Buyer season—300 tons, $1.58½; 100, $1.53⅝; 300, $1.58¾; 200, $1.58⅞; 2700, $1.59. Buyer 1886—200 tons, $1.49½; 400, $1.49⅝ ₩ ctl. Afternoon Session: Buyer season—1900 tons, $1.59; 3000, $1.58⅞. Buyer 1886—100 tons, $1.49½; 100, $1.49⅜.

[COMMUNICATED.]

Market Information.

Cereals.

Barley held to strong prices up to Monday, when, owing to cloudy weather, an easier feeling set in, resulting in a lower range of values. It is very generally conceded that although the stock in this State in warehouses is larger than at this time last year, yet the quantity on the granaries in farmers' hands is very much less now than in December, 1885. If this be true, then the present low prices are not warrantable. The consumption continues large, but the export demand is restricted, owing to buyers waiting for lower prices.

Oats are very firm, with a slight advance obtainable for the better grades. Western oats are slow, owing to the quality being below this coast's production. Oregon and Washington oats are in fair supply, but as receipts are light, holders are firmer. It is claimed that the supply to draw from is light.

Choice grades of California corn are in light offering, causing a strong tone; but fair to good is in liberal supply with prices in buyers' favor. Western corn is in moderate supply, but prices favor buyers.

In rye and buckwheat there is nothing new to report.

The wheat market holds strong, notwithstanding this is the last week of the year, when all transactions are virtually suspended. The strength of the market is due to the paucity of stocks throughout the civilized world, supplemented by an almost certainty of war in Europe at an early day. The very best informed writers are thoroughly convinced that although war may for a time be averted, yet sooner or later it must come, but even if it does not, a much higher range of values is looked for before June, 1887. Eastern advices are confirmatory of a lighter stock, take the visible and invisible as a whole, than at this time last year; and as Europe's main dependence is on this country, it is not at all unlikely but there will not be any of consequence to spare by April next. In this State the prevailing opinion is that when the returns of the stock on hand on January 1, 1887, are rendered, the aggregate will be very considerably below former years, and as there is quite a short interest on Call, with a large engaged tonnage in port, a stronger buying will be developed, which will force values to a much better figure than now obtains. Continued dry weather is a much stronger inducement to hold than all else combined. Many now appear firmly fixed in the belief that next year's will be considerably below an average.

Feedstuffs.

Bran has been marked up, owing to lighter supplies and a good demand. Middlings, ground barley, feedmeal, and oilcake meal are essentially unchanged. The demand for all kinds is reported good.

Feed carrots are in heavy supply, with prices favoring buyers.

Hay is in an unsettled condition. Buyers only take in a hand-to-mouth kind of way, under the belief that with heavy rains soon, farmers will be free sellers. Holders are not making concessions on last week's prices.

Fruits.

Oranges continue to come to hand in excess of trade wants, which causes the market to rule weak. The demand is good for the season. Limes and lemons are also in liberal supply, with prices weak and in buyers' favor. The demand is light.

Choice apples continue in light supply, with a good inquiry ruling; poor varieties are in heavy stock, with prices against sellers. The receipts from Oregon are lessening, but from the East they are quite free.

Pears are scarce and command good prices.

Hops.

The market is inactive, but holders are firm. A late issue of *Bradstreet's* reports the New York market as follows: "The imports from Germany have been exceedingly heavy, and New York warehouses are overcrowded with hops. Possibly two-thirds of the arrivals, however, are for account of outstanding contracts with brewers, and the available surplus in dealers' hands is a matter of speculation. While the snpply of really choice goods is inconsiderable, the heavy weight of good, useful mediums and the large stocks of low and inferior grades have depressed and weakened the market. Choice Bohemians and Kents, and fine Pacific hops are still, however, firm, and there is little doubt that the best descriptions of all kinds will rule considerably higher in a few weeks' time. Reports are rife among New York growers that the roots of the vine have been injured by lice, and many experienced hop men think that the prospects for a good crop in this State next year are very poor."

The London *Brewers' Guardian* of Nov. 30 publishes the official returns as to the acreage under hops during the last three years, from which we take the following:

ACREAGE UNDER HOPS IN ENGLAND, AS RETURNED JUNE 4 IN THE YEARS 1886, 1885, AND 1884.

	Acres. 1886.	Acres. 1885.	Acres. 1884.
Kent	43,924	44,834	43,464
Hants	3,339	3,303	3,197
Hereford	6,770	6,703	6,602
Surrey	2,547	2,627	2,493
Sussex	10,391	10,722	10,382
Worcester	2,951	2,910	2,873
Other counties	199	228	247
Totals	70,127	71,327	69,258

Live-stock.

The consumption of beef is largely increased, but offerings continue on a liberal scale, which keeps values from advancing. It is stated that with heavy rains and bad roads, deliveries of cattle will fall off, which will create higher prices with us. Mutton sheep are steady, with a firm tone for the better conditioned. Hogs are easy under a continued free selling pressure. Milch cows are in slightly better inquiry. In horses there is nothing new to report.

BEEF—Extra, 7@7½c; first grade, grass fed, 6½ @7c per lb; second grade, 5½@6c; third grade, 5@ —c.

MUTTON—Ewes, 5@—c; wethers, 5¼@—c.

LAMB—Spring, 6@7c. Yearlings, —c.

VEAL—Large, 7@8c; small, 9½ to 10c.

PORK—Live hogs, 2½ to 3c for heavy and medium; hard dressed, 4 to 6c per lb; light, 2½ to 3c; dressed, 3½ to 4½c; soft hogs, live, 1¾ to 2¼c.

On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

Potatoes continue steady, with choice qualities scarce. Notwithstanding the holidays, the demand is fair for both home and shipping. Sweet potatoes are strong.

Choice onions are strong, owing to a lighter stock and a good demand. Cut and otherwise poor onions are slow and weak.

Cabbages and root vegetables are steady.

Miscellaneous.

Grass seeds are in better inquiry, but prices are unchanged.

Beans are firmer, with a good shipping demand, notwithstanding receipts have largely increased.

Honey holds strong, with both the stock and supply light for the season.

Raisins, if choice, are firmly held at steady prices, but other qualities are shaded so as to find custom. Eastern papers continue to speak well of the more choice packed, and predict that California raisins will take the lead in the near future,

Heretofore, turkeys ruled very low a day or two before each holiday, owing to heavy receipts, but the past Christmas they sold very high, owing to light receipts. So far this week the market has been steady. In hens, roosters, ducks, and geese, the market shows but little change.

On Monday last, the market was glutted with hares, causing a very low range in prices; since then they are higher. Other wild game ruled fairly steady.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way	215,278	152,365
In port, disengaged	62,282	129,950
In port, engaged	56,079	41,062
Totals	333,639	323,377

The above gives a carrying capacity, as follows: 1886, 527,515 short tons; 1885, 513,475 short tons; increase over last year, 14,040.

Dried fruits continue strong for all kinds except prunes, which temporarily are weak under heavy receipts.

San Francisco, Dec. 29, 1886.

Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, *to those who pay fully one year in advance of date,* IF REQUESTED, the following articles (while this notice continues), at the very greatly reduced figures named at the right:

1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price $1).....$0.25
2.—World's Cyclopedia, 794 pages, 1250 illustrations; (exceedingly valuable).....50
3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.....50
4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated.....25
5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations.....05
6.—To NEW Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new".....Free
7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates.
9.—Pacific Coast and Eastern Dailies, Books and Periodicals, *except special publications,* we can usually give 10 to 15 per cent off advertised retail rates.
10.—March of Empire, by Mallie Stafford.....25
11.—Life Among the Apaches, 322 pages, stiff cloth .25
12.—$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application .25
14.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.) .25
15.—European Vines Described, 63 pages.....05
19.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable.....50
23.—Architecture Simplified, 60 pages.....15
24.—Mother Bickerdyke's Life with the Army; patriotic and ably written; 166 pp., cloth, $1.00.....75
Beautiful Poetic Review, entertaining and instructive 35 pages (a handsome and pleasing present).. .25

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F.

Inform your neighbors about our offers and paper. Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for any further information desired.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, $3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

It Should Always be Borne in Mind

That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the fittest"—the "DOMESTIC" SEWING MACHINE.

THIS season of the year eggs command a high price, and hens demand extra inducements to make them ay. Fresh ground oyster shells and fresh ground bone about the poultry house, and a warm breakfast of ground corn meal, will greatly help the hens to increase their power to lay. Write Wilson Brothers, Easton, Pa., to send you their free catalogue, telling you all about their grinding mills, so useful to every poultry keeper and farmer, backed up by testimonials from many who use them.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from $5000 to $500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. **

DIVIDEND NOTICE.

The German Savings and Loan Society.

For the half year ending December 31, 1886, the Board of Directors of The German Savings and Loan Society has declared a dividend at the rate of four and thirty-two one-hundredths (4 32-100) per cent per annum on term deposits and three and sixty one-hundredths (3 60-100) per cent per annum on ordinary deposits, payable on and after the 3d day of January, 1887. By order.

GEO. LETTE, Secretary.

DIVIDEND NOTICE.

SAN FRANCISCO SAVINGS UNION,

532 California St., cor. Webb.

For the half year ending with 31st December, 1886, a dividend has been declared at the rate of four and one-half (4½) per cent per annum on term deposits, and three and three-fourths (3¾) per cent per annum on ordinary deposits, free of taxes, payable on and after Monday, 3d January, 1887. LOVELL WHITE, Cashier.

ANNUAL MEETING.

The regular Annual Meeting of the Stockholders of the Grangers' Bank of California, for the election of Directors for the ensuing year, will take place at the office of the Bank, in the city of San Francisco, State of California, on Tuesday, the 11th day of January, 1887, at 1 o'clock P. M. For Grangers' Bank of California.

ALBERT MONTPELLIER,
Cashier and Manager.

Reasons why Sherwood's Steel Harness is the Best and should and will be Universally Used:

1.—It is a common sense Harness. 2.—It is made of material that will last a lifetime. 3.—In plowing, dragging, logging and scraping there are no whiffletrees. 4.—In all farm work you can change from plow to wagon quick. 5.—In plowing in the orchard, you can't bark fruit trees. 6.—In plowing and cultivating hops it has no equal. 7.—In plowing along the fences you can get two furrows closer. 8.—Horses cannot step over the traces, or calk themselves. 9.—A small boy will handle plow readily. 10.—There is no weight on plow beam. 11.—Team works one-third easier. 12.—There is no chafing, crowding or fretting of team. 13.—For man and team it has no equal. Do not hesitate, but order at once from your nearest agent. Address

TRUMAN, ISHAM & HOOKER,
San Francisco, Cal.

☞ *Refer to Nos. in latest issue when ordering.*

For $1.00 we will furnish new subscribers the PACIFIC RURAL PRESS for three months, and $1.00 worth of the above seeds. For $1.75 the RURAL six months and $1.00 worth of seeds. For $3.25 the RURAL one year, and $1 worth of seeds. For $4.50 the RURAL for eighteen months and $1 in seeds. The seeds will be carefully forwarded, post paid, from some one or more of our leading and reliable seedsmen, whose name will accompany the package. In ordering, write on a separate sheet the *number only* of each article wanted as numbered, together with your address.

Old subscribers can advance payment so that their subscriptions will be paid the same length of time in advance and receive the same terms as above. Those who have remitted since this offer was made can send the additional amount which would have entitled them to a premium, and receive the same by stating which numbers they prefer.

For other kinds of seeds, or for seeds in larger packages, patrons are referred to reliable seedsmen advertising in this paper. We wish to aid in increasing the planting and cultivation of gardens.

We are not going to embark in the regular seed business, and have not time to investigate or answer many questions of private interest only, nor respond to orders received without remittances.

Subscribers will please notify neighbors who do not take this paper of this offer, and the merits of the RURAL.

In writing correspondence, items of information, or on other business, please use a separate sheet.

California Inventors

Should consult DEWEY & CO. AMERICAN AND FOREIGN PATENT SOLICITORS, for obtaining Patents and Caveats. Established in 1860. Their long experience as journalists and large practice as Patent attorneys enables them to offer Pacific Coast Inventors far better service than they can obtain elsewhere. Send for free circulars of information. Office of the MINING AND SCIENTIFIC PRESS and PACIFIC RURAL PRESS, No. 252 Market St., San Francisco Elevator, 12 Front St.

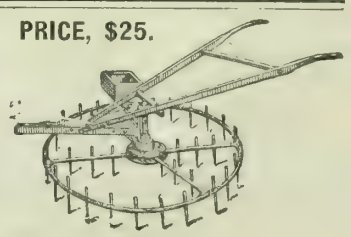
TOWER, complete, $15 00.

BONDS'

ECONOMY WINDMILL

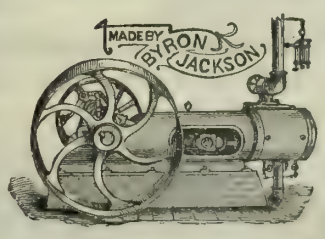


Is the cheapest ever offered to the trade, and as efficient and durable as the most elaborate self-regulators. It is intended to run constantly, and turns on the stand facing the wind, from whatever direction.

The wearing parts are few and cheaply replaced. Requires little or no attention. Will raise 25 per cent. more water than any "self-regulator" of same diameter of wheel. Any one can put it up.

Write for Circulars to

BYRON JACKSON 625 6TH STREET SAN FRANCISCO.



PRICE, $25.

THE JACKSON VINEYARD HARROW

Rotates either way, at the will of the driver, and by driving the SLOW side next to the vine or tree, there is no danger of hurting it, as the Harrow will roll gently around the tree or vine.

It has half-inch steel teeth, and is made to rotate either way by simply changing the cast-iron weight from one side to the other. The Harrow weighs 170 lbs., and can be taken down and packed closely for shipment.

BARREN HILL NURSERY

NEVADA CITY, CAL.

SPECIALTIES:

NUTS, PRUNES, AND GRAPES.

The Finest Collection of Nut-Bearing Trees to be found in the United States.

19 Varieties of Walnuts,

—INCLUDING—

CLUSTER WALNUT,

The newest, most prolific and valuable variety ever introduced into this country.

PRŒPARTURIENS,

Or Early-Bearing, or Fertile Walnut, introduced into California in 1871 by Felix Gillet. "Second Generation" Trees, grown from nuts borne on the ORIGINAL tree; 90% guaranteed to be "genuine Prœparturiens," or having retained the surprising characteristics of **precocity, fertility** and **hardiness** of the **original** Prœparturiens. "Third Generation" Trees, grown from nuts borne on **second generation** Prœparturiens, entirely California-grown; vigorous, hardy and fertile variety.

Serotina, Franquette, Mayette, Chaberte, Gant, Parisienne, Mesange Walnuts.

The leading varieties of Europe, highly recommended for beauty and quality of the nuts, fertility and hardiness of the kinds.

9 Varieties of French Chestnuts or Marrons (Propagated solely by grafting).

7 Varieties of Filberts.

4 Varieties of April Cherries, the earliest and most prolific in California.

207 Varieties of Grapes, including the very earliest Table varieties known, such as Blue Muscat, Ischia, Magdeleine, Malingre, Pearl of Anvers, Bulhery, Luglienda, Dupont, Gros Sapat, etc.

81 Varieties of English Gooseberries, all sizes, shapes and colors, and "true to name."

PRUNES! PRUNES!

Lot D'Ente, or "D'Ente true from the root." We have ourselves given this name of "Lot D'Ente" to this type, so extensively propagated in the valley of the Lot (France). **True from the root** and not grafted, and which we have introduced into this country. This type of the D'Ente Prune is not at all propagated by grafting, which would do away with its chief qualities of being more vigorous, more **long-lived** than grafted trees, and a **gum-resistant** stock.

Saint Catherine, "true from the root."—This kind is altogether propagated **true from the root** in its home, valley of the Loire (France), and offers greater advantages than grafted trees, as being also more vigorous, more long-lived, and a **gum-resistant** stock.

We highly recommend these two purest types of the two most celebrated kinds of French Prunes, and have divided our stock into three sizes, which we offer at $20, $30 and $40 per hundred. All such trees are imported from the two great prune districts of France, but have been from one to three years in our grounds, and have, like all our mountain-grown trees, a fine system of roots.

For the Season of 1887-88, the D'Ente, the purest and largest type of the Prune D'Ente, or D'Agen, or Robe de Sergent (solely progagated by grafting).

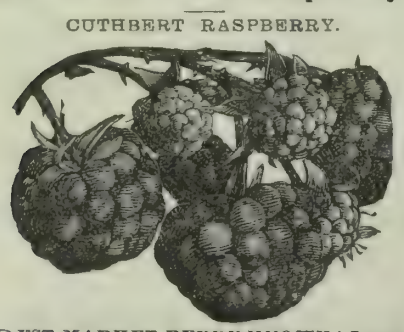
APRICOTS — Boulbon, Esperen, Duclos, Mexico, the shipping varieties of the south of France.

Constantinople Quince—The largest, most precocious and prolific of all quinces.

Ever-bearing Black Mulberry of Spain—Medlar, Sorbus (all those kinds should have a place in all gardens).

Mulberry Trees for Silkworm Feeding.

Silkworm Eggs.



SERICULTURE CHART, 50 Cts.

☞Send for General Catalogue and Supplement with Chapters on "Nut-bearing Trees" and "Prunes," illustrated with 20 walnut cuts, 5 prune cuts, and numerous other cuts representing Medlar, Sorbus, Black Mulberry, French Chestnuts, Filberts, etc.

FELIX GILLET,
Nevada City, Cal.

Fine Small Fruits a Specialty.

CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE, by practical experience, found that the **JUDSON POWDER** especially; is the best adapted to REMOVE STUMPS and TREES.

FROM 5 TO 30 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing.

In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder not strong enough.

☞For particulars how to use the same, apply to

"ACME" PULVERIZING HARROW

The **"ACME"** subjects the soil to the action of a **Steel Crusher** and **Leveler**, and to the **Cutting, Lifting, Turning** process of *double gangs* of **CAST-STEEL COULTERS**, the peculiar shape and arrangement of which give **immense cutting power.** Thus the three operations of **crushing** lumps, **leveling** off the ground, and thoroughly **pulverizing** the soil are **performed at the same time.** The **entire absence of Spikes or Spring Teeth** avoids pulling up rubbish. It is especially adapted to inverted sod and hard clay, where other Harrows utterly fail; works perfectly on light soil, and is the only Harrow that **cuts over the entire surface** of the ground. **We make a variety of sizes, 3 to 15 feet wide.**

The **"ACME"** is in practical use in nearly every Agricultural County on the Pacific Coast, and has proved itself to be just the tool for use in **VINEYARDS, ORCHARDS and GRAIN FIELDS.**

GOULD'S SPRAY PUMP.

This Pump we have gotten up expressly for spraying vines, fruit trees, etc., infested with destructive insects. It has been adopted and recommended by the State Horticultural Society. The working parts are constructed entirely of Brass, and will not be affected by the corrosive solutions used. The BAMBOO EXTENSION is an admirable invention. The operator, by the use of this extension, can get to all parts of the tree while on the ground; also saving himself from getting burnt with the solution. The improved nozzle will save the price of itself within a day. It throws a very fine mist. We have also an attachment for Pump to stir up the liquid in barrel before putting on the solution, thus keeping the liquid always in condition to be laid on evenly, and not allowing the preparation to settle at the bottom. Send for special Catalogue.

We are prepared to fit these Pumps complete with Hose, Bamboo Extensions, Barrel, all ready to commence spraying with. Write for prices.

Essex Swine.

There is some progress being made with Essex swine in California, and there are several very good, though small breeding herds of pure breds in this State. The Berkshire have the lead by prior introduction, and they merit their popularity; but for sake of variety as well as for their intrinsic merit we would like to have the Essex better known. We have on this page a good engraving of a pair of Essex swine from the herd of W. J. Neeley, of Ottawa, Ill., who was the first Western importer and breeder of this breed in this country. The boar is imported Greenbush and the sow a thoroughbred, the name of which we have not at hand. As the engraving shows, the Essex hogs are perfectly black, and are, in this respect, different from the Berkshires, which have small white markings.

The improved Essex swine of to-day are believed to be the result of crossing the Neapolitan hog upon the original Essex, and afterward breeding and selecting toward the present type which is now fixed. Other characteristics secured by intelligent breeding have been early maturity, a quiet disposition, tendency to fatten well, and to reach a very respectable size for a small hog. In fact they are claimed to be the largest of the small breeds and to reach 300 to 400 pounds at one year old when well fed. As bred now they are described as follows: "Color black; face short and dishing; ears small, soft and erect when young, but droop somewhat with age; carcass long, broad, straight and deep; hams heavy and well let down; bone fine; hair ordinarily rather thin. Fattening qualities superior; prolific breeders and fair nurses." With all these excellent qualities the breed has not generally been popular in the Western States, mainly on account of their lack of great size. They are, however, growing in public favor. For crossing with the large, coarse breeds they are especially useful. Of course, in California, where the large hog is not so greatly desired as east of the Rockies, the Essex is quite large enough. We should like to hear from California Essex breeders. Records of their experience with the breed would be read with much interest.

THOROUGHBRED ESSEX SWINE—IMPORTED GREENBUSH AND CONSORT.

A single sale of 17,000 orange trees was made by a San Bernardino nurseryman, recently, to the representatives of a colony from Chicago.

Fruit Shipping.

On page 30 of this issue may be found a statement from Mr. Hatch, president of the Fruit Union, concerning the views which the directors of that organization take of the present situation; also, the changes in the by-laws with which they propose to meet the prevailing views on policies to be adopted. We have received a strong protest from one fruit-grower against the last clause of Section 10, as printed in the Rural this week, as calculated to work spurious wines, it being claimed that the amendments legalize just what it was intended to prevent. Apparently the meeting lost confidence in congressional aid in this direction, and, following Mr. Estee's advice, will make an effort to induce the California Legislature to define pure wine, and afterward seek the same act by Congress. A motion was carried appointing Messrs. McIntyre, Doyle, Rixford, J. Kohler and Shillaber a committee to draft a spurious wine bill suitable to the California growers and present it to the Legislature for passage.

At the afternoon session Professor Hilgard delivered a lecture on different methods of fermentation, of which an outline will be issued in a University bulletin. It was decided by the directors, before adjournment, to call a great convention of the winemakers of the State for March 1st and four following days.

Dr. Sanborn stated last winter, at a meeting of the Illinois Horticultural Society, that he protected from rabbits and mice his 600 pear trees with a wash of lime and water, with enough copperas added to change the color to a deep green. Some cheap glue was added to make it adhere to the trees. Neither rabbits nor mice would touch the trees thus treated.

Grape-Growers' Meeting.

We attended the meeting of the Grape-Growers' Association which was held on Tuesday of this week, at the rooms of the Viticultural Commission in this city. There was a large representation of those engaged in the wine branch of the grape industry. The morning session was occupied with a discussion on pending congressional legislation on wine interests. Much fault was found with the amendments which have been made to the bill against hardship and open the way for the introduction of favoritism. This is the paragraph which proposes to receive options for the control of certain markets by those who will bid most for the privilege. It does not appear to us that such a method would work well. We received, too late for printing on the same page with the other matter relating to fruit shipping, a letter by P. W. Butler, giving the views of the Placer county growers. This letter may be found on page 33 of this issue. It is time that all in the fruit interest were bethinking themselves of plans and methods for procedure. The meeting of the Fruit Union will be held January 19th. According to the statement by Mr. Hatch, it will be an open meeting for all in the fruit interest, though, of course, the right to vote is restricted to members of the Fruit Union, on whose stock assessments have been paid up.

Harvesting Corn by Machinery.

It appears that the Western farmers are getting tired of cutting up and shocking their maize, and weary also of the winter occupation of husking. They hasten to finish up the business, cutting with a reaper and then putting the whole growth through a grain separator and getting good husked and shelled corn at the spout. What has happened to the famous Western corn? It must have dwindled down considerably since the time when they had to use stepladders to gather the ears and axes to hew down the stalks. However that may be, the following is an item which we find in an Eastern exchange:

T. H. Wood, an enterprising farmer south of Litchfield, Minn., this year tried an experiment with his field of over 60 acres of corn, that is worthy of more than a passing mention. When the corn became ready for cutting, he went into it with his self-binder. The only change he made in the machine was to attach the sickle-knives to a bar of double weight, the ordinary sickle bar being considered too weak for the work. In cutting, where the corn was green and unusually heavy, he took but one row at a time, but where it was of ordinary growth he took two rows at a swath. The bound bundles were shocked up like wheat and permitted to stand in the shock until thrashing time, a few days ago, when he ran them through an old thrashing machine in the same manner as he would wheat. The result was in the highest degree satisfactory. The corn was shelled clean from the cob. Some of the grains were broken, but for feeding and commercial purposes uninjured. Some of it he brought to Litchfield for market, and received five cents per bushel more for it than was being paid for corn in the ear. The stalks were broken up better in some respects than by a feed-cutter, and made excellent fodder. Mr. Wood says he shall continue to harvest his corn in this manner, and commends the process to his fellow-farmers as being cheaper and preferable in many ways to the ordinary method of harvesting that crop.

We do not suppose California will be long taking the hint in this direction. It may be that our stalks are too long and thick, but they certainly can have the advantage of perfect dryness, which must facilitate such an operation. Perhaps some of our wide-awake inventors can devise an improved thrasher which will do the business for California corn. Perhaps we can have a modification of the combined harvester which will pass through the cornfields delivering the shelled corn in sacks and the minced corn fodder in bales for stock-feeding. Harder things have been done before now,

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Glimpses of San Diego County.

[Written for the RURAL PRESS by GEORGIE D. W.]

Southward of our gates of gold
Two hundred leagues, as the tale is told,
Two hundred years, near the Aztec sea,
A city there was and again shall be.
—*Old Legend.*

Entering at San Diego bay, we pass through a narrow channel between the almost perpendicular hights of Point Loma, with its lighthouse, and the peninsula, with its Coronado beach. Safe in the land-locked harbor, after a sail of some seven or eight miles, we find ourselves in port, and then, with a rustic's eye, take in the city and its surroundings.

The distant Mexican mountains on one hand, the San Bernardino range, topped by the snow-draped peaks of the San Jacinto on the other, form a very pleasing picture—one not easily forgotten. The city abounds in tropical fruits and flowers and dense shrubbery. It can almost vie with Italy's famed "Bride of the Sea"—the beautiful Venice of song and story. The moonlight nights here are perfect. They have gondolas. Isn't a gondola a boat? Well, there are ever so many here. Any evening, when the wind doesn't blow, you may see those little crafts lazily floating over the placid waters, or propelled by the light-dipping oars of the boatmen, freighted with merry pleasure-seekers on their way to or from the Coronados, Point Loma or some little isle they wot of.

San Diego city is growing as rapidly as its most zealous admirers could wish. There have been a great many handsome residences put up lately. The Florence Hill, on the outskirts of the city, claims the finest, I believe. H. H. Bancroft, the historian, has a beautiful residence up there. The hotels are all crowded, and still the cry is for more room. Several large hotels have gone up lately. I suppose they will see to it that room is provided for all who come.

Only a few days in the city, as our way lies northward. In a private conveyance we soon reached the dry bed of the San Diego river at North San Diego, the present suburbs. Here, where the old monastery now stands, was founded the first mission, afterward removed further up the river. But my pen must stop. The subject is very fascinating, but it has been so well and so enthusiastically written up by others of far better descriptive powers that I stand—as I stood before those grand old wrinkled palms, a century dead—in silence.

After a visit through the monastery and grounds, we moved on northward over a good mountain road, past some of San Diego's prettiest valleys, which open out to the sea through breaks in the Coast Range that follows the line of the ocean all the way along from San Francisco. The first of these little valleys is Cordero, where the California Southern Railroad has its first station, 18 miles from San Diego. High mesa land rises on either side, the valley lying quite level only about one and a half miles wide from mountain to mountain. The slopes to those mesa mountains are being converted into ranches and homes by the new settlers.

San Diego county generally is very healthy. It is semi-tropical, with all the advantages and minus the disadvantages of the tropic countries. In this mountainous region there is no miasma; no intense heat; no very cold weather (although the wind is very searching sometimes), but health on every passing breeze. Ay! soft, invigorating breezes, whether they blow from the ocean laden with spicy southern perfume or come floating down from mountain pines.

Trapping Gophers.

EDITORS PRESS:—The most favorable time for trapping gophers is during the rainy season and in summer before the ground becomes dry and hard. In order to trap gophers successfully a liberal supply of common sense and patience is very essential to the trapper. In the first place, the habits of the gopher must be studied and learned. It is well known that gophers come to the surface in the night, and generally close their holes in the morning soon after daybreak. They frequently emerge again about noon, and a third time late in the afternoon. It is best to set the trap in an open hole, as the gopher will be sure to return to fill it. Still the holes may be opened if the dirt is still fresh, with a good prospect of the gopher's return. Therefore the trapper may make his rounds three times a day, as above indicated.

In the second place, care should be exercised in preparing the hole for the insertion of the trap. The trapper should assure himself that he has found a straight hole for a distance of at least 10 inches, with no lateral branches, otherwise the gopher in pushing out the dirt will likely enough thrust the trap to one side, cover it up or spring it without being exposed to its grasp.

In the third place, the trapper should be supplied with at least two varieties of traps—one for the larger gophers and the other for the smaller ones. The common iron gopher trap, which springs downward, is excellent for the former, and the small wire trap, which springs upward, is generally successful with the latter. It is taken for granted that the size of the hole is indicative of the size of the gopher. Either trap should be inserted nearly its full length into the hole, pressed down firmly, and a little dirt piled at the outer end to prevent its being easily pushed out. After the trap is set it is well to cover the opening with some grass or weeds. Sometimes the holes require a little enlarging, but care should be taken to make the fit as close as possible, that the body of the gopher may be kept near the center, and thus more exposed to the prongs of the trap.

In the fourth place, the trapper should be supplied with a small spade and a little gouge-shaped implement for trimming the hole.

Finally, the trapper should be supplied with traps as numerous as the extent of the pest demands. He should not be discouraged by lack of success at first. Perseverance is as essential in this work as in any other, and will generally win. We have in mind the successful capture of a big gopher after trapping for him a week, changing the trap two or three times a day; he had then destroyed about 50 hills of corn. How much damage he and his descendants might have done had not his career of devastation been interrupted, can only be estimated by such multiples as attach to the propagation of that particular species. G.

Santa Cruz.

THE DAIRY.

San Mateo County Dairies.

The Redwood *Times and Gazette* has been out among the dairies and collected the following interesting statements:

The San Mateo dairy of Messrs. Kinne & Daley occupies a sightly eminence. To the east it overlooks part of the Potrero, with the bay and a portion of Oakland beyond and the long sweep of the Mission road from St. Mary's College to the San Mateo county line. To the south rise the rugged steeps of Mt. San Bruno. To the southwest and west unfold the fertile slopes of Colma, rising southward to the hights which overlook San Pedro valley, and sinking westward to Laguna Merced and the sandy dunes which wall it from the encroaching sea. To the north the land falls rapidly to the irregular pass which forms the business portion of the thriving village of Ocean View, and then rises to the hights which run north across the peninsula in a gradually lessening line until lost beyond Lone mountain in the broad plateau south of the Presidio. In the very teeth of the west wind, and at the northern bastion of the county, so to speak, this little "castle of industry" stands, the first of the many milk dairies which have made San Mateo county the pure-milk purveyor of the metropolis. Within easy rifle shot of the San Mateo dairy is the dairy of Knowles Brothers, who have succeeded their father in the operation of a well-equipped, well-managed dairy, small, but good—a veritable multum in parvo of system, cleanliness and quality of output. Both these dairies feed the best of hay as well as plenty of bran, middlings and oilcake meal. At the Knowles dairy is in operation the first De Laval cream separator used in San Mateo county. This separator is an application of the principle of centrifugal motion to the extraction of cream from sweet milk. The milk is put into a tin tank so fast as milked, and when the required amount is in the tank it is passed therefrom and through the separator, run by a two-horse steam engine. The result is sweet cream, thick or thin as desired, and sweet skimmed milk, suitable for feeding to young calves or for sale to bakeries to be used in bread-making. Mr. Bart Weeks, of Pescadero, has also one of these separators in use. Mr. Coburn is about to put one in, and other large butter dairies will doubtless do so soon, in situations where the fuel supply justifies. The milk supplied to San Francisco by the two dairies first noticed, by Jersey farm at San Bruno; by the Millbrae dairy and by the Howard dairy at San Mateo, as well, doubtless, as that produced by many other smaller milk-shipping dairies in the county, is of approved excellence.

The writer has just returned from a trip along the coast from Half Moon bay nearly to Point New Year. No better dairy section exists in the county. The milk product of this entire section readily might be sent to San Francisco by rail—if rail facilities existed. Seven thousand gallons daily might be sent from the section between Pigeon Point and Half Moon bay. Given a coast railroad from Santa Cruz to San Francisco and the problem of supplying the metropolis with pure milk will be solved for all time. We think we do not exaggerate when we say that the coast side of San Mateo and Santa Cruz counties can easily supply San Francisco with all the fresh milk it is likely ever to need. The undeveloped dairying possibilities of that section are greater than have been even dreamed of. Rapid, sure and cheap transportation of fodder and of milk must come some day and ought to have come long ago. Let those who have most to gain in the matter—all of us are in some degree interested—do something. A mass meeting in Pescadero, another in Santa Cruz, another in Half Moon Bay, addressed by the intelligence and the public spirit of those three communities, ought to throw light upon the disputed question of how best to secure what is needed. If neither the Atlantic & Pacific nor the Southern Pacific evidence determination soon to build, why not build ourselves? Find out what it will cost and build it! If the coast shows the capitalists of this county and Santa Cruz county that it is in earnest it can have enough stock subscribed for and enough money paid in to begin work within six months from this writing.

THE STOCK YARD.

Official Statement About Pleuro-Pneumonia.

It is telegraphed from Washington that Chairman Hatch, of the House Committee on Agriculture, has received from Commissioner Colman a reply to the resolution offered a few days since by Representative Swinburn, of New York, in which the commissioner sets forth the difficulties of attempting to extirpate or to control the pleuro-pneumonia scourge in the present state of the law and with the machinery at hand. He reinforces his recommendations previously made for more heroic methods, with additional arguments and statements.

The resolution of Swinburn seemed to question the prevalence, if not the existence, of pleuro-pneumonia, declaring, in its preamble, that since the submission of the commissioner's last report it has been denied that the contagion did exist, whereas that report said it did, and calls for full and explicit information as to the ownership and locality of the infected herds, the number of animals which have perished and the steps taken to stamp out or confine the contagion.

Extent of the Infection.

The commissioner, at the outset, declared that some of the statements attributed to his report were not contained in it, and proceeds to show that the summary by the Chief of the Bureau of Animal Industry of the discoveries made during two years was erroneously assumed by Mr. Swinburn to be a statement of the condition of affairs at the present moment. Commissioner Colman proceeds as follows: "In reference to that part of the preamble which states that it has been denied, since making the report, that the disease does not exist in the localities where it was reported to do so, I would respectfully say that my information is not in accord with the statement. If by localities individual premises are meant, then the statement may be admitted to be correct, for with pleuro-pneumonia, as with all other contagious diseases, some herds are continually being rescued from contagion while others are continually coming under its influence. If, however, we use the word localities in the sense of States or counties, I see no reason to believe that with the exception of Kentucky and Illinois there has been any material change.

"As to the proportion of 1727 affected animals which recovered and the proportion of those exposed which afterward became affected, I have no information. An inspection was made to obtain the facts as to the extent of the disease, and it was impossible with few exceptions under the existing laws to keep the infected herds under supervision or to obtain any facts as to the subsequent history of the herds.

"The publication of the fact of the existence of pleuro-pneumonia in certain herds without the adoption of prompt measures for suppressing it caused so much damage to the owners that in many cases they not only refused to give any information, but prevented the examination of the animals at subsequent visits."

The commissioner then says that the only way to learn the fate of animals in such herds is to place a watch on the premises, and maintain it day and night. For 450 herds this would require at least 900 men, a force which it was clearly impossible for the department to employ, even if the expenditure were authorized.

Quarantine Ineffectual.

As to the quarantine of infected herds, the report refers to the State laws, which are not such as to enable the department to enforce such regulations, there being nothing to prevent the removal of that part of the infected herd which has not yet shown symptoms of disease from any State into any other State.

The commissioner recommends emphatically that his department be given sufficient authority to overcome this difficulty, or that the work of eradicating the plague be left entirely to the State authorities.

The report enlarges upon the difficulties in the way of effectively quarantining infected herds on account of the loss entailed upon the owners by the suspicion thus cast upon their product. In order to overcome such difficulties, it will be necessary to place a sufficient guard over every infected premises to prevent any men or animals liable to spread the contagion from mingling with the outside world. The commissioner concludes that such a quarantine would be so expensive and so intolerable to the citizens of this country as to make its maintenance impossible.

He therefore recommends, wherever an infected herd is discovered, that all the exposed animals be slaughtered, the premises thoroughly disinfected, and the owner compensated for the loss to which he is subjected for the protection of the public.

The report gives the history of pleuro-pneumonia in Kentucky and illustrates the commissioner's opinion with incidents showing the impossibility of making an effective quarantine, and representing that the slaughter of diseased and exposed animals and disinfection of the premises to be the only way of extirpating the plague.

Number of Animals Slaughtered.

The report concludes with the figures giving the proportion of the slaughtered animals that were more or less affected with pleuro-pneumonia, which are of great interest because they demonstrate the advisability of slaughtering all animals once exposed to this contagion. Many of the affected cattle presented no symptoms of the disease before slaughtering, but the condition of their lungs was such as to make it very certain that they were capable of disseminating the contagion for an indefinite period.

The table referred to shows that from November 28th to December 16th, 2271 animals were slaughtered, of which 1031 were found to be affected. Another table shows that in addition to these, 332 small herds, numbering in all 1051 animals, were placed in quarantine in Chicago and vicinity from October 13th to November 30th, all being in private herds and stables, and the greater part of which were quarantined because of exposure to affected cattle grazing on the various commons about the city.

What is the Reason of It?

EDITORS PRESS:—I recently bought a cow, 15-16 Jersey; she was in poor condition, having been underfed both before and after calving; her milk is nevertheless rich, and for the first few churnings the butter came all right, although it took from three-quarters of an hour to one and one-half hours; it was very hard. The next time we churned for several hours, but the butter would not gather, although we could see it in the cream, and finally after two or three days we abandoned it as useless. The next time we were successful, but since then we have tried twice without success. We are quite unable to account for it. As to food, the cow gets a mash in the morning, two parts bran and one middlings, and pumpkins three times a day (all she will eat with the seeds taken out), and has access to a stack of barley straw. She also has corn-stalks to pick over during the day, and hay at night (the latter is rather mixed, ordinary wheat, bearded wheat, and wild oats, but it is very free from weeds). She still keeps lean, but appears well and gives as much and as rich milk as at first. Can any one tell me what is the matter? My wife has made butter from common cows for years; do Jerseys require different management in any way? Am I feeding too many pumpkins, or is there anything wrong with the other food mentioned?

Will some one be kind enough to tell me the proportions and ingredients to make a mash for young bulls, one year old? SUBSCRIBER.

Gubserville.

Hereford Cattle.

EDITORS PRESS:—Not long since an allusion was made to Mr. Wm. Dumphy's cattle; as I saw no reply to the inquiry, I will state the few facts I am in possession of.

The herd were brought to San Mateo after leaving quarantine and grazed about one year. A portion were shown at the State Fair and at county exhibitions, and received prizes. No sales were made of single animals to distribute into the breed through the State. The original 16 had, at the time they were sold to Mr. Dumphy, increased to 20, and report was that the price was even $10,000 for the 20 head. I saw no notice of the sale, and as so many of your readers saw this exceptionally fine lot of cattle, it may be of interest to know that they were bought by Mr. Dumphy and taken to his ranch in Monterey county. I was enamored with them, and, through courtesy, obtained the service of the bull Vanguard, and possess two nicely marked, deep red, thrifty bulls from deep milking Shorthorn cows. Others in the neighborhood have white faces from good milk stock, in all not exceeding ten head. These cattle should have a home in the grazing districts of our State. J. T. HOYT.

San Mateo.

THE APIARY.

Bee-Keeping in the Hills Near Salinas.

EDITORS PRESS:—A few miles north of Salinas, among the rich gravelly hills and narrow valleys of the neighborhood of the San Miguel canyon, between the cultivated fields, there are considerable portions of country still in an uncultivated condition and partially covered with wild flowering shrubs. Many orchard trees flourish here, and during much of the year wild and domesticated flowers combine to furnish very fine bee forage.

Several farmers are here partially devoted to bee-keeping. C. S. Swensen has about 250 colonies; Mr. Rose about the same number; Mr. Gilkey about 80; Mr. John Webb 100; Mr. Adcock perhaps 200. Several others have a

few each. Mr. Swensen last spring started in with about 175, the other 75 colonies having been added during swarming time. An estimate based on this proportion will, it is thought, approximate the number of new colonies made among those above mentioned during the last swarming season.

The past season was in this neighborhood not first-rate for the production of honey. The flowers of honey plants bloomed out rapidly during the heavy spring rains, and seemed to exhaust their vitality before the bees could do much; after the rains they soon dried up. From the flowers of a kind of black sage the bees usually in spring make much first-class honey. Wild alfalfa, so called by the people of the country—a rather small shrub of the broom family—grows here in great abundance, blooms a little later than the sage, and was during the season the main dependence for honey-making.

Mr. S. extracts and disposes of honey in comb, using section boxes for the purpose. He this season took from his 175 old colonies about 3000 pounds of honey in the comb and about 5000 pounds of the extracted. This is considered a small yield for this region, but upon comparing notes with his neighbor bee-keepers found it about an average yield for this season. Most of the bee-keepers above mentioned dispose of their honey in the comb.

While most bee-keepers herein mentioned use the Harbison hive, Mr. Swensen uses No. 8 Langstroth, and believes it the best of all hives. He uses foundation for comb in the brood-chamber. The section boxes are Harbison's, sections one and one-half inches wide, with slight foundation start at top of each.

Mr. Swensen's apiary has heretofore been badly subject to foul brood. He finally got rid of it by the following process: When he found a colony infested with foul brood, he would first give the hive a good smoking and let the bees fill themselves with honey. He would then drive the bees to an empty box and shut them up for 72 hours, then put them into another box full of foundation sheets and feed them well with what is called medicated honey, after the recipe by Chas. Muht, which is furnished by Mr. Swensen as follows: Mix eight grains salicylic acid, eight grains soda borax, one ounce water; then take honey (boiled about 15 minutes, preferred, taking off scum as it comes to top). To the honey add water by measure, in the proportion of one part water to three parts honey. Then add to each quart of this honey mixture two ounces of the acid mixture.

This treatment has, with Mr. S., proved very efficacious in ridding his bees of foul brood.

Monterey Co. McD.

POULTRY YARD.

Notes on Poultry Buildings.

EDITORS PRESS:—I would like very much to have an interchange of ideas with some practical poultry-raiser, in the matter of ventilation for hen-houses, or perhaps I had better say that I would like to have the ideas of some practical poultry-raiser in the matter, not that I have not some ideas which I am willing to put forth for the benefit of any one if he finds any benefit from them. My own practice at present, and for some time past, has been to leave in my houses, on the sides at the bottom, an opening, say two inches wide, and within a foot or so at each end of the length of the house, and if there should be any fear of skunks getting into the house through these openings, one can easily nail a lath or some narrow strip of something on in such a way as to do away with the possibility of their getting in and still not impede the circulation of air materially. For the top ventilation, of which I have satisfied myself at any rate that the fowls need very little, I simply leave the space made by the rafters resting on the top of the house-side instead of being let in. That space and the thickness of the roof boards, at the sides and ends, furnish, in my view, all the top ventilation necessary or advisable.

My first houses were in size 8x12, with a ventilation made by simply raising the last course of shakes four inches, by nailing on the end of the rafter, where the last course was to go, a piece of 2x4 scantling, and then nailing on the roof boards and shakes, and no ventilation at all at the bottom. The houses, by the way, were fitted with two roosts and were expected to furnish shelter for 50 or 60 fowls. Not being satisfied with this, I made a house with a lattice-work ventilation at the bottom of a foot in width, nearly the length of the house, and lessened the opening at the top. I liked that better because the fowls seemed brighter and more comfortable, and, of course, did better—better health and more eggs. In short, after trying sundry other ways, I find that the way in which I make them now is best for all purposes.

Also, instead of being 8x12, they are only 4x6, but still are shed-shaped, as I find them the cheapest and easiest to make and as well suited to requirements of the fowls as any other, and if tastefully made are as nice looking. I keep not to exceed one dozen fowls in each house, having two roosts lengthwise of the house, with door in one end of the house and hole for fowls to go out and in at the other. Each house has its yard 16 feet square, with the house forming part of the fence, so that one can go into the house without going into the yard. I have kept several hundred fowls of different breeds in this way and in the same yards and houses for the last two or three years, and they keep healthy and productive, and they are incubator fowls, too.

I did not intend to write so much as I have, and I had better cut it short at once. I have been in the business between five and six years raising eggs and broilers, still hatching by incubation and raising finely developed, healthy fowls, and make it pay. If you find this acceptable, I hope it will call out some one full of good practical ideas. T. B. GEFFROY.

Lodi, San Joaquin Co.

[These notes are of much interest, and we would like to have many more of them. We hope also that our poultry readers may have something to say upon the points advanced.—EDS. PRESS.]

THE FIELD.

Distribution of Cuttings and Scions.

University Experiment Station, Bulletin No. 62.

The Standard Orchard of the University contains upward of 500 named varieties of fruit. The soil is not well adapted to the growth of fruit trees, nor is the bay climate of Berkeley calculated to foster the production of handsome, high-colored fruit specimens, except of apricots, which color better here than in the interior. Notwithstanding the disadvantages of soil and climate, we have, by the use of barnyard manure, which is abundant in the neighborhood, and by careful pruning and cultivation, succeeded in growing fruit (especially late apples and pears) which, when shown in variety at the leading fairs, has received the commendation of the expert judges and the public.

The Standard Orchard of the University is maintained not as a commercial enterprise, but to serve several purposes. First, that of illustrating the instruction which is given in horticulture; second, to serve as a means of identifying fruit specimens which are sent to us from all parts of the State for that purpose; third, as a source from which any citizen of the State can obtain scions or bud-sticks either for the purpose of testing varieties under the conditions prevailing in his locality or to insert in bearing trees to establish the identity of unnamed varieties which he may have. There is such variation in the characteristics of varieties grown under different conditions in California that often we can but approximately identify a variety and send scions of that variety, true to name, for the grower to fruit for himself and thus compare the two when grown under the same conditions. In all these directions the Standard Orchard at Berkeley is proving of value to the fruit interests of the State.

The accurate records which have been kept of the tree growth and fruitage of the different varieties serve as a trustworthy guide for planting in regions adjacent to the bay and coast, where the climate in its main features most resemble that of Berkeley. The forthcoming report of the College of Agriculture for 1886 will contain tabulated results of several years' observations by Mr. W. G. Klee, from which the reader may learn what varieties promise well and those which are likely to be worthless in the section of the coast region to which allusion is made. From these observations it is also possible to indicate certain varieties which have good points, but evidently need a warmer locality to develop full quality. Such varieties are commended for trial at greater distance from the coast.

Terms.—Orders may be sent for few or many varieties, as may be desired. We cannot furnish large quantities of a single variety, because the object is to test varieties and not to furnish material for commercial propagation. Packages of scions are forwarded by mail, and applicants are required to send 10 cents for each dozen ordered, to defray expenses of packing and postage. Postal notes, payable at the Berkeley postoffice, are requested to be sent in lieu of stamps whenever practicable. Any surplus left after filling orders as far as possible will be returned to the senders, deducting letter postage.

The limits of an announcement of this kind prevent a full enumeration of varieties which can be furnished. We select, therefore, such kinds as seem to us most promising and least known to growers. Those who may desire other varieties than those named may apply for them, and they will be furnished if we have them.

Apricots.

Observations on the growth and bearing of our collection of apricots for several years warrant the naming of several varieties as well adapted to bay and coast climates in this part of the State: Blenheim or Shipley medium size, color fine, early, very productive; Beauge, (?), very handsome fruit of Blenheim type, most beautiful golden yellow, painted with brightest red, rich quality, *a clingstone*, ripening here the middle of July; Orange, possibly identical with the Royal, but grown here, has much higher color, a good bearer and early, but the tree is only a moderate grower; Sardinian, a small apricot, possibly valuable because of its earliness.

Apricots not altogether satisfactory here but likely to be valuable in warmer parts of the State: Alberge de Montgamet, large freestone, pitting very readily, color orange, flesh firm and rich; St. Ambroise, large, fine-looking fruit and tree large and vigorous; Kaisha, from Syria, pale colored, excellent flavor and quality and very juicy; Canino Grosso, fine, large fruit of Hemskirk type; De Coulorge, also fine fruit of similar type.

Apples.

The following varieties include the most promising of those in our collection which are not generally known in this State:

Benoni; shaded and striped with red; midsummer; for table and market; very good to best.

McCloud's Family; yellow; striped with dull red; late summer; very good.

Fanny; crimson red; midsummer; very good.

Julian; whitish; striped with rich red; very good.

Red Canada; beautiful red; winter; very good.

Mother; splashed and marbled with red; winter.

McAfee's Nonsuch; striped and splashed with red; winter.

McLellan; red; beautiful; very good to best.

Dalonega; striped and splashed on yellow ground.

Green Sweet; greenish yellow; very sweet.

Cardinal; yellow; middle of July; tree a fair grower; but yield here rather small.

Count Orloff; pale yellow; rather a small bearer; but good quality and good keeper.

Grimes' Golden Pippin; yellow; a fair grower; middle of September.

Disharoon; yellowish; dull red or russet cheek; a strong grower and healthy tree; fruit good and a good keeper; October and November.

Duckett; yellowish; striped and splashed with red; winter; tree fair grower and fruit good.

Equinetely; greenish yellow; covered and splashed with rich red; a fair grower and good bearer; fruit good, and keeps until March.

Rome Beauty; shaded and striped with red; a good grower and bearer; fruit good, keeping till April.

Dutch Mignonne; yellow striped and splashed with red; a fair grower and good bearer; fruit good, keeping until March and April.

Canada Reinette; large russet; a fair grower; fair bearer; quality good and a fair keeper; ripens in September.

Crab Apples.—The University collection of crab apples shown at the fairs attracted much attention by their great variety in form and color. We can furnish scions of the following varieties:

Oblong Crab, Montreal, Chicago, Coral, Red Siberian, Yellow Siberian, Currant, Transcendent, Large Yellow, Ringo, Malus Karda, Hewe's Virginia, Lady Crab, Large Red and Hysops.

Pears.

Our collection of pears is very good, and the quality of many of our winter fruits, especially, excellen'; but the presence of the summer fogs has the tendency to give them a russet surface. The same varieties grown farther from the coast will present a much handsomer appearance. The collections shown at this year's State and Mechanics' Institute Fairs were highly commended. The spraying of the orchard with the sulphide-whale-oil soap solution produced a marked effect upon the black fungus, and gave the trees and the fruit a much better appearance.

In connection with the descriptions of the following varieties, of which scions can be had, we give the time of ripening of this locality, which, compared with the greater part of the State, is very late. Those starred (*) have proved exempt from the black fungus, or nearly so, every year since fruiting here:

Annie Ogereau; very handsome pear; beginning of August.

Ott; middle of August, before Seckel; small, but delicious.

Duchesse Precoce; above medium; a steady bearer; fair quality; end of July.

*Doyenne Robin; medium to large; beginning of September; good bearer; fair quality; excellent keeper.

Dr. Reeder; small, but of the highest quality; end of September, beginning of October, after Seckel.

*Paradise d'Autumne; September and October; medium size; very good.

*Marie Louise d'Uccles; end of September; small grower, but a large and constant bearer; fruit large; good quality.

*Sheldon; large; end of September; good.

*Conseiller de la Cour; large; regular bearer; good; middle of October.

*Jalousie Fontenay Vendee; medium; good bearer; resembles in taste Beurre Gris, of Europe.

*Pitmaston Duchesse d'Angouleme; a pear entirely different from the ordinary Duchesse; is later; large to very large; so far a shy bearer; good.

*Baronne de Mello; medium; regular bearer; November; good.

Augustus Dana; large; November; very good; so far a shy bearer.

*Beurre Gris d'hiver Nouveau (new gray winter pear); a variety, we are told, which was formerly cultivated considerably in Santa Clara, but now not met with; large to very large; tree a good regular bearer; quality very good; November and December.

*Md. Lariol de Barny; large, good bearer; good (resembles Emil d'Heyst).

*Jaminette; above medium size; November and December; excellent keeper; good (extremely sweet).

Fondante de Noel; above medium; very handsome; December; good.

*Jones Seedling; small; a good, steady bearer; October; good.

Duhamel de Monceau; December; above medium; very good; tree a poor grower.

*Doyenne d'Alencon; late; ripening January 1; good grower and healthy; yield fair; quality good and a good keeper.

*Beurre de l'Assomption; middle of August; fair grower and healthy; yield good; fruit handsome and large, but not a very good keeper.

Forelle or German Trout Pear; a fall pear of great beauty.

*Louis Vilmorin; large pear resembling Clairgeau. Not adapted to coast climate; should be tried elsewhere; tree healthy and yield fair.

*De Tongres; very handsome; highly colored; a good keeper; fruit shown at the fairs attracted much attention; tree healthy and a good grower. Ripens here October 1st.

Plums.

Scions of the following varieties can be furnished:

Ontario; the best early plum we have; green; above medium; quality fair.

Black Morocco; small, blue plum; very early; cracks badly in this locality.

Lawrence's Favorite; seedling of green gage; resembling it, but larger.

Wangenheim Prune; resembles German prune, but bears better here.

Red Magnumbonum; a good plum; rather large; freestone.

Victoria; handsome, large; flesh yellow and rather coarse, but sweet; tree vigorous and healthy.

Lombard; a popular Eastern variety; medium size; violet-red; flesh juicy, but not rich.

Reine Claude de Bavay; one of the best varieties, which should be better known here; very late; greenish-yellow; flesh juicy, melting and rich.

St. Lawrence; rather large; dark-purple with light bloom; yellow flesh; sweet and rich.

McLaughlin; one of the best; large; skin thin, yellow, dotted with red; flesh yellow; very sweet and luscious.

Prince Englebert; a good variety; tree very productive.

Goliath; a large, handsome plum; deep red to purple.

Copper Plum; an old variety; tree very productive, vigorous and hardy; fruit medium size; late; should be better known.

St. Martin's Quetsche; a late prune from Germany; tree hardy and apt to overbear; fruit medium size; pale-yellow; hangs long on the tree; flesh yellow; freestone.

Peters' Yellow Gage; very good here; tree a strong grower; flesh yellow, juicy and sugary.

Prince of Wales; an old variety; very satisfactory in this locality.

Orange; very large and handsome; yellow; tree vigorous and productive.

Belgian Purple, rather large, and deep purple; handsome; tree strong and productive.

Drap d'or d'Esperen; fruit large; golden-yellow; flesh light-yellow and good quality.

Ives' Autumn; an excellent plum; yellow with red dots; large.

Royal de Tours; large; bright-red to violet; flesh high flavored; juicy; very good.

Autumn Compote; large; whitish-yellow, with crimson in the sun; flesh yellow; very good.

Diapree Rouge; tree rather a poor grower, but fruit large, reddish-purple; flesh pale-green, juicy and melting.

Reine Claude Rouge; very good to best; is somewhat known in this State.

Denniston's Superb; an excellent variety; tree a strong grower; healthy, hardy and productive; fruit round and large; color pale-yellow.

Mulberries.

The mulberry plantation on the University grounds has made a fine growth during the last year, and a few cuttings can be had of each of the following kinds: Downing's Everbearing, *Morus Multicaulis*, Russian Mulberry, *Morus Alba*, and the Japanese varieties, Lhoo and Nagasaki. The last two have made especially fine growth.

Grapevines.

The climate of Berkeley is so unsuitable to the growth of the vine that no attempt is made by us to maintain a complete collection, which, in the absence of fruit, would offer comparatively little interest. Moreover, the existence of the phylloxera on the grounds renders any extension of the culture of non-resistant vines inexpedient, the small block or vineyard being maintained only for the purpose of experimentation in relation to the repression of the pest. We have, however, endeavored to secure as complete a representation as possible of the several wild stocks that possess, to a greater or less extent, the power of resisting the inroads of the insect, as stocks for grafting, to be used in localities already infested. This collection now embraces the following species, of which cuttings will be sent to those desiring to test them, on the same terms as other scions:

American Resistant Grapevines.

Vitis Arizonica; the wild Arizonian vine.

V. Riparia; the Riverside grape of the Mississippi valley.

V. Californica; the wild grapevine of California.

V. Aestivalis; the summer or upland grape of the East.

V. Candicans; the Mustang grape of Texas.

V. Cinerea; an upland grape related to the Aestivalis.

V. Cordifolia; the Southern Riverside grape.

V. Vulpina; the Southern Muscadine, Scuppenong, etc.

V. Monticola; the mountain grape of Colorado, etc.

V. Neo-Mexicana; a wild grade of New Mexico.

V. Rupestris; the rock grape of Missouri.

Asiatic Vines, Presumably Resistant.

V. Romaneti; white; Eastern Asia.

V. Romaneti; red; Eastern Asia.

V. Opiman; from Cashmere.

V. Spino-Vitus Davidii, China.

V. Katchebourie.

Huasco Raisin Grape.—This variety, imported from Chilé, has been distributed by us for some years and is now well spread in the State. We can still furnish cuttings of the variety in lots of 10 each, for experimental growing. The cuttings are, of course, carefully disinfected before shipment, although the vines have never become infected. Reports regarding its merits as a raisin grape vary, although it appears to be a more reliable bearer than the Muscat, which it nearly resembles.

Address applications to

E. W. HILGARD.

University of California, Berkeley, Cal., Dec. 29, 1886.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Railroad Pooling.

A fanatical sect sprang up in England during the reign of Cromwell, known in history as the Fifth Monarchy men. They held that the fifth great monarchy spoken of in biblical prophecy, destined to break and stamp in pieces all other kingdoms, had begun with the rule of that despotic chieftain. There ever has been a strange belief founded upon a bit of Hebrew prophecy of a monarchy, diverse from all other kingdoms, that shall devour the whole earth, attempt to change times and laws and trample the people as grass. Prophecies and dreams may sometimes come true, but in a way the liveliest fancy little anticipated. What seemed to the rapt vision a goodly land at a distance, may turn out a heap of rock and sand, inhabited by wild beasts and savage men.

Now all prophecy and romancing aside, there is steadily and silently spreading a mighty power in this land in the shape of a network of railroads extending from the Atlantic to the Pacific, and from Maine to the Gulf States; it is coiled around all the industries of the land with a tentacle fastened to every wheat sack and box of fruit. It is a power that has no cannon, no fortifications, and yet it levies tribute at its own arbitrary will, and is pushing out toward the north, south, east and west, crushing all in its way. It is a power that has no patriotism, no politics. While there is a full appreciation of the value of railways and of the difficulties of successfully operating them, the public will never be convinced that it is wisdom or justice to leave this vast power to grow without check and regulation. That is the object of the Interstate Commerce bill now before Congress. A recent dispatch says there is rapidly developing in the Senate a strong opposition to the measure, and if the short-haul and anti-pooling clause are not abandoned it will most likely suffer a defeat. But it is obvious that we must take a start, and the sooner the better. The people demand such legislation and there is no mistaking their will. The party or politician that heeds not the warning will be left to the cyclone. The measure will be a little clumsy at first, but experimentation is the only way to the right.

But one thing is clear—the anti-pooling clause under no circumstance should be abandoned. It is the pith of the whole question. The fact that the whole railroad opposition hangs on this peg ought to arouse suspicion. If railway managers can combine when they please for the purpose of preventing competition in passengers and freights, then the throne of a despot is planted in our midst. What is pooling but the plot of a minority to fleece the majority? Forestalling in the provision market has ever been rigorously punished by law. At the present time the legislative mechanism of a great State is being evoked to suppress the combination of sundry coal companies to raise or depress prices at their caprice. Is there any difference between coal pooling and freight pooling? Already coal pooling is indictable in some States as a criminal conspiracy against the rights of the people. Railroad pooling is equally criminal in purpose, and should be made equally illegal. It may be more difficult to suppress, owing to its widely expanded interstate operation, but the Reagan feature of the bill now before Congress makes railroad companies as easily arraigned before the proper courts as the coal companies now are in several States. It has been said that if this bill becomes a law it will drive many weak railway companies into bankruptcy. Let them go. It is the inevitable law of trade. Why should railroads combine to put up the prices in order to prop up the weaker companies, any more than merchants combine to prevent the failure of small dealers? Then it is the people that must always pay this advance of rates, and they have had enough of the monstrous usurpation. Whatever modification this bill may receive, by all means preserve the anti-pooling clause. It is the vitality of the whole measure.

Installation at St. Helena.

EDITORS PRESS:—St. Helena Grange met on Saturday, January 1st, at 10 A. M., for the purpose of installing officers for the ensuing year. Our hall was beautifully decorated with evergreens and mottoes appropriate to the occasion. We would have been pleased to see some other members of the Order with us, but, unfortunately, the announcement had not appeared in season in all the papers. The installation passed off well, after which all repaired to the lower hall to partake of the lunch which had been prepared. At 2 P. M. the hall was thrown open for the reception of New Year's callers, and about 50 ladies and gentlemen responded. During the afternoon refreshments were served, interspersed with music and social greetings. Everything passed off pleasantly and was in perfect harmony with the delightful weather. Fraternally,

WM. PETERSON, Sec.

St. Helena, Jan. 4, 1887.

The Senatorship.

It may seem rather unkind to wish any man a hard road, but we must acknowledge that, in common with the people of this State, we are glad to see that Mr. George Hearst is not to have a smooth path to the senatorship. This will give the legislators a good chance to stop and think whether, on the whole, it is for the popular interest to send a man to the United States Senate who could not possibly be chosen to such an office by vote of the people. We have had enough instances of choosing men by legislatures whom the people would forcibly reject if their names came up at the polls. There is a strong movement in favor of amending the Constitution so that senators can be elected by popular vote, and it is well enough to ask how a candidate would stand by such a standard. We certainly do not want men to decide public questions who are so entangled in private and corporate interests that they cannot act disinterestedly on great questions in the struggle of the people against the aggression of monopolies; we do not want for our advocates and judges on such matters the men who are the greatest monopolists in the country.

The telegraph announces that Senator Stanford will speak against the Interstate Commerce bill. Of course he will, and as president of a railway company it would be proper enough for him to do so; but being such an officer, he speaks not as such, but as a representative of the people. It is one of the greatest inconsistencies of the day—the party arraigned pleading his own case, not as an offender, but as the judge. If we place George Hearst beside Stanford, we double the trouble, and between the two we probably succeed in representing all the oppressive monopolies which are crushing us. We have Stanford to smite us on one cheek, and seem to be turning the other for George Hearst to pound on.

There is apparently a determined minority at Sacramento who do not approve of Mr. Hearst's candidacy for these and many other reasons. We certainly wish that they may make some impression upon the majority, which will result in a better selection being made. We hope there are too many independent men in the present Legislature to elect any man to the U. S. Senate for the principal reason that he has furnished the campaign funds that secured the success of any party.

From the National Lecturer.

Under date of Christmas, Bro. Whitehead, Lecturer N. G., writes a genial personal letter to the Master of Temescal Grange. He speaks, among other things, of having just returned from "a grand meeting of the Maine State Grange," and finding on his desk reports from several others, all showing hopeful signs.

Toward the close he says: "I thank you for the invitation to visit California. I have a number of friends in the State, and was quite temoted to go on with my comrades of the G. A. R. last summer. Perhaps by co-operation of all concerned it might be arranged that I can visit you, say next year (I refer to 1888), making calls among the Granges of Colorado, Oregon, Idaho, etc., when going or returning."

Sister Jeanne C. Carr, Bros. Ewer and Dewey, and other California Patrons, have lively and agreeable recollections of Bro. Whitehead speaking at the Centennial Encampment in Philadelphia, when 1000 to 1500 was but an average attendance at those pleasant evening meetings, and will rejoice to see his face and grasp his hand and hear his earnest voice again. Whenever he pays his visit to the Pacific Coast we are sure he will receive the warmest and heartiest of welcomes.

Grange Elections.*

BENNETT VALLEY GRANGE.—Dec. 18: Don Mills, M.; J. M. Talbot, O.; A. R. Lacque, L.; W. P. Crane, S.; J. P. Whitaker, A. S.; Mrs. A. Lacque, C.; N. Carr, T.; A. P. Crane, G. K.; J. B. Whitaker, Sec.; Mrs. J. M. Talbot, Ceres; Miss S. A. Lacque, P.; Miss Ida B. Lacque, F.; Miss Nellie Peterson, L. A. S.; G. N. Whitaker, Trustee.

POTTER VALLEY GRANGE.—Dec. 18: W. A. Grover, M.; H. S. McGee. O.; S. H. McCreary, L.; W. S. Vaun, S.; G. D. Neil, A. S.; T. W. Dashiell, C.; F. M. Hughes, T.; W. V. Killbourne, Sec.; J. Lierlev, G. K.; Miss Emma Neil, P.; Miss Clara Brower, F.; Mrs. Laura Lierley, Ceres; Miss Addie Dashiell, L. A. S.

ST. HELENA GRANGE.—Dec. 18: J. Norton, M.; H. J. Lewelling, O.; Jane L. Peterson, L.; W. Pinkham, S.; Chas. A. Storey, A. S.; W. B. Storey, G. K.; W. Peterson, Sr., Sec.; Mrs. N. Hewes, C.; H. Meacham, T.; Mrs. Ella Storey, Ceres; Mrs. Edna Norton, P.; Miss Maggie Fountain, F.; Mrs. C. Castner, L. A. S.

SUTTER MILL GRANGE.—Dec. 11: F. J. Veerkamp, M.; Wm. Nichols, O.; Wm. Valentine, L.; E. M. Smith, S.; J. Scolari, A. S.; A. Morely, C.; J. Crocker, T.; F. Veerkamp, Sec.; E. Veerkamp, G. K.; Geo. Ramsey, Trustee, Sister J. Crocker, P.; Sister L. Peterson, F.; Sister W. Stearns, Ceres; Sister A. Veerkamp, L. A. S.

*Secretaries, or other officers, are invited to send us lists of officers elected, date of installations, and all other interesting matter for publication.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

It is the design of these weekly columns to give not alone the words and thoughts of one individual, not to advance the Grange in any *one* direction alone; neither are they prepared for Patrons only; but rather to gather from as wide and *varied* a field as possible such ideas, lines of thought, work and progress as will illustrate the great mission of the Grange in the neighborhood, in the State and in the nation; its social, educational and financial features. Thus "line upon line," proving its principles *true*, its aims *high*, its work *successful*. Sent forth with the hope that they will encourage the despondent, strengthen the strong, and secure not alone the good wishes and respect of our unorganized farmers—but their *help* by joining with us and working with us for home and farm and native land.

It is a fact too plain to be longer disguised, that the wealth produced by the masses is gathered in by a few men, when compared with our nearly 60,000,000 of people, and after it is so gathered, consolidations and monopolies are formed to control the political element, elections, legislation, courts and government to an alarming extent. This evil should be corrected—it must be corrected—or our American liberties will soon depart forever, and the American farmers become the serfs of a moneyed aristocracy. The only remedy is organization and education. The Grange is the organization and its highest object is education.

Excursion rates were refused the Patrons of Indiana for their State Grange meeting last month by the "Central Traffic Association," composed of 30 different railroads, because said association had agreed to issue them only to the following classes of societies: Religious, benevolent, educational or medical; and, "as your society does not come under either of the above heads, we cannot under our rules grant you any reduction."

Who will educate the railroads? The Grange *does* come under the first three heads and perhaps the fourth also. Its U. S. Supreme Court and congressional medicine is hard to take. A plank in the Grange platform reads: "We shall advance the cause of education among ourselves and for our children by all just means within our power."

H. E. Hayes, Worthy Lecturer of the State Grange of Oregon, has invaded the Territory of Idaho, and to good purpose. Idaho is under the jurisdiction of the Worthy Master of the Oregon State Grange. Brother Hayes has organized two good Granges within a month in Idaho. They are live, active, enthusiastic Granges, and report to the Secretary of the National Grange that they "are in Idaho county, Idaho Territory, to stay, progress, build up the Order and be a voice and power in the National Grange ere long."

The printed proceedings of the Twentieth Annual Session of the National Grange, a book of 195 pages, are now being sent out through the different secretaries of State Granges; two copies for each subordinate Grange. The important reports of officers and committees should be carefully read and studied in every Grange, that the plans and work of our Order may be well understood, and then all should help earnestly in the work of carrying them on to success.

The Patrons of New Hampshire are arranging for a series of lectures during the winter, covering all parts of the State. Six different lecturers will follow each other in this lecture course. Massachusetts Patrons are also to have a series of lectures by the Lecturer of the National Grange in February. Brother C. L. Whitney will continue his work in Nebraska during January. He reports six Granges reorganized and ten more nearly ready to take up the work. Brother D. H. Thing, Past Master and present Lecturer of the Maine State Grange, has accepted the appointment as one of the four Deputy National Lecturers provided for at the last session of the National Grange. He will work in some nine different States, and will be busy nearly all the year. Pennsylvania State Grange will follow up the successful lecture work of last year.

Illini Grange, No. 772, Macon county, Illinois, reports 12 new members.

North Brookfield Grange, Massachusetts, has just received 17 additions.

Indiana Grange, No. 313, Pa., dedicated a fine new hall a few weeks ago, and has seven applications for membership.

Moorestown Grange, No. 8, N. J., has just completed a fine new Grange hall of brick, two stories; number over 100 members.

Connecticut Patrons are arranging for a Fire Insurance Company "for Patrons only."

"Let us remember that the crowning glory of our organization is to educate and elevate the American farmer, and bring good cheer to the family household."

W. H. STINSON,
Master N. H. State Grange.

Question for discussion by subordinate Granges: What proportion of the profit paid by producers upon the cost of farm products goes to the farmer, and how can we "save for wife and home an honest share of what our harvests yield?"

Several matters are now before Congress that every Patron, every farmer and every Grange should take *prompt* action upon.

1. *Favoring* the bill creating a Department of Agriculture and Labor, with its head a member of the President's Cabinet.

2. *Favoring* the Reagan interstate commerce bill, protecting farmers and others from unfair discrimination in charges, etc.

3. *Favoring* the Hatch Experimental Station bill, appropriating $15,000 annually to each State to sustain an experiment station.

4. *Opposing* all Tariff legislation being asked for by manufacturers and others that will place "raw materials" (all farm products, wool, hides, hemp, flax, etc., are "raw materials") on the *free* list, and leave a High Tariff on the manufactured goods that farmers have to buy.

5. *Opposing* all legislation that will cut off, hinder or prevent the working of the oleomargarine law.

Write personal letters to the Congressman of your district and both your U. S. Senators. Prepare a memorial on these subjects, attach the name of the Master and secretary of your Grange, make three copies, and send one to your Congressman and one to each of your Senators.

"Act, act, in the living present,
Heart within and God o'erhead."

INSTALLATION AT HAYWARDS.—Again Eden and Temescal Granges will have a joint installation of officers. The meeting will open at ten o'clock to-day in Haywards. Ten candidates are expected to be instructed in the fourth degree. This is complimentary to the workers of Eden Grange. Bro. J. V. Webster was a welcome attendant at Temescal Grange last Saturday evening, and will doubtless take part in installing the Worthy Secretary of the State Grange, as Master of Eden Grange. Many other representative Granges, it is hoped, will be present. All P. of H. are invited, and we can vouch that Eden's Harvest Feast will be ample and good enough for all who can attend.

GRANGE ITEMS.—We note in the *Patron* that Potter Valley Grange expected to add 14 to its membership at its New Year's meeting....A large concourse of friends attended the funeral of Mrs. Wm. Tibbits, an esteemed sister in Sacramento Grange....Magnolia Grange had a good average attendance last year, gained 17 members and got clear of debt....The ball at Coloma, given for the benefit of Bro. Veerkamp, whose house was burned recently, was largely attended and the receipts were satisfactory.

INSTALLATION AT YUBA CITY.—The *Sutter Farmer* states that the meeting of Yuba City Grange, appointed for January 8th, has been postponed until Saturday, the 15th. The Grange will be called to order at 10 A. M., for the purpose of conferring the first and second degrees. At 1:30 P. M., the officers-elect will be installed by State Lecturer Flint. The installation will be public, and all friends of the Order are cordially invited.

SACRAMENTO GRANGERS' BUSINESS ASSOCIATION.—A notice in our advertising columns announces the semi-annual meeting of this very popular association in Sacramento, January 11th, at 10 o'clock A. M. It is desired that there be a full attendance.

Stockton Notes.

[Written for the RURAL PRESS by MRS. W. D. A.]

New Year's Day came in merrily through the thick fog that, in lieu of rain, keeps grain growing and pastures quite good; but the noon sun, warm as April, broke forth and everybody basked in its rays, and wished everybody a "Happy New Year," and rested from business routine and thought the outlook for city and county brighter. Wheat was up to $1.55. A $220,000 courthouse was to be started; another bridge to be built across the San Joaquin at Mossdale, Sutherland's ferry, costing $29,940. Main street was fine with basalt pavement and concrete sidewalks—all of the streets in good order, elegant and tasteful dwellings were constantly going up. Permanence and thrift showed everywhere. A free postal delivery was likely to be got through the efforts of Congressman Loutitt, who is also struggling hard, with a good show of success, to get a large river and harbor appropriation from Congress, to dredge and improve the San Joaquin and Stockton and Mormon channels.

But as the days wear on, anxiety for rain fills country and town. The west side needs rain to put in a crop, and some black land needs it, and much grain that is sown will not come up without it. Some are plowing the grain in which will come right up; others feel that it is best to wait for the month to foretell the season. Dense fogs help, but after the good time to put in grain, rain is the one great want that all signs fail to supply. Now that the Legislature is met, people feel that it must pass some measure for district distribution in the interest of the people, of the snows hoarded in the watersheds of the State, that will insure a part of a crop, at least, to the cultivator of either fruits or grain.

At Christmas, turkeys rose from 11 to 16 and 25 cents a pound. Unfortunately most farmers had parted with theirs before the rise. Usually Stockton markets yield a fair profit to poultry-raisers.

Purple figs dried and put without pressing into a cracker box, sold at the groceries for four cents a pound lately. Nowhere in the world can figs be cured more quickly than in this dry, sunny valley, with no fogs till December. Hot lye from wood ashes kills insects, and if packed next day the figs are pliant and sugary. Native black walnuts bear full each year, and sell for 10 cents a pound; they have been pronounced by Eastern visitors better than theirs. W. B. West has magnificent French walnuts in bearing. Won the gold medal at the late Citrus Fair, at Sacramento, for them. He has done valuable work in developing the capabilities of this soil and climate for useful fruits, nuts and berries.

A CITRUS FAIR is to be held in the Horticultural hall, at San Jose, during the second week of February.

AGRICULTURAL NOTES.

CALIFORNIA.

Calaveras.

CORN YIELD.—EDITORS PRESS:—In reading the columns of your paper I noticed an article on corn-raising. I have been raising corn for several years and have never raised less than 2500 pounds to the acre on any of my land planted; an average yield will reach 3000 pounds per acre or more. Last year I planted eight acres of corn which yielded 5000 pounds per acre of shell corn, besides many loads of pumpkins, and without irrigation. The ground was plowed three times and kept clean of weeds. Have always raised pumpkins and squashes among my corn, and could never see that they were any damage to the corn. My place is situated in Calaveras county on the Calaveras river. —A SUBSCRIBER, *Jenny Lind*.

Inyo.

IRRIGATION PROJECT.—*Independent*, Jan. 1: In the Sierra mountains, on the west side of Owens valley, are many small lakes. One of these is near the head of Black Rock canyon, a few miles north of Independence. It is the intention of Mr. C. B. Rawson to tap this lake during the coming summer, and bring the water down into the valley for irrigation. He thinks a tunnel of about 300 feet in length would tap the lake at a depth of about 40 feet. This would give a large supply of water.

Lassen.

STOCK RANGE.—Reno *Gazette:* Albert Gallatin, of Sacramento, has recently purchased the land on the shores of Eagle lake for 20 miles. He will use his Red Bluff ranch for a winter range and the Eagle Lake property for a summer range. He will not move his horses and mules. His cattle are all good grade, and he is using none but thoroughbred Herefords.

Placer.

FRUIT FROM DUTCH FLAT.—Grass Valley *Tidings*, Dec. 31: This year the fruit shipments from Dutch Flat have been 37,780 lbs. by freight and about 3000 lbs. by express, making a total of 40,780 lbs., mostly of apples and pears, with some plums and peaches. Many of the growers there find a good home market, and others are holding their apples in expectation of better prices later on.

GRAPE SHIPMENTS.—*Republican:* At Rocklin this season Hawk & Wood shipped seven carloads of grapes; the California Raisin Company, six carloads of raisins; Layton Bros., two carloads of grapes; Mr. Himes, two carloads of grapes; and some smaller lots have been shipped by other persons which would make the total at least 350,000 pounds.

Sacramento.

PLANTING ORANGES.—*Record-Union*, Dec. 31: The orchardists of the lower Sacramento, whose success in raising peaches and other fruits made their locality famous and the ranch-owners wealthy, have turned their attention to citrus fruits. George Smith, whose ranch is a portion of the old Jared Runyon place, about a mile below Courtland, is arranging to plant 200 young orange trees of choice variety on his mound—the highest Indian mound on the river. Mr. Smith has a large number of Tahiti orange and Sicily lemon trees on his ranch which have attained a hight of between two and four feet from the seed in one season. Peter Green, on Randall island, above Courtland, will plant 100 orange trees this winter, and other fruit men down there express their determination to give citrus fruit raising a thorough trial at once.

San Bernardino.

EXPERIMENTING.—Ontario *Record:* H. J. Rose has lately received a case of plants from the Gov't Botanical Gardens, Jamaica. He intends trying how the climate of California suits the mango, star apple, custard apple, naseberry, Malay apple, alligator pear, etc. Among the number are the following spices: Ginger, cinnamon, nutmeg, allspice; and flowering shrubs, including poinsettia, bougainvillea, ylang, etc., are also included. We hope the experiment will be a success.

San Diego.

TO MAKE OLIVE OIL.—National City *Record*, Dec. 24: Material for the new olive oil factory is now being put on the ground. The building will be 115 feet deep, two stories high, and is located just south of the new Land and Town Co.'s office. Frank A. Kimball, the owner, states that work will be pushed as rapidly as possible. This will be one of the most important enterprises in National City, making a permanent market for all the olives raised in this section.

San Luis Obispo.

POULTRY NOTES.—Paso Robles *Leader:* Mr. John Marden, one mile from Estrella P. O., has made a business of raising poultry for about three years, and from 200 hens he realized as much as some of the extensive grain farmers. Mr. Dane, of Hog canyon, raised about 200 turkeys for market this year, realizing about 12 cents per pound net. The fowls average 12 pounds each.

Sonoma.

WHEAT ACREAGE.—*Democrat*, Jan. 1: More land in this county is being sown to wheat the present season than has been before for many years. Some years ago the Hessian fly became so destructive that farmers lately have been planting their land to other crops. The present season opened favorably—so early that farmers began sowing wheat after the first rain, and are now in hope that when the season arrives when this insect is so destructive, the wheat will be too large to be affected much.

COAST DAIRIES.—P. D. Quinlan, a prominent dairyman, reports feed along the coast good, and the farmers in that section buoyant over the encouraging outlook for the coming year. Most of the dairy ranches on the coast are rented and leased to Swiss, who seem able to make more out of them than the owners themselves. Dairy lands are being rented for the coming year at prices slightly in advance of what they were last season, which is a pretty good indication of what the outlook is. Butter and cheese promise to be of a better quality than usual. Not many of the dairies, however, will change hands, most of them being rented for the coming year by the same parties who occupied them the present season. The dairymen have recently clubbed together and purchased a schooner by which to ship their produce to S. F.

PLANTING PROSPECTS.—Six years ago Capt. Grosse established an olive orchard on Rincon Hights, several miles east of town. His orchard now comprises many acres, and he is still planting. This and other experiments have been so satisfactory that the number is annually increasing. We learn that upward of 50,000 olive trees will be planted in Sonoma county the coming spring, 40,000 in Placer county, 25,000 in Gilroy, 14,000 in Alameda and other counties adapted to their culture.....On the Fountain Grove farm, north of town, several trees of oranges are now in full bearing, and the fruit is pronounced superior. Other experiments in different parts of the county have been equally successful. The great drawback at present is the cost of trees, choice varieties bringing from $2 to $3 each. Most people are deferring the planting of oranges in considerable numbers until prices are lower, which will probably be several years.....The demand for peach trees is slightly in advance of what it was last year. While they do not thrive well except upon a sandy soil, there are large tracts of land in the county which possess all requisites for their growth. The lack of a market has, for several years, prevented many from planting; but with the assurance of our new railroad this industry has received a new impetus.

Santa Cruz.

PERSIMMONS.—*Pajaronian*, Dec. 30: Hanging in W. V. Gaffey's office are several bunches of fine persimmons. A few years ago he bought a lot of persimmon trees from James Waters and set them out on his mountain ranch. They have been in bearing two or three seasons, and each year have shown a good yield.

Tulare.

A SIMPLE DRIER.—Hanford *Sentinel:* Geo. Thyark's new raisin-drier is proving a success. It consists simply of a board building 16x24 feet in one room, with a ceiling about 12 feet high, in which are two ventilators. In the center is a trench three feet deep. In this is a large box-stove, attached to which is a sheet-iron drum about 10 feet long. Racks are built with grooves to receive the regular trays upon which the grapes are brought from the vines, with only space enough to admit of free circulation of the air, which, with the stove, is at a necessary temperature to do the work of drying the fruit, which is kept from 90 to 100 degrees. We visited it on Monday and found it full of choice fruit, the last of his crop, which was all cleaned up and placed inside on Saturday, just before the rain. The drier is simple and working satisfactorily.

FINE HEREFORDS.—*Times:* Jasper Harrell and W. H. Hammond this week purchased of C. B. Smith, of Fayette, Missouri, two thoroughbred Hereford bulls, which were delivered in Visalia Monday morning, and were an attraction for many stockmen all day. Mr. Hammond's bull is four years old and weighs 1900 pounds; Mr. Harrell's is three years old on the 23d of this month and weighs 1600 pounds. Neither of the animals is what would be called fat, but both are in good condition. They are fine animals and are meat all over, from head to tail and down to the hoof. Mr. Harrell is the possessor of two full-blooded Hereford cows and three young bulls, and with the present addition to his stock has a good starter in the business. Mr. Smith values the mother of the Harrell bull at $1200, and says she could be sold for that at any time. Probably before the week is out two or three more of those bulls will be sold to parties living in Visalia. Messrs. Harrell and Hammond paid $400 each for their animals, which is considered dirt cheap.

MARKET GARDENING.—*Register*, Dec. 31: East Tulare is to have a market garden that is not the property of Chinamen. While north recently, Mr. T. Bacigalupi induced three Italian gardeners of Stockton to embark in business in Tulare. They purchased 20 acres from Mr. A. Y. Moore, and are erecting buildings and preparing the ground for the coming season. They understand their business thoroughly.

Ventura.

LIVE STOCK.—*Free Press*, Dec. 31: Stock-raising in this county, under Mexican rule, consisted solely of cattle and horses; but when the Americans took possession they made sheep-raising a specialty. Under their supervision, the county has supported as many as a quarter million head at one time, and at the present there are something like 75,000 head in the county. Recently imported draft and other horses have been introduced, the last assessment roll indicating 3000 American horses, over 2300 of which are graded. Percheron, Belgian, Hambletonian, Morgan and other breeds have been imported. Among cattle there have been imported Durhams, Jerseys and Holsteins. The county is in advance of many others in the best breeds of horses and cattle, farmers having reached the conclusion that good stock can be raised as easily as the poorer varieties and to much greater profit. The industry has recently received a fresh impetus in this section. The raising of hogs is also engaged in extensively and profitably. Diseases among stock are unknown here, except scab in sheep, which has not proved destructive. Poultry-raising has also proved profitable.

Yolo.

GRAPES AND RAISINS.—*Democrat:* From 140 acres of the Briggs vineyard, 21,500 boxes of raisins have been packed and 175 tons of grape converted into wine. Estimating the raisins at $1.50 per box and the wine grapes at $10 per ton, there is a gross product of $34,000, or an average of $243 per acre. We are unable to estimate the entire cost of placing this crop on the market, but the profits are large and speak well for the production of Yolo county. Including the foregoing, Mrs. G. G. Briggs and family have a raisin crop in Yolo this year of 58,000 boxes. Such a return from vineyard lands is sufficient to impress the home seeker favorably. These figures are reliable and can be verified without trouble.

NEVADA.

BEEF.—Reno *Gazette*, Dec. 28: The beef market is in a very unsatisfactory condition. Everything points to a glut during February. The haystacks are fast disappearing, and at least half the stock now on the meadows must either go to the shambles or hunt new feeding ground very soon. This state of things butchers are taking advantage of. The fact is, shippers do not want cattle except at low figures—five cents is the top price at Reno for a good grade of steers, and they must be cut in the middle at that. Cattlemen are somewhat discouraged. Taking the brightest view of the situation, a large tail end of the cattle left here after the middle of February must go to the hooks at very low rates. An estimate of the beef cattle now in Nevada, made for Mr. Ricky by J. F. Triplett, shows that there are about 20 000 head east of the mountains. There are 9500 head on the meadows; Honey lake, 2500; Sierra valley, 800; Lovelock, about 2000. Outside of these are not over 1200 head of cattle on the Humboldt. Bradley and Russell had 500 head up, but turned them out rather than sell at present prices. They are shipping up 100 tons of hay from Livermore to feed at Battle Mountain. They get very low rates.

Assembling of the Legislature.

The new State officers have assumed their trusts excepting the new Governor, having been inaugurated on Thursday.

The Assembly organized promptly by the election of Hon. W. H. Jordan, of Alameda, as speaker. The Senate organized on Wednesday afternoon by choosing Stephen M. White, of Los Angeles, president *pro tem.*, and E. H. Hamilton, of Alameda, secretary. The Assembly began business on Wednesday afternoon. The first bill was introduced by Mr. McDonald, it being an amendment to Section 1, Article XIII of the Constitution, exempting growing vines and fruit trees from taxation.

We give on this page the full list of State officers now in charge, and of the members of both houses, with the districts they represent and their residences. These lists should be kept for reference.

MAJOR ROBERT BECK.—The friends of Major Robert Beck, formerly Secretary of the State Agricultural Society, and more recently Secretary of the California Jersey Cattle Club, will be pained to hear of his death. He has been a sufferer of late by rheumatism and neuralgia, and it was seen by his friends that he was failing fast. He was missed Dec. 23d, and on the morning of Jan. 4th his body was found in the bay. Whether he fell in by accident or sought death in a fit of mental aberration is not known. He was by birth a Pennsylvanian, and came to California in 1849.

POISONING RABBITS.—F. H. Roberts, of Lookout, has been telling the Adin *Argus* how to kill off rabbits. His plan is to build a platform of narrow boards about 18 inches from the ground, at a place that stock cannot reach. On top of this platform scatter pulverized salt and arsenic, or any similar poison. During the wet season the poisonous water runs through to the ground and thus makes a "lick" for these animals, which they will soon find and frequent. This is said to be one of the best modes of poisoning them, and we would like to see it fairly tried.

RAISING MULES.—The Petaluma *Courier* thinks it next in order for some enterprising lover of good stock to import a few choice Maltese or Spanish jacks, and go into the business of raising mules. These jacks are said to be the largest and finest in the world, and, crossed with our big American mares, might breed an animal that would at three years old sell readily for at least $250 to $300.

The New State Government.

State Officers.

Governor	WASHINGTON BARTLETT
Lieutenant-Governor	R. W. WATERMAN
Secretary of State	WM. C. HENDRICKS
Controller	JOHN P. DUNN
Treasurer	ADAM HEROLD
Attorney-General	GEORGE A. JOHNSON
Superintendent of Public Instruction	IRA G. HOITT
Surveyor-General	THEODORE REICHERT
Clerk of Supreme Court	J. D. SPENCER
Associate Justices of Supreme Court, short term	JACKSON TEMPLE
Associate Justices of Supreme Court, long term	T. B. MCFARLAND

The Cottage in the Orchard.

[Written for the RURAL PRESS by NESTLING.]

In the heart of a peach orchard,
Laden with most luscious fruit,
Overgrown with but two vines,
Honeysuckle, bond of love,
And the reddest of red roses,
Stands a brown and low-roofed cottage,
Home of six most happy children.

Like a nest within the peach trees,
Like the birdies in the brown nests,
Safely sheltered from all care,
This vine-covered, low-roofed cottage,
Brown with age of many years;
Sheltered these six happy children,
Bound with ties affections weave.

Ere the children yet had ventured
On the wide world's restless tide,
Tried how strong might be their pinions,
Came a messenger from heaven,
Took the father by the hand,
Whispered, "Follow me, my loved one,
He who sent will guide your band."

Then the band within that cottage
Tasted Grief's most bitter cup,
Tasted, thinking, "We will trust Him,
He will not forsake His own."
In the chain affection-woven,
Now one link is sadly broken,
Never to be forged again.

As the vines upon that cottage
Honeysuckle, bond of love,
Roses, but where'er the roses,
There so surely is the thorn.
Of the two that left that brown nest,
For the one Love strews her roses,
For the other Grief spreads thorns.

Be what may their path of duty,
Bound by links affection's forged,
To that cottage in the orchard,
Nest of love and peace and joy.
And the Angel hovering o'er it
Sweetly whispers, "Peace, complain not,
Loved ones; follow me, I'll guide you Home."

Crow's Landing, Cal.

The Senator's Daughter.

[Written for the RURAL PRESS by SARAH CAMPBELL STANFORD.]

Perhaps my memory runs back further than most children's, for I certainly can remember when mamma was shut up in a chamber with my sick baby brother for weeks, while I was left to the tender mercies of Katie, only getting a kiss occasionally as mamma would meet me in the hall or some of the rooms as she passed through. I could not have been four years old when I overheard Katie say to the cook: "What a pity 'taint this one. Little fright! She could very well be spared, but the bonny boy, with his great black eyes! Ah, no! everything goes wrong in this world!"

I held a grudge against Katie; she had taught me to say I was Katie's little nuisance in the catalogue of pet names attached to me. When I repeated the list to some friends dining at our house, beginning with "Mamma's joy and papa's girl," they all laughed—papa the loudest—at "Katie's little nuisance." I knew Katie had betrayed me, and ever after I was on the watch for her long words, and "fright" was laid up against her.

After Alvar had recovered from the long, dangerous illness, and we were taken out together, it was often said of us: "What a contrast! What a pity Madge isn't the boy! Alvar would make a lovely little girl;" or, "That girl is a perfect image of her father; she ought to have been the boy." So I was made dissatisfied and jealous at a very early age. Jealous—just think of it—of the large, dark eyes, the silky, black hair, the refined, delicate beauty, so like our mother. Alvar was frail and delicate, while I was robust, as all children should be.

Our home was in a pretty inland town on what is known as the "Western Reserve," Ohio. Our father, the first lawyer of the place—brilliant, jovial and eloquent. Our mother, a sweet woman, with a clinging nature just fitted to adore her strong, joyous husband. I think, as I remember her then, she was the most beautiful woman I ever saw; but very soon trouble came upon her, and care and anxiety robbed her of much of her loveliness. As I grew older I knew that money was becoming scarce in our household. I knew, or might have known, if I hadn't been willfully blind, that mother was killing herself with the household drudgery. I knew, as articles of furniture wore out, they were not replaced by new ones, but makeshifts instead were resorted to. There were no more dinner parties nor lawn fetes at our house. Mother made her dresses over for me, and she [illegible]ed at home with no one to comfort her save dear Alvar, who can never feel the remorse I now feel. He did what he could; he saw and sympathized with her in her heart-sorrow, while I was careless of everything save my own amusement and pleasure.

I remember an old aunt of mother's—Aunt Statira—who used to visit us occasionally. She said one day to mother: "That girl's strong will will either make or ruin her. You will see, Margaret, she will either be a very good woman or a very bad one, and I fear 'twill be the latter."

What a temper I had! I can remember of biting the pillow with rage when banished to my room as a punishment. The first thing that seemed to have any effect upon my outbursts of temper was a story mother told me. She said: "Once a certain gentleman told his little son he would give him a piece of smooth board, and he wished, every time the boy lost his self-control, he would drive a tack into that smooth surface; and every time he was tempted to fly into a rage and restrained himself he could draw one out. At the expiration of a month the board was to be taken to the father for inspection. Well, the compact was made, the tacks accumulated rapidly at first; but at the end of the second week the boy had so gained the mastery of himself that when the month was up every tack was out. He was delighted and ran to his father for his approbation. 'Yes, my son,' said he; 'the tacks are gone, which is a great thing gained, but the marks are there where they have been; and so it is with your anger—it has left scars on your character that time alone can wipe out, and perhaps you can never entirely efface them.'"

That little story helped me a great deal. From that time I truly believe I tried to be a better girl.

But father still remained out late nights, and in his frequent attacks of sick headaches poor mother hung over him like a pitying angel. Still I was ignorant of the sword hanging over our household, threatening to cut the bonds of affection and duty asunder. But my eyes were opened in a cruel manner.

One afternoon, after school, I went home with Jessie Stanhope, to practice our duet. How well I remember that evening, the last of my innocent careless happiness! The Stanhopes were the first people in town. Everything was real, from their solid silver to their elegant manners. So far as I could ever see, there wasn't a sham about them. Jessie, the youngest of a large family, was the pet and darling of the house—every desire was gratified; but with it all, she was the dearest, sweetest child in the world. She was some months younger than I; but of all my friends I loved her best. After practicing until we were tired, she took me to a room in the garret, which had been fitted up as a studio for her brother-in-law, an artist of some renown, who, with his family, was making a long visit to this hospitable mansion, and who was at work on a model in clay on that particular day. After a low rap, she ushered me into the "den," as it was called. I stood face to face with the debonair gentleman. A black velvet cap sat jauntily on the blond, flowing hair. He was my ideal of an artist.

"I have brought you a model for the hand and arm you were wishing for last evening, Sherry," said Jessie, at the same time raising my arm and pushing back the loose sleeve.

Before I could realize it, I found myself, with my sleeve rolled up, passing before this elegant stranger. My one point of beauty, my only inheritance from my beautiful mother, was made much of, and for the first time in my life I was lifted up in pride of self. Jessie and he ran on, in a merry conversation, until the dressing-bell sounded, just as a dash of rain on the window-pane, and a long, low rumble of thunder proclaimed the coming of a storm. I sprang to my feet to hasten home; but they remonstrated and persuaded me to spend the night. Jessie proposed that we dress in costume for private theatricals for the evening's amusement.

After dispatching a servant to acquaint mother with the plan, we ran to Jessie's dressing-room, and I was put under the deft fingers of her maid, who brushed and braided my rough mane into something like smoothness; while Jessie brought in piles of old-fashioned party dresses that her mother and sisters had discarded, and which were kept for charades, masques, etc. She selected for me a creamy white crape, cut with a train. Jessie fastened a necklace of amethyst about my throat, with bracelets to match. She chose a pink satin with white lace and pearl ornaments. Her golden hair hung in curls below her waist, and her large, dark eyes shone like stars in the anticipation of the evening's enjoyment.

When we appeared in the parlor, but five minutes before the dinner-bell rang, I was introduced to the married daughter; the other members of the family I knew. The massive silver, the waiters at our backs, and the removal of the cloth for dessert, all rendered me a trifle nervous; but the simple, quiet manners of this delightful family set me at my ease to such an extent that I neither upset my plate nor drank out of the finger-bowls. Dear mother, with all her burdens, had carefully trained us in table etiquette, and I was able to endure the ordeal.

After a number of tableaux and scenes, Jessie importuned her father to teach us the old-fashioned dance, the minuet. After he and Mr. Wellington (the artist) had donned the continental costume, we were initiated into that delightful, stately dance. (Why has it been discarded? I am sure every one would look with favor upon that dignified, courteous amusement, in such contrast to the whirling, giddy waltz, which mother said is justly called the "dance of death.")

I rose early the next morning to run home and study my algebra lesson, as was my custom. I stole out of the house, down the deserted streets. As I was passing a gambling and drinking saloon, my own father came down the steps with a bewildered, vacant look on his face, and reeled and tottered from one side of the pavement to the other. I hurried home a back way, and burst in upon mother, who was in the kitchen. "Mother, father is coming home drunk," and then I cried, and moaned, and wrung my hands, and wished all the dreadful things that young girls are apt to wish when trouble first approaches them.

Poor mother had two sick ones on her list that day, and she waited upon and petted us all the long hours, when she should have been in bed herself. From that time her strength seemed to fail her.

I could not bear to meet father for days—that noble man, whom I had thought almost perfection, reeling in the streets! I felt I never could hold up my head again.

Soon after, before the shock had lost its dreadfulness, the women began that wonderful movement called the "crusade." They held prayer-meetings nearly all the time; they even went to the saloons and prayed God to strike conviction to the hearts of these men, and induce them to give up their dreadful business.

One day, as Hattie Hill and I were going home from school, we passed a church where some ladies were holding a meeting. She proposed that we go in, "just for fun," and in we went. The hymns or prayers, my own state of mind, or something, urged me on, until I was on my feet talking to that large assemblage of ladies. I was in such a state of excitement, I can remember nothing that was said or done until it was over, and mother had her arms about me, with my head on her shoulder, while she soothed me just as she did when I was a little girl. Other friends gathered around, and I heard Mrs. Smith say: "Dear child, she has her father's talent, sure enough."

"Yes," said Mrs. Pryne, "her eyes looked just as his did the day he addressed the jury on the Jack Winters trial."

And I buried my flushed and tear-stained face deeper in mother's neck, and sniffed and snuffed myself into comparative quiet.

That night, after I had gone to my room, mother came in, and told me how proud she was of me, and asked me if I was willing to consecrate any and all talents I might possess to the cause that was uppermost in our minds.

"Dear Madge," she said, "I cannot stay long with you, and I leave a heavy burden for you to bear—I believe you can save your father yet; and there is Alvar—he has his college life before him. Will the time ever come when a woman can feel safe with her loved ones out of her sight? Society helps me to shield you, my daughter; but there is nothing but temptation for a boy, and the higher he stands the surer the fall."

"But, mother, don't you think God will stop this sin, now all these good ladies are asking Him to?"

"Many of these good women have been praying for long years in secret before they dared to take this public step. Dear child, remember that God's attitude is right toward this iniquity as it is toward all sin; it is our minds that need changing, and perhaps this uprising of the women of this State is God's answer to my own and the prayers of many others for long years."

"But don't you think, mother, the saloons are going to be closed? We read every day of some in different places closing. Won't they here, too?"

"Very few, if any, will remain closed, but I do think perhaps a clearer vision is given me now the veil is so nearly lifted. I seem to see something grow out of this movement that will accomplish the blessed work; and you, my child, will live in this grand time. You have felt the divine enthusiasm to-day; you, I believe, have a great work to do. Oh, yes; the women who have felt this pentecostal fire can never, never be content with the frivolities of life again. The signet of their Father's power is resting on their brows, and they will in their woman's faith and enthusiasm by the grace of God do this work."

I gave her my pledge that I would do everything in my power to stay this evil. Within a month after I graduated from the High School, and in the midst of my preparing for Vassar, my mother died. Alvar had gone up the lakes on an excursion. Oh, how she yearned for him! And the last words she uttered were, "Alvar! Alvar! Alvar!" as if her soul could not take its flight and leave him in this cruel, sinful world.

Father was terribly shaken at her death, and I resolved to pit myself against the saloons. Ah! perhaps if I had not been so ignorant of the strong desire of habit I would not have had the courage. Oh! my trials, they make me sigh yet. I knew nothing of housekeeping, and my ignorance seemed a target for the servant, who came and went in an unending procession. Then all the every-day duties—the marketing, the washing and mending—how tired and discouraged I often got! But strength was always given me to keep a smiling front to father, whom I daily accompanied to the office. Alvar came home and continued his preparation for college. Father did so well that I thought the conquest would be easy; but one evening I noticed an uneasiness in his manner at the tea-table, and I caught the whiff of wine on his breath as he walked with me into the parlor. Then I knew that my powers would be taxed to the utmost. I played and sang, read, talked and laughed as I never did before. At last I proposed a game of chess. Oh, how tedious the hours seemed as we hung over that chessboard, for I believe the average woman was never intended to play chess! But I persevered and to-day am a fair player.

When, at last, bedtime came, and we separated for the night, I saw in his eyes that he intended to steal out, after the house was quiet.

I went to my room, put on a warm wrapper, took two blankets, and lay down on the mat at my father's chamber door. The last waking thought was, perhaps Aunt Statira would think my strong will was good for something, after all.

I meant to keep awake, but I was a healthy girl, accustomed to sound sleep, and the first I knew somebody had stumbled over me in the dark. I immediately knew what it was, sprang to my feet, grasped father by the shoulders and pushed him back into his room. He was startled, of course, and before he recovered himself I had the door locked and the key in my pocket. For the first time in my life I rejoiced that I was large and strong.

I can hardly speak of the horrible night that followed. It was not my father who raged and stamped; he had the fumes of one glass of wine in his brain, and it made him a demon. He caught me and attempted to obtain possession of the key; but I took it from my pocket and threw it through the glass window into the garden below.

[TO BE CONTINUED.]

"I am the Resurrection and the Life."

In Memoriam. (M. F. R.)

[Written for the RURAL PRESS by CHAS. P. NETTLETON.]

Grief-smitten soul, love calls to thee
Through all thy strife—
"I am the resurrection
And the life."

His word proclaims these humble frames
Turn into dust;
Trust and know this—to endless bliss
God bears souls just.

May man then mourn those death has shorn
Of earth's keen pain?
Loved ones may go, but, weeper, know
Pure bliss they gain.

Thou wouldst not bring again earth's sting
To the beloved;
Let then grief cease at God's release—
His love He proved.

Hayward's.

What a Cigar Stump Can Do.

EDITORS PRESS:—I have been wondering of late if it is, after all, good to live in single-blessedness, and I conclude once more that it is. For the novelty of having somebody in my house with me, I rented my spare room to a couple of young men a week ago. All went well with us until yesterday, when I solved a mystery that had puzzled me since the day of their arrival. A musty and most disgusting smell clung to their room. I kept both their windows open night and day, without either notice or protest on their part. I feared they would leave me, but they didn't even complain. I felt truly grateful to them for tolerating so much with such unswerving patience. Surely mine were model roomers. As for their cleanliness, their general appearance and four dirty towels daily on their towel-rack bore evidence to that.

One of them comes and goes with an occasional bow or how-d'ye-do to me. The other is a trifle less shy; and, though their professions are of an humble kind, I hear him regularly at 9 A. M. brushing up, preparatory to bidding me a polite good-morning as he passes through my sitting-room in a Prince Albert coat and looking as neat as a pin. Could any one dare suspect them of anything foul?

Yesterday I could bear it no longer. An army of a dozen skunks, I knew, would have beaten a hasty retreat from the room; nothing could counterbalance such an odor. It followed me and pervaded my own quarter, threatening me with eviction. My lady friend called for a few days' visit. I was filled with a mingled feeling of pleasure and pain at her coming. I was suffering for want of sympathy, yet dared not ask it under such condemning circumstances. My friend kissed me at the door, entered, laid off her hat, sat down, and was about to enter upon a rehearsal of some amusing accident encountered on the way, when she changed countenance and looked around the walls suspiciously, then with a plea of feeling faint, stepped to the door for air. I could keep my secret no longer. I unbosomed myself at once. She was, as ever, sympathetic. Who but would sympathize with one under such circumstances? "It is too bad," she said, following me to the dreaded apartment, "that the sun never gets in this room." I assured her the sun had nothing to do with the trouble, as the room had been free of it the past 14 years, yet it had never smelled unpleasantly before. Then she cautiously suggested rats—dead rats in the walls. The mystery was solved. At least we thought it was, until in our investigation we knocked a couple of cigar stumps from

the casing behind the window curtain. We each picked up one and smelled it. That settled it. If my roomers had entered just then they would have learned that cramming can be done outside of schools. We should have crammed our "find" down their throats, even at a peril to their immaculate shirt bosoms. Were they forewarned? They didn't return until 1 o'clock this morning. We heard them pass through to their room, but they were then safe. We had eaten nicotine in our supper; we were breathing it from our sheets. Indeed, we were too much stupefied by the ubiquitous poison to arise and execute our sentence.

Santa Barbara, Cal. DAGMAR MARIAGER.

Blank Votes.

A Great Practical Lesson.

Three years ago a convention of delegates met in one of our large cities to nominate a candidate for mayor. Other considerations than the ordinary political ones were involved. One man who was pushed for the office represented the corrupt ring of the city, the bosses who lived in luxury on the taxes levied on the mass of hard-working citizens. The other was the candidate of the honest, reputable part of the community, who hoped through him to correct the abuses from which it suffered.

The excitement was intense during the meeting. When the time arrived to poll the votes, every man knew that he was called on to choose not only between a rogue and an honest man, but between a system of roguery and a system of honesty. The rings, too, were powerful, and could seriously injure the business of any one who opposed them.

When the ballots were counted, the two candidates were found to have an equal number of votes, and one ballot, which might have decided the contest, was blank. Without voting again, the meeting adjourned.

A few weeks later, two members of the caucus were discussing the affair.

"To be candid," said one, "I could not vote for that scoundrel Bright, and I was afraid to compromise myself with the bosses by voting for Wynne; so I put in a blank slip of paper! Just did nothing—see? Saved my credit and did no harm."

"Just this harm," said the other, gravely. "With your vote Wynne would have been nominated. Without it there was a tie. A second meeting was called. You stayed at home and did nothing. Bright was chosen, and the city remains in the power of the bosses."

The great mass of boys in a school, or men in the world, herd together to "keep safe." They are afraid to take a decided stand for the right, hence their accumulated dead weight is thrown against it. The man who is civilly tolerant of corrupt officials, and of drunkenness and impurity in his associates, and the woman who follows vulgar and immodest customs, because they "do not like to make a fuss," throw blank votes in life. The doom of the man who, from laziness or weakness, refrained from doing right, was the same as his who was active in doing evil. Each of us on entering life has a blank record to fill for good or evil. Shall we spend our years in trying to do nothing, to leave it blank?—*Youth's Companion.*

BEGIN WHERE YOU ARE.—The man who has really resolved to live the best life that he can must begin right where he is—begin where his failures, his false education, his errors and his sins, have left him. By no single stroke of the pen can we erase whole pages in the history of our lives. We have made or unmade ourselves as we are. If we could only begin at some lofty hight which our moral dreams picture for us, it seems to us that there would be inspiration in going still further. But we cannot substitute in a moment the dream of life for the real one. We are surrounded on every side by hard and tangible realities. We must begin where we are. One who takes a practical and sagacious view of what is possible to him in life will not burden himself by attempting the unattainable. He will begin when and where he is, and do that which lies in his power. Each day of life brings its own task; each task accepted, each opportunity fulfilled, may be a step toward a higher life. Jacob's old dream was not an unreasonable one. His angels did not fly to heaven; they went patiently up each round of the ladder, and they began at the bottom.—*Christian Register.*

INDIAN FEAST.—About 200 Indians met at Camp Independence the Monday after Christmas to hold a feast. The week before, hunting parties had been out in the valley and among the mountains and a large amount of game had been secured, all of which was taken to the "big eat." Several noted Indian dancers were present, and the first dance came off on Monday night; this was the "war dance," and only two warriors performed. They were elaborately dressed, part of their costume being feathers stuck upon their noses. After the grand ceremonial performance the dancing became general, men and women taking part. The music is a low "crooning" kept up by the whole company. The festival lasted all week, with dancing every evening.—*Inyo Independent.*

THERE is said to be a blind boy in Brooklyn who takes dictation on a type-writer faster than any known expert possessed of good eyesight.

YOUNG FOLKS' COLUMN.

The Angel and the Flowers.

An angel once asked the Father if he might leave heaven for a day and go down to earth to visit the flowers and birds and little children, for you must know that no other earthly things please the angels of heaven as do the flowers, the birds and the little children.

"Yes," said the Father, "you may go down to earth, but be sure to stay no longer than a day; and when you come back to heaven bring me the loveliest flower that you can find, that I may transplant it in my garden and love it for its beauty and fragrance. Cherish it tenderly that no harm may befall it."

Then the angel went down to the earth, and he came to a beautiful rosebush, upon which bloomed a rose lovelier and more fragrant than any of her kind.

"Heyday, sweet rose," said the angel, "how proudly you hold up your fair head for the winds to kiss."

"Ay, that I do," replied the rose, blushing, albeit she enjoyed the flattery. "But I do not care for these idle zephyrs nor for the wanton sunbeams that dance among the leaves all the day long. To-night a cavalier will come hither and tear me from this awkward bush with all its thorns, and kiss me with impassioned lips, and bear me to his lady, who, too, will kiss me and wear me on her bosom, next to her heart. That, O angel, is the glory of the rose, to be a bearer of kisses from lover to lover, and to hear the whispered vows of the cavalier and his lady, to feel the beating of an impassioned heart, and to wither on the white bosom of a wooed maiden."

Then the angel came to a lily that rose fair and majestic from its waxen leaves and bowed gracefully to each passing breeze.

"Why are you so pale and sad, dear lily?" asked the angel.

"My love is the north wind," said the lily, "and I look for him and mourn because he does not come. And when he comes and I would smile under his caresses, he is cold and harsh and cruel to me, and I wither and die for a season; and when I am wooed back to life again by the smiles and tears of heaven, which are sunlight and the dew, lo! he is gone."

The angel smiled sadly to hear of the trusting, virgin fidelity of the lily.

"Tell me," asked the lily, "will the north wind come to-day?"

"No," said the angel, "nor for many months yet, since it is early summer now."

But the lonely lily did not believe the angel's words. Still looking for a cruel lover, she held her pale face aloft and questioned each zephyr that hurried by. And the angel went his way.

And the angel came next to a daisy that thrived in a meadow where the cattle were grazing and the lambs were frisking.

"Nay, do not pluck me," cried the daisy, merrily; "I would not exchange my home in this smiling pasture for a place upon the princess's bosom."

"You seem very blithesome, little daisy," quoth the angel.

"So I am, and why should I not be?" rejoined the daisy. "The dews bathe me with their kisses, and the stars wink merrily at me all the night long, and during the day the bees come and sing their songs to me, and the big cattle caress me gently with their rough tongues, and all seem to say, 'Bloom on, little daisy, for we love you.' So we frolic here on the meadow all the time—the lambs, the bees, the cattle, the stars and I—and we are very, very happy."

Next the angel came to a camellia which was most beautiful to look upon. But the camellia made no reply to the angel's salutation, for the camellia, having no fragrance, is dumb—for flowers, you must know, speak by means of their perfumes. The camellia, therefore, could say no word to the angel, so the angel walked on in silent sadness.

"Look at me, good angel," cried the honeysuckle; "see how adventuresome I am. At the top of this trellis dwells a lady-bird, and in her cozy nest are three daughters, the youngest of which I go to woo. I carry sweetmeats with me to tempt the pretty dear; do you think she will love me?"

The angel laughed at the honeysuckle's quaint conceit, but made no reply, for yonder he saw a purple aster he fain would question.

"Are you then so busy," asked the angel, "that you turn your head away from every other thing and look always into the sky?"

"Do not interrupt me," murmured the purple aster. "I love the great luminous sun, and whither he rolls in the blazing heavens I turn my face in awe and veneration. I would be the bride of the sun, but he does not heed my devotion and beauty!"

So the angel wandered among the flowers all the day long and conversed with them. And toward evening he came to a little grave which was freshly made.

"Do not tread upon us," said the violets. "Let us cluster here over this sacred mound and sing our lullabies."

"To whom do you sing, little flowers?" asked the angel.

"We sing to the child that lies sleeping beneath us," replied the violets. "All through the seasons, even under the snows of winter, we nestle close to this mound and sing to the sleeping child. None but he hears us, and his soul is lulled by our gentle music."

"But do you not often long for other occupation, for loftier service?" inquired the angel.

"Nay," said the violets, "we are content, for we love to sing to the little sleeping child."

The angel was touched by the sweet humility of these modest flowers. He wept, and his tears fell upon the grave, and the flowers drank up the angel tears and sang more sweetly than before, but so softly that only the sleeping child heard them.

And when the angel flew back to heaven, he cherished a violet in his bosom.

GOOD HEALTH.

Typhoid Fever.

Symptoms by Which the Disease May Be Recognized.

When a person becomes ill, suffering with slight chills, loss of appetite, frequent nose bleeding, irregularity of the bowels, coated tongue, rapid, weak pulse, a body temperature rising about one degree daily until 105 degrees Fahrenheit is reached, with fugitive pains, especially in the back and head, with progressive muscular and mental weakness, and an inclination to be stupid, the presumption is very strong that the patient has typhoid fever, and this notion is much strengthened if, with the above symptoms, there be a tumid abdomen, gurgling on pressure on the right side.

These symptoms may exist about 14 days, and gradually abate, and the patient recover, but the patient may, on the other hand, go on from bad to worse, and finally be destroyed by exhaustion, perforation of the bowels, or bowel hemorrhage. If on examination of the body of one dead under the above circumstances there be found numerous patches of inflamed surface in the bowel known as "ileum," it is perfectly proper to ascribe the death to typhoid fever. The poison of the disease, which is probably a microscopic plant, exists mainly in the bowel evacuations of those sick of the disease. It is true that this substance has never been isolated and shown to men as one would show a sample of wheat or other seed, but it exists all the same, and when a person develops the disease it is because he has swallowed some of the poison with his drink, most likely, and it passes along the alimentary canal till it finds a good soil in which to grow—that is, in the position indicated, known as "Pyers' patches," a glandular formation bearing the name of a learned physician long since dead. It is probable that some in vigorous health might take small amounts of this poison into the system and escape unhurt. A temperature of 412 degrees—that is the boiling point—kills the poison of all zymotic diseases. Here is the sum of the prevention of the trouble: Maintain a high state of the general health and boil all suspected water before using. In fact it is well to use nothing but boiled water when any epidemic disease prevails. Some typhoid fever patients will recover by rest in bed, and using only liquid food. Others will die in spite of the best of attention. These last are either constitutionally weak or received enormous doses of the poison. Enteric fever is the better name for the trouble in question.—*Medical Journal.*

WHERE TO DIG THE WELL.—Let us remember that a well will drain an area with a diameter equal to twice its depth. Therefore, a well 12 feet deep will drain an area the diameter of which is 24 feet, that is to say, that it will drain the surrounding soil for 12 feet in every direction. Obviously then the privy should be more than the depth of the well away from it, and more than this again if it is proposed to place it on a higher level, which, however, should never be done. The well should be lined inside thoroughly with mortar so that percolation cannot occur between the crevices of the bricks, and it should be well covered, so that surface drainage cannot get into it, for you want to drink water that has come into the well from the bottom, after it has been purified by filteration though the earth. Thus, then, these are the precautions to be observed in locating and building your well in the country. How about the city? Well-water in the city should never be used; the sources of contamination are too numerous and too hidden to be avoided.—*Annals of Hygiene.*

EFFECT OF PERFUME.—We learn that an Italian professor has recently made some very agreeable medicinal researches, resulting in the discovery that vegetable perfumes exercise a positively healthful influence on the atmosphere, converting its oxygen into ozone, and thus increasing its oxidizing influence. The essences found to develop the largest quantity of ozone are those of cherry, laurel, clover, lavender, mint, juniper, lemon, fennel and bergamot; those that give it in smaller quantity are anise, nutmeg and thyme. The flowers of the narcissus, hyacinth, mignonette, heliotrope and lily of the valley develop ozone in closed vessels. Flowers destitute of perfume do not develop it, and those which have but slight perfume develop it in small quantities. Reasoning from these facts, the professor reccommends the cultivation of flowers in marshy districts, and all places infested with animal emanations, on account of the powerful oxidizing influence of ozone.

DOMESTIC ECONOMY.

Hints for Resting and Working.

[Written for the RURAL PRESS by MRS. J. HILTON.]

Isn't it delightful and refreshing when one goes to the house of an acquaintance exhausted bodily, as one has to sometimes, to have her say: "Now do lie down and get rested. I will see to the child, and I know after you have some refreshment you will feel better." Yielding to the gentle persuasion, I lie down for 15 or 20 minutes, and arise feeling like a new woman.

The first time I ever lay down in an acquaintance's house in the daytime was quite an event to me. I had been used to all kinds of kind treatment, but that surpassed them all. I had taken dinner with my friend, and as she did her own work, I assisted her in washing the dishes and sweeping, and that and my walk had made me really unfit to do anything else but lie down and rest. I was, however, heroically trying to conquer my exhausted frame and be sociable, when I was invited to go upstairs, and when there my friend said: "Now let us lie down and rest half an hour, and then we can talk again." So giving me a paper to amuse myself with, she left me to my own devices, although she was in the same room. Of course I enjoyed my day's visit immensely, and have tried to pass on the good idea. Dear sister friends, try it the next time you have a friend come to stay all day and see how much happier you both will be than you would if you worried through the whole day trying to entertain by constant talking.

I am supposing that the sisters take a half hour's rest after dinner, as every one should do when she does her own work, and if any among you do not do it, commence immediately. It can be done if you set yourselves about it. By such rest you can safely count on 10 years being added to your life, and instead of the supper-time and evening being a burden, they will be a pleasure.

And another thing: I want you all to try to arrange your sewing so that it will not have to be done at night. Keep that time for reading and recreation. It can be done in most cases if you only try. Be content with less work done on a garment. Why, I used to think an undergarment, especially, would not do at all unless a seam was felled down, but I was disabused of that idea by a friend, and I rarely go over a seam but once now. The gain in time is very much where one has much to do.

In another home where I have been lately, I also learned of several helps about our daily work, and I will mention part of them, as they may be of benefit to others. One is to varnish shelf papers. They keep clean longer and can be wiped off occasionally. For shelves near a stove, put on oilcloth; white I like best. It is much less trouble to wipe off with a wet cloth than to change papers.

Another thing is to use oil cans, five-gallon ones, with the tops cut off, just inside the edge, and the rough places hammered down. For boiling clothes in, instead of a boiler, they are excellent. Then the different grades of clothing can be kept apart and more clothes boiled at once. This economizes the time needed on wash days, for most stoves will accommodate four cans.

Another thing is to put all pieces of broken bread into the pancake dough. We have a can that we mix buckwheat or "shorts" batter in, and at supper-time we gather up all the clean crusts, broken pieces and crumbs and put them into the can and wet with cold water. Half an hour or so before bedtime we put in enough shorts to make up sufficient batter for the morning meal. About once a week or so we start with fresh yeast, leaving a little of the batter in the can each morning for the next rising. A teaspoonful of soda wet up with hot water stirred into the batter just before baking makes all sweet and nice. The bread crusts are an excellent addition to the flavor of pancakes, I think. One of my lady friends always puts in a small handful of sugar when she puts in the soda; it makes them very nice.

Los Alamos, Santa Barbara Co.

Soft Soap.

Will any reader of the RURAL, who has a good recipe for soft soap made with lye from wood-ashes, be kind enough to insert it in the paper for the benefit of

A CONSTANT READER?

SNOW PUDDING.—Pour on to three table spoonfuls of corn starch dissolved in a little cold water one pint of boiling water. Add the whites of three eggs beaten to a froth, pour into an earthen dish, and set in a steamer and steam 20 minutes.

GOLD CAKE.—The yolks of three eggs, a scant half-cup of butter, one cup of sugar, two cups of flour, one-half cup of milk, one teaspoonful each of saleratus and cream of tartar, or two teaspoonfuls of baking powder. Flavor with lemon.

BUTTER-SCOTCH.—A coffee-cup of brown sugar, half a cup of water, and a dessert spoonful of vinegar; a piece of butter the size of a hickory nut. Boil 20 minutes. Pour into buttered pans, and cut into narrow strips.

The Week.

The delightful weather has returned, all too soon. The storm from which we hoped so much last week fell short of our expectations and made but a small contribution to the rain record. Apprehension is, of course, felt for the character of the season, but there is yet time for it to retrieve itself. One only has to remember several recent years where the rain has held aloof till late in January, and still has been abundant afterward. We await similar experience this year.

The Legislature is in session and the brand-new corps of State officers are in their places in the State Capitol. There are many important and interesting matters pending, and all should watch the course of legislation and not hesitate to aid their representatives with full expression of their views and wishes on important questions. Our columns are open for discussions on legislation as related to agricultural and general industrial interests and the public welfare. So far as our acquaintance goes, the Legislature has good men in it, and we shall expect them to act wisely.

Self-Murder and Society.

The frequency with which men and women, and even children, resort to suicide as a means of escaping real or imaginary evils, is a subject of almost daily comment. Scarcely a paper issues that does not chronicle a fresh case of self-murder. From what cause springs this alarming tendency to self-destruction? Our social philosophers, insurance men and fraternal men are toiling at the problem. When it is proved before a coroner's jury that the suicide had domestic trouble, or reverse of fortune, or was intemperate or in poor health, or had been disappointed in love or ambition, all inquiry ceases. But a good theory is one that seeks to group all the infinitely various determining motives in the unity of one primal law. Can such a law be discovered? In what direction shall it be sought? The great Italian alienist, Henry Morselli, in his elaborate essay on suicide, says: "The motives which impel the suicide to quit life are not beyond social laws; indeed, man would never have destroyed himself if he had lived far from other men, and had not shared in the misery of his fellow-creatures. The more humanity advances, the more it tends to the common association of forces; therefore, the savage appears to be freer in his virgin forest than the civilized man in his splendid cities." Here is foreshadowed, perhaps, the direction in which the final solution may yet be found.

In the mean time it is evident that the organizations of capital and labor have robbed both rich and poor of their individuality and made all men mere parts of a machine. Before the era of railroads and steamboats and telegraphs every shoemaker, tailor or blacksmith had his own shop, but now these and all other forms of artisanship are merely parts of a machine, and this machine usually takes the form of corporate control. Even the men who manage the machine are parts of the mechanism. Life is reduced to a time-table. We eat and run to work by the ring of a bell or the shriek of a steam whistle. In short, nearly everything pertaining to existence in these days is so nicely adjusted that life has become a treadmill monotony, and perhaps it is not too much to say that nine out of ten who commit suicide are impelled to it by the dull and joyless barrenness of their lot.

Then, no doubt, many men and women commit suicide in these days not because they have loved and lost, but because they are unable to find anything to love. How many men and women can say that they have one true, tried and devoted friend? We once knew a man who advised all his acquaintances when they were in trouble to go and tell their wants and grievances to the wooden Indian that stands before the cigar store. He believed that half the world would agree with him that the advice was good. It is at least certain that one reason of the frequency of suicide is the fact that everything is so arbitrarily and nicely adjusted that there is no time nor room for friendships. Whatever may be the immediate cause, we may be certain that life to the unfortunate has become void and barren of hope. Men of the church, men of our fraternal Orders, think of this! You may help to remedy this evil in some degree. It is obvious that the only cure is in the nature of a preventive; in whatever more evenly distributes the burdens of life and helps to make the world more bright, joyous and beautiful.

The Experiment Station Bill.

The December meeting of the State Horticultural Society fell on the day before the New Year's holiday, and the attendance was small. Certain matters of business were announced, but as they will come formally before the January meeting and be acted upon then, we defer the report until that time. For the January meeting it was decided to discuss orchard pests and best materials and methods in spraying. State Inspector Klee has agreed to address the meeting on that subject and give the results of his latest researches. The meeting will be held at Irving hall, Jan. 28th, and all interested in insect fighting are invited to be present.

One item of business transacted at the December meeting which is of general interest was the passage of resolutions approving the congressional bill to provide for experiment station work. This measure is now before Congress, and will pass if those who approve it will notify their representatives at Washington of the fact and ask them to advance the measure. There seems to be no opposition, and it is only necessary to show the popular demand, to take up the bill out of its order and make it a law. All who have friends in Congress, whether representing their district or not, will do well to address them upon the subject, and all petitions or resolutions adopted by the Granges or other agricultural organizations should be forwarded to Washington without delay. The following action was taken by the State Horticultural Society at its last meeting:

WHEREAS, It is understood by this society that the Hatch bill, which provides for the establishment and endowment of experimental stations in connection with the several agricultural colleges, has been favorably reported upon by committees of both Houses of Congress, but is in danger of not being reached at the present session, unless taken up out of its regular order; and

Whereas, This measure is of exceptional interest to California, on account of the great variety of soils and climates existing within the State, which daily bring our farmers face to face with untried industries and problems, requiring systematic and scientific investigation for their prompt solution, in the interest of industrial progress;

Therefore, Appreciating the great practical importance of the proposed measure, we earnestly request our senators and representatives in Congress to use every effort to speedily bring the bill before that body and to secure its passage.

Ramie and Jute.

Last week we alluded to the possibility of profit in growing flax fiber in this State for the twine-makers, even if there should be no immediate prospect of the higher use of the fiber in linen manufactures. In the University distribution described in last week's RURAL, ramie plants are offered to those desiring a few for experiment. This fact, coupled with the interest which is now active in this city in ramie-fiber extracting machines and in the propagation of ramie plants for commercial planting, lead us to believe that a considerable planting of ramie and possibly a considerable investment in extracting machinery are to be features of our immediate industrial future. The people are ready for such an activity, and the number of people who are inquiring of us about ramie as a crop and the chances for profit in it, is large. To such we say:

1. There is no question about the satisfactory growth of ramie over a considerable area of the State, and there is prospect of success, in varying degrees, under a wide range of conditions in soil and moisture.

2. We cannot speak authoritatively of the success of the several extracting machines and processes which are now receiving considerable attention. We have seen fiber extracted by some of them and it is excellent, and so far as we can judge, it is in the form which will suit the foreign manufacturers who at present are its purchasers. We have the authority of several parties who have examined the machine which is now most talked of in this city, that it is satisfactory, and we have seen similar assurance in print concerning machines which are being used experimentally in the South and East.

3. Granted that one or all of the machines now being shown the public, here and elsewhere, are successful, there is something more needed to assure the prospective ramie-planter that he can safely purchase and set out the plants. Before people can be advised to plant ramie on a commercial scale, it seems to us some of these machines must come into the hands of those who are prepared with capital and skill to work the crop when grown, and to pay for it. The ordinary farmer cannot give up land and time and purchase plants for a ramie crop, merely on the expert assurance that any machine is a success. He must know whether, when he makes his cutting of stalks, he can get his money for them. He cannot afford to grow the plants, purchase the machines, experiment with the extraction, and stand the chances of some future return when the ramie fiber finds a market on the other side of the globe. It is necessary, then, before one can be advised to go into ramie, on something more than an experimental plantation, that capitalists should take the matter up, prove the machines, ascertain what it will cost them to extract the fiber, what they can get for it when it is in proper shape, and then what, after securing for themselves reward for their enterprise and investment, they can afford to pay the ramie-grower for his raw material. We understand that something of this kind is now contemplated or is really under way—we are not sure which. If it is as yet only projected, we can advise capitalists that the subject is worthy their attention. There is much unproductive money lying in this city. It should be employed in some industrial effort. Let its owners, then, look into this matter and take whatever wise risks may be necessary, with the purpose and in the hope of building up a new industry, which will be of great value to the State, if successful.

We notice there are at present several centers of disturbance on the fiber-industry question in this country. There has been most heat in the matter in New Orleans, and possibly San Francisco comes next. We believe that in New Orleans there are two machines contending for public favor, and the reason the interest cropped out there is because of the exhibition of these machines at the World's Fair and because ramie and jute, the plants which it is thought will be most profitably handled, are well adapted to that region of country. We see by the local papers that great efforts are being made to organize companies with capital enough to purchase machine rights and embark in the extraction business. One company whose prospectus we have seen proposes to buy the control of one machine, and having it vested in New Orleans, to secure for that city preeminence in the extraction of fiber and ultimately in the manufacture of fabrics. We have no objection to the capitalists of New Orleans buying the control of a machine if they want to, and we hope, if they buy it, they will make money out of it and build up a great growing and manufacturing industry. It seems to us, however, very improbable that they can by the purchase of any one machine control fiber extraction. We have confidence enough in California inventors to be assured that they will do as much as any other inventors in the world can do. It will be interesting, however, because of the free talk about textiles in California, to mention a few of the statements made in the articles in New Orleans papers, which are designed to extend the interest among their capitalists in this undertaking. We quote as follows from the New Orleans *German Gazette*:

Two years' experience has proved that jute and ramie can be successfully and profitably cultivated all over the Southern States as far north as the 32° of northern latitude, the average yield being from 10 to 30 tons of green jute, and from 6 to 10 tons of green ramie stalks. Well cultivated land will reach the last figures.

The parties embarking in the enterprise have calculated that they will be able to pay producers $4 a ton for green, leafless jute, and $5 a ton for green, leafless ramie stalks, thus insuring the latter a safe and reasonable profit.

As far as the progress achieved in extending the cultivation of these staples is concerned, it is gratifying to note that there has been ordered jute seed, for Texas alone, to plant 2000 acres; for Louisiana, 900 acres, and for Alabama, 450 acres. About 250,000 ramie roots have also been ordered for different sections of the South.

Jute butts, defiberized by the Luft machine, are worth, in the market, $65 per ton; fine fibers, from $80 to $90 per ton; ramie, just from the machine and dried, $125; ungummed, $240 to $275; and bleached, from $500 to $600 per ton.

For fibers from fibrous plants, growing wild, in Texas, New Mexico, Arizona, California, and Florida, $60 to $180 per ton cash is paid in the New Orleans market. These wild plants only need to be cut and delivered—no cultivation is necessary.

In 1887 at least 3000 acres of jute will be cultivated, yielding an average of 15 tons per acre, for which $4 per ton would be paid to farmers, netting them $180,000.

Of jute there will be at least 250 acres planted, yielding, on an average, three cuttings, of 8 tons each, realizing $5 per ton, or $30,000.

The prospectus proceeds to show how the proposed corporation, after paying fiber-growers this $210,000 for raw material, could sell the extracted fiber for $396,000, which would certainly be a very good business. We know nothing about the accuracy of these figures; they come from those who seem anxious to float the stock of the proposed corporation, and must be received with that fact in view.

What we want now in this State, looking at the matter from the farmer's point of view, is that some responsible company assure us that they will pay $4 per ton for green jute stalks and $5 per ton for green ramie stalks, or any other stated figure for any other stated condition of crop, and then growers can take steps to determine whether they can furnish the goods profitably at the prices offered. The beet-growers in the lower part of Alameda county grow sugar beets in quantity, because the Standard Sugar Company is ready to pay a profitable price for them. We want some similar assurance for fiber crops. What will our capitalists do about it?

Food Adulteration and Congress.

A national convention is called to convene in Washington City, D. C., the 19th of this month, for the purpose of securing congressional legislation against food and drug adulteration. The evil is national in extent, and it is quite impossible to secure uniformity of action between the States, and the consequence is that if one State makes a stringent law, the people who live on the borders of a State that permits adulteration would be poorly protected. The benefit of congressional legislation would be that a law preventing the manufacture and sale of adulterated food and drugs would be uniform, at least so far as importation and interstate commerce in vitiated provisions is concerned. It is time something was done, and no uniform and vigorous remedy can be applied by isolated State action. The extent and variety of food and drug adulteration would seem incredible were it not that the facts have been officially ascertained. There is scarcely an article of food that can be bought with any assurance of purity and wholesomeness. Trade guarantees are worth nothing. If manufacturers and dealers have no more principle than to persist in silently, under the cover of the mysteries of their business, to adulterate and poison provisions, drugs and delicacies, there is but one redress left, and that is summarily to break up the whole business, by stringent legislation. A good beginning was made against fraudulent butter in the shape of oleomargarine; let the good work go on till the market is thoroughly purged of this class of frauds.

The protection of the life, health, property and happiness of the people is the primary aim of government. It should stand as a wall of fire between them and all invasions from without or violence within; from open assault or covert danger. It is for this protection the people pay their taxes and give their personal valor in time of war. Where does this protective function of the Government cease? Has it done all that should be expected when it hurls back the invader, subjugates treason, puts a stop to smuggling and counterfeiting, punishes murderers, burglars and incendiaries? By no means. It should punish the adulterators of meat and drink as rigorously as robbers and murderers. They are worse than the average murderer who kills in a heat of passion, for they kill off thousands of innocent people by the slow processes and homeopathic doses of dirt, nastiness and poison, from the sheer lust of gain. The Borgias and others of that accursed race were actually less culpable. They killed units, while the modern vender of deleterious compounds insidiously assails the health of a whole community and shortens the average duration of human life. Better a thousand times an occasional dose of poison by a Madame Brinvilliers than vile, unwholesome admixtures in our sugar, syrup, coffee, tea, pickles, canned fruit, lard, butter, oil, curry, and a host of other articles in every-day use.

CATS FOR DOGS.—We find in an English exchange a novel suggestion for the supply of meat for what they call dog biscuits. Upward of 9,000,000 kittens are annually produced in England, the greater part of which are destroyed and buried, there being no means of utilizing their flesh at a profit. This being the case, the *Pall Mall Gazette* wants to know why they cannot take the place of the meat imported from New Zealand and South America for the 150 tons of dog biscuits which are weekly made in that country. If they use imported meat for dog feed in England, it might be easier to secure condensed California squirrel or Australian rabbit than to rear the millions of felines which it is convenient to put out of the way ere they see the light. There was an effort somewhere in the State to make a profit by canning California squirrel for European epicures, but it did not succeed. Perhaps a better strike could be made with pressed squirrel for dog feed.

NATIVE PERSIMMONS.—When we read about persimmons grown in this State, we usually take it that one of the Japanese varieties is referred to; but this inference appears to be not wholly safe, for the Visalia *Delta* speaks of Mr. Griggs receiving from Santa Rosa a box of persimmons raised by his father, J. H. Griggs, who has in his grounds two persimmon trees about 18 years old. J. H. Griggs' father brought the seed from old Virginia and planted it. For several years the young trees had a hard struggle for life, but by constant care, and transplanting a few years ago, they finally became thrifty and are now about 10 feet high and bear heavily each season. The fruit is excellent after it has been thoroughly frosted—equal to that grown in the "Old Dominion."

Statistics of Indian Wheat Shipment.

It may interest our wheat-growers to know that statistics show that something like desuetude is overtaking the shipments of Indian wheat—that is, that the annual progression in amounts which has alarmed wheat-growers has reached its culminating point and the advance has ceased. The following figures, which we take from H. Cains-Jackson's review in the London *Farmer* of latest-received date, are of interest, as showing not only the amounts shipped, but the season at which new-crop Indian wheat reaches the European markets, etc.

A DOUBLE CALLA FOUND IN A SAN FRANCISCO GARDEN.

Indian wheat shipments have been as follows:

January—March (old crop).	Qrs.
From Bombay	415,091
" Karachi	297,426
" Calcutta	24,568
Total	737,085
April—June (new crop).	Qrs.
From Bombay	1,309,746
" Karachi	123,480
" Calcutta	605,588
Total	2,038,814
July—September (new crop),	Qrs.
From Bombay	373,242
" Karachi	265,441
" Calcutta	589,698
Total	1,228,381
Total shipments for nine months in quarters:	
Bombay	2,098,079
Karachi	686,347
Calcutta	1,219,854
Total	4,004,280

Mr. Jackson finds encouragement in these figures for general wheat values. He says that they show that Bombay, after a period of extreme energy, has ceased to ship largely, and they also show that India, for the whole year, is not likely to materially surpass what was expected of her in the way of shipments. Four millions seems a big quantity, but the Continent has taken a considerable proportion, and that of 476,000 quarters of Indian wheat afloat December 1st, 134,000 quarters were destined for the Continent.

California Cork.

Some enterprising Americans have recently conceived the idea to grow cork trees in this country. They believe they can be successfully grown in the climate of California, and steps have been taken toward making the experiment.—*St. Louis Globe-Democrat.*

The growth of the cork oak in California is not a matter of experiment. Its success was demonstrated long ago. The distribution of cork acorns by the Patent Office about 25 years ago may not have accomplished much in other parts of the country, but it gave us a start, and there are now trees yielding cork and bearing acorns at a number of different places in the State. Some time ago we gave a picture of the tree growing on Mr. Richardson's place at San Gabriel, Los Angeles county. There were samples of cork and acorns shown at the Sacramento Citrus Fair by H. A. Messenger, of Calaveras county. There are trees of similar age in Sonoma, Santa Barbara and Tulare, and perhaps other counties which we do not now remember. The State University is growing seedlings from California cork acorns, and will be likely to have the trees for distribution next year. There is no doubt about the adaptation of the tree to the State, as the widely separated counties named above all furnish proper conditions for its growth. It is, of course, a crop which one has to wait some time to gather, and therefore needs patience in the planter.

The journal named above, and which mentions experiments as to be tried in California, gives some facts concerning the cork trade which will be read with interest in this State:

The average annual importation of corkwood into this country, entirely at the port of New York, is 70,000 bales a year. A bale weighs 160 pounds, and is worth on this side of the water $20, making a total value of the yearly importation of $1,400,000. It comes in duty free. It is nearly all brought over by one firm, which has a branch office in New York, the main offices being in London and Lisbon. The firm owns vast forests of corkwood in Portugal and Spain, and may be said to control the business. With the exception of an inferior kind of corkwood grown in Algiers to a limited extent, all the corkwood of commerce comes from the Spanish peninsula, where the trees abound not only in cultivated forests, but also grow wild on the mountains. The tree is like an American oak, with leaves similar to the oak and acorns. It takes 10 years for the bark to become of proper thickness to be manufactured into bottle-stoppers, life-preservers and seine corks. When stripped from the tree, it is boiled for two hours, cured in the sun for a week and pressed into flat pieces for baling and shipping. The denuded trunk, like a hen robbed of her eggs, does not sulk and quit the business, but throws out a fresh covering for a fresh spoliation. One tree has been known to yield a one-half ton of corkwood. One pound of cork can be manufactured into 144 champagne corks. The baled corkbark is sold to cork manufactories in the cities. The most extensive manufactory in America is at Pittsburg. Beside the ordinary demands for corkwood, a good supply of the buoyant material, after being burned to make it still lighter than the original bark, is shipped to Canada and New England, where it is made into seine corks.

Meat Values Abroad.

The Pacific Coast has always had an eye on the possibility of sharing in the production of meat for distant parts of the world where prices are high. It is interesting to notice that the large shipments of meat from the United States, and from South America and Australia, have steadily reduced values in England, much to the discomfort of the home producers. The London *Economist* calls attention to a somewhat curious fact in connection with the matter, pointing out how largely the fall there is in the inferior class of beef. In the London market on January 1st, in each year since 1881, the prices per eight-pound have stood thus, contrasted with the values now current:

	Present Price.	1886	1885	1884	1883	1882	1881
	d.	d.	d.	d.	d.	d.	d.
Beef inferior.	26	34	48	40	44	46	54
Do. prime.	44	46	54	60	60	56	58
Mutton middling.....	38	42	46	56	66	44	64
Do. prime.	52	52	56	66	78	55	70
Pork large...	36	32	38	46	50	50	62

Commenting upon these figures, the London *Farmer* states that before 1881 prices had risen sharply from 40d. in 1879 for inferior beef to 54d. in 1881, and slowly from 54d. for prime to 58d. Mutton of "middling" character was 52d. in January, 1879, against 64d. two years later, and it is only 38d. now. Prime mutton was 60d. in 1879 and 70d. in 1881. From 1881 to the present time the drop has been 24 per cent in prime beef, 26 per cent in prime mutton, but 52 per cent in inferior beef, and 41 per cent in inferior grades of mutton. Comparing the prices of 1879 with those now current, inferior beef has fallen in value as much as 35 per cent, and inferior mutton 27 per cent, but prime mutton and beef have fallen only 13 and 18 per cent respectively, while pork is 22 per cent lower. The great fall in the value of low-class meat is largely ascribed to its displacement by the fresh meat imported from New Zealand and the River Plata.

This shows that the shipment of dead meat in refrigerating cabins in steamships, to which we have frequently alluded, has reached a considerable amount. Give us an Isthmus canal, and this traffic could in all probability be made profitable from San Francisco.

A Double Calla.

We give on this page an outline drawing of a floral freak the like of which we have never seen before, nor has such a thing occurred under the observation of florists and floriculturists to whom it was shown. Possibly, however, in appealing to such a wide circle of observers as that comprised by the readers of the RURAL PRESS, we may find that the phenomenon is not so rare.

Col. Oscar Woodhams, who resides at 250 Clay street, in this city, has a clump of callas growing in his yard, and it has always heretofore thrown up orthodox blossoms. Judge of his surprise one day last month to see a stem bearing the twin bloom which the engraving represents. The stem is single and shows no sign of duality below the point where the two spathes start, as shown in the drawing. The spadix is simple and has the ordinary appearance. One of the spathes is larger than the other, but both are perfectly shaped and symmetrical, and the effect of doubling the envelope is quite pleasing. Who has seen such a one before?

THE *World* has organized a snowshoe expedition, under the leadership of Lieutenant Frederick Schwatka, of arctic fame, for the mid-winter exploration of that wonderland of this hemisphere, the Yellowstone National Park.

FRUIT SHIPPING.

Announcement by the Fruit Union.

In calling the attention of all interested in the future welfare of the fruit interests of the State—whether growers or shippers—to the second annual meeting of the California Fruit Union, to be held at Irving hall, San Francisco, January 19, 1887, at 1 P. M., the trustees desire to say a few words, to urge all to take particular pains to attend this meeting, and to briefly outline the various methods, as they have been suggested by different persons all over the State, for marketing our fruits the coming year.

In looking over the past year's work, two causes seem to have tended most to produce unsatisfactory results:

1st. The fact that our fruits were sold in sharp competition with themselves, a result which we sought to obviate, but failed, because there were *two* shipping organizations, each struggling for existence in the selling markets of the East.

2d. The failure of the so-called special fruit trains to place the fruit at its destination in any certain time, and because of this in good condition.

The first condition can be obviated by a united action of the combined fruit interest, so that there be but one selling agent in each large city.

The latter lies in the hands of a railroad company alone. We hope and trust they will see it to their advantage to aid and assist an interest which is alike important to them and ourselves—one which will be prosperous if managed wisely by the growers, and kindly treated by the railroad people.

We have in this first year's experience found many things which must be avoided in the management of the second year's business.

That some mistakes have been made it is useless to deny; some were made at the meeting which adopted our code of by-laws—some by the trustees.

Because of these errors many have set to work to find remedies, and many are the plans suggested.

All agree on the one point, that a combination of some nature is essentially necessary. We all desire success—success for each and all—and every one sees that it can only be obtained by the earnest co-operation of all.

Some maintain that the best way for us to handle our fruits in all markets in the East is by the auction plan, and that the existing by-laws should be changed to meet the case. A copy with the changes, as suggested, is inclosed for your consideration. Quite a number of others, while they are satisfied that this plan is probably the best for four or five of the larger Eastern cities, are extremely doubtful if it be wise policy to so frame the by-laws that all fruit, no matter to what point sent, must be sold by this method.

They would favor leaving the details of manner of selling more in the hands of the Board of Trustees, with the recommendation that the auction plan be used in certain named cities, but that in cities of less importance they use their best judgment as to manner of selling.

They argue that it is best to put the control in the hands of the trustees, a board formed alike of producers and shippers, who then elect their general manager second only in authority to the board.

They are also to appoint a traveling agent for the Union, whose business it is to be in the East during the shipping season, with headquarters say, for instance, at Omaha.

That he be ready to go at a moment's notice to any point, and inspect the condition of cars on arrival; keep himself fully posted on the condition of the Eastern markets, prices fruit is bringing, etc.; and have general supervision of our Eastern connections, reporting regularly to the general manager on this side.

All expenses to be met by the sum coming into the treasury of the Union from the difference between what commission we pay our agents and the 10 per cent charged the members for handling their fruits.

Some claim that it were best to have all agents salaried, and employ no commission men; while others favor the forming of a pool of the growers and shippers, and sell all fruits for the East on orders.

These and many other methods are suggested. We only mention them that you may give them thought, and come prepared to assist by your suggestions in formulating some plan which will be acceptable to all. With all working together, we can easily dispatch a train a day.

Enough has been sent this year to do it. This in the face of a short crop in many localities, poor prices in Eastern markets, fair in local, and the certainty that the fruit, if sent on special fruit trains, would arrive in comparatively poor condition, because of the time made by such trains.

Change the order. Give us such a crop as we have every reason to expect next year, reasonable rates and service from the railway companies, and our plans so arranged on the other side of the mountains that we may expect fair returns, at least, and who can compute the amount of fruit which will leave the State?

Judging from our local markets this year, it is plain to every one that the fruit must be sent East, or, with a full crop, augmented by the fruit from new orchards and vineyards, we will not receive enough from the sale to pay the cost of cultivation; to enable us to do this, we of necessity must have infinitely better service from the railroad companies. It would seem plain to all that this claim can be made upon them with much greater force when coming from a body embracing all the fruit-growers in this part of the State, than when backed only by the urgent appeal of individual growers.

Therefore, let us all come together, with the sincere and earnest desire to make as near as possible a perfect organization; to lay aside all jealousies caused by the work of the past year, and all pull together to secure lower and better shipping facilities; and having accomplished this, to unite on some plan that will be for the most good to the most people.

The attendance of all is desired, whether members of the Fruit Union, of any other union or association, or of none, as the nearer we can all come to working in harmony, that much nearer will we be to success. The matter of changing the existing by-laws can, of course, only be done by the vote of those entitled to a voice in the meeting.

That as full a vote may be had as possible, inclosed find a blank proxy, which, if you cannot attend yourself, fill out and sign, either for some one of your neighbors whom you know to be coming, or any one who will be in attendance, and return same at once to this office.

A. T. HATCH, President.

S. F., Dec. 24th.

Systems of Distribution Proposed.

In the circular of A. T. Hatch, president of the California Fruit Union, published herewith, there is allusion to a change in the by-laws to meet the auction plan of selling, etc. The following is the proposed Section 10, which sets forth the methods of distribution presented for the consideration of stockholders:

Shipments, Commission, Guarantee, Purchases.

SEC. 10. The Board of Directors shall, by compiling such facts and statistics as may be at their command, arrange a table of distribution subject to such changes and modifications as the market may, from time to time, demand; and it shall become the duty of the general manager to regulate the distribution strictly in accordance with such provisions.

The directors may delegate, subject to revocation, the power to change or modify the table of distribution to the general manager.

The general manager shall appoint, subject to confirmation by the Board of Directors, a commissioned agent, also an auctioneer in every city east of the Rocky mountains that can use a carload or more of California green fruits at a time.

The Board of Directors shall establish regulations to control the quality, weight, and packing of all fruits offered for Eastern shipment; and it shall be the duty of the general manager, through his inspectors, to enforce such regulations, and to reject all fruits offered for shipment that do not come up to the standard requirements.

All fruits consigned by the Union to Eastern agents shall be offered, by the auctioneer appointed by the general manager, at public auction, and sold to the highest bidders for choice of lots; the auctioneer's fees to be deducted from the agent's commission.

The auctioneer shall forward by the first mail, to every member having fruit at such sale, a copy of the catalogue, giving in print the prices realized for every lot of fruit sold at said sale.

Subscribers of stock shall contract with the other subscribers that they will not sell any fruits for Eastern shipment to any except to members of said Union (Eastern shipment meaning east of Ogden), reserving the right to sell any and all fruits for any other purpose.

Members of the Union shall be privileged to name points of destination for their fruits, and they shall be further privileged to name their own consignees. It shall be the duty of the general manager to faithfully observe such wishes, provided, the space allotted to such points of destination be not all previously applied for, and provided such members agree to have their fruits sold by public auction, by the auctioneer employed by the Union, and at the same time and place at which the fruits consigned to the agents of the Union are sold.

The Board of Directors shall establish such rules as will give all members an equal chance in naming preferred shipping points. Should the application for space to certain shipping points be greater than can be furnished, the Board of Directors may entertain sealed bids from members of the Union, at the rate of so much premium per ton, for the privilege of securing a choice of shipping points for quantities not to exceed one carload at any one shipment; provided, the term for which such privileges are let shall not exceed 30 days; and provided, that due notice to all stockholders be given through the mails by the secretary at least five (5) days before the time appointed for the opening of such sealed bids, which shall be addressed to the secretary, and opened by him in the presence of the Board and such bidders as may desire to be present; the highest bidder to have first choice during the term of 30 days or less, and so on, the directory retaining the privilege to reject any and all bids.

Division of Profits.

SEC. 11. All moneys received for such privileges shall be placed in a separate fund, and at the close of the business year shall be distributed among the stockholders, in proportion to the amount of fruit each will have shipped through the Union.

A commission of 10 per cent will be charged on all sales. Out of this 10 per cent, the Union shall pay its agents, auctioneer charges, and other running expenses.

Dividends of the earnings of the Union may be declared by the Board of Directors when, in their judgment, the affairs of the Union will justify. But in no case shall such dividend be made until all indebtedness shall be provided for.

Note from Mr. Weinstock.

EDITORS PRESS:—I was surprised to find in your issue of January 1, 1887, an article from the pen of Mr. R. H. Chinn, of Vacaville, under the heading of "Mr. Weinstock Proposed as Manager," in which he says: "We beg of you to give publicity to the inclosed letter from H. Weinstock, who, after urgent solicitation, has agreed to serve as our manager."

I thoroughly appreciate the kindly spirit that prompted Mr. Chinn in writing the above, but my private affairs will not permit me to be a candidate for any position that will demand the greater part of my time. H. WEINSTOCK.

Sacramento, Jan. 2.

ENTOMOLOGICAL.

Fighting the Codlin Moth.

The Petaluma *Courier* of recent date contained a letter signed "A. C.," which we take to mean A. Cadwell, the well-known fruit-grower. We quote the following:

I find many who propose to dig up their apple trees. Some say they will sell theirs to the drier, while others say there is nothing in that; still another says, I will give mine to the hogs. Why do they come to this conclusion? Because we have to spray the trees with some kind of soap in the spring, we have to put bands on our trees and change them every eight days through the season, and all this costs money. Then, if we neglect to attend to the bands only once, or our neighbor allows his to go free, when picking-time comes we find we have very few apples suitable for market. So that the difference between hauling our apples to the drier, or being put to this trouble and expense to ship a few to market, is so little (especially if Oregon should ship in about 10,000 boxes at the same time) that we prefer to take the easiest way. This I find is the decision of nearly all the small growers. On the other hand, some of the large growers say we must keep right along, as this is our business, and the country must have apples, even if they get them from the East, and we certainly can compete with the East and North, and so we can with industry and perseverance, which is required in any business at the present day to make a success of it. I, for one, have found that by spraying my trees in May thoroughly with the sulphur soap of Mr. Jamison, of Petaluma, it not only destroys the first hatching of the codlin moth, but checks the mildew to that extent that it will make but little heading afterward. Then I put on my bands, examine them every eight days, never missing one day. In addition to this, on the 1st of August I examine the forks and loose bark on the trees, which saves much more damage from the pest, and then when I pick my fruit I have two men to sort the wormy from the good ones, so that the former can be taken to the drier.

I put my good apples in a house lined with straw to keep it cold, then I wet them and keep the door open nights, and early in the morning close it. In this way I keep the fruit cool and moist, which is very essential to their preservation and flavor. When these apples are packed and placed in rows, one at a time, until the box is full, they are then classed as No. 1, No. 2 and Xmas. Then comes the pruning of the trees, which requires skill, tact and good judgment. The trees while young require but little pruning, but as they grow older they incline to fruit spurs, and the pruning should be done so as to take off as many of these as possible and leave the new wood. But there is a difference between new wood and water sprouts, which grow up in the middle of the tree. So that the new beginner can plainly see that unless he has enough to take up his whole time, there will be but little in it. And I still think that a good orchard of apples in a good location, well managed, will pay a man handsomely, notwithstanding that Oregon and the East are trying to divide the profits with us.

A Deep Mystery.

Wherever you are located you should write to Hallett & Co., Portland, Maine, and receive free, full information about work that you can do and live at home, making thereby from $5 to $25 and upward daily. Some have made over $50 in a day. All is new. Hallett & Co. will start you. Capital not needed. Either sex. All ages. No class of working people have ever made money so fast heretofore. Comfortable fortunes await every worker. All this seems a deep mystery to you, reader, but send along your address and it will be cleared up and proved. Better not delay; now is the time.

READERS of our paper who will send their full name and P. O. address to the Eureka Salt Manufacturing Company, limited, P. O. Box 3241, New York, will be furnished, free of charge, a valuable pamphlet on "How to make the Best Butter," by a prominent dairy authority, in beautifully lithographed cover, showing portrait in colors of the famous Jersey cow "Oakland's Cora."

It Should Always be Borne in Mind

That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the fittest"—the "DOMESTIC" SEWING MACHINE.

Farmers and Travelers

Sojourning in Marysville will find the Western Hotel the best in the city, being clean, quiet, comfortable and reasonable in prices. Geo. Wappel, proprietor.

THE LUMBERMAN.

Our Lumber Resources.

The lumber business of California is one of our most valuable industries, and one closely connected with the development of the State. No town or district can materially progress in population or wealth without drawing upon the lumber interest, and all such drafts add materially to the wealth of the State, from the fact that our lumber is a natural product of the soil and made available only by the employment of the labor and capital of our own people. One great drawback to the lumber interests of California is the lack of proper means of transportation. The timber resources of Sonoma, Mendocino and Humboldt and other counties to the north are very extensive, and will soon be made fully available by the construction of railroads now in progress or in contemplation, while the extension of the southern railroad through Santa Barbara and San Luis Obispo counties will open up still other sources of lumber. Branch roads will also soon be extended from the main line into the western slope of the Sierras, which also abound in the finest of timber lands. For a brief description of the timber region to the north of this city, we cannot do better than to copy the following from *Harper's Weekly:*

The cutting of the redwoods is the mammoth lumbering of the world. California has no competitor in big trees. They belong to the genus *Seguoia*—a name derived from Sequoyah, a Cherokee, who invented an alphabet and written language for his Indian tribe—and are of two species. They are found in the track west of the Sierra Nevada mountains between the 34th and 42d degrees of latitude, ranging in hight from 200 to 400 feet and in diameter from 8 to 25 feet.

In Sonoma, Mendocino and Humboldt counties, reaching from the Golden Gate to Oregon, are immense redwood forests covering an area from 2 to 20 miles wide and nearly 200 miles long, from which millions of feet of lumber are now cut annually. Redwood is the most valuable timber in the State. As yet no railroad traverses this territory, but work has been begun on lines which will soon bring the lumbering camps within easy reach of the market. The redwood is a coniferous evergreen, resembling in some respects the cypress. The wood, which is extensively used on the Pacific Slope for building and is seen in recent houses in Boston and Chicago, is of a fine red color, but fades slowly when exposed to the light. The shrinkage is principally lengthwise, and in California the wood is very popular. The timber land is exceedingly valuable, as single trees are often worth $600 or $700, the current price of redwood being $16 to $30 per thousand. A trip to a redwood lumbering camp is full of interest.

Characteristics of Good Timber.

There are certain appearances which are characteristic of strong and durable timber, to what class soever it belongs. 1. In the same species of timber, that specimen will, in general, be the strongest and most durable which has grown the slowest, as shown by the narrowness of the annual rings. 2. The cellular tissue, as seen in the medullary rays (when visible), should be hard and compact. 3. The viscular or fibrous tissues should adhere firmly together, and should show no wooliness at a freshly cut surface, nor should it clog the teeth of the saw with loose fibers. 4. If the wood is colored, darkness of color is in general a sign of strength and durability. 5. The freshly cut surface of the wood should be firm and shining, and should have somewhat of a translucent appearance. A dull, chalky appearance is a sign of bad timber. 6. In wood of a given species, the heaviest specimens are in general the stronger and more lasting. 7. Among resinous woods, those which have least resin in their pores, and among non-resinous woods, those which have least sap or gum in them, are in general the strongest and most lasting. 8. It is stated by some authors that in fir wood that which has most sap wood, and in hard wood that which has the least, is the most durable; but the universality of this law is doubtful. Timber should be free from such blemishes as clefts or cracks radiating from the center, "cup shakes" or cracks which partially separated one annual layer from another; "upsets," where the fibers have been crippled by compression; "rindgalls," or wounds in a layer of the wood, which have been covered and concealed by the growth of subsequent layers over them, and hollows or spoony places, in the center or elsewhere, indicating the commencement of decay.—*Prof. Rankine.*

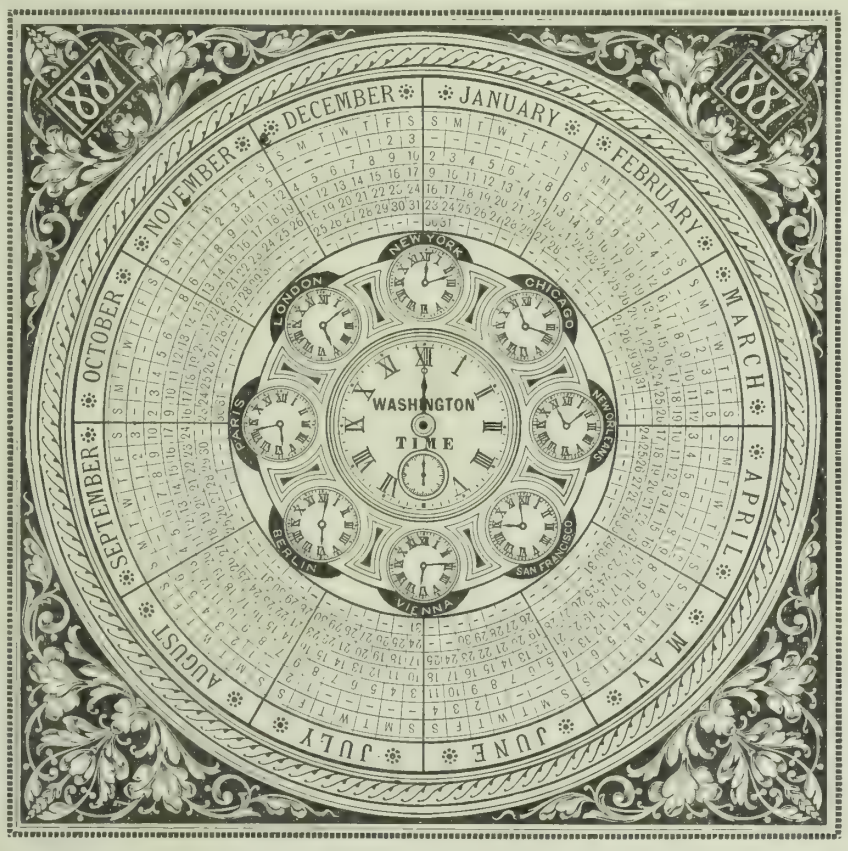
TIMBER DEPREDATIONS IN OREGON.—The Capital Lumber Company, of Salem, Oregon, is charged with cutting upon the public domain of that State 3,200,000 feet of lumber, valued at the mill at $14 per thousand, or $45,000 in the aggregate. Some time ago the company, fearing prosecution, offered the Government in compromise $5000. The Solicitor of the Treasury sent the offer to the Attorney-General, who directed the United States District Attorney for Oregon to investigate and report. He did so, and recommended that no compromise should be accepted for a sum less than the value of the stumpage, $32,000. Lately the company made another offer to compromise in the sum of $10,000, and it was accompanied by a recommendation from the District Attorney that that sum be accepted. In explanation of this the District Attorney reported that upon further investigation he had found that the agent who had investigated and reported upon the depredations had not valued the stumpage at all, but had lain "sodden drunk" in a cabin while two persons he had deputed, but who were not familiar with the lines, did the counting. The prosecuting attorney fears that the effect of such a revelation upon a jury would destroy his case, and he thinks it safer to compromise. The Secretary has ordered a new investigation of the facts and the case carried to a prosecution unless settled. The timber agent charged with drunkenness was for a long time connected with the homestead division of the General Land Office.

CALIFORNIA FORESTS.—The New York *Post* of Nov. 29th had this to say about California forests: California is becoming aroused to the necessity of doing something to preserve her forests. Abundantly as she was supplied by nature with trees, the destruction wrought by the woodman's ax, aggravated by the devastations of mountain fires, often recklessly started, have caused really an alarming diminution of the acres of timber in all parts of the State. The State Board of Forestry at last shows some activity, and proposes to submit to the Legislature a recommendation for the protection of growing timber and the encouragement of forest culture. There is also evidence that public sentiment is becoming aroused to the sense of the fact that even the natural resources of California cannot forever withstand the reckless waste which always characterized her people.

SOME idea of the lumber interests of Los Angeles may be obtained when the fact is made known that on an average over a million feet of lumber of various kinds is used there and thereabouts every month. Nearly 200 vessels of various classes are employed in transporting to that market the products of the lumber mills up the coast all the way from Mendocino to Puget Sound and even further north. Possibly the most prosperous of all commercial pursuits in Los Angeles is the lumber interest, and those interested are among the city's most enterprising and energetic business men.

CUTTING YOUNG PINE TREES.—The too common practice of cutting young pine trees for fuel and poles, which have grown up along the base of the Sierras where the heavy timber was taken off years ago, should in some way be discouraged, for if allowed to grow it would not be many years before the denuded mountains would again be clothed in their pristine beauty. —*Reno Gazette.*

TREATMENT OF FALLEN TIMBER.—A Government inspector of timber in France recommends for timber used in ship-building one year's immersion in river water, two years in fresh, or three in brackish water, constantly being changed, to be followed by two years of air seasoning.



Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Early Canadian Settlements in the Willamette Valley.

Of the beginnings of agricultural pursuits in the Willamette valley, Hubert Howe Bancroft's "History of Oregon" gives the following account:

In 1828, the whole Northwest territory was under the rule of the Hudson Bay Company and John McLaughlin, the company's Governor at Fort Vancouver. One of the company's employes, Etienne Lucier, whose time had expired, asked the Governor if he believed the Willamette valley would ever be occupied by settlers. The latter replied that wherever wheat grew there would be a farming community. Lucier then asked what assistance would be given him should he settle as a farmer. The Hudson Bay Company was bound under heavy penalties not to discharge their servants in the Indian country, but to return them to the place where they had been engaged. McLaughlin was in favor of making settlements, and devised a plan to keep the men in the country without acting against the letter of the charter: First, to avoid the penalty, the men must remain on the company's books as servants; but they might work for themselves and no service would be required of them.

Second, they must all settle together and not scatter about among the Indians, with whom their half-breed children would be taught by their mothers to sympathize, making them dangerous neighbors; while by keeping their Indian wives among themselves exclusively, these women would serve as hostages for the good conduct of their relatives in the interior. Third, each settler must have 50 pounds sterling due him to supply himself with clothing and implements, which rule was designed to make them saving and industrious, and by making their farms cost them something, attach them to their homes. Fourth, seed for sowing and wheat to feed their families would be loaned them for the first year, and two cows for an indefinite period. These were the terms which only secured the better class of Canadians as settlers, and kept the idle and dissolute from becoming incorporated with them. The American trappers, having no credit on the company's books, were nevertheless assisted in the same way and to the same extent, as the best means of making them good citizens instead of roving firebrands among the Indians. At the end of the first three years all the settlers, French and Canadian, were out of debt.

PERCHERON HORSES—A VALUABLE COMMENDATION.—The exhibition of fine horses in connection with the annual American Fat Stock Show at Chicago has become a very attractive feature. At the late exhibition for 1886 the show of draft horses was exceptionally grand. The finest specimens of Clydesdale, English draft, Shire and Percherons were present in large numbers from all parts of the country, and evoked the admiration of the thousands of visitors. The most notable exhibit, and the center of attraction, was that of beautiful black Percherons, of the royally-bred Brilliant family, from the Oaklawn stud of M. W. Dunham, Wayne, Illinois. While looking at them, admiring their splendid proportions, one of the visitors, Mr. Heineman (the most extensive country buyer of horses in the United States, who supplies with draft horses the great horse dealer of New York, I. H. Dahlman), said: "I would give $50 more for a draft horse showing strong marks of French blood than for any other breed." Coming from such a competent judge of the value of horses, this is a high compliment to the Percheron breed, and valuable information to those breeding horses for the market.

A Blessing.

Nothing adds more to the security of life, of happiness, and of health, than a safe and reliable family medicine. S. L. R. has won for itself the appellation of "the family blessing." If a child has the Colic, it is sure, safe and pleasant. If the father is exhausted, overworked, debilitated, it will restore his failing strength. If the wife suffers from Dyspepsia, Low Spirits, Headache, it will give relief. If any member of the family has eaten anything hard to digest, a dose of the Regulator will soon establish good digestion. It gives refreshing sleep even in cases where narcotics have failed. It is a preventive, perfectly harmless, to begin with, no matter what the attack, it will afford relief. No error to be feared in administering; no injury from exposure after taking; no change of diet required; no neglect of duties or loss of time. Simmons Liver Regulator is entirely vegetable and is the purest and best family medicine compounded. J. H. Zeilin & Co., Philadelphia, Pa., sole proprietors.

H.H.H. HORSE LINIMENT.

THE H. H. H. Horse Liniment puts new life into the Antiquated Horse! For the last 14 years the H. H. H. Horse Liniment has been the leading remedy among Farmers and Stockmen for the cure of Sprains, Bruises, Stiff Joints, Spavins, Windgalls, Sore Shoulders, etc., and for Family Use is without an equal for Rheumatism, Neuralgia, Aches, Pains, Bruises, Cuts and Sprains of all characters. The H. H. H. Liniment has many imitations, and we caution the Public to see that the Trade Mark "H. H. H." is on every Bottle before purchasing. For sale everywhere for 50 cents and $1.00 per Bottle.

For Sale by all Druggists.

THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from $10 to $30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from $100 to $200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

TITLE, U. S. PATENT.

TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of $25 will be required in all cases to cover expenses of sale.

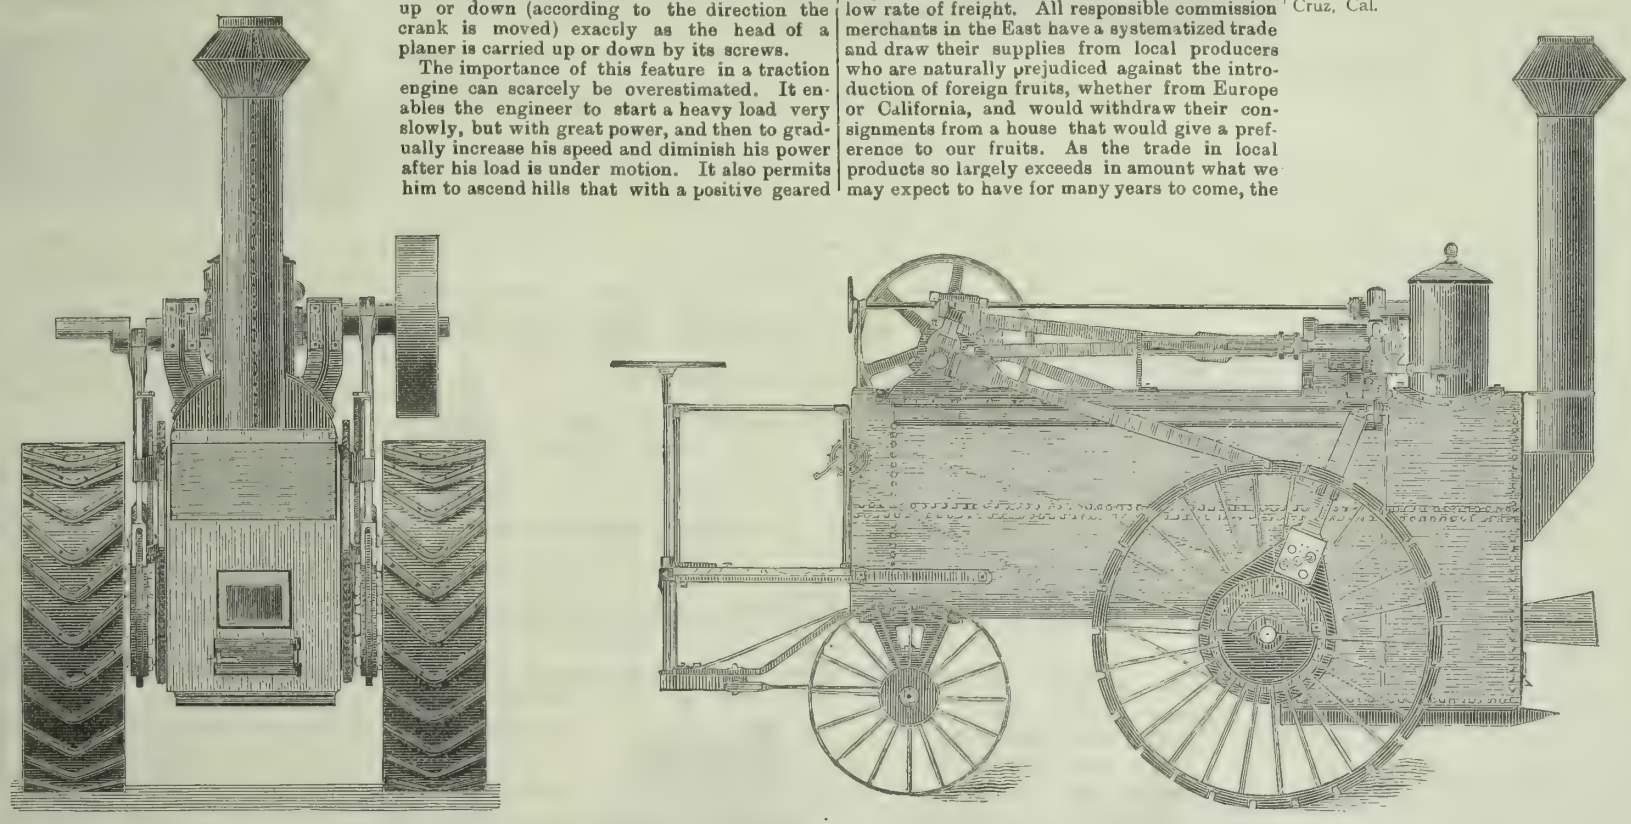
SANITARY PUBLISHING CO., Chicago.



A New Traction Engine for Farm and Road Use.

The fact that a common straw-burning traction engine will successfully and economically drive a combined harvester and thrasher cutting 25 feet or over was demonstrated last season by Mr. G. S. Berry, of Visalia. He not only proved that it would run a combined harvester using straw as a fuel, but that it would also pull a gang of 20 10-inch plows, running from 4 to 6 inches deep, as is now being done daily on his place with the consumption of about three tons of straw per day.

This seems to threaten a revolution in plowing, harvesting and thrashing in our great valleys, for it implies that the power to perform these heavy and hitherto expensive operations may be found in a small fraction of the straw that has been deemed almost useless in our great wheat-growing sections.

The great field thus suddenly and almost unexpectedly opened for the use of traction engines has directed the attention of our inventors to their defects and incited them to efforts to improve them.

Among the first to attempt this is an old acquaintance of the readers of the RURAL, Jacob Price, of San Leandro, who recently brought to this office, for the purpose of securing a patent, drawings of the machine, illustrated on this page, and which will be fully understood

NEW DESIGN FOR TRACTION ENGINE, BY JACOB PRICE, OF SAN LEANDRO, CAL.

from the following description in connection with the cuts.

It is needless to explain to those who are familiar with traction or field engines that in all of them the rapid motion of the crank or flywheel shaft is reduced and transmitted to the driving or carrying wheels by trains of cogwheels.

The cogwheels thus employed are from 10 to 14 in number, and add greatly to the weight and cost of the machine, to say nothing of the large percentage of power that they consume by their friction.

Mr. Price's invention dispenses with these entirely. He employs in their place two friction ratchets (one on each side) which get their motion from the flywheel shaft by the connecting rods, as shown.

These connecting rods get their motion from cranks in the main crank shaft just outside the main boxes. (See end view.) These cranks have only about two inches throw, so that they work the ratchet levers back and forth about four inches at the point where the connecting rod attaches. It is understood, of course, that the friction ratchets, like all ratchets, slip freely in one direction, but grasp and hold firmly in the other.

The hubs of these ratchets are keyed securely to the main axle of the engine. This axle, by the alternate motions of the two ratchets, is given a constant and steady motion forward, carrying the large driving-wheels with it, and thus propelling the machine. The driving-wheels, like those of a two-wheeled mower, may slip forward on the axle to permit turning.

These simple devices, thus dispensing with the trains of gearing, appear to be a great improvement, as they save power, reduce cost and weight, simplify construction and greatly lessen the liability of breakage.

But still the most important and novel feature of the invention remains to be described, viz.: The power or leverage of the steam on the driving-wheels may be increased or diminished by the operator at will, when the engine is advancing or standing still.

In other words, the power of the machine to pull a load can, within certain limits, be increased or diminished, as desired. This somewhat remarkable mechanical effect is produced by very simple means, clearly shown in the side view. It consists in making the points of the attachment of the connecting rods to the ratchet levers movable up and down, the result being that when said points are moved to the upper ends of the ratchet levers the pulling power of the engine is increased immensely, being at least eight or ten times as great as when these points are at their lowest position. In other words, the steam, through the medium of its engine, is allowed to use a longer lever when heavy work is to be done, just as a man pumping water naturally takes hold near the end of the handle if the pump goes hard.

The method of raising and lowering these points is shown in the end view, but not very clearly. The connecting rods are connected to a block of metal having a mortise through it the size of the ratchet lever. These blocks therefore may slide up and down on the ratchet levers freely, but they are connected to long screws (seen just inside of the ratchet levers and parallel to them). These screws have bevel pinions on their lower ends, actuated by bevel wheels working central to the main axle of the machine and having on their outer edges sprocket teeth, which enables them to be turned by the chain belt so clearly shown in the side view. It will be seen that by turning the hand-crank at the front end of the boiler (the end opposite the fire-box) the screws will be rotated, carrying the metal blocks referred to up or down (according to the direction the crank is moved) exactly as the head of a planer is carried up or down by its screws.

The importance of this feature in a traction engine can scarcely be overestimated. It enables the engineer to start a heavy load very slowly, but with great power, and then to gradually increase his speed and diminish his power after his load is under motion. It also permits him to ascend hills that with a positive geared engine would be impracticable, or to go over bad ground or pull out of a ditch.

These features also adapt it perfectly to operating combined harvesters and thrashers, for it must be borne in mind that the engine and flywheel shaft of this machine runs at a constant and unvarying speed, whether the whole machine advances slowly or rapidly; hence if the cutting and thrashing apparatus of a harvester is run from the flywheels the speed will always be the same, though the engineer may, if the grain be heavy, slow down the forward motion (thus reducing the amount of straw delivered to the thrasher), while, as before stated, the thrashing cylinder and sickle runs at full speed.

The boiler here shown is Tindall's patent return-flue straw-burner. The portion reaching forward from the fire-box is oval in form—not round. Its thickness or width in this engine is 34 inches, while its depth is 46 inches. In the lower portion, reaching from the fire-box forward, are several large flues, while in the upper portion are the return-tubes. The form of the boiler is symmetrical and compact, and its heating surface is very great. However, any type of boiler or engine may be used, the invention relating only to the means used for dispensing with the cog gearing and the device employed for increasing or diminishing the power of the engine on the driving-wheels.

LOTE TREE SEEDS.—The article by Dr. A. Kellogg, on Parry's Native Jujube or Lote tree, which appeared in the RURAL PRESS for Dec. 11th, has awakened a good deal of interest. Mr. Abbot Kinney, Chairman of the State Board of Forestry, writes Dr. Kellogg that he has had in consequence many inquiries for plants and seeds, which he has been unable to satisfy. Can any of our readers furnish the seed or plants?

EXPERIMENT STATIONS AND CALIFORNIA CONGRESSMEN.—Secretary Chester, having transmitted to our Members of Congress the resolution of State Grange, in favor of Mr. Hatch's bill for agricultural experiment stations, has received favorable replies.

The Placer County Fruit-Growers' Views.

EDITORS PRESS:—Many fruit-growers in this county have been interviewed by the writer, and all approve of the plan proposed by Mr. H. Weinstock, of having California fruits sold at auction in the Eastern markets.

After more than 20 years' experience as a dealer in foreign fruits in the Atlantic States, I feel that I may be permitted to make the assertion that the information gathered by Mr. Weinstock on this subject during his recent tour through the Eastern States, and given to the public through his published letters, is wonderfully accurate and comprehensive, and the resolutions offered by him are worthy of being adopted without material change by the fruit-growers at their meeting to be held on the 19th inst.

The commission men of this State have handled, and will probably continue to handle, a large proportion of the fruit consumed in our near markets. Their sales, however, are made direct and at stipulated prices. Freights, deterioration of fruit while in transit, or losses of whatever nature, must be met by the purchaser.

For our increasing products there is an insufficient demand at home. We have then to place them upon the markets of the East in large lots, in order to secure the indispensable low rate of freight. All responsible commission merchants in the East have a systematized trade and draw their supplies from local producers who are naturally prejudiced against the introduction of foreign fruits, whether from Europe or California, and would withdraw their consignments from a house that would give a preference to our fruits. As the trade in local products so largely exceeds in amount what we may expect to have for many years to come, the commission man will, as a matter of policy, first sell the goods of his local consignor, who is near at hand to look after his own interests, should he even suspect they were being neglected; while the fruit of the foreign owner is wholly neglected until the local supply is exhausted, by which time it may have become worthless.

This may occur even when the fruit arrived in good condition, and might, perhaps, have been sold at a fair price at some point outside of the regular trade of the consignee; but if the cost of so doing should exceed the commission, the effort is liable not to be made, and the fruit allowed to be lost, as expenses are all paid by the shipper, even if his fruit is never sold.

There is no way in which a car or more of fruit that is particularly perishable or arrives in poor condition can be sold to realize so much money to the owner as at auction, even if sold for less than cost. If, because of imperfect condition or an overstocked market, it cannot all be placed by purchasers among regular customers, they then extend their sales to more remote points, and perhaps into entirely new fields. This fruit that may have been sold at a loss to the shipper will then be the means of opening a market for increased trade, and may be no more expensive than other methods of getting custom.

It will not do to both sell at auction and private sale at the same time and place, as the rivalry would cause the same disaster to owners that has occurred in Chicago during the last season.

Shippers who are not growers should join in this movement in order to avoid the possibility of direct competition, and the overstocking of any place in the Eastern markets. There is little fear that the average producer will desire to ship fruit East on his own account, if the shipper will buy his entire crop at a fair price; but it is quite certain he will not be content to let the buyer have the cream of his crop at such times only as may suit his convenience; and having no other arranged outlet, run the risk of losing the balance.

It is the opinion of the people of this neighborhood that every grower and shipper of fruit should combine as members of the Calif. Fruit Union, or under any other name that may be preferred, adopting the plans of Mr. Weinstock to sell our fruits in the East at auction, and place him at the head of the organization as president and manager. P. W. BUTLER.

Penryn, Placer Co., Jan. 3, 1887.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in DEWEY & CO.'s Patent Office Library, 252 Market St., S. F.

354,950.—FENCE-POST BASE—J. D. S. W. P. Tilton, Yakima, W. T.

17,040.—DESIGN—F. M. Gilham, S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

What "Old Fritz" Said.

It was an aphorism of Frederick the Great that "Facts are divine things." An undisputed fact is that Dr. Pierce's "Golden Medical Discovery" is the most powerful liver vitalizer extant, and by its characteristics and searching action will cure dyspepsia, constipation, dropsy, kidney disease, sick-headache, and other maladies which, popular opinion to the contrary notwithstanding, are directly traceable to a diseased condition of the liver, by which its work as purifier of the blood is made incomplete. All druggists.

"Oh! But I Salivated Him!"

Was the actual exclamation of an honest physician, spoken of one of his patients to whom he had given calomel for the cure of bilious ess and a diseased liver. And he had *salivated him* for certain, from which he never recovered. All these distressing consequences are avoided by the use of Dr. Pierce's "Pleasant Purgative Pellets," a purely vegetable remedy that will not salivate, but produce the most pleasing effect, invigorate the liver cure headache, dyspepsia, biliousness, constipation and piles. By druggists.

The worst cases cured by Dr. Sage's Catarrh Remedy.

GOLDEN GATE INCUBATOR.

"Seeing is believing." Parties who contemplate using incubators, or who have been unsuccessful in their use or in the rearing of chickens, should inspect our incubator and brooding-house. This is the only satisfactory showing in this period of distrust of incubators—a distrust brought about, for the most part, by cheap and inefficient contrivances for the purpose. We have a long and strong list of recommendations, with the written testimony of people who have made the largest average percentages you ever heard of; we have a large number of medals, diplomas and what-not from various Fairs; we have the finest-looking machine you ever saw, with a magnificent record of more than four years' duration—but we are quite willing you should discard all these weighty evidences after once seeing the daily hatching of our machine and the hundreds of beautiful, strong and healthy birds, without vermin or blemish, now in our brooding-house. **We show what we can do,** and you are cordially invited to **know what that is.** It is worth your while to witness the results of our more than six years' successful experience. Boats from San Francisco every half hour; fare, 15 cents. Large circulars mailed free. **G. G. INCUBATOR CO., East Oakland, Cal.**

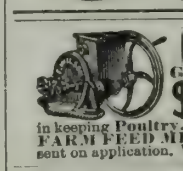
SHEEP AND SHEEPWASH.

LITTLE'S CHEMICAL FLUID SHEEP DIP.

Price Reduced to $1.25 PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for SCAB in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yolk. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.



FALKNER, BELL & CO.,

GOULD'S SPRAY PUMP.

This Pump we have gotten up expressly for spraying vines, fruit trees, etc., infested with destructive insects. It has been adopted and recommended by the State Horticultural Society. The working parts are constructed entirely of Brass, and will not be affected by the corrosive solutions used. The BAMBOO EXTENSION is an admirable invention. The operator, by the use of this extension, can get to all parts of the tree while on the ground; also saving himself from getting burnt with the solution. The improved nozzle will save the price of itself within a day. It throws a very fine mist. We have also an attachment for Pump to stir up the liquid in barrel before putting on the solution, thus keeping the liquid always in condition to be laid on evenly, and not allowing the preparation to settle at the bottom. Send for special Catalogue.

We are prepared to fit these Pumps complete with Hose, Bamboo Extensions, Barrel, all ready to commence spraying with. Write for prices.

S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 5, 1887.

The past week was interrupted by the usual holiday festivities, but now that they have passed more active trading is looked for. Notwithstanding the holidays, wheat, barley and oats advanced under liberal buying. The English wheat markets ruled very strong, with a strong closing to-day, as follows:

LONDON, January 5.—WHEAT—Dull and irregular. California spot lots, 7s 7d to 7s 10d; off coast, 38s; just shipped, 40s; nearly due, 38s 6d; cargoes on passage quiet but steady; English country markets, generally dearer; French, firm; Wheat and flour in Paris, firm.

Eastern Wool Markets.

NEW YORK, Jan. 1.—The markets here and in Boston and Philadelphia are slightly active for the closing week of the year. In this market there is nothing new to report, while the general tone of business is fairly prosperous. Wools and woolen goods continue dull. In Boston, California wool is very quiet, and is either held out of market or is selling without a profit. Territory wool is still in heavy stock and more or less pressed for sale, and the market is emphatically in buyers' favor, though quotations are no better nor lower than last week. In Philadelphia, stocks of all descriptions are light and low, and medium wool is generally held with confidence in anticipation of an improving trade. Fine fleeces and territory wools are regarded with less confidence than other descriptions, and on these the market inclines in buyers' favor, but there is no quotable change from last week's prices. Among the sales were: 10,000 pounds East Oregon, at 16@17c; 25,000 pounds East Oregon, at 21@24c; 60,000 pounds territory, at 16@21c; 20,000 pounds territory, at 22½c; 120,000 pounds territory, at 21@24c; 25,000 pounds medium, at 25c; 75,000 pounds Wyoming and Utah, at 19@27c.

BOSTON, Jan. 3.—The Boston *Post* of the 1st inst. says: The demand for domestic wool the past week has been quite good and the sales amounted to 2,158,500 pounds. The market continues firm, and prices remain about the same. Holders are confident that present prices will be sustained and that manufacturers will become free buyers in a short time. The interior markets are well cleared of wool, and foreign markets continue firm and are still considerably above the importing point. In Australian wools there have been sales of 75,500 pounds, at 34 and 39c. The other sales of foreign have been 30,000 pounds Montevideo, 363,000 pounds Mediterranean carpet, 15,000 pounds East Indian carpet, and 40,000 pounds sundries, on private terms. For California wool, the market is very quiet, and only 75,000 pounds have been reported, on private terms.

Foreign Review.

LONDON, Jan. 3.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says the markets are sparingly supplied. English wheat is 2s higher than before the holidays. The flour trade has a decided upward tendency—prices being from 6d to 1s higher. The sale of English wheat during the week footed up 34,766 quarters, at 35s, against 30,245 quarters at 30s during the corresponding period of last year. The general values are about 1s better. Two cargoes of wheat have arrived; one remained. At to-day's market, English wheat was strong. During the past fortnight the advance has ranged from 1s 6d to 2s. Flour was firm; the fortnight's rise was 1s 6d. Corn was slightly cheaper. Beans and peas were unchanged.

New York Wheat Market.

NEW YORK, Jan. 1.—The wheat market was quiet, but steady, down to Thursday's opening, when it became more active, and prices advanced on stronger European market reports and warlike rumors. Exporters were buyers for early shipments. The market on Friday ruled active, closing steady; spot, 2½@2⅞c higher; options, January, 93¾c; February, 94⅝c; March, 96½c; May, 98¾c.

New York Hop Market.

NEW YORK, Jan. 1.—The market has developed no change. Coast crop, 1886, prime to choice, 25@27c; fair to good, 22@24c; 1885, good to choice, 10@13c.

Eastern Dried Fruit Market.

CHICAGO, Jan. 1.—A steady and firm feeling prevails in the dried fruit market here. The market at the same time rules rather quiet, arrivals are still light and offerings limited. Jobbers and dealers are busy, taking stock, and are not looking around much. California dried fruits—Raisins are easy, but other kinds are steady and firm, and the demand is fair. Prunes, French, per lb, 9c; plums, pitted, 13@14c; peaches, quarters, 12@13c; halves, pared, 25c; nectarines, 9c; pears, 8@12½c; raisins, London Layers, 20-lb boxes, per box, $1.75@1.80; raisins, loose Muscatel, per box, $1.50@1.60.

NEW YORK, Jan. 1.—Raisins—The movement is moderate, confined principally to better grades, which, being in limited supply, are held steady. Two-crown loose Muscatel, $1.40@1.45; London Layers, $1.95@2; California two-crown, $1.60@1.65; three-crown, $1.85@1.90; London Layers, $1.95@2.20. Prunes—Turkish in limited request, at 5c. French, firm, at 7⅞@8c for 60's@90's. Currants in moderate demand, at 5¼@5⅜c. Citron, 17½@17¾c.

California Products in New York.

NEW YORK, Jan. 1.—California Lima beans are quiet, at $1.80@1.85.

Local Markets.

BAGS—The market holds to strong prices for Calcuttas, with fair trading for futures, which would be largely increased with heavy rains soon.

BARLEY—The market held to strong prices throughout the week, owing to stronger holding and a good demand. On Tuesday, prices weakened off, but closed higher to-day. On Call, transactions were large and higher figures. The following are to-day's sales on Call: Morning Session: Buyer season—500 tons, $1.15¾; 1000, $1.16; 100, $1.16¼; 100, $1.16⅜; 200, $1.16½; 200, $1.16⅝; 800, $1.16¾; 900, $1.17; 400, $1.17⅛; 500, $1.17¼. Seller season—400 tons, $1.08½; 100, $1.08⅝; 200, $1.08¾; 100, $1.09; 100, $1.09¼. May, 100 tons, $1.11 ₩ ctl. Afternoon Session: Buyer season—1100 tons, $1.17; 400, $1.16¾; 900, $1.16½; 400, $1.16⅜. No. 1 Brewing, buyer season—300 tons, $1.28 ₩ ctl.

BUTTER—The market is soft, with only gilt-edged wanted. The market is overstocked with fresh made from new pasturage.

CHEESE—The market is very strong, with an advance obtainable.

EGGS—The market is weak at 30 cts top for gilt-edged or strictly choice fresh ranch. The demand is increasing, but so are receipts.

FLOUR—The market is exceedingly strong, with an advance asked and obtained for the more choice brands. Local dealers are more disposed to stock up, owing to the higher advancing market for wheat. The exports, last year, aggregate 1,124,615 bbls, against 1,295,657 bbls in 1885. Of the exports last year, China took 421,698 bbls, and Great Britain, 469,385 bbls.

WHEAT—The market continued to advance up to Monday, when it weakened off, but rallied again to-day, closing very strong, with $1.60 bid for No. 1 shipping season, storage paid at Port Costa. Call transactions have been large throughout the week. The following are to-day's sales: Morning Session: Spot, season's storage paid—500 tons, $1.60. Buyer season—700 tons, $1.67⅞; 900, $1.68; 100, $1.68⅛; 1600, $1.68¼; 200, $1.68⅜; 800, $1.68½; 900, $1.68⅝; 400, $1.68¾; 100, $1.68⅞; 2700, $1.69. Seller 1887—200 tons, $1.55 ₩ ctl. Afternoon Session: Buyer season—6100 tons, $1.69; 1900, $1.69⅛; 5400, $1.69¼; 300, $1.69⅜; 1600, $1.69½. Buyer 1887—100 tons, $1.75 ₩ ctl.

[COMMUNICATED.]

Market Information.

Cereals.

Although the wheat market closed the year 1886 very strong, yet the new year opened on a higher and excited market. The causes which have led to the high market this paper has set forth in previous issues, and pointed out the certainty of very high prices ruling before the close of the season. This position was taken in July last, and maintained ever since, notwithstanding the daily press, without an exception, seemingly worked in exporters' favor by bearing the market so as to have farmers sell at low prices. The exports of wheat last year from this port aggregated 15,832,155 ctls against 11,727,895 in 1885. The stock of wheat in the warehouses in this city and Port Costa, on January 1, was 87,438 short tons. It is claimed by well-informed parties that the stock carried by interior warehouses is very considerably short of the quantity carried on January 1, 1886, but this cannot be verified until the Produce Exchange's account of stock in the State is made public. In the absence of this official statement, the following is given in short tons:

Wheat on hand July 1, 1886	75,000
Total 1886 wheat crop	1,100,000
Probable receipts from Oregon	35,000
Total	1,210,000
Local wants and seed to December 31, 1886	200,000
Total exports, everywhere, to December 31, 1886	540,000
	740,000
On hand January 1, 1887	470,000
Local wants, January 1 to July 1, 1887	150,000
Probable export, January 1 to July 1, 1887	300,000
	450,000
On hand July 1, 1887	20,000

With a 20,000 tons carryover, one and all must concede that high prices will obtain from now on, even if the foreign market does not advance; but all present advices point to still higher values abroad.

In last week's issue we stated that higher prices for barley were inevitable, which was fully verified by a sharp advance on Monday, with a strong market ruling. The dry weather and lighter stocks in the State than heretofore claimed caused the short interest to commence filling. The overland exports last year aggregate 249,838 ctls, against 92,760 ctls in 1885, and by sea, 723 648 ctls, against 185,297 ctls in 1885. The principal increase was to Great Britain and New York. To the former country they aggregate 391,151 ctls against 8103 ctls in 1885, and to New York, 187,005 ctls against 76,287 ctls in 1885.

Oats have made quite an advance the past week, with a strong closing. The improvement is due to lighter receipts, light stocks and a good demand. The bulk of the oats are inferior, which still further enhances the value of the more choice.

Choice corn continues firm, with a good demand ruling, but poorer grades are slow and in buyers' favor.

Rye and buckwheat are steady under a light stock. The demand is fair.

Feedstuffs.

The demand for bran and middlings is good for the season, but the supply is fully up to the consumption. Some millers are disposed to advance their prices.

Ground barley is very strong at a slight advance in sympathy with the higher price of barley. The demand, at the advance, is slow.

Feed carrots are without essential change.

Dealers continue to talk down hay, but the dry weather keeps holders firm, which forces buyers to pay well up to secure a choice quality owing to its relative scarcity. The market is quotable as follows: Alfalfa, $9.50@12; barley, $8@11; oats, $8@11; cow hay, $8@11.50; wheat, $10@13 ₩ ton.

Fruits.

Oranges, under lighter receipts, show more strength, but buyers are not disposed to bid up only to meet immediate wants, fearing heavy receipts. Shipments to the north are increasing, but for that trade only the very best good keepers are wanted.

Limes and lemons continue in excess of the demand, causing a low, unsatisfactory market.

Our market continues to be liberally supplied with Eastern apples, which keeps prices for California and Oregon down. The demand is good, with a firm, strong tone for the more choice.

Dried fruits are firm, with the stock well in hand. Receipts are only fair, with the supply to draw from reported light. Eastern advices report a strong, active market for all kinds.

Raisins are slower, but the tone to the market is firm for the more choice packed, but those not fully up to the standard are slow, with concessions necessary to effect sales.

Live-Stock.

The selling pressure, noted last week, is continued this week in beef cattle, due, so report says, chiefly to the dry weather. Mutton sheep are steady, but hogs are easy. The demand for all kinds is only moderate. In horses there is no change, with a light demand; milch cows are slow.

BEEF—Extra, 7@7½c; first grade, grass fed, 6½@7c per lb; second grade, 5½@6c; third grade, 5@—c.

MUTTON—Ewes, 5@—c; wethers, 5½@—c.

LAMB—Spring, 6@7c. Yearlings, —c.

VEAL—Large, 7@8c; small, 9½ to 10c.

PORK—Live hogs, 2½ to 3c for heavy and medium; hard dressed, 4 to 6c per lb; light, 2½ to 3c; dressed, 3½ to 4½c; soft hogs, live, 1¾ to 2¼c.

On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

Potatoes are strong at an advance. The better market is due to light receipts and a good demand. Choice of all varieties continue, which causes buyers to bid up on top quotations to have their wants met. Sweet potatoes are in light supply.

Choice, hard, good-keeping onions are in light supply, with further advances not at all improbable at an early day. Onions of off quality and also cut onions favor buyers.

Cabbages and root vegetables are steady, as are mushrooms, marrowfat, squash and dried peppers.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way	207,785	152,365
In port, disengaged	70,011	129,950
In port, engaged	50,710	41,062
Totals	328,506	323,377

The above gives a carrying capacity, as follows: 1886, 525,609 short tons; 1885, 513,475 short tons; increase over last year, 11,134.

The demand for grass seed is slower, with prices favoring buyers.

Beans are steady, with a strong tone for the more choice under a fair demand for the East.

Honey continues in light stock, which causes dealers to look for still higher prices.

Wild game is unchanged, with the demand for ducks and geese slower.

In poultry there is no essential change to note; choice are wanted, and for which full prices are paid, but poor to fair are slow and easy.

San Francisco, Jan. 5, 1887.

Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

THE CITRUS FAIR IN CHICAGO.—The fruit from the Northern and Central California Citrus Fair at Sacramento reached Chicago in prime order, save that one fine young banana plant was frosted fatally in transit, and the display was formally opened on the last night of the old year. Frequent telegrams speak of the good attendance, and the interest and admiration shown by visitors, who include fruit merchants, well-known citizens and ladies.

CAMELLIA JAPONICA.—Superb plants charming to the vision are those camellias, in bud and open blossom, white, pink and variegated, which H. H. Berger & Co. have just received from Japan and are showing at 317 Washington street. The largest is a double white which stands about 15 feet high, including its matswathed ball of earth, and Mrs. B. values it at $200. They arrived in fine order and are well worth calling to look at.

EXPLANATION.—Cl. for clear; Cy., cloudy; Fr., fair; Fy., foggy; — indicates too small to measure. Temperature and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours.

[From RURAL PRESS of Jan. 1, 1887.]

Better Rates for Payment in Advance.

Wanted—20,000 New Subscribers in 1887.

We are desirous of furnishing the RURAL PRESS to subscribers at as low a price as possible without sacrifice to ourselves or lessening its good qualities as a clean, handsomely printed and valuable reading journal. While we cannot see our way to reduce the regular price below its present rate of $3 per year, we have determined to try the plan of offering greater inducements for all subscribers to pay as far in advance as possible, hoping thereby to greatly increase the number of our patrons, and, if possible, improve its issues from time to time.

Therefore, during a period of sixty days from date, to all subscribers paying $3 in advance we shall give thirteen and a half months (one year and six weeks) credit. For $1.50 in advance, six months and three weeks. Subscribers delinquent less than one year will be charged at the rate of $3 a year up to the time of paying, and will be allowed two months and an extra No. for each fifty cents paid in advance. In case any arrearages should occur beyond 12 months, $3.50 a year will be charged. All agents and clerks are required to adhere to these terms. No new names entered on the list without payment in advance.

All our premiums are offered under these terms.

It is not at present possible for any firm on this coast (if indeed anywhere else) to offer better rates than these, for any length of time, and do justice to themselves while furnishing as good a paper as the PACIFIC RURAL PRESS.

No. 252 Market St., S. F., Jan. 1, 1887.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, *to those who pay fully one year in advance of date*, IF REQUESTED, the following articles (while this notice continues), at the very greatly reduced figures named at the right:

1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price $1).....$0 25
2.—World's Cyclopedia, 794 pages, 1250 illustrations; (exceedingly valuable)..... .50
3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt..... .50
4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated..... .25
5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations..... .05
6.—To NEW Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new"..... .....Free
7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates
9.—Pacific Coast and Eastern Dailies, Books and Periodicals, *except special publications*, we can usually give 10 to 15 per cent off advertised retail rates.
10.—March of Empire, by Mallie Stafford..... .25
11.—Life Among the Apaches, 322 pages, stiff cloth .25
12.—$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application .25
14.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.) .25
15.—European Vines Described, 63 pages..... .05
19.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable..... .50
23.—Architecture Simplified, 60 pages..... .15
24.—Mother Bickerdyke's Life with the Army; patriotic and ably written; 166 pp., cloth, $1.00..... .75
25.—Ropp's Easy Calculator, cloth, 80 pp..... .25
26.—How to Tell the Age of a Horse..... .05
27.—Percheron Stud Book—French—bound in leather, 192 pages (full price, $3).....1.00
Beautiful Poetic Review, entertaining and instructive; 35 pages (a handsome and pleasing present).. .25

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F.

Inform your neighbors about our offers and paper. Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for any further information desired.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, $3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

LOVELL WHITE, Cashier.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. It costs you nothing for a trial, and I will cure you. Address Dr. H. G. ROOT, 183 Pearl St., New York.

California Inventors Should consult DEWEY & CO. AMERICAN AND FOREIGN PATENT SOLICITORS, for obtaining Patents and Caveats. Established in 1860. Their long experience as journalists and large practice as Patent attorneys enables them to offer Pacific Coast Inventors far better service than they can obtain elsewhere. Send for free circulars of information. Office of the MINING AND SCIENTIFIC PRESS and PACIFIC RURAL PRESS, No. 252 Market St., San Francisco Elevator, 12 Front St.

BARREN HILL NURSERY

NEVADA CITY, CAL.

SPECIALTIES:

NUTS, PRUNES, AND GRAPES.

The Finest Collection of Nut-Bearing Trees to be found in the United States.

19 Varieties of Walnuts,

—INCLUDING—

CLUSTER WALNUT,

The newest, most prolific and valuable variety ever introduced into this country.

PRŒPARTURIENS,

Or Early-Bearing, or Fertile Walnut, introduced into California in 1871 by Felix Gillet. "Second Generation" Trees, grown from nuts borne on the ORIGINAL tree; 90% guaranteed to be "genuine Prœparturiens," or having retained the surprising characteristics of **precocity, fertility** and **hardiness** of the **original** Prœparturiens. "Third Generation" Trees, grown from nuts borne on **second generation** Prœparturiens, entirely California-grown; vigorous, hardy and fertile variety.

Serotina, Franquette, Mayette, Chaberte, Gant, Parisienne, Mesange Walnuts.

The leading varieties of Europe, highly recommended for beauty and quality of the nuts, fertility and hardiness of the kinds.

9 Varieties of French Chestnuts or Marrons (Propagated solely by grafting).

7 Varieties of Filberts.

4 Varieties of April Cherries, the earliest and most prolific in California.

207 Varieties of Grapes, including the very earliest Table varieties known, such as Blue Muscat, Ischia, Magdeleine, Malingre, Pearl of Anvers, Bulhery, Luglienda, Dupont, Gros Sapat, etc.

81 Varieties of English Gooseberries, all sizes, shapes and colors, and "true to name."

PRUNES! PRUNES!

Lot D'Ente, or "D'Ente true from the root." We have ourselves given this name of "Lot D'Ente" to this type, so extensively propagated in the valley of the Lot (France) **True from the root** and not grafted, and which we have introduced into this country. This type of the D'Ente Prune is not at all propagated by grafting, which would do away with its chief qualities of being more vigorous, more **long-lived** than grafted trees, and a **gum-resistant** stock.

Saint Catherine, "true from the root."—This kind is altogether propagated **true from the root** in its home, valley of the Loire (France), and offers greater advantages than grafted trees, as being also more vigorous, more long-lived, and a **gum-resistant** stock.

We highly recommend these two purest types of the two most celebrated kinds of French Prunes, and have divided our stock into three sizes, which we offer at $20, $30 and $40 per hundred. All such trees are imported from the two great prune districts of France, but have been from one to three years in our grounds, and have, like all our mountain-grown trees, a fine system of roots.

For the Season of 1887-88, the D'Ente, the purest and largest type of the Prune D'Ente, or D'Agen, or Robe de Sergent (solely propagated by grafting).

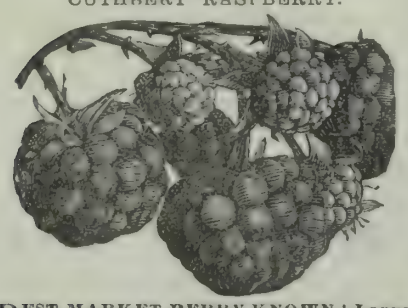
APRICOTS — Boulbon, Esperen, Duclos, Mexico, the shipping varieties of the south of France.

Constantinople Quince—The largest, most precocious and prolific of all quinces.

Ever-bearing Black Mulberry of Spain—Medlar, Sorbus (all those kinds should have a place in all gardens).

Mulberry Trees for Silkworm Feeding.

Silkworm Eggs.



SERICULTURE CHART, 50 Cts.

☞Send for General Catalogue and Supplement with Chapters on "Nut-bearing Trees" and "Prunes," illustrated with 20 walnut cuts, 5 prune cuts, and numerous other cuts representing Medlar, Sorbus, Black Mulberry, French Chestnuts, Filberts, etc.

B. V. CUTTINGS.

Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M., 200,000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Meriot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

WHITE ADRIATIC,
SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Præparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

STOCKTON, CAL., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

THE "ACME" PULVERIZING HARROW

Is the most Thorough Implement invented for the Cultivation of the soil. It will save its cost many times in a season.

READ WHAT A PROMINENT COLUSA RANCHER SAYS OF IT:

COLUSA, April 4, 1886.

ARTHUR BULL, ESQ.—DEAR SIR: I have given the "Acme" Pulverizing Harrow a thorough trial and find it far superior to any other Harrow I have ever used, not only for the Orchard and Vineyard, but in the Grain Field. It does the work fully twice as quick, leaving the ground in much better tilth. Dead weeds or stubble are no drawbacks to it. It goes along without any stoppages, and clears itself. It ought to be used by all grain raisers.

J. R. TOTMAN.

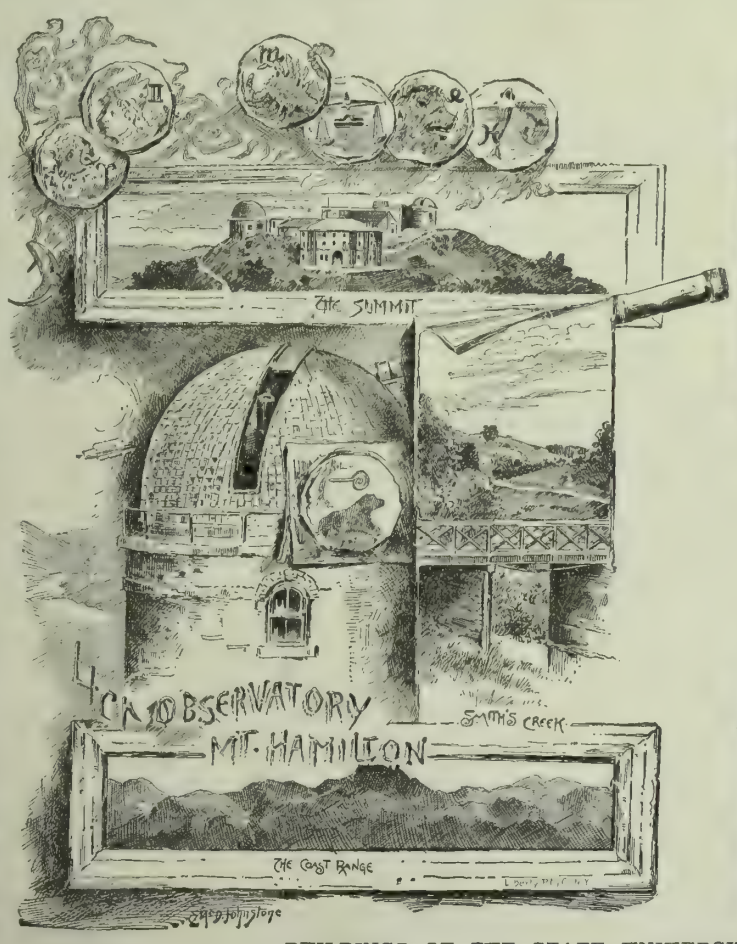
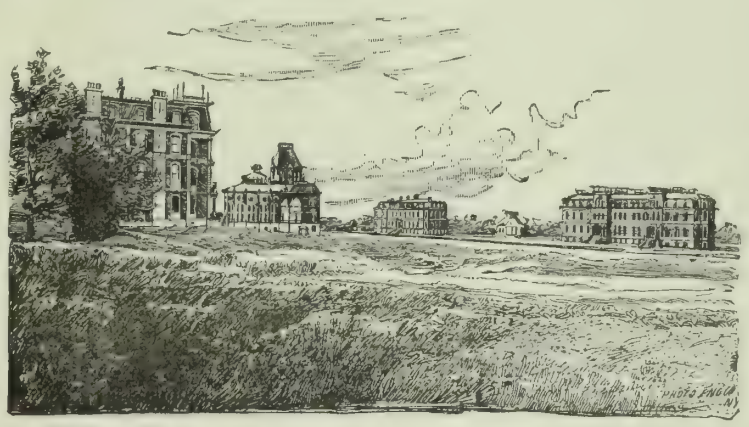
Directions for cultivating on each. Our beautiful illus. 88-pp. catalogue accompanies each order. We grow these Seeds by the pound, by the bushel, and by the acre. Address SAMUEL WILSON, MECHANICSVILLE Bucks Co., Pa.

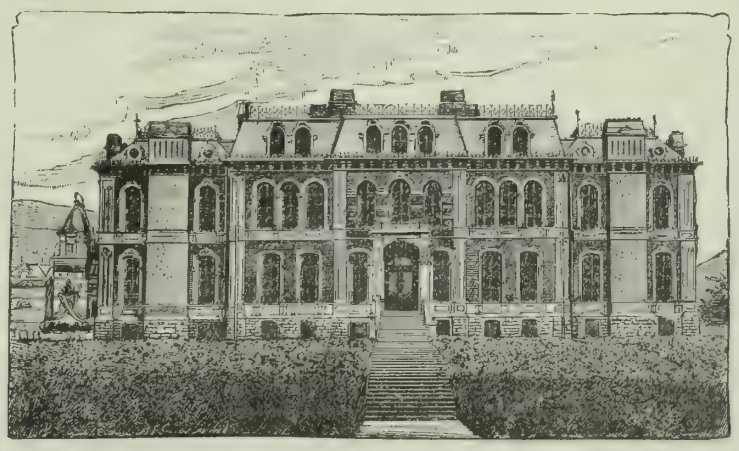
PACIFIC RURAL PRESS



ANNUAL AGRICULTURAL REVIEW—TWENTY PAGES.



Vol. XXXIII.—No. 3.] SAN FRANCISCO, SATURDAY, JANUARY 15, 1887. { $3 a Year, in Advance / Single Copies, 10 Cts.



The University.

Several recent occurrences make timely the sketches upon this page. It is probably generally known that, upon its completion, the Lick Observatory will become the Lick Astronomical Department of the University of California. The lenses for the great refracting telescope were safely brought across the continent and are now in the safe at Mt. Hamilton; the great iron dome which will house the instrument is approaching completion in this city; the other portions needed for the erection of the telescope are well in hand by different expert manufacturers, and during the coming summer the observatory will be placed in the hands of the Regents of the University.

Another incident which draws popular attention to the philanthropic deeds of Mr. Lick is his final sepulcher in the foundation of the great telescope, which is described at length upon another page of this issue. It is fitting indeed that the memory of Mr. Lick should be honored; it is appropriate that his resting-place should be in the institution which he has established.

BUILDINGS OF THE STATE UNIVERSITY AT MT. HAMILTON AND BERKELEY.

Our engravings are intended to emphasize the unity of the institutions of which sketches are given, and the fact that they are the property of the people of California.

It is a matter for general congratulation that this crowning educational establishment of the State is now in excellent working condition, and that it never has been so strong in the popular esteem and heart as now. These facts signify that its course is onward and its spirit in harmony with the progressive spirit of the people. Judged by its faculty and pupils, by the tone of the comments of press and people, and by the recognition of its efforts to incite all to fuller knowledge in all the departments of thought and labor, it is clearly enjoying popular confidence and support. President Holden has accomplished much both in the internal and external condition of the institution during the year of his incumbency.

There is apparent now a general disposition to advance the University as an institution worthy of generous support. Of course, in our line of thought, we naturally look first at the advancement of its provisions for technical and industrial education. We know from our acquaintance with those engaged in these branches of the University work that they are honestly and diligently endeavoring to win esteem by meriting it, through devotion to their tasks and constant acquisition and improvement in their methods and materials. They believe and labor earnestly for the extension of sound practical training as the basis of true success and prosperity. No doubt the Legislature now in session will be called upon to aid in the advancement of this work, and we are glad to see that Governor Bartlett in his inaugural made this reference to it:

> The efforts already being made by the people for establishing manual and technical schools should also be liberally encouraged. The technical departments of the University should be made as valuable as possible to the people throughout the State. It would be well to offer special inducements to public school students to arouse a greater interest in the industrial arts and sciences.
>
> The vast agricultural, manufacturing and mining industries of the State need the most enlightened treatment, in order to compete in the markets of the world. It is but just to those who are to conduct these interests in the future that they should be prepared in as full a measure as possible to meet such great responsibilities. I would suggest, therefore, that your Committee on Education should make a thorough investigation as to the wants of the people in the way of better industrial training, and the best way of meeting those wants.

With its excellent intellectual equipment and the disposition to employ its best efforts in the public service; with its fine establishment at Berkeley and its allied institutions in San Francisco; with the magnificent institution on Mt. Hamilton soon to be added, and with such additional facilities as it is expected the present Legislature will provide, the University of California is indeed worthy of its name, and will prove a potent factor in the true advancement of our favored people.

Citrus Fair at San Jose.—The fair to be opened in San Jose, Feb. 7th, under the auspices of the Horticultural Hall Association, gives promise of being a great success. Hon. Cyrus Jones and Capt. Frank Dunn, who were commissioned to canvass the localities where citrus fruits are raised, have visited Los Gatos and Saratoga and the region round about, and report that more orange and lemon trees are planted and in bearing than they had any idea of, and offers of contributions to the fair were liberally made. At a meeting of the directors of the association last Saturday, it was decided to call the exhibition the Central California Citrus Fair, and to invite displays from the counties of Santa Cruz, San Benito, Monterey, Stanislaus, Merced, Fresno, Contra Costa, San Mateo and Alameda.

Our Produce Market.—We are giving especial attention to our market reports for California produce, and desire to make them as complete and trustworthy as possible, for we fully appreciate the importance of such information to our readers. We shall be very glad to have suggestions from our readers as to any manner in which the market reports can be improved or made to serve producers' needs better.

Double Callas.

The cut of Colonel Woodham's double calla, which appeared in the Rural Press last week, has interested our readers in various parts of the State. Wm. Boots says they have noticed several at Milpitas, though only when the nights and mornings have been frosty, and sends us by express a very large and handsome specimen. Mrs. Viola K. Dunne also gives us tangible evidence that such a blossom has opened at San Felipe. Mrs. LucyE. Wiester, of S. F., writes that she has twice seen the like novelty in Flora's kingdom—once about 12 and then two years ago. In 1885, near Westminster, Los Angeles Co., C. G. Scott saw two as perfect as the one pictured; and Flora M. Kimball says the double calla is a familiar sight to her, in both her own and neighbors' gardens at National City, San Diego county. She writes: "When the first one was seen, several years ago, it was a matter of curiosity, but now we consider them quite 'orthodox.'" A Fresno correspondent, formerly resident in New Zealand, remembers a brother marking just such a flower, with the intention of raising seedlings which might develop an increased tendency to duplication, but the blossom failed to produce seed. Among the communications thus elicited came a copy of our own paragraph, clipped from the paper, with the curt remark pencilled on the margin, "Have been described years ago, *twice*, in your columns," which goes to show how carefully some of our patrons store away in memory the goods things served up, through the seasons, in the columns of the Rural Press.

European Onions in S. F.—A novel importation to be seen at L. G. Sresovich's last week was 500 crates of Spanish onions, which had come directly from Barcelona to New York, and thence by rail to this city. Their average size was large, some weighing two and one-half pounds, and they arrived in remarkably good order, considering the distance traveled. They were offered in lots at $2.25 per 100 pounds, while the best California onions were selling at $1.80 or $1.85.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Shasta County Notes.

EDITORS PRESS:—Away up the valley of the Sacramento among the wooded hills and dales of Shasta county, there is a little cottage where the RURAL PRESS is a regular and always welcome visitor—welcome not only because it is a live paper intelligently conducted in the farmer's interest, which lies at the basis of all commercial prosperity, but also and equally because of its clean and healthy moral tone. We congratulate you on the maintenance of a secular paper whose aims and purposes are such as to make it an inspiration to all that is good. May you receive a higher reward than any men can bestow.

Although we live almost in the shadow of "awful Shasta's icy shrine," yet the orange and the olive, the grape, fig, almond, peach, and all semi-tropical fruits flourish here, so far as introduced, luxuriantly. And as we have at least four times greater annual rainfall here than in Southern California, we dispense with irrigation, and very gladly also with the chills and fever which generally keep it company. The pine and the palm, the apple and the orange, here grow side by side, and roses are in perpetual bloom in sight of mountains whose summits are always white with snow. I do not wonder that the "poet of the Sierras," Joaquin Miller, has purchased a section of land, in Shasta county, on which to make himself a home and is extravagant in its praise. This, of all the places I have seen, (and I have been 10 years a commercial traveler) is best fitted to be a poet's home, and best of all, its beauty is only matched by its healthfulness.

Our county takes its name from a noted mountain in Siskiyou county, which joins us on the north, and though this mountain seems very near on account of its great size (to Redding), it is in reality about 75 miles away. On clear days it can be distinctly seen with the naked eye 200 miles down the valley; it furnishes an unmistakable landmark and beacon to the traveler going northward. Even dull and prosy souls, in the presence of this magnificent emblem of power and grandeur, become poetic and almost reverential, and we all say beholding it: "How small are we and how brief our day compared with that of many of the things by which we are surrounded." Towering 2000 feet above the line of perpetual snow, clad in robes of unchanging white, Mount Shasta stands in silent majesty, like some giant sentinel watching the ages as they softly pass, and the generations of men that come and go with all their hopes and fears and joys and sorrows and passions and pains; that rise and fall and bloom and fade even as do the grass and the flowers in the valleys outstretched at its feet. Viewing this monument of Omnipotence, who can fail to be impressed with a sense of the power and majesty of Him who made it such? "The strength of the hills is His." We shall soon pass away, but this magnificent token of God's almighty power shall remain, and the men and women of the generations which succeed us shall gaze upon it with admiration and awe until earth and time shall be no more.

Raisin Interest.

But to speak of things practically (and I am quite an old settler now, for this is my third year here), as this country is proving to be so well adapted to fruit-raising, and especially to the growth of the vine, it seems to me that the culture of the raisin grape in the near future will claim a greatly increased share of attention and prove immensely profitable. In this branch of the fruit industry the fear of overproduction or of overstocking the market need not trouble the grower, since we produce in the United States only about one-tenth of the raisins we consume, and it is certain that the California product is claiming more attention and meeting with greater favor every year in Eastern markets. And this growth of demand, with improved methods of handling and careful grading and packing, is sure to continue. Our Shasta county raisins are said, by actual test, to contain the highest percentage of sugar of any yet produced in the State, and the atmosphere here is peculiarly suited to "sun-drying," which, however, always in my opinion should be supplemented by an evaporator, to fall back on when the sun does not serve.

North and South.

We, in Northern California, regret very much to notice an envious spirit on the part of some of our Southern California fruitmen. We do not wish to detract one iota from the fame they have justly earned, but we ask "the patronage of a fair opportunity." We ask to stand on and be judged by our own merits, and we claim that what has been done in Southern California can be repeated here, and time will prove we are right in this conclusion! As our section is one of the newest brought permanently forward to public notice, so our lands are the cheapest, and the opportunity for settlers with limited means to come in and grow up with the country is the best. Considering these things, we are much gratified by the exhibit we made of Shasta county products at the recent Citrus Fair, in Sacramento—small in quantity, but excellent in quality. Neither shall we be forgotten at the California Citrus exhibit now being made in Chicago, since our "landman," Mr. D. N. Honn—who is the right man in the right place—has gone there to represent us.

In conclusion, permit us to say that if you, or any of your readers, see fit to come this way to "look," to "invest" or to "settle," we promise you a courteous welcome in Redding, which is one of the most thriving and prosperous towns in California to-day, and will freely give you all the information in our power concerning the country where we have taken up our abode. A. M. GOODNOUGH.

Redding, Shasta Co.

Tuolumne County.

The wintry rain falls free again,
A nectar draught, for hill and plain!
Bright emerald green will soon appear,
On barren soil long brown and sere.

EDITORS PRESS:—A few days ago prayers were sent up for rain. Now the rains have come in gentle showers, at night, so that the labors of the day have not been interfered with. Nothing could be more favorable to growth than the warmth of these gentle rains. Stock of all descriptions has not suffered this fall, owing to the fine feed left over since last spring. We have had some cold weather, but it was free from storm. No high winds attend the present wet spell—out of doors is truly healthy and delightful. Among these foothills, plowing was only delayed one day. Farmers cannot complain for lack of opportunity to put in extra acres for hay and grain. Summer-fallowed land is showing a good growth. With no great setback there seems no reason why next harvest should not be an exceptionally good one, and largely in excess of the last few years.

The fruit interest will also recover from the blight of drought and grasshoppers. The past two years have been very discouraging for our foothill orchardists. But they show a bravery in persevering against every obstacle. They are bound to win at last, for Dame Nature will get tired of crippling enterprises well directed.

For all the influx of immigrants, it is singular so few seek the foothill region. Only now and again a stray wanderer settles among us, and why is it thus? The great tide of humanity ebbs and flows toward Los Angeles and surrounding country. Capital is invested without being assured of the fitness of things. Many citizens of Tuolumne county settled and bought land in and around Pasadena. I learned to-night of one who cleared $10,000 in a few months by speculation, buying and selling land, making many of our staid citizens believe that they are only wasting their time by laboring on ranches for a nominal sum above a living, and often not that. Do the prices now paid for land in these favored localities warrant such enormous sums for a few acres? The same amount would purchase a whole domain in these foothills, and land, too, which would outyield their high-priced land, if the same cultivation were followed up as is bestowed upon lands in orange and wine localities. By and-by our foothills will be rated for what they are worth. Even now our fruits command a ready sale and top prices in San Francisco. Their flavor is unsurpassed, so far as table grapes and peaches are concerned. The higher altitudes of the county produce an apple superior to any grown upon a lower level. Why should capital invest in a $500-acre, when it might procure 100 acres of productive land for the same amount? Only one excuse may be given, and that is the lack of transportation. Railroads have not found us yet, but that is a mere matter of time. Capital invested in fruits and other horticultural products would encourage capital to invest in rail facilties. When the great valleys become crowded, and maybe investments unprofitable, our region will be sought after for variety of products, and excellence in flavor and richness of fruits for table or distilling, or even for exporting. It is singular how some barren spots will rise in value when a corporate body purchases at a minimum value, surveys, advertises, and makes maps. There are always men ready for change, and many good families seeking a home, who pay a large price for a very small piece of ground, taking years of hard toil and labor to meet expenses and improve their purchase. No such conditions exist among these foothills. Variety of products and a vegetable market for current expenses after a few months' labor.

From all I have seen of valley lands and homes for the average husbandman, commend me to the valleys of the Sierras' foothills, where genial winds blow and fogs rarely intrude; where fungus rarely grows from damp atmospheres; where water cool quenches thirst, and nature adorned with mountains grand greet the eye, and shut out the cold of the North and the fogs of the South. We have a golden-hued sky above and gold-lined soil beneath our feet, and would invite the seekers of a quiet rural home to visit the thermal belt before locating.

JOHN TAYLOR.

Chinese Camp, Tuolumne Co.

Contra Costa County.

EDITORS PRESS:—Without going into detail, allow me to express myself as greatly pleased with this section of country. The chain of valleys from Livermore to Martinez are surprisingly rich in soil. It seems to me that the capability of this region has never been fairly tested nor appreciated. The climate is fine and healthy; the scenery very beautiful. There is more flat land than one would naturally expect to see among the hills near the foot of Diablo. Lovely little valleys, numerous farms and villages.

The price of land is exceedingly low, compared with that of several counties where the advantages are really inferior. There will some day be a boom here as sure as fate, which will treble in value this whole region. I have seen first and last sufficient evidence of the capacity of soil, mildness of climate, etc., to convince me that the time is near when this section will attract to itself thousands of searchers for beautiful homes where the grape, the olive, the palm, the orange and fig will grow to great perfection and with a certainty not to be exceeded in California.

I hope to take some special notes at my convenience, and you may hear from me again.

Pacheco. S. H. HERRING.

POULTRY YARD.

The Pablo Poultry Yards.

EDITORS PRESS:—Among all rural pursuits there is none more fascinating than the breeding and management of thoroughbred poultry; nor is there any single branch of agriculture more important.

A few years ago it was said that there were no thoroughbred fowls except the Black Spanish in Southern California; but the magic wand of capital and enterprise touched her, and from a sleep of centuries she has awakened to life, luxury and beauty, and in all the wide world there is no fairer land nor any which presents as bright a prospect for the future in poultry raising than does the Golden State.

Mr. Paul Bancroft, whose model establishment, the Pablo poultry yards, occupies a prominent place on Fifth street, determined that his yards should not only be the best on the coast, but equal to the best in the country, sent his manager East to select breeding pens of the following varieties, which were carefully selected after a visit to a majority of the best yards in the East. Let us step into the Pablo poultry yards and look around.

Wyandottes—a genuine American "invention," and the most popular of all breeds. Here is a pen of the Preston strain; there is another. Yes, they are light in color, for many prefer them so. Now, if you wish to see darker ones, come this way.

"Magnificent!" Yes, they are fine specimens of Hawkins' strain, and fanciers of the darker Wyandotte pronounce them royal birds. "What will that cock score?" Wait for the next show. He is my ideal of a perfect bird, and undoubtedly without a rival on this coast. The Wyandotte is not only beautiful, but a good all-around fowl for fancier and farmer, being a good layer, matures early, has yellow legs and skin, and is hardy and of a mild disposition, a good forager if let run, and contented in confinement. They are not high-flyers and could be kept in bounds by a four-foot fence.

Plymouth Rocks—Another American breed, another grand triumph of the breeder's art. The American Dominique and the Black Java, both birds of sterling quality, were happily united in the production of so justly popular a breed as the Plymouth Rocks have been and will long continue to be. They are Hawkins' strain.

White Dorkings (Croad's strain)—The Dorking is the most popular fowl in England, and has its champions in this country as well. Before England became a nation the Dorking was known. It takes us back to the ancient city of Rome. It is the most regal of the royal families. The White Dorking is bred with the rose comb, others (the silver gray and the colored) either with rose or single comb, although the greater number have the rose comb. As a table fowl they cannot be excelled, and they are good brooders as well as layers. Their peculiar shape and the fifth toe enables even a novice to distinguish them at a glance.

Silver Spangled Hamburgs (Schofield's strain)—"Speckled beauties" is applicable to fowls as well as to fish (trout); and it is easily understood how the handsome plumage of the Wyandotte is obtained when we know that this handsome fowl was a prominent actor in the drama. As layers they (the Hamburgs) stand in the front rank, and while their beauty recommends them to the artist, their finely flavored flesh is warmly praised by the epicure.

Rose Comb White Leghorns (Bonney's strain)—Differ from the ordinary White Leghorn only in comb, but are preferred by many who admire a rose comb on such a bird, and also because a rose comb is less liable to injury from frost and other occurrences.

Brown Leghorns (Williams and Croffut's strain)—These Italian birds, so well and favorably known to all who keep poultry, are a strange contradiction of the accepted theory that the climate of their native country (and all similar climates) produces an habitual languor or inactivity; for of all the breeds of fowls they are the most active and tireless, seldom still during the whole day, and shelling out an astonishing number of eggs in a year. There is no difference in the laying qualities of the white, the black and the brown, and all are non-setters.

Black Leghorns (introduced in this country by Mr. Watson in 1871)—They have the same characteristics as their brothers and sisters, the whites and the browns, but are very scarce at present.

Houdans (Todd's strain)—No wonder you admire them, for they are the finest of the fine, and fear nothing on the show bench. They are very sociable, and "Dick," here, is the most affectionate fellow I ever saw. Although a native of France, it does not require a French cook to tell us that the Houdan is one of the most delicately flavored of all domestic fowls. They are prolific layers, and mature early.

Light Brahmas (Felch & Williams strains)—These pens are fine and cannot be equaled in Southern California; now let me show you another pen of them. They are direct from the yards of Mr. Felch, and I think you will agree that Mr. Felch is justly proud of them when he says they are among his best. Of the hundreds of fanciers who have seen these Light Brahmas, none have failed to warmly praise them. It is well known that a multitude of fanciers regard the Light Brahma as the handsomest breed named in the "Standard of Excellence;" and more money changes hands each year for fine specimens than for birds of any other variety.

Langshams (Croad's Strain)—Major Croad's importation from China in 1872 has proved an important event, as the Langsham club and their friends will attest. Their glossy brown eggs are rich, and they give them to us in liberal quantity. Can you imagine a more beautiful sight than either of these yards of Langshams with their metallic greenish-black plumage and bright red combs, ear lobes and wattles, their gentle, graceful carriage and symmetrical form? Their size, small bones and juicy, tender flesh, recommend them for the table.

Bantams—These little pets please the children, and have their admirers among the "children of a larger growth." They are pretty, affectionate and hardy, and will lay a greater weight of eggs for the amount of food consumed than many of the larger varieties.

Bronze Turkeys—These noble specimens make one feel that Christmas and Thanksgiving Day should come weekly instead of annually; yet it would seem like treason to plot the death of those handsome birds. See that gobbler parading before his harem; is he not justly proud of his flock (and himself)? And look in the next yard—there is another with fan spread and feathers raised. He is taking a sun-bath and airing his vanity at the same time. A fine male specimen of this breed will at maturity fatten to weigh 40 pounds. Is it economy for farmers to breed mongrels?

Pekin Ducks—Yes, they are noisy, but 'tis music to the ear of a breeder or poultryman. Duck-raising in this country is in its infancy, yet there are many at the business, and if properly managed it is very profitable. The Pekin duck is a general favorite owing to its large size, good laying qualities and beauty of color and form. It is not generally known that these ducks can be successfully raised without water except for drinking, but such is the fact.

Guineas—They are scarce in Southern California, but poultry-raisers, who know that they keep away rats, scare off hawks and are the best of sentinels, will have them at any cost.

Common Fowls—Yes, they are kept on Mr. Bancroft's Helix farms in Spring Valley, where we also send the surplus fancy stock and where all the feed—grain and green—is raised, and where is also kept a fine stock of thoroughbred horses and cattle. "Is there plenty of room for large stock?" Six hundred acres and every convenience.

Yes, we have incubators in constant operation, and will shortly give you an article on artificial incubation. C. VON CULIN,

Manager Pablo Poultry Yards.

San Diego, Cal.

ARBORICULTURE.

Late or Early Planting.

The question when trees or shrubbery is most profitably transplanted will, of course, be answered differently in different countries. Much depends upon the season or seasons; much, again, upon the quality of the stock and also of the quality of soil in which the trees are to be planted. The general idea is that evergreens should be planted late, indeed as late as possible in the spring. The reason for this, we are told, is that evergreens make their fine, new roots just at that period, and that if they were dry before the trees would not sustain themselves until spring.

This is partly right and partly wrong. Evergreens, just like other trees, begin to make root as soon as they are cut, be that in the fall or in the spring, provided only they have a chance to do so. As evergreens are growing, or at least circulating sap all the year round, it also follows that their endeavors to make new roots are unceasing, if the location is favorable. Our ordinary winters are hardly ever severe enough to stop the growth of common evergreen trees, even if it is considerably retarded. If transplanted to light, dry, and warm soil, new roots begin to form immediately. Every nurseryman knows that evergreens "bailed" will root through the sack, even in December and January—not waiting for the advent of spring and warm weather. But if the same evergreen, instead of being assigned a suitable place at once, is put in cold, heavy soil, undrained and uncongenial, the chances are that the trees will suffer

and not be able to produce new roots until the warm weather makes the ground dryer and warmer.

But what holds good in regard to evergreens is also applicable to deciduous trees and cuttings. The very moment a fruit tree is dug and again planted it commences first to heal the wounds made, and with the first advent of warm weather the new roots begin to shoot out. It is, therefore, very desirable that fruit and deciduous trees should be planted as soon after being cut as possible, provided the ground is suitably warm and drained. If, again, the soil is cold and wet, the trees are prevented from healing the wounds, and it is much better to delay the planting in such soils until warmer weather sets in or the ground becomes dryer, else the roots may decay and mold and the trees may die. But the great question is whether such soils ever are suitable for fruit trees or whether they had not better be planted with something else.

The same applies as well to grape-cuttings or cuttings of any kind. If the ground is warm and dry, the grape-cuttings had best be set out in the fall, as the "callous" is thus formed early, and the new roots will be ready to push with the first warm weather in spring. On wet and damp places, however, late planting is just as good, as the "callous" never forms if the ground is excessively wet. On the contrary, the butt ends are apt to sour or rot, which precludes any callous ever being formed. The orchardist generally delays planting too long, and hardly ever realizes the advantages of getting his orchard in as early as possible in the winter.

In connection with this I will mention another point, which both bothers the nurseryman and injures the planter; the idea of some of the latter is that all the good trees are disposed of early, and the bad ones late. While this holds good as to varieties sometimes, it does not as regards size of trees. The orchardist, therefore, writes the nurseryman to dig his order and heel it in for him. He is not yet ready; will be so in one or two months, and will then write for his trees. It is an entirely mistaken idea that such proceeding will benefit any one, and I wish here to point out that it is decidedly to the disadvantage of the planter to have the nurseryman care for his trees, heeled in. If these trees or plants are heeled in and kept separate, after being dug, the roots will start almost immediately, and when afterward the order comes to ship the trees, they are re-dug, the young roots exposed to the air and dried, and the trees suffer more or less. If the planter is not ready to plant his orchard when he orders his trees, he had better take them and care for them himself, heeling them in on a proper place. When he is ready, the trees can then be dug and immediately set out before the young roots have time to dry and spoil. I believe by such a proceeding a crop may be had a year sooner.

To sum up, I think trees and shrubbery should be planted as early as possible in the winter on dry and warm soil; on wet and cold soil they should be planted at the end of the winter. If the trees have already made new roots, it is of the greatest benefit to save them and prevent their drying. GUSTAV EISEN.

Fancher Creek Nursery, Fresno.

SHEEP AND WOOL.

Hints to Flock-Owners.

EDITORS PRESS:—Assuming that the conditions under which sheep husbandry is conducted on the Pacific Coast are not radically different from those which prevailed 14 years ago, when I was personally familiar with the business in the Salinas valley, I wish to offer the California flock-masters a few suggestions.

The three most important points in the practical management of the flock are lambing, winter care, and working off the culls and mutton sheep. "Take care of the pence and the pounds will take care of themselves," is an old and truthful saying. The main flock of mature sheep and the clip of wool are the pounds; the three items above mentioned are the pence.

1. Lambing.—The lambs are the interest on the shepherd's capital, and it depends principally on himself whether he receives 75 per cent, 60 per cent or only 50. It is almost impossible to have a range ewe too fat, either at coupling or at parturition, because she has abundant exercise; but in a breeding flock, which is yarded, a ewe may become so loaded with fat as to be sterile, or at least produce a feeble and flaccid lamb. This applies to ewes which have reared lambs the preceding summer. There is always a considerable percentage that "miss" at service, or for some reason fail to bear or rear lambs, and these are apt to get so fat before the coupling season comes again—passing their heat so many times fruitlessly—that they will be barren unless they are separated into a flock by themselves and their condition reduced a little before service.

Service should be so timed as not to have lambing come on before the heaviest spring rains are over. In case the flock-master is accustomed to go into the mountains for the summer, there is a great temptation to him to get lambing and shearing out of the way early, before the flocks start for the summit; but this may be overdone. During the long cold rains of February and March, in the Sierra foothills and mesas, I have seen from one to three young lambs lying dead close around the trunk of many a tree, and from one to six freshly shorn sheep, in a heap, in almost every ravine or little depression in the mesa, stiff and cold, where they had crouched together to escape the wind. It is worse than useless to bring on lambing before there is a sufficiency of green feed. Green feed makes milk, and milk makes the mother. Without a good supply of milk in her udder, the ewe is very apt to disown her lamb, and then all is lost.

If the ewes could receive a little grain a month before lambing, this would enable them to pass through the ordeal earlier and on a more scanty supply of grass than if the latter were the sole dependence. This grain feed need not exceed six or eight ounces to the head, and should be scattered in little piles on the ground. (This is better than troughs, where there is a hard, smooth surface, not sandy or muddy, as it permits each to get an equal share.)

With many flock-masters it seems to be a difficult matter to strike an even balance between loss of sheep and cost of feed. We will suppose that $500 worth of feed would prevent the loss of $500 worth of ewes and lambs. A good many flock-owners seem to argue, judging from their actions, that if it will do no more than that, it is not worth the trouble; overlooking the very important fact that that amount of feed would probably save $500 additional in preventing loss of condition, light fleeces, "jointed" fiber, stunted lambs, destined, in all probability, to succumb the following winter, even if they survive this, etc.

It is a great mistake to scamp the work of lambing by reducing the force of help. It is easy enough to lose in a day enough lambs to pay a man's wages for a month. The point of greatest importance is, to keep each ewe and lamb together and at the same time work them homeward to the corral. If a ewe, especially a young ewe, loses sight and scent of her lamb for an hour, the probability is strong that she will never recognize it again. If the number of helpers is too small, the lagging ewes with very young lambs at heel will be crowded and beaten along, and confusion will reign supreme. There ought to be enough men assisting the regular herder so that one may start out from the flock toward the corral with an installment of ewes and lambs every three or four hours through the day.

On stormy days there ought to be especial vigilance and activity in camp, for on a stormy day look out for a shower of lambs. It is unfortunate to be compelled to drive, huddled together, a large number of ewes and young lambs in the rain, for the rain and the rubbing together are apt to obscure or obliterate the scent by which alone the ewe recognizes her own.

The second point—winter care—has been partly treated already. I once saw, within sight of the dome of the State Capitol, a farmer build a furnace and boil up the carcasses of his sheep for hogs—sheep which had perished in winter, but most of which might have been saved by the wheat straw that he burned in the fall! The average California flock-master may smile incredulously at this, but the writer knows whereof he affirms, for he has, even in the rigorous winter of Ohio, carried a flock of 225 wethers through in good condition on wheat straw and corn alone, and shorn excellent fleeces from them—fleeces above the average of the entire lot of sheep; and Ohio straw, bleached and weatherbeaten, is much less valuable for feed than the bright yellow straw of California. The chaff is especially valuable. If straw was properly stacked to shed rain, and the parts of it richest in chaff given to sheep in board-racks, they could be kept thriving through the winter on a feed of six ounces of barley per head daily, for grown sheep.

As for shelter, I do not recommend straw sheds, such as might be made for the small flocks of Eastern farms. Unless the straw is piled very deep on the roof, they are a nuisance, except it might be as mere wind-breaks, without a pretense of a roof. Unless the shepherd has a long purse or a short flock, so that he can afford to protect his sheep with board sheds, the best thing he can do is to furnish the herder a gum coat and keep the flock moving in a long, cold rain. But barracks ought to be built if possible.

I speak of wheat straw because it is so abundant on the Pacific Coast and so generally wasted. Probably the flock-master would think he could not afford to give hay to range sheep, but it is quite possible that he may be mistaken in this view, especially where wild hay can be harvested in quantities.

3. There is a delusive saying in Texas and California: "Old sheep for mutton." This has arisen from the fact that, in regions remote from a market and sparsely settled, there was so little demand for mutton that the flock-master found it profitable to keep his wethers, generally, until they died of old age, and the ewes until they died of lamb-bearing. But this is certainly an error. The interesting and valuable experiments made on the Sweet Bros. flocks, at Pompey, N. Y., in the years 1861-3, show that wethers continue to increase (after the first year) in their percentage of wool up to their fifth year; ewes the same; but after the fifth year they decline. That is to say, a sheep of either sex has reached its highest value for wool and (mature) mutton at the age of five years; then it enters on the down grade. A sheep five years old or over will consume more feed than a young one, but is less profitable, because it yields a lower percentage of wool, though the fleece may weigh absolutely more. Now, the proposition I lay down is this: If a wether that has passed his climax, or a superannuated ewe, fattened cheaply on grass, will fetch anything above the cost of transportation, it is better to sell them and fill their places with lambs.

A flock of muttons should be allowed to retain their fleeces in the fall for protection. Then when well fed out, if driven by easy stages to a railroad station and fed on alfalfa, hay and grain for a few weeks, to remove from the flesh the wild gamy flavor of the black sage and other shrubs, and then shipped on double-deck cars to the best available market, in judicious installments, they will seldom fail to bring a profitable price. Wild range mutton "kills red," as the butchers say, and it also "cooks red," does not brown nicely in the oven. It requires a few weeks' feeding on good hay and grain to impart to it the juicy flavor and brown color, when cooked, which are the delight of the gourmet. STEPHEN POWERS.

Wash. Co., Ohio.

The Mohair Market.

EDITORS PRESS:—Fall mohair is now coming in freely, and we take pleasure in giving you our opinion of the domestic clip in general. We have always been opposed to a second shearing, but so many excellent breeders, long experienced in the business, claim its advantages, and the handsome condition of this fall's clip, has induced us to modify our views very materially. There is one very serious drawback, however, and that is that in sorting the fall clip yields a very large proportion of mohair too short to comb. No matter how fine, silky or lustrous this may be, it is only carding stock and must be sold as such. This brings down the average value of the clip, even when it is a very choice one. Growers should try and keep their mohair free from alkali, which seems to destroy the natural oil which gives the fleece its luster.

The market is still in a depressed condition. We should be pleased to report it more favorably, but have to state the true facts. The demand is very sluggish and prices continue low. We look for a better sale after the new year, but cannot reasonably expect any advance. The course of the foreign market, which so many growers confound with our own, has been as follows since June, 1883: Values increased gradually from then till January, 1886, when there was a marked decline. The dullness and low prices continued till June, when there was a sudden and still greater decline.

At this time English manufacturers were heavily stocked and there was no demand in their market for Turkey and Cape mohair. This caused the drop and our American manufacturers sent large orders abroad and refused to receive on consignment or buy domestic mohair. They cared nothing for an American industry in which they claimed to have a great interest, but they simply wanted to get cheap, raw stock. We did not join in this movement at any time, and did all we could to sustain our home market. It is a curious feature that while English manufacturers were heavily stocked and their market very dull, that they went to Turkey and the Cape and tried to raise a boom there. The English market felt the effects of this about October, but it soon passed over, and there it is reported as being very quiet and prices weak.

For choice fine, 36 cents is full value to-day. Good average combing will bring only 34 cents, and fair average will not command more than 30 cents. Carding stock is slow sale, from 15 up to 25 cents for very clean, bright lots. We see no reason or possibility of values going lower. WM. MACNAUGHTAN'S SONS.

New York.

METEOROLOGICAL.

Pacific Coast Records to Dec. 31, 1886.

The Signal Service has prepared a summary of the weather reports during the past year, showing the total rainfall and giving figures for comparison with past years. This summary shows that less rain has fallen this year than has fallen, on an average, in previous years, and considerably less than fell last year.

The following is the summary and review for the month of December relating to rainfall and temperature:

Rainfall—The Northern California boundary line is coincident with the zone of December normal precipitation, south of which the rain has been below the average, being about three inches in a belt parallel to and near the coast, two inches in a belt passing down the great California valley, and one inch down the Sierra Nevada range. In Western Washington Territory and Northwestern Oregon the excess above the average is four inches, thence south to the California line it gradually diminishes to the normal.

Seasonal Rainfall—But slight departures have occurred in Oregon and Washington Territory, except in the Willamette valley, where the deficiency at Portland is about six inches. In California the deficiency throughout the State is noteworthy. In Sacramento valley the precipitation is from about three to five inches below the average; in San Joaquin valley from one to three inches; in the Santa Clara and Salinas valley from one to four inches, and in the southern portion of the State about three inches below. The rain has, however, fallen in gentle showers with an absence of downpours, so that the whole of the rain has penetrated the soil.

Rain was generally prevalent in Washington Territory and Oregon during the month. In California rain fell to the central portion of the State in considerable showers the 7th, 8th and 9th, 29th and 30th. Light showers occurred in the extreme northern portion, with sprinkles as far south as San Francisco and Sacramento, the 11th, 15th and 16th, 22d and 23d. Rain occurred in Southern California the 9th, 29th and 30th.

Temperature—The mean temperature has been normal only at San Diego; elsewhere throughout the Pacific Coast it has been above it. The line of one degree in excess skirts the coast from San Francisco to Los Angeles; the line of two degrees passes parallel to the former and through Sacramento; of three degrees through Red Bluff down the Sierra Nevada range to Yuma; of four degrees from Shasta southeastward; the line of five degrees passes from Winnemucca, inclosing northeastern California through Roseburg, Portland and Olympia; north and east of this the excess is still greater.

General Weather Features—A number of cyclonic areas appeared off the Washington Territory coast, but invariably passed eastward and failed to move down the coast, their influence seldom passing as far south as the extreme northern portion of California.

The following table shows the rainfall at some of the principal towns on the coast from Puget Sound to Yuma. The figures in the second column give the average of the rainfall for places set forth in the first column. The third column gives the total rainfall from July 1st to December 31, 1886. The last column gives the total rainfall from July 1st to December 31, 1885:

SALT ARTESIAN WATER.—An artesian well being sunk at White Plains, Nev., is down over 2300 feet, and can go no further until the water, which is 17 per cent salt, and so heavy that the ropes and tools float on it and the drill does not penetrate the rock, is shut out.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The Grangers' Installation at Haywards.

The joint meeting of Eden and Temescal Granges at Haywards, on Saturday last, was a very enjoyable affair. Haywards is about 16 miles from Oakland, and the ride between the two places, on Saturday last, was indeed a charming one to all who had the pleasure of enjoying it. Worthy Lecturer Flint was promptly on hand to aid and encourage the goodly number of Patrons present. Brothers Webster, Deming and Baldwin (of Danville Grauge), with their wives, were also in attendance.

Eden Grange was opened in ample form by Worthy Master Perham. By request, Bro. Flint instructed a class of seven sisters and three brothers in the third and fourth degrees. The conferring of the degrees of Matron and Husbandman on these young ladies and men marks an encouraging day for Eden Grange. In thus joining the ranks of our noble Order, we have no doubt that many of them will find that they have taken a more important and wiser step than they have dreamed of with the fraternal friendship of the great brotherhood in their favor. We heartily wish them all success in their relations with our Order and with all their worthy undertaking.

We congratulate the ladies of Eden Grange, for they decorated the long tables of the Harvest Feast very handsomely, with rare flowers tastefully arranged with tempting food, and the sentiments, expressed in a friendly and lively way, were exceedingly enjoyed. Brother Chester, State Secretary, Brothers Blackwood, Anway, Dennis, Baldwin, Deming, Webster, Goodenough, Dewey and others co-operated in saying many pleasant things.

After Harvest Feast, Brother Flint, assisted by Brother Webster, duly installed the officers of both Granges, and the inspiring remarks and faithful pledges given by each officer received a warm response from the heart of every true Granger present. The graceful, easy and homelike manner in which the installing exercises were conducted by the officers, and participated in by those installed, made it a very delightful occasion, long to be remembered. The method of joining together in such installing ceremonies proves an exceedingly fortunate one. Brother Perham, the retiring Master of Eden Grange, has served his fellow-Patrons ably, faithfully and very acceptably the second term in that office, as well as many years in other responsible stations.

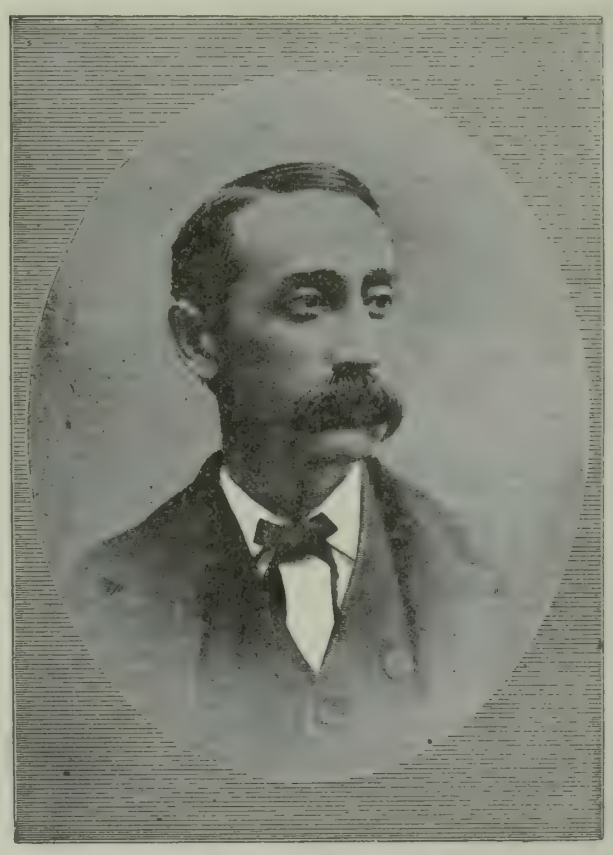
Brother Chester assumes the gavel with improved prospects of the Grange for the future, and will have a hearty support of the active, faithful members before the year rolls round, it is hoped that Eden Grange will have two more neighbors, respectively at Centerville and Livermore, in Alameda county. As a slight recognition of the long and faithful services of Sister Babcock as Secretary of Temescal Grange for seven consecutive years, and Sister Sharai, Secretary of Eden Grange for nine years, Brother Dewey presented, as a slight token of appreciation on the part of their respective Granges, handsomely bound volumes of the "Life of Mother Bickerdyke," written by a talented daughter of California. The work of that noble woman, like that of these worthy secretaries, is worthy of all praise.

It is seldom that the Master of any Grange serves long enough to do so much real praiseworthy work for the Order as such modest and faithful servants as these two secretaries. We can further say that they are only two of many who work on quietly, year after year, their own consciousness of doing good being their greatest reward.

Brother Russell, we are glad to learn, is improving in health. He was unavoidably absent on this occasion. We were sorry to miss some other good Grangers, whom we know would have been present, if possible, and would have enjoyed the occasion as only good and liberal Patrons can do.

Grangers' Bank.

Albert Montpellier, cashier and manager of the Grangers' Bank of California, has issued a notice to the stockholders, informing them that the Board of Directors, at their regular meeting held Jan. 11th, declared a dividend (the 12th) of $4 per share, payable immediately—equal to about seven per cent per annum free from tax—the same amounting to $42,000, and ordered carried over $13,500 to the reserve fund, the net profits of the bank for the year 1886 being $55,500, equal to 9¼ per cent on the capital paid up, making the total amount of dividends paid in cash to the stockholders, since its organization in 1874, $465,000.



The annual meeting of the stockholders of the bank was held in the afternoon of the same day and the old Board of Directors was unanimously re-elected. Officers and management remain the same as before.

GRANGE SOCIAL.—The young people of Martinez and neighboring towns will be pleased to learn that the next Grange social will come off Saturday evening, Jan. 15th. This date has been fixed upon in order to take advantage of moonlight, which will be fully appreciated by those coming from a distance.—*Gazette.*

Mortimer Whitehead.

Brother Mortimer Whitehead, Worthy Lecturer of the National Grange, enjoys a national reputation as an early worker in the Grange cause, and one of the builders of our Order. And through his weekly notes of "Grange Work and Progress," this winter, he has been growing so like an old acquaintance to our readers that we are sure they will be glad to learn more about him, and know how he looks. We have therefore taken pains to secure the excellent likeness which we now have the pleasure of presenting, together with an interesting biography, for which latter we are mainly indebted to the *National Farm and Fireside.*

He was born October 9, 1841, and belongs to one of the oldest families in the State of New Jersey. His ancestors, on both father's and mother's side, were among the patriots of the Revolution; even the women of the family partook of the "Spirit of '76." At the battle of Monmouth—fought on an extremely hot day in June—Aunt Peggy Whitehead was one of the women who carried water out to the soldiers on the field all day. And when the town (now city) of Elizabeth was threatened by the enemy, Aunt Rachel Whitehead helped roll the barrels of flour from the warehouses, to get it to safer quarters. The broad Anglo-Saxon name traces back across the water to one Master Whitehead, who was chaplain to Queens Anne

MORTIMER WHITEHEAD, LECTURER N. G., P. OF H.

Boleyn and Elizabeth. His mother comes from the Huguenots, who, because of their persecutions, love of liberty, and desire to worship God after the dictates of their own consciences, were among the earliest settlers of this country. On his mother's side, as we have stated, the family were active in the battle of freedom. Gen. Heath (his mother's maiden name) was one of Washington's most trusted generals, particularly in the campaigns through the "Jerseys."

Bro. Whitehead received a good education, mainly at Paulding and Oak Hill institutes, on the Hudson river. While not yet of age, from his father's farm he enlisted in the Twenty-sixth New Jersey Volunteers, and passed through some of the severest battles of the war with the Army of the Potomac, being of Gen. Sedgwick's famous Sixth Army Corps, and serving under Generals McClellan, Burnside, Hooker and Meade. At the close of the war he deliberately took up agriculture as his profession, purchasing a farm of 106 acres, which he has owned ever since, and upon which he is now living, at Middlebush, Somerset Co., N. J. Progressive farming alone suited him, and he glories in the name of "book-farmer," and was active in farmers' clubs and a director in the County Agricultural Society at an early age. Like thousands of others, he was all ready for the Grange when it came, and went into it with his whole heart and strength. Himself and wife were charter members of the first Grange organized in New Jersey—Pioneer, No. 1—as far back as 1871, when there were hardly 100 altogether in the United States. Of this Grange he was first Lecturer. He soon after helped organize a Grange nearer home—Somerset, No. 7—and was elected its first Master; was made a general deputy, and helped organize Granges in several counties of the State. At the organization of the State Grange he was elected a member of the executive committee, and one year later Master of the State Grange, making his first appearance in the National Grange at Charleston, S. C., being the youngest Master of a State Grange. At the Louisville session of the National Grange he was elected Assistant Steward, and served two years, followed by his election at the Cincinnati session to the office of Lecturer. At the 19th annual session of the National Grange, at Boston, November, 1885, he was again honored with the office of Lecturer. He was also elected and is serving as Lecturer of the New Jersey State Grange for the third time. Of his powers and success as a lecturer it is not necessary for us to speak; he is too well known, having lectured in nearly all the States of the Union, and has the honor up to this time of delivering more public and private lectures than any other member of the Order, amounting in all to 3597, to do which vast amount of work he has traveled in distance nearly 10 times around the earth. He is a natural orator, and his earnest and eloquent efforts, listened to by hundreds of thousands, have been of vast benefit in building up the Order, and his labors are duly appreciated. For over nine years he was one of the editors of the *American Grange Bulletin*, but is now upon the staff of the *Farmers' Friend*, of Mechanicsburg, Penn., and his vigorous pen is used as effectively from week to week in its columns, in battling for the rights and interests of farmers, as are his words upon the platform. The heavy, constant labors of over 13 years in the field told upon Mr. Whitehead's health, and he was forced to recruit his weakened throat and lungs by rest from speaking, devoting his time more closely to editorial work, and to conducting Fruitvale as an experimental farm. He has broken loose again of late and is heard from in no uncertain sound against monopoly and for the right.

Brother Whitehead has four children—three boys and one girl—and that he may long be spared to our Order and his country, we know, is the sincere wish of his 10,000 friends. We can only wish the Grange had 1000 more like him. They are needed.

GRANGE ITEMS.—We note in the *Patron* that Wheatland had a goodly attendance and fine time at installation New Year's day, with visitors from North Butte, South Sutter and Yuba City....Lafayette Yates, of Elsinore, is endeavoring to found a Grange in that part of San Diego county....The revived Sierra Valley Grange has 17 charter members—seven brothers and 10 sisters....Elk Grove's officers were installed by W. M., Johnston, assisted by C. A. Hull, W. M. of Sac. Pomona Grange. A number of guests, not members of the Order, were present by invitation, and evidently enjoyed both dinner and installation.

INSTALLATIONS.—The officers of Sacramento Pomona Grange, a list of whom we published at Christmas, were duly installed last Saturday at Granger hall, Sacramento, by W. M., Wm. Johnston, assisted by Sister Jones, of Yuba City Grange.

Lodi and Woodbridge Granges had a joint installation at the hall of the former on Wednesday of last week. The ceremonies were conducted by D. Flint, W. L. S. G., assisted by W. L. Overhiser, W. O. S. G.

CORRECTED.—Among our "Grange Elections" may be found a corrected list of the officers whom Enterprise installs today.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

Hon. Norman J. Colman, U. S. Commissioner of Agriculture, has issued a circular requesting the Lecturer of the National Grange and the various State and Territorial Granges to forward to him the name and postoffice address of the Master, Lecturer and Secretaries of the Pomona and District Granges, with the view of fostering and perpetuating a hearty co-operation for the promotion of the agricultural interests of the nation. A similar circular will be issued to the secretaries of Farmers' Clubs and other purely agricultural associations. It is to be hoped that the officers of the Granges referred to will all act promptly in the matter. Each neglect of duty not only deprives the one Grange of its benefits, but weakens our general power for good. We must act together.

The reports that have been coming in from the annual meetings of the State Granges in December are full of encouragement. A few items plainly tell of the rising tide all along our lines.

Mississippi.—Put. Darden, W. M. N. G., and M. S. G., writes: "I have just returned from a most successful and profitable meeting of the State Grange."

Minnesota.—W. S. Choen, M. S. G., writes: "The work is beginning to look up in this State. Had a very harmonious meeting of the State Grange, and I think accomplished more work that will result in good to the Order than for a number of years."

Vermont.—Alpha Messer, M. S. G.: "We had the largest and best meeting of the State Grange that has been held for several years. The utmost harmony prevailed, and the enthusiasm and determination of the members to push the work was a surprise to the members themselves."

Kentucky.—J. D. Clardy, M. S. G.: "Just closed one of the best meetings of our State Grange we have had for several years. We hope to have a general revival during the year."

Maine.—Eleven new Granges during the past year. Total membership, 15,059; 1100 new members; *net* gain, 628.

Pennsylvania.—Eighteen new Granges between sessions of State Grange, 1885 and 1886; 1726 new members; *net* gain, 994; $1000 appropriated for lecture work for 1887.

Connecticut.—Eighteen new Granges during the year. Increase in membership nearly 150 per cent. J. H. Hale, M. S. G., says: "There is an increasing interest and love for the Order in nearly all of the older Granges, and a growing respect and confidence for the Grange and its work by all good citizens."

Michigan.—Nine new Granges. A large and profitable State Grange meets in capitol building at Lansing.

New Hampshire.—Nine new Granges; total membership, 5300; net gain, 561. "The Grange in New Hampshire has realized a year of great prosperity numerically, financially and educationally, and it is increasing in popularity each year in the minds and hearts of the people of every class and profession."

Wisconsin.—S. C. Carr, M. S. G.: "Our State Grange closed on the evening of the 16th. We had a good attendance. The Governor of the State gave us a rousing reception. All went home happy, feeling that the Order was on an upward and onward course."

Massachusetts.—James Draper, M. S. G., says: "We rejoice in a prosperous year with a gain of two Granges and 143 in membership."

Delaware.—Henry Thompson, P. M. S. G.: "We closed a very successful session of the State Grange yesterday. The city papers gave us free reports and liberal editorial notices. I feel the Order has received a boom it will feel for a long time."

Iowa.—J. E. Blackford, M. S. G., says, after the meeting of the State Grange: "Prospects encouraging."

Indiana.—Milton Trusler, M. S. G.: "The 16th annual session of the Indiana State Grange was the best ever held in the State. Citizens of Frankfort and Patrons of county gave us a hearty welcome in public reception. The Masons, Odd Fellows and other benevolent orders furnished their beautiful halls free for our private meetings; the press, eager for all news, publishing Master's address in full, sending it broadcast over the State and recommending it to be read by all. We are growing stronger in the minds of the people and the leaven is at work."

"We are plowing and sowing and reaping,
All over America's land."

Grange Elections.*

ENTERPRISE GRANGE.—Dec. 11: W. A. Birch, M.; E. J. Lynch, O.; Zenos L. Coy, L.; A. M. Gunter, S.; Ulysses Wilson, A. S.; Thomas Waite, C.; Mrs. S. C. Coy, T.; Miss Letitia Hanlon, Sec.; A. A. Krull, G. K.; Miss Edith Tibbitts, Ceres; Miss Cerita Wilson, F.; Miss Minnie Schulze, P.; Miss Etta Plummer, L. A. S.

FLORIN GRANGE.—Jan. 1: John Reese, M.; D. H. Buell, O.; Sister I. A. Casey, L.; David Reese, S.; Wm. Johnston, A. S.; Sister H. A. Anderson, C.; C. Towle, T.; L. H. Fassett, Sec; J. Jackson, G. K.; Mary Donovan, P.; Lillie Casey, F.; Mamie Brown, Ceres; Annie Donovan, L. A. S.

SIERRA VALLEY.—Dec. 28: Geo. P. Haines, M.; A. E. Knerr, O.; B. F. Lemmon, L.; Mrs. Geo. P. Haines, S.; Mrs. Mary Lemmon, A. S.; J. Hubbard, C.; Mrs. J. B. Albee, T.; N. N. Strang, Sec.; Hal Lemmon, G. K.; Mrs. G. J. Johnson, Ceres; Miss Leora Robbins, P.; Mrs. J. N. Phipps, F.; Mrs. N. N. Strang, L. A. S.

WHEATLAND GRANGE.—Dec. 4 (installed Jan. 1): Hugh Morrison, M.; Julius Hollister, O.; Frank Kirshner, L.; Samuel Kuster, S.; Abner Hollingshead, A. S.; Mrs. L. W. Hamilton, C.; Mrs. Lou Fraser, T.; I. W. Huffaker, Sec.; Michael Horner, G. K.; Mrs. L. Huffaker, P.; Miss Mary I. Ostrom, F.; Miss Fannie C. Dam, Ceres; Miss Lizzie Oakley, L. A. S.; Miss Rosa Ostrom, Org.

*Secretaries, or other officers, are invited to send us lists of officers elected, date of installations, and all other interesting matter for publication.

Grangers' Business Association.

The Sacramento Grangers' Co-operative Business Association held their annual meeting in Grangers' Hall at Sacramento, Jan. 11th. According to the report in the *Record-Union*, the Directors of the past year were re-elected. as follows: Daniel Flint, N. Mertes, Henry Fassett, G. W. Hancock, Erskine Greer, Chas. A. Hull, A. M. Plummer, Geo. Rich and Wm. Johnston. The Directors organized by choosing Wm. Johnston, President—a position he has held for five consecutive terms; Charles A. Hull, Vice-President; Erskine Greer, Secretary; Henry Fassett, Treasurer; and Daniel Flint, Auditor. The Association commenced business in 1877 on a capital of $2400, which has been increased to $75,000. It has a paid-up capital of $30,000, and is incorporated for $50,000. Their brick building, 80x160 feet, three stories in hight, is one of the finest structures in the city. The stockholders are all farmers.

GOOD WORDS FOR ST HELENA.—The *Star* was a delighted guest at the New Year's Grange doings, of which Secretary Peterson gave us a brief report last week, and thus voices his appreciation: At 12 o'clock a Harvest Feast was spread in the lower hall, to which we were honored with an invitation. Of course we were there, and it goes without saying that we were kindly entertained and treated to an incomparably good feast. In fact, every time we partake of a "Grange dinner" we are ready to assert it the best we ever had. But paramount to the good dinner, which an editor always enjoys, is the pleasure of association and conversation with the hospitable members of this Grange, who have the art of entertaining down to a science, and with whom one always feels at home. At 2 o'clock the ladies of the Grange held their New Year's reception, and thither we were drawn again, in company with three other gentleman callers. We found their hall upstairs beautifully decorated for the occasion. On one side, in evergreen letters, appeared the motto, "*Esto Perpetua*," on another the dates 1867 and 1887, together with the names of the seven illustrious founders of the Order. All callers were hospitably entertained and invited to partake of appetizing refreshments. During the afternoon 47 ladies and gentlemen called, attesting the popularity of the good people of the Grange. St. Helena Grange is in a prosperous condition, numbering nearly 50 members, and receiving new accessions to its ranks every few weeks. Its membership is from among our best people, and we sincerely wish that it may continue to prosper as it richly deserves.

The Fruit Union Meeting.

Fruit-growers should not forget the meeting of the California Fruit Union, which will be held at Irving hall, in this city, beginning Wednesday, January 19th, at 1 o'clock P. M. It is intended to be a general meeting of fruit-growers, for President Hatch, in his circular which we printed last week, said:

The attendance of all is desired, whether members of the Fruit Union, of any other Union or association, or of none, as the nearer we can all come to working in harmony, that much nearer will we be to success. The matter of changing the existing by-laws can, of course, only be done by the vote of those entitled to a voice in the meeting.

THE LANE LECTURES are popular lectures on medical and hygienic subjects, given at the Cooper Medical College, in this city. The fifth course was opened on the 7th instant by Prof. L. C. Lane, who addressed a good audience on "Vaccination." The remainder will be given on the first and third Fridays of the months. as follows: Jan. 21st, Prof. C. Cushing, "Water;" Feb. 4th, Prof. A. Barkan, "Our Noses;" Feb. 18th, Prof. J. H. Wythe, "Heredity;" March 4th, Prof. C. N. Ellinwood, "Medical Hints in Emergency Cases;" March 18th, Prof. C. H. Steele, "Alcohol;" April 1st, Prof. J. O. Hirschfelder, "The Skin;" April 15th, Dr. W. S. Whitwell, "The Opium Habit;" May 6th, Prof. H. Gibbons, Jr., "The Heart and Its Disorders;" May 20th, Prof. W. D. Johnston, "Lower Forms of Life." The lectures are entirely free, and no ticket of admission is required.

ANGORA PRODUCTS.—We are glad to learn by an item in the San Jose *Mercury* that C. P. Bailey, the well-known breeder of Angora goats, and president of the Angora Robe and Glove Manufacturing Co., has succeeded to the interest of his partners in the latter concern, and is preparing to enter upon the manufacture of these goods upon a much larger scale than heretofore. For this purpose he is erecting a two story building, 24x40, on North Fourth street, near Washington, which he expects to use as a factory by January 1st. He hopes to furnish employment to about 40 persons, a large proportion of whom will be women and girls.

MESSRS. BATCHELOR & WYLIE, of this city, have just received two steam-heat evaporators, which were manufactured expressly for the California market. These have been set up and can be seen in operation at their store, No. 37 Market street, where all fruitmen and others interested in producing a prime article of evaporated fruit are respectfully invited to call and examine the apparatus and system.

AGRICULTURAL NOTES.

CALIFORNIA.

Butte.

ALMONDS ON SHORT NOTICE.—Oroville *Register*, Jan 6: C. L. Durban, of Pentz, in September last, gathered a crop of paper-shell almonds. One hundred of these nuts were put in the cellar where they would not dry too fast. Oct. 20th he removed the shells and planted the nuts. Every one sprouted and came up, and the little trees are now from three to seven inches in hight. Mr. Durban expects to gather a crop from these trees during the fall of 1888, thus saving one year's time by planting the nuts almost as soon as picked from the tree.

Contra Costa.

A GIANT CAULIFLOWER.—G. A. Sellers, of Brentwood, lately presented the *Gazette* with a cauliflower which weighed nearly 20 pounds and measured across the head one foot and a half. It was raised on his farm from seed of the "Snowball" variety purchased in the East.

El Dorado.

APPLES AND AURUM.—Georgetown *Gazette:* A. J. Wilton, of Kentucky Flat, came down Wednesday with his sixteenth load of choice apples for the season. This last load was all readily sold in Georgetown. Wilton's ranch is a remarkable one; while the surface is valuable for agricultural purposes, underneath is an ancient river channel rich with gold. The gravel lies from 40 to 200 feet below the surface and is drifted out and washed. Last year he leased the mine to Placerville parties, who were so encouraged with the returns that they have had their lease extended another year.

BIG TURNIPS.—*Republican*, Jan. 6: S. R. Tripp, of Upper Placerville, brought out a number of huge turnips last week, one of the Amber Globe variety weighing 14 pounds and measuring about a foot in diameter. A White Norfolk is nearly as large.

Fresno.

HANDSOME RAISINS.—*Expositor:* Col. Forsyth has sent to S. F. the most elegant box of raisins we ever laid eyes on. They were packed in a case about two feet wide, 30 inches in length, and two inches deep. Around the edges were arranged, as a border, rows of large, luscious-looking raisins, while from a common center radiated branches of the same fruit, the main stems showing between rows of gorgeous-looking berries. The case was faced with glass set in a nickel-plated frame. The fruit was unparalleled for size and beauty, and the arrangement in the box the work of an artist. It will be exhibited in S. F. for awhile, and then sent to Los Angeles.

THE RAISIN PACK.—*Republican*, Jan. 7: Exact figures for Fresno pack of raisins in 1886 have not yet been obtained, but enough is known to make it certain that the general estimate of 200,000 boxes, made some months ago, was considerably too low. The pack will undoubtedly reach 225,000 boxes, or 4,500,000 pounds, and it may exceed that number by several thousand 20-pound boxes.

Humboldt.

NOTES FROM CHINA FLAT.—Cor. *Standard*, Dec. 27: Most of the crops are in and doing well. Some of our farmers are behind hand, but are diligently at work plowing and sowing. Crane & Donohue have some very fine grain up, in fact, the finest on the river. Stock seems to be doing well considering the scarcity of feed. The grass has started and the hillsides begin to look green, but it is a poor quality and not much substance in it. Geo. Hemsted has over 300 bearing peach trees all under eight years old, also about that number of other trees, consisting of apples, pears, plums, nectarines, cherries, apricots and figs, all of which are bearing. He also has a small vineyard which he intends to enlarge with choice grapes from Napa county. Frank Martin, of South Fort, also has a large orchard and vineyard. Many others have smaller orchards and all would enlarge them if they could get the fruit to market.

Los Angeles.

MONEY IN WALNUTS.—Downey *Review:* O. P. Passons' orchard in Los Nietos, of 17 acres, yielded him at the rate of $243.24½ per acre. The sum of $135.15 would pay all the expenses of taking care of the orchard. He sold 595 sacks of walnuts, or 47,916 pounds, at 8½ and 5½ cents per pound, realizing $4000 net. As another instance, Mr. H. L. Montgomery sold $700 worth of soft-shell walnuts from two acres of land.

HEAVY MUSCATS.—Orange *Tribune:* Last season the crop of Muscat grapes in the small vineyard of Josiah Ross, near Santa Ana, was purchased by McPherson Bros. From one and three-quarter acres of land they picked and paid for, by actual weight, 27 tons and 500 pounds of grapes. The price paid was $20 per ton, on the vine, and the one and three-quarter acres brought Mr. Ross the snug little sum of $545.

Mendocino.

BOUNTY ON COYOTES.—Ukiah *Press*, Jan. 7: Our sheep-growers in the northern part of the county are in earnest in their efforts to rid Mendocino of coyotes. They have entered into an agreement between themselves to pay a bounty on scalps of $30 each, and if the Board of Supervisors do not move in this matter, they have the assurance that the incentive for hunting this most pernicious varmint is double what it was under the old rule of $15 for each scalp brought to the courthouse. Now let our bold hunter boys "go for" the coyotes. Apply to either of [a dozen parties named] and receive your money.

Monterey.

FINE STOCK IMPORTED.—Salinas *Index*, Jan. 6: J. C. Storm got back from the Atlantic States last week, bringing with him from Kansas 13 head of registered thoroughbred Durham cattle, viz., one 5-year-old cow, two 2-year-old heifers, five bulls from 6 months to a year old, and five calves. They are beauties. The cow took the first premium in her class for three years in succession at the Topeka fair. Mr. Storm also brought home from Illinois a diminutive pony and a magnificent Cleveland bay stallion. The latter will be four years old next spring, is 16½ hands high and weighs 1465 pounds. He is a genuine Cleveland bay, of beautiful color, faultless form and fine action, remarkably kind and gentle. He has attracted much attention among our local horsemen since his arrival. Both cattle and horses came through in fine order.

Napa.

NEW YEAR'S MELONS.—E. G. H., in *Calistogian:* We do not claim that watermelons can be raised here at all seasons of the year, as there is sometimes a little white frost in the winter; but I picked the last of my melons, raised in an exposed position to the outdoor weather, up to January 1st, when I concluded to pick them, ripe or not ripe. I found them ripe and perfectly sound inside and out.

PRIME POULTRY.—St. Helena *Star:* Rev. James Mitchell, in addition to being an earnest, hard-working and popular minister, is also somewhat of a chicken fancier. We think we never before saw so fine a looking lot of poultry as he has in his yard. His special pride is a pen of 12 Wyandottes, the handsomest hens we ever set eyes on. The Wyandotte rooster he recently imported from Massachusetts, at a cost of nearly $20, and there is probably no finer bird of the kind on the coast. He has his broilers weighing at two months two pounds and at four months five pounds. The pullets lay at five months, being one month ahead of the Plymouth Rock. They are pretty, docile birds, nice to have around, and their early development renders them most desirable for laying or for table use. From a setting of 25 eggs of this variety, Mr. Mitchell can show 21 healthy chicks.

Placer.

ORANGE-PLANTING.—*Republican*, Jan. 5: The Auburn Orange Co. has bought 1000 budded orange trees—the buds being one year old on two-year-old stocks—50 lemon trees and 10 lime trees, which will be planted in their orchard this spring. Besides these, 1000 Florida and 1000 Japanese seedlings will be placed in a nursery. Mr. Curry, manager of the orchard, says that of the trees planted last year those which came with the roots puddled have done better than those which came with the roots in balls.

San Benito.

HORSE DISTEMPER.—Hollister *Advance*, Jan. 7: A mysterious disease is prevailing among horses in the neighborhood of San Felipe. Last week, Donnelly, Dunne & Co. lost six and Jack McCann three. The disease is described by veterinary surgeons as spinal meningitis or disease of the brain, and usually attacks young horses. Death follows soon after an appearance of the symptoms, unless promptly attended to. Horses taken with the disease first manifest its presence by drooping the head and listlessness. The surgeons recommend strong blistering along the spine as one of the best remedies.

San Joaquin.

VINES THAT PAY.—Stockton *Independent:* John Perrott, near Woodbridge, has a small vineyard of two and a half acres of Mission grapevines. For ten years he has realized more than $100 an acre for his grapes, which are of a common variety. Last season he raised the smallest crop for many years, but he sold from that two and a half acre vineyard 16 tons of grapes for $12.50 per ton, amounting to $200. T. J. Pope has a farm near Atlanta on what is called the "sand plains." Two years ago last spring he set out grapevines enough to cover one acre, and last fall gathered a good crop. The vines never had a drop of water other than the rains, and they are now in a strong, healthy condition. Mr. Pope expects to gather a large crop this fall from that one lonesome acre of vines.

LIVE-STOCK AND DAIRY.—Norwalk Cor. L. A. *Herald*, Dec. 30: This is a fine stock country, and during the past few years much attention has been paid to the introduction of the best breeds of horses and cattle. The sales of these, as well as of beeves, do not appear among the outgoing railroad freights, although the rearing of fine horses is one of the most profitable and rapidly increasing industries of this section. A certain encouragement has been given to dairy farming by the prosperous cheese factory of Johnson & Lumbard, of Norwalk, although it is an industry not yet sufficiently appreciated by the farmers in general. During the year 1886 this firm consumed 940,869 pounds of milk, manufacturing 104,869¼ pounds of cheese, from which has been realized $11,869.62. The cheese is excellent in quality and commands a ready market at the highest prices.

Shasta.

A CITRUS VETERAN.—Shasta *Courier:* Fourteen years ago Dennis H. Dunn, one of Shasta's pioneers, planted an orange tree a few feet east of his dwelling on Back street. The plant was set in a hole about four feet in diameter, and mostly sunk in bedrock, dug out by Wm. H. Dunn. The tree received no special attention, but was once topped. It now stands 13 feet high, is limbed from ground to top, and loaded with nice, bright, thin-skin oranges—a picture of tropical beauty here in the foothills, with snow-crowned Mount Shasta in the background. This tree has this year borne 500 fair-sized oranges, 150 of which have been picked off.

Solano.

LEVEEING.—Dixon *Tribune*, Jan. 8: Work on the levees of Andrus island is being pushed forward. A good levee is completed more than half-way around the island, having a good easy slope to the hight of about two feet above high-water mark and a width of about seven feet on top. In places where the material is not good it is considerably wider. It has been completed along the Georgiana slough, and the Mokelumne river to San Joaquin, except a few breaks where the dredger will fill in. The dredger has built about half a mile, beginning at the mouth of Seven-Mile slough. It is a perfect success, filling the deepest and widest breaks in an incredibly short time. The material is pure sediment taken from the bottom of the slough and deposited where it will do the most good. With reasonably good luck they should complete the work in the next two or three months. The levees on Brannan island are nearly all completed, and in excellent condition. The people are generally hopeful and united in their purpose to succeed.

Sonoma.

SHIPPING ORANGES.—*Index-Tribune*, Jan. 8:—C. C. Carriger is engaged in filling an order for 600 boxes of oranges for a S. F. firm. The first shipment was made last Wednesday. The Carriger place, situated a few miles west of Sonoma, is noted for the excellence of its oranges, lemons, and limes, which are grown on a large scale and always find a ready and profitable market.

Tulare.

NOT AFRAID OF DROUTH.—*Delta*, Jan. 6: J. B. Zumwalt, residing near Tulare, was in town on Monday. He has 600 acres in wheat, all up and looking well. He will put in 300 more and then wait for rain. His farm has been irrigated so much, and is under such a good system of ditches, that prospective dry weather does not alarm him. The grain now up was growing finely previous to the first winter shower. The water stands now within seven feet of the surface, where a few years ago it stood at 25 feet. Irrigation has so filled the soil that one or two dry years will not cause much loss.

NEVADA.

GOOD SALE.—Reno *Gazette*, Jan. 5: O. North has made a sale of his beef cattle for $37 a head on the ranch to Godchaux. He thinks he made the best sale that has occurred in the State. He had over 600 head.

ANTI-DEBRIS WORK.—At the last session, for 1886, of the Yuba county supervisors, the Anti-Debris Committee, consisting of B. F. Dam, C. E. Stone and J. F. Flathmann, reported as follows: We, your committee, beg leave to report that on the 20th day of July, 1886, a suit was commenced in the Superior Court of Yuba county, and an injunction was issued against the South Yuba Water and Mining Company, to restrain them from selling water for mining purposes, and to prevent them from mining upon the Yuba river or its tributaries. A suit has since that time been commenced in the Superior Court of Yuba county, and an injunction granted against the South Feather Water and Union Mining Company to prevent them from mining or depositing tailings in the tributaries of the Yuba river; also two new complaints have been filed in the U. S. Circuit Court against the Milton Mining Company for contempt; also a complaint has been filed in the U. S. Circuit Court against the Manzanito Mining Company, of Crowell & Co., for contempt. All of which is respectfully submitted.

PURE WINES.—There seems to have arisen an issue between Mr. Wetmore, of the Viticultural Commission, and a number of leading viticulturists as to the value or expediency of the bill now pending before Congress, aiming to define pure wine. The pending bill does not restrict pure wine to that made from grape juice, and the prevailing sentiment of California wine-makers seems to be that such shall be its definition. The Santa Clara Viticultural Society has adopted resolutions to that effect. Mr. Wetmore has resigned his position as Chief Executive Officer of the Commission.

MULBERRY TREES.—The State Board of Silk Culture has received a telegram from New York that the consignment of 500 mulberry trees of the cultivated Cattaneo species had arrived in that city and have been forwarded to San Francisco. These mulberry trees will be distributed gratuitously to those interested in developing the silk industry. Applications for trees should be sent to Mrs. Rienzi, Secretary State Board of Silk Culture, 22 Montgomery avenue, San Francisco, as soon as possible.

THE expected war of railroad passenger rates has hardly begun in earnest. Cuts of $9 to $12 on through tickets overland are reported, indeed, but there is at present little travel eastward.

To Whittier on His Birthday.

[The beloved and venerable Quaker poet having entered his 80th year on the 17th of December, Mrs. E. Cavazza, in the Portland (Me.) *Transcript*, addressed him a "Birthday Song," hail the stanzas of which follow.—EDS. PRESS.]

What had thine heart to do with winter-time,
Thy spirit with the darkness of the year,
Thy soul with desolation and with dearth,
That in the season of cold, and snow and rime,
Of lessened light and branches bare and sere,
Thy soul took shape, thy body had its birth,
Thy life began to count its years on earth?
Yet winter hath no power upon these three;
The soul, the sun, the sea,
These are of endless freedom; unconfined—
And hence, Heaven had in mind
To send thee, bearing gifts of goodliest worth,
A messenger unto men that thou mightst be
Prophet and poet crowned of Liberty.

* * *

Thy lips were touched with living sacred fire:
Thy feet were turned aside from ways embowered
Where Art would lure thee with a lulling song;
With holy hands thou didst uphold the lyre
Warning of judgment over sin that lowered—
Apart, not mingled with the choral throng—
Until the time was come, that tarried long,
When rose the dawn of Liberty, and light
Streamed up against the night,
As when the sun makes glorious all the East;
And thou, not having ceased
To sing throughout the darkened reign of wrong,
Didst join the stars of morning and rejoice
With voice victorious as a trumpet's voice.

* * *

Yea, thou hast proved the depth of the abyss
Is but the measure of celestial hight,
And Love is great beyond man's utmost need,
And darkness is no other thing than this—
The shadow of the substance of the light.
With hearts enlightened unto faith and deed
We follow gladly where thy footsteps lead,
Singer elect of Love, and born to teach
That Love is all, for each,
And will not leave us lightless on the way
Through any shadow—nay,
That every evil hath in it the seed
Of some remote strange blessing, no despair
Can be so dark but light finds entrance there.

How shall thy praise be said, the number told
Of them that love and know or know not thee?
They are as many as the oak-leaves of the wood
Innumerable as sands that bound and hold
The countless waves of the unmeasured sea.
We hear and love thee, and we call thee good
And bless thee for thy courage that withstood
The scorn of scoffers for a noble cause,
Thy songs that grew to laws,
Thy faith in Love that will not fail to keep
Us, though we wake or sleep,
Thine heart fulfilled of human brotherhood
Tender as strong: Have honor of us and praise
For all thy past and all thy future days!

The Senator's Daughter.

CHAPTER II.

[Written for the RURAL PRESS by SARAH CAMPBELL SANFORD.]

At last, in the "wee sma' hours," he became quiet and sank into a disturbed sleep, while I watched the night through. To keep me awake I searched among the books on his shelves and found Holland's "Bitter-Sweet," one of mother's books. In my nervousness I dropped the volume, and in picking it up it opened to a marked passage: "And then the fight began, 'twixt hell and me, for my husband's soul, with the odds against me."

The book slipped from my nerveless fingers as the awfulness of my position revealed itself to me, invoked by those words, that mother had realized to the utmost. I wrung my impotent hands in an agony of grief; dry, hard sobs escaped me, but no tears—they seemed scorched, burnt up, by those dreadful words. I buried my face in the sofa pillow and wrestled with myself for control. It seemed as though I must throw myself from the window in my desperation. At last the words I had been reading in "Janet's Repentance" came to me. They had lingered in my memory, it seems: "Beware of the groans of the wounded soul. Oppress not to the utmost a single heart; for a solitary sigh has power to overset a whole world." Ah, to think of the sighs and groans from mother's dear lips in that very room! Were they to count for naught?

From her, my thoughts traveled out, toward the great army of women encamped all over the world, fighting this evil, and being overwhelmed and borne down by it; not because the rum traffic has such a mighty following, but because the better class of men and women are so indifferent to it. Because the law and Government throw the mantle of respectability about it. Ah, if the law-makers would make it just as much of a crime to manufacture or sell the accursed stuff that made my father a demon that night—that liquid fire that caused him to fell me to the floor, as to make or pass counterfeit money, how many homes would be happy, how many little children, shivering and starving to-night, would become bright-eyed, joyous creatures! I am only a young girl—I don't know much about the science of Government; but I believe, when alcohol is put under the ban of the law, many of society's most difficult problems will be solved.

As thoughts like these coursed through my brain, all sense of fatigue left me, and I paced the room until morning broke. Father still slept, and how to make my escape from the room before he awoke perplexed me. At last I ventured to swing out over the cornice and catch on to the kitchen roof, and from there it was quite easy to clamber down to the back porch, and so to the ground. Then I searched for the key, and while on my knees, feeling all through a verbena bed, Alvar laid his hand on my shoulder and drew me to my feet.

"You haven't slept at all; why did you not call me?"

"Oh, no, dear Alvar; you must never interfere; pretend you know nothing."

"But you are walking in the same path that led mother to her death. Must we all be sacrificed to this dreadful curse?"

"No, I am stronger than mother. I shall live to conquer."

"No, you can do very little; you may hinder, but you cannot cure, his thirst; and after you have worn yourself out, he will go down, dragging us all with him."

"No, Alvar! do not say it, do not think it for one moment. Somebody has said somewhere that, 'One man with God, with duty and conscience, is at last a majority.' I am not a man, only a simple girl; but I am trying to do my duty, and that is as much in the sight of God as if I were a king."

As I took my eyes from his face they rested on mother's white-rose bush, and there, hanging on one of the branches, was the missing key. I gave a cry of pleasure and ran to father's room to put it on the inside of the door before he awoke. He did not go to the office for several days, but fought, until, for the time being, he overcame the demon within him, before he went out in the midst of temptation.

That was the hardest fight. I never had to resort to force again. My entreaties would prevail when the tempest raged within him. His business increased, and money became plenty; in fact, I hardly knew what to do with the sums he gave me. The dear old home was refurnished, pictures and books abounded, and pretty dresses were common. Of course, spending so much time with father debarred me from much society, and but for the kindness of the Stanhopes I should have been entirely forgotten; but father and Alvar were always included in my invitations, and father found such congenial companionship at their parties that he was as ready to go as we.

At first, I feared the wine-cup, and declined the invitation; but dear Mrs. Stanhope wrote me such a kind note, telling me that since she had witnessed my struggle against that enemy she had resolved, with her husband's consent, to banish it from their sideboard. And then she said perhaps my influence would save some member of her family as well as my own. How the glad tears rolled down my face! Was it possible that poor commonplace I could exert an influence in such a place? Then the thought came to me that we must just live the right life, think the right thoughts, and say the right word, regardless of what it might or might not do—in other words, do right for the sake of right, and God will take care of the rest.

In return for all their kindness, father proposed to take Jessie with me to his old home in the country, a farm about 100 miles distant. So one bright morning in June we set off for a week's visit. The place was occupied by a brother of father's. I had never been there, and was quite unprepared for the primitive low-eaved house, with its yellow paint—a rambling, roomy structure, suggestive at the first glance of wide, low-browed rooms and deep fireplaces. Under the front windows a brilliant display of sweet-williams, foxglove and marigolds, and on either side of the broad, flat, unhewn stone, which formed the doorstep, glowed the blood-red peonies.

Beside the fence, and between the long rows of currant bushes and the border of sunflowers, stood a line of beehives, around which, through all those long summer days, was a drowsy murmur from the pollen-dusted workers, as they came and went from great beds of balm and sage, or hovered over the gaudy borders, where blossomed tiger-lilies, tall hollyhocks and monk's-hood, interspersed with the more delicate faces of sweet-peas and carnations.

Near the garden gate stood the well, its wooden curb and platform weather-stained and mossy with the rains of many years. In the rear of the house were the great barns, which, with the clustering sheds and out-buildings, made almost a village of themselves.

Of course, we, as guests, entered the front door and were shown into the "best room." It was a low-ceiled room, with a handsome rag carpet in broad-shaded stripes of red and green. The furniture was old-fashioned spider-legged mahogany and hair cloth—bought, I suppose, for my grandmother at her marriage. Between the front windows stood a card table, never used for play, on which were disposed a number of books in brilliant bindings, laid in prim little piles of three or four; the family pictures in ambrotype. On the wall, framed in resplendent gilt, were the oil portraits of my grandparents, a couple famed in their youth for beauty. How strange was their dress, and how stiff and ungraceful was every line! Either the country-side was incapable of passing judgment or the artist failed to delineate the beauty, for more ugly pictures I never saw.

Aunt Lucy seemed determined to keep Jessie and me in this sacred apartment, but we avoided it during our stay, preferring the large, cool dining-room. This latter was used in winter for the kitchen, but during the warm weather the cookstove held sway in a "lean-to," so that the farmer's dinners of boiled cabbage, etc., did not penetrate into the spick-span rooms, redolent of lavender. It was a large square room of cheerful aspect, and always impressed one with its exquisite neatness. The yawning fireplace was filled in with the vivid green of asparagus tops, and a large red and white jar full of lilacs stood on the brick hearth. The furniture was plain and old-fashioned; a birch table, a tall secretary, curtained behind its glass doors with faded green silk; a few straight-backed, splint-bottomed chairs and a settee with pillows in patchwork. Green shades shut out the bright sunlight, and we found it delightfully cool and inviting after our rambles in the heat. Oh, how we reveled in the meadows and woods!

Aunt Lucy was a quiet, unpretending woman whose whole soul was devoted to housekeeping and her family. Soapsuds and fresh air were cardinal virtues with her.

The family consisted of Uncle Heman, Aunt Lucy, the hired man, little three-year-old Tude (the child's name was John, but Tude was the home name), and the maid-of-all-work. An older son was away, attending school, and their daughter was teaching.

How still and quiet was that first evening of our arrival! And what strange sounds greeted my ears before it was fairly light! The noisy barnyard fowls, the cry of the calves and the lowing of their mother cows; the stir and bustle attending the morning duties of a dairy farm proved so exciting to us that we soon found ourselves out in the barn, where the entire family, save Aunt Lucy and baby Tude, were milking. There stood the patient creatures, each in its stall, with its head in a queer-looking yoke or something, calmly chewing their cuds. The smell of the fresh milk, with the fragrance of the new hay, the vaulted roof of the huge barn, and the swallows circling overhead, gave us a new and pleasant experience. "We come to our own" in the country, surely. All style and fashion slip down and away, and our real selves know and feel the sympathy existing between man and nature.

What do we want of carpets, when we can press our feet in the soft green of yonder undulating meadow? Who cares for upholstery so long as that gnarled tree covered with moss invites one to rest and drink in the blessed sunshine and sweet-scented air! The privileges of town—what are they? Is it the opera one sighs for? Just take an early morning walk and see if Mrs. Sigourney wasn't right when she wrote:

"There's a concert, a concert of gladness and glee,
The program is rich, and the tickets are free;
In a grand, vaulted hall, where there's room and to spare,
With no gaslight to eat up the oxygen there.
The musicians excel in their wonderful art,
They have compass of voice, and the gamut by heart;
They have traveled abroad in the winter recess,
And sang to vast crowds with unbounded success.
Aud now 'tis a favor and privilege rare
Their arrival to hail, and their melodies share."

How graceful the songsters are, and how they flirt and swing and chirp between the acts! I saw, one morning, three swinging on the whip-lash, which happened to be left in its socket. What an ecstasy they were in! It made me feel ready to soar away with them in the blue sky.

What delightful rambles we took during the cool morning hours, returning to the quiet darkened living-room, with its fragrance, to read and doze away the long, sultry day with the noisy cackling of the busy hens sounding in our ears.

When the shadows began to lengthen, Jessie and I would run to the barn to hunt the eggs. Perhaps the time spent in clambering and sliding over the delicious new hay, searching for those "great pearls," was the most enjoyable of all the lovely time spent on the farm.

Tude always accompanied us. He became passionately fond of Jessie, and was her shadow. Dear little fellow! he seemed possessed to swim, as he termed it, in a tiny brook that ran through the meadows a short distance from the house. He was forbidden the amusement, but that only enhanced the pleasure.

One night, as Jessie prepared him for bed, she suddenly exclaimed, "Ah, Tude, you have been swimming again."

"No, 'deed no," answered the boy.

"Yes, you have, you bad boy."

"Haven't neither."

"How did your shirt come to be wrong side out, then?"

He stopped and thought a moment, then looked up into her face as grave as a judge and said: "It must have got turned when I crawled through the fence."

Poor child! His naughty story went unpunished that time. We laughed so immoderately at its wit, we could not lecture him on the sinfulness of his falsehood.

His mother looked grave when we told her the next morning, and said: "Did you ever stop to consider that the only weapon a little child has is a falsehood? Little dogs have their teeth and kittens their claws, but a child has only a lie. How careful we should be, then, in governing him, to prevent his being tempted to commit that sin. Tude's father promised him a whipping the next time he went into the water, and now he has done a greater wrong, for I think there can be nothing worse than to acquire the habit of deceiving." And she sighed as she sifted the flour for bread.

That day was our last on the farm. A letter calling father back to his office cut short our visit. Soon after our return, Earl, Jessie's brother, came home from Harvard with honors. A series of lawn-fetes, dinner-parties and balls were inaugurated at the "Terrace," as the Stanhope residence was called. He was to have only a month's vacation, and then off for Heidelberg; so the whole month was given up to pleasuring. Father said he might as well close the office and do nothing, he was kept gallanting around so much; but he was the gayest of the gay, and became a great favorite.

One day we were sailing in Earl's beautiful yacht, "The Lady of the Lake." Earl looked like a true sailor, and managed our little craft like one, too. The day was perfect, and while we were lying becalmed, just off a tiny island, I reveled in the rich draughts of sunshine and beautiful tints of sky and water. The soft air, the whole scene, intoxicated me, as Nature, in her balmy moods, ever does. Oh! is there an amusement, a recreation, in all the world equal to spending a perfect day on a sailing craft, away from the busy, crowded town, a little world to ourselves, away for hours from the daily papers and the telegraph?

Jessie said: "Why, the most wonderful things may be happening over there, and we can't know it."

If one could only sail on, and on, without thought or care where or when we should land! But as that cannot be, I lay my worries down by the front gate and forget them while absent, never rembering they exist until I return and fit them to my shoulders again. It is surprising how much weight they lose in the interim! That particular morning household affairs had jarred considerably, but the moment my foot touched the deck I knew nothing save this—God is good and this world delightful. I leaned my head on the rail and gave myself up to dreaming, regardless of the gay voices around me. Mrs. Stanhope at last rallied me from my reverie. I made answer by quoting:

"'In the spring a young man's fancy
Lightly turns to thoughts of love.'

"But mine turn to poetry. O dear Mrs. Stanhope! thoughts press so heavily on my mind, but I cannot find words to express them. Why are we given the desire, without the language or the means to make it known?"

"Dear child," said she, "we do not live for ourselves alone, or by ourselves; we are part and parcel of a great whole. Thomas Carlyle in his essay on Robert Burns says: 'It takes generations to produce a poet.' If this is true, then cultivate and encourage every lofty and noble aspiration, even if it finds no voice with you. In some subtle process, mysterious to our mortal ken, all our thoughts will be garnered, and will bear fruit some time. If we could only realize that our very thoughts influence coming generations, would we not be 'pure in heart' indeed? Spurn an evil, impure thought from your mind as you would spurn a reptile from your path, and the world with all its evil tendencies can do you little harm."

How noble she looked, standing there in her gracious womanhood! The breeze which had just begun to freshen stirred the silver hair on her forehead. May I so live that my years will rest like a crown upon me in my old age.

The wind increased, the sails caught the breeze, the timbers creaked, and away we sped. All was animation and life. Earl stood at the helm; occasionally his clear voice would ring out, "Trim ship!" and hurry-skurry to one side we would all go, amid the laughter and jests that lie so near the surface with a pleasure party. The sun sank out of sight, and the night air began to be chilly as the darkness shut down about us. We were quite near the landing, when suddenly a gale struck us, and over our little ship careened, and threw part of the passengers into the dark water. Jessie was singing to her guitar accompaniment; her voice floating out over the water was enough to divert one's thoughts, and I suppose Earl was not quick enough with his command to trim ship. Thus our day's enjoyment was almost turned into a tragedy. I remember Jessie's voice in these words:

"And here and there a foamy flake,
Upon me as I travel,
With many a silver waterbreak
Above the golden gravel."

I caught the last word, while struggling with the cold water; then a mighty rush was borne in upon my senses.

[TO BE CONTINUED.]

WYTOPITLOCK.—Many names of Maine towns and villages are puzzling to the uninitiated, both in pronunciation and spelling, and it is fortunate that postmasters, mail agents, etc., are gifted with the Yankee faculty of guessing. A postal clerk in Penobscot county had a puzzle of the kind the other day. He found two letters in his mail, one going to "Whitoo Bedlock" and the other to "White Opedlock." He sent them to Wytopitlock and they have not yet returned.

Something for Nothing.

Don't try to get something for nothing. It is not the right spirit. It is this propensity that leads men into gambling. There is a great demand for lottery tickets everywhere because people want something for nothing. Thousands of people answer spurious advertisements which set forth that, by sending some paltry amount, information will be returned whereby a fortune may be easily made. The proposition is so absurd on the face of it that it would seem that no half-witted person would pay any attention to it, yet some very intelligent people "bite at it."

Don't *want* to get something for nothing! The consequences of such a desire are disastrous in every respect. Probably nine-tenths of all the criminal cases on record originated in the desire to get something without giving an equivalent for value received. And this is not bringing into account the traffic of rum-selling, which our imperfect institutions make legitimate. The consequences of this terrible evil alone are enough to cause us to blush that humanity is so weak as to tolerate by legal sanction a curse that destroys more lives in peace than are sacrificed in all the wars, not taking into account the privation and suffering of innocent women and children. It all comes about from a desire to get something for nothing.

Nearly all the evils and abuses of the world are the outgrowth of this pernicious propensity. Liberated from this curse, the human family would be regenerated and the necessity for great reforms would be superseded by a voluntary obedience to moral laws. Men would not then be urged by a morbid desire for gain into all manner of corrupt, dishonorable and infamous double-dealing and trickery against known laws of right. For we take it that no man consents to do wrong without moral compunction, and but for a morbid propensity for gain few among those who now set conscience aside would be violators of moral laws bearing upon the just rights and privileges of all.—*Shasta Co. Index.*

"I Made That Man What He Was."

A saloon keeper in Dover, Delaware, who patronized his own bar very liberally, stepped into a back room where men were at work about a well. The covering had been removed, and he approached to look down, but being very drunk, pitched in head foremost. He had become so much of a bloat, by the use of strong drink, that it was impossible to extricate him in time to save his life. There was great excitement in the town. Men and women who had never been inside his saloon before were the first to rush to the rescue, and offer sympathy to the bereaved family. As he was dragged from the well, and stretched out dead on the saloon floor, a wholesale liquor dealer from Philadelphia stepped in. After the first shock of finding one of his good customers dead, he turned to a prominent lady, and said, pointing to the wretched victim: "I made that man what he was. I lent him the first dollar, and set him up with his first stock of liquors, and now he is worth $10,000 or $15,000." Looking him square in the face, she replied: "Yes, you did make that man what he was—a drunkard, a bloat, a stench in the nostrils of society; and sent him headlong into eternity and a drunkard's hell. What is $15,000 weighed against a lost soul, a wasted life, a wife a widow, and children orphans?"

He turned deadly pale, and without a word left the house.

What is all the revenue to the millions whose homes are destroyed, whose children are beggared, and whose loved ones are sent headlong to a drunkard's grave?—*The Christian Women.*

QUAINT OLD MARRIAGE RECORDS.—The world discourages, and rightly so, the marriage of December with May, and when such marriages took place in former times they were usually recorded in some such way as this: "22d August (1782). At Bath, Captain Hamilton, aged 30, to Mrs. Munson, a lady of rank and fortune, aged 85." We may find even a distance of 80 years between an old man and his bride. In February, 1769, "Robert Judge, Esq., of Cooksburgh, Ireland, aged 95, to Miss Annie Nugent, aged 15. He served in King William's wars, and received a ball in his nose." Particulars of hight, as well as of age, fortune and length of courtship, were often given. "December (1755). At York, Mr. Thomas, a grenadier in the Yorkshire militia, six feet two inches high, to Miss Hannah Tennick, of Clearlam, three feet two inches high, with a fortune of £5000." And on April 5, 1785, at Ripley church, Mr. Robert Long was married to Miss Reynard; between them there was disparity both of age and size, "the bridegroom being 37 years of age and more than six feet high; the bride 20 years old and little more than three feet high." The record of a marriage in 1779 of a couple aged respectively 80 and 85 concludes thus: "And what is still more remarkable, there has been a courtship carried on betwixt them for more than 60 years."—*Brooklyn Magazine.*

"Is there much water in the cistern, Biddy?" inquired a gentleman of his Irish girl as she came up from the cellar. "It is full on the bottom, sir, but there's nothing at all on the top," was the reply.—*Boston Budget.*

YOUNG FOLKS' COLUMN.

A Girl's Experience at School.

[WRITTEN for the RURAL PRESS by DOLLIE BROOKS.]

It was just after the monthly reports had been distributed in the seminary at Highland Park and the girls were very anxious to see how many credits they had received during the month. Each one was asking the other: "What did you get in arithmetic, geography or algebra, etc. "Did you get a hundred in anything?" They all stood unusually high this month, except Annie Morris. As soon as she had received her report she ran off to her room, for she was very much afraid the girls would ask her the same question and she was ashamed to tell them.

She said nothing about it to any one except her room-mate, who was in the room when she entered. Annie said that it was the teacher's fault, for she knew she ought to be marked higher. But she could not help thinking to herself all the while that it was her own fault.

By and by her room-mate went out and she was left to herself. Conscience whispered to her: "Annie, you know you ought not to blame your teacher when it is your own fault, because you know if you had studied like the rest you would have stood as high."

Just then Mary Ford, one of the girls, happened to come in, and was astonished to see Annie sulking. "What is the matter?" she asked. Annie said "Nothing," and put her card in a book so it could not be seen. But her friend did see it, and asked her to let her look at it. This she hesitated to do, but at last consented. Mary said *she* thought it was the teacher's fault, too, and told the girls so.

She asked them to come into her room and talk it over after supper. This was agreed to.

They assembled in Mary Ford's room, and I am sorry to say that, with one exception, all took Annie's part in blaming the teacher. They all felt very much inclined to pity her and thought she was abused.

They even advised her to complain to the teacher. Annie took their advice, and the next morning went to the teacher and told her she thought she deserved to be marked higher in her report, and that it was too bad to be disgraced before all the school.

Miss Jones, the teacher, said very kindly but firmly: "The report is correct; if you had studied like the rest you would have stood just as high. You have been urged to do your duty many times, but idleness and inattention are your two great faults, and until you correct them you cannot advance like the other scholars." Annie went off to her room crying. She knew she was in the wrong. A knock was soon heard at the door, and Emma Taylor, the girl who did not take her part, entered. "I come as a friend," said Emma in her mild way, "not to find fault with you, but to give you my advice. I am sorry you are so low in your report, and it is no one's fault but your own. You know as well as I do, Annie, that you wasted nearly all your time in school when you ought to have been studying like the rest. You hurt Miss Jones' feelings very badly when you told her that which was just as much as to say she cheated you in your report. Now, if I were you, Annie, I would go and ask Miss Jones to forgive me and tell her you will be a better girl in school."

Annie thanked her friend for her advice and promised she would follow it, for she knew it was the truth, and the very next day she apologized to Miss Jones, who readily forgave her and pointed out to her how to avoid the same trouble in the future. She was a better girl after this and became very fond of Emma Taylor and Miss Jones.

Suisun, Solano Co.

Morro Notes.

DEAR EDITOR:—Morro is improving; it has a hotel, a brass band, a skating rink, and the school has 25 scholars. We had a nice Christmas and a party afterward, which was very nice. The Spooners played for the party.

We've not had much rain yet, and the dairymen and the farmers are feeling very blue for fear of a dry year.

Cayucos is still improving. I do not know much about Cambria, for I do not go there.

They have completed the schoolhouse at San Simeon, and Mr. Hearst gave them an organ, which is very nice. Their school is out until March. Our school closes in March.

People in the East couldn't believe that we could pick tomatoes from the vines for Christmas, and bouquets. All of mamma's geraniums and fuschias are out of doors. B. M.

Morro.

THE MOUND-BUILDERS.—Recent explorations prove that the ancient mound-building inhabitants of America extended their works northward beyond the Red river of the North. Along this river and Lake Winnipeg were found mounds identical in structure with the famous ones of the Ohio and Mississippi valleys.

A HANDY PEN-WIPER.—A good pen-wiper for steel pens is a piece of raw potato. It removes the ink crust and causes a smooth flow of ink.

GOOD HEALTH.

Lanolin—A New Oil.

Lanolin is the name given to a new fatty substance obtained from the alkaline water-wastings of wool, and very highly recommended as a base for various medicated salves and ointments used in treating cutaneous eruptions and other external as well as internal disorders. It consists of varying proportions of cholesterin and fat acids, with which is incorporated a certain percentage of water, which it readily absorbs, thus forming a smooth, white, unctuous mass. As some of our professional readers will be interested to know how it is prepared, we are able to present the following formula, as contained in a late issue of the *Western Druggist:*

"The wool-washings are first passed through a fine sieve to free them from mechanical impurities, and then through a convenient quantity of cut straw or sawdust; the solution is then treated with magnesium sulphate, and the resulting magnesium soap, containing also the cholesterin, is collected, well washed with water, then drained and allowed to dry by exposure to air. It is then treated with sufficient diluted hydrochloric acid to decompose the soap; a large excess of hydrochloric acid should be avoided, but sufficient added until a slight excess of acid is indicated, which is afterward removed in the process. The resulting fatty scum, consisting of fatty acids and cholesterin, is drained and treated with petroleum benzine in a closed vessel, slightly warmed to about 85° F. to aid solution, and then filtered through flannel in a closed filter press. The petroleum benzine is then driven off by evaporation or distillation, and to remove any remaining traces of hydrochloric acid, the residue is treated with from one-tenth to one-fourth per cent of carbonate of magnesia, rubbed up with water, the mixture being then well washed with fresh portions of water, until the water washings are no longer milky. It is then again melted, filtered, while hot, through flannel, and, when cold, water is incorporated, and the lanolin becomes white, hard and smooth."

The peculiar valuable quality of lanolin consists in the facility with which it penetrates the skin and is absorbed into the system. This peculiar characteristic makes it especially valuable as a carrier. There is no doubt but that gray ointments, and in fact all ointments, are much more efficient when prepared with lanolin. When used on mucous surfaces it never forms a scab.

DUST AND DUSTING.—At all times unwholesome, when dampness gets hold of dust it ferments, decays and becomes positively poisonous; and this must needs happen on any rainy day, on foggy mornings, on dewy nights, and at that season of the year when dampness seems to penetrate the house, and it is not yet time to light the fires that might dry it out or hinder it. The rooms of a dwelling-house, then, cannot be too thoroughly swept and dusted off, in order that the least possible deposit of dust may be left in them. Many housewives think that the less the dust is stirred in sweeping, the better the work is done, and tea leaves and wet grass or moistened meal is thrown about the floor in order to gather the dust and prevent it from rising. But people giving the matter philosophical attention have come to the conclusion that precisely the opposite course is the fit and proper one; that a good stirring up and then a good blowing out is what the dust needs, and that with a wind blowing unobstructedly through the room as thoroughly as a wind can be made to blow.—*Harper's Bazar.*

SLEEP A PREVENTIVE OF HEADACHE.—A scientific writer says: Sleep, if taken at the right moment, will prevent an attack of nervous headache. If the subjects of such headaches will watch the symptoms of its coming, they can notice that it begins with a feeling of weariness or heaviness. This is the time a sleep of an hour, or even two, as nature guides, will effectually prevent the headache. If not taken just then it will be too late, for, after the attack is fairly under way, it is impossible to get sleep till far into the night, perhaps. It is so common in these days for doctors to forbid having their patients waked to take medicine if they are asleep when the hour comes round, that the people have learned the lesson pretty well, and they generally know that sleep is better for the sick than medicine. But it is not so well known that sleep is a wonderful preventive of disease—better than tonic regulators and stimulants.

DIPHTHERIA AND MANURE HEAPS.—M. Ferraud, *Lyon Medical*, traces the relation between manure heaps and rural epidemics of diphtheria. On one occasion the disease appeared the day following a general street cleaning. He argues that manure should be kept in closed wells of stone, glazed with bitumen, so constructed that the fluids may filter away from the solid matter.

DEATHS FROM BEING STRUCK BY FALLING METEORS.—Prof. Shepard, of New Haven, makes a statement which will surprise most persons. He says: "There have been several instances of deaths occasioned by meteoric stones. Two monks in different places were thus killed in Italy, and two sailors on shipboard in Sweden."

DOMESTIC ECONOMY.

TO MAKE SOFT SOAP.—Dissolve three pounds of potash in three quarts of water. Put the potash, in the lump, in an old saucepan, pour the boiling water on it, set it on the stove and leave it till it is dissolved; it may take several hours. Stir it about with a stick now and then, taking care not to splash it on you, put 3 pounds of clean fat in a tub or small barrel. When the potash is dissolved, pour on the fat, stir well with the stick and leave it. Next day pour a kettle (holding at least a gallon) of boiling water, slowly to the potash and fat, stirring thoroughly. Do this every morning till the soap is made, which you will know by it beginning to look like stiff jelly when cold, and losing all appearance of grease; then try it; if it seems too strong, or makes the hands rough, add more boiling water. The soap will be ready to use in about nine days after it is started.

REMOVING CAKE FROM TINS.—Supposing it to be a loaf of cake in a deep tin. First, you must butter the tin all around the sides and bottom, then butter the paper as well (cutting it to fit the tin exactly). Now, when the cake is baked, don't try to take it from the tin while hot; set it away until perfectly cold; then return it to the fire long enough to warm the tin through, then turn it upside down on your hand, and tap the edge of the tin on the table, and it will slip from the tin all right, and you can take off the paper without any injury to the cake.

ALMOND PASTE.—One pound sweet almonds, six bitter almonds, one pound finely sifted sugar, whites of two eggs. Blanch the almonds and dry them thoroughly; put them into a mortar and pound them well, wetting them gradually with the whites of two eggs. When well pounded, put them into a small preserving pan, add the sugar and place the pan on a small but clear fire (a hot plate is better), keep stirring until the paste is dry, then take it out of the pan and put it between two dishes until cold.

VELVET PUDDING.—Five eggs beaten separately, one cup of white sugar; beat well together, then stir in four tablespoonfuls of cornstarch dissolved in a little sweet milk; three pints of sweet milk; let it come to a boiling point, then stir in briskly the other ingredients, then let it boil until it becomes quite thick, remove it from the fire, pour into your baking dish. When nearly done, take the white of eggs, beaten to a froth with one cup of sugar, and pour over the top of the pudding.

APPLE FRITTERS.—Make a smooth batter of one-half pound of flour, three eggs and a half-pint of sweet milk; salt to taste. Cut one dozen large, juicy apples into slices, after peeling and coring them. Put the slices into the batter. Have ready a pan of equal parts of lard and butter boiling hot. Take the batter up in a ladle, allowing a slice of apple to each fritter, and drop into the hot lard. Fry brown, drain a moment, and serve with powdered sugar and nutmeg.

BOILED SQUASH.—Peel and slice the squash, removing the seeds. Lay in cold water half an hour, then put on the stove in enough boiling water, slightly salted, to cover it. Boil for an hour, drain dry in a colander, and mash and beat smooth in a wooden bowl. Heat again, stirring in a lump of butter the size of an egg and quarter of a cupful of milk. Season to taste and serve very hot.

COTTAGE PUDDING.—One cup of sugar, one tablespoonful of butter, one cup of milk, two eggs, two cups prepared flour. Cream the butter and sugar, add the whipped yolks of the eggs, the milk, the flour and the beaten whites. Bake in a brick-shaped mold well greased, and slice crosswise. Eat with either hard or liquid sauce.

APPLE-CUSTARD PIE.—Three cups stewed apples; one cup (nearly) white sugar; six eggs; one quart milk. Beat the eggs light, and mix the yolks well with the apple, seasoning with nutmeg only. Stir in the milk gradually, beating as you go on; finally, add the whites, fill the crust, and bake without cover.

CORN PUDDING.—Drain the liquor from a can of corn and chop the kernels very fine. Rub together a tablespoonful of butter and sugar, add a beaten egg and two cupfuls of milk. Stir the chopped corn into this, salt slightly and bake in a good oven for about half an hour.

DELICIOUS DISH OF APPLES.—Take two pounds of apples, pare and core them, slice them into a pan, add one pound of loaf sugar and the juice of three lemons; let them boil about two hours, turn into a dish, and serve with thick cream.

DANGER IN NICKEL-PLATED WARE.—An order has been issued in Lower Austria forbidding manufacturers and tradesmen to sell nickel-plated cooking vessels. It is stated that vinegar and other acid substances dissolve nickel; and that this, in portions of one-seventh of a grain, causes vomiting, and is even more poisonous than copper.

Our Subscription Rates.

OUR SUBSCRIPTION RATES ARE THREE DOLLARS a year, in advance. While this notice appears, all subscribers paying $3 in advance will receive 13½ months' (one year and six weeks) credit. For $1.50 in advance, six months and three weeks. Subscribers delinquent less than one year will be charged at the rate of $3 a year up to the time of paying, and will be allowed two months and an extra No. for each 50 cents paid in advance. In case any arrearages should occur beyond 12 months, $3.50 a year will be charged. All agents and clerks are required to adhere to these terms. No new names entered on the list without payment in advance. Our premium offerings are subject to these terms.

Advertising Rates.

The Week.

We give this week a collection of statistics and deductions concerning the agricultural achievements of the last year, which we trust will be acceptable to our readers both for present reading and for reference. The State has shown good growth during the year and has disclosed symptoms of awakening and enterprise which promise much for the future. The southern counties have still enjoyed the lion's share of those who come seeking homes, and a most remarkable advancement has been made in wealth and population. The incoming host has, however, shown a greater disposition to look over the whole State than in previous years, and here and there in the central and northern parts of the State the advance in development and settlement has been considerable. It is to be expected that the recent awakening at various northern points, and the efforts to make the upper parts of the State better known, will result in a wider distribution of home-seekers than has existed hitherto.

The rain problem is still in abeyance. Coming storms are heralded from the north, and, according to prognostications, there should be a change in the weather this week, as the trouble among the elements at the northern stations has been considerable. It cannot come too soon.

The Legislature is now at work, and bills are falling like the rain—we long for. Governor Bartlett was inaugurated and Lieutenant Governor Waterman installed on Saturday. In our next issue we shall begin our sketches of proposed laws on agricultural subjects, and shall expect to keep our readers informed on such matters during the session.

Railroads Subject to Government Control.

Last Monday the Senate proceeded to the consideration of the Interstate Commerce bill, and was addressed by Senators Beck and Cullom, in favor of the adoption of the conference report, and by Senator Stanford in opposition. Senator Stanford met the case squarely and with his acknowledged candor and ability. Among other things he said:

"Railroad companies are organized under the general laws of different States. They have no exclusive privileges. They are associations made by the general laws—laws of which every citizen or any number of citizens may avail themselves equally with those forming the railroad company. In the mere fact of associations they may exist entirely without the aid of the State. The association is as natural as it is for one man to call in his neighbors to help him raise his barn, or to roll a sawlog, or to any business not inconsistent with the rights of others. The State gives by virtue of the incorporation laws nothing to that incorporation. Whatever of capital or labor that is contributed to them is entirely private. The ownership of the labor and capital provided is private; as much so as the banker's ownership of his money, the farmer's ownership of his farm, the teamster's ownership of his team, and so on."

This simply means that railroad property is strictly private property, and, like all other private property, is not subject to Government control and supervision. If this proposition is conceded, it cuts up root and branch all such legislation as that contemplated in this bill. The position is certainly untenable. The fact that corporations of this kind are founded upon franchises—that is, an endowment of powers and privileges immediately conferred by the law-making power of the Government—shows conclusively that it enters into the very intention of the law that this class of property is to be kept in some measure within the control of the Government. That it is different in this respect from all other kinds of property. This is inherent in the very nature of the transaction. What is it? A contract with the Government in which the corporation agrees, in consideration of certain immunities, to build and run a road a certain period of time and enjoy its legitimate profits. Now a farmer never made a contract with the Government as to the opening and management of his farm. The house-builder, carpenter, merchant or shoemaker never thinks of plying his vocation under a grant of privileges from the Government. They are strictly private owners. There is no limit to the duration of their powers.

But when a corporation prays of a Legislature a grant of powers—whether by general or special statute makes no difference—to perform a certain work, as to build a road, telegraph, bridge or ferry, it concedes as a party to the agreement that it is about to handle a class of property that is not like any other property; that, in short, it is quasi-public property, and could not come into existence without public permission, and could not continue in existence were that permission withdrawn. What the State creates, the State certainly has the power, to some extent, at least, to control. Were that not so, the creature would be greater than its creator. The State does not by any law, general or special, build barns, houses, or sawmills. Were the State to extend any association doing this kind of business certain special immunities, then this class of business would cease to be exclusively private business and would be subject to Government control. Senator Stanford contends that the immunities and privileges granted to corporations are in consideration of the fact that their work is a public benefit. True, but how is the Government to secure a perpetuity of the benefit if it abdicates all right of control and supervision? What promised to be a public benefit might, under bad or unscrupulous management, become a public oppression. The Government never takes such risks. It cannot in the nature of things. The act would be suicidal.

This statement of the relation of railroad property to the public is the doctrine of the law as solemnly announced by the highest judicature of the nation in what is popularly known as the "Granger Cases." These decisions should have put the question to rest. They are not ancient, mythical and traditional authority, black-letter law, or decisions rendered in an inchoate state of the railroad systems. They were rendered only about 10 or 11 years ago. The issue was then squarely made and elaborately argued. No court ever existed that was more perfectly free from all suspicion of bias and prejudice.

And it cannot be seriously alleged that the doctrine announced in the aforesaid cases leads in the least degree to the confiscation of this class of property. No one in his sober senses ever doubted for a moment that railroad property has been built and is owned by individuals, and that it should be as sacredly protected in all its legitimate uses as any other individual property. Hostile legislation may make this sort of property utterly valueless to the owners, but all will agree that such legislation would not only be impolitic but absolutely unjust. But there is not a word, not a shadow of a hint, in these cases to warrant such a conclusion. "A good government," says Chief Justice Waite in discussing the leading Granger case, "never puts forth extraordinary powers except under circumstances which require it. That government is the best which, while performing all its duties, interferes the least with the lawful pursuits of the people."

That there is a liability of abuses growing out of the act that casts upon these corporations one of the great functions of government, is not strange in a world where every one works for his own personal interests. That there have been abuses to some extent is evidenced by the fact that there is scarcely a State that has not sought, by direct legislation or the creation of boards of commissioners, to check or prevent such evils. And what has been done by the States in lightening or making uniform and impartial the burdens of the people without crippling the usefulness of these roads, is what is now sought to be attained by the bill before Congress over a wider expanse of territory.

Irrigation at Sacramento.

The subject of irrigation is coming up at Sacramento in a more temperate and therefore in a more promising condition than at recent sessions of the Legislature. It is reported that up to Wednesday four bills, each of considerable length, had been introduced in the Assembly. One by Mr. Wright, of Stanislaus, provides for the organization and government of irrigation districts, and for the acquisition and distribution of water for irrigation purposes. It provides for the application of the law of eminent domain for the condemnation of the existing water rights, and is in entire harmony with the recent decision of the Supreme Court on the irrigation question. It also provides a system of elections and assessments and the collection of revenues necessary to carry out the provisions of the Act.

Mr. Butler, of Tulare, proposes to add a new section to the Political Code defining riparian rights.

Mr. Shanahan, of Shasta, has a bill intending to do away with the Supreme Court decision, and provides for the distribution of water in just proportions.

Mr. Bost, of Merced (whose name was incorrectly spelled "Boot" in our legislative list last week), has a bill providing for an irrigation commission, consisting of the Governor, Attorney-General, Surveyor-General and State Engineer, which shall divide the State into irrigation districts and organize the same with a view to the storage and distribution of water.

THE CITRUS SHOW AT CHICAGO.—Telegrams from Chicago announce that the managers of the Citrus Fair had decided to close the exhibition Wednesday night. All the surplus fruit had been used in replenishing the stock, which could not remain presentable much longer. Sealed bids had been invited for the entire lot of fresh fruit. The raisins, dried fruit, etc., were to be turned over to the Southern Pacific Immigration Commission for a permanent exhibit, and the parties in charge expected to be all on their homeward way by Thursday.

The Co-operative Bill.

Senator Stanford has prepared a bill to promote co-operation among workingmen that is worthy of serious consideration. It is no novel invention; can hardly be called an attempt at experimental legislation. It is modeled on the plan of the English Co-operation Act, which passed in 1852, and has from time to time been greatly improved by amendments. The principle has worked successfully in England. The wholesale and retail stores conducted on this plan amounted in 1883 to 1304, with a membership of 680,165. There are also numerous associations of mechanics and manufacturers along the same line. The same principle has struck root in France, though not quite so extensively. At the last report there were 74 co-operative societies in France, chiefly at Paris, consisting of jewelers, carpenters, furniture-workers, masons, painters, saddlers, tailors and other branches of mechanics and handicrafts. Many of these are improved and strengthened by incorporating the fraternal principle of insurance against sickness and death.

The principle involved in this bill may in some degree help to solve the most troublous problems of the age. We have come into an era when evolution pauses to adjust itself to the new environments. The feudal age of vassalage has been succeeded by a new class of breadwinners in the shape of wage-receivers. Labor no longer a fixture of the soil, a piece of the real estate, has gone into the world's market as a commodity for sale. In dense populations it is crowded, restless, discontented, and is steadily growing more conscious of its power and more bitter in its class prejudice. This is undoubtedly a transitional state of things that time will solve, as it has many other perplexing problems, but in the meantime and as tentative to such solution, it is clear the day has dawned to study the questions of co-operation and equalization of burdens. The issue is inevitable and must be met. In a country where the men who labor are free to think and utter thoughts, and where the law-making power is largely in their hands, it cannot be kept down. As well attempt to hold back the swell of the sea with the palm of the hand or stop the rampages of a volcano with magnetic passes. It cannot be adjourned to a more convenient season, nor soothed with pleasant embrocations. The question is upon us, whether there is in theory a common good and whether labor constructs and maintains society for its own degradation. Now, whatever measure tends in the least degree to throw light upon this dark and apparently threatening question is too precious to the human weal to be lost. It may prove to be the tiny mustard seed which grew into a great tree, where the fowls of the air came and lodged.

It is true that the co-operative principle has not so far been a success in this country. But there is a cause for it. The New Harmony Community, established by Robert Dale Owen in Indiana, and the Brook Farm in Massachusetts, and other experiments of a similar character, were tainted with communism. There is no redemption for society in that direction. To think so is akin to the craze that seeks for perpetual motion or the art of turning cobblestones into diamonds. The desire for personal ownership of property is an ineradicable instinct and will last as long as human nature remains as it is.

Just why this bill should have a clause exempting co-operative societies from the strict construction of the law is not apparent. It is under such a construction we all make contracts and do business; why this special favoritism? Then this bill is for the purpose of encouraging the formation of co-operative associations in the District of Columbia. This is proper enough, but it should be amended so as to confine the operations of such societies to that district. The reason is obvious. An association formed in the District of Columbia under its operation would be under no territorial limitation. It could do business anywhere in the United States. The legal residence would be in the District. Now, as this bill clearly contemplates the co-operation of capital as well as labor, suppose an association should go into the telegraph and railroad business. What would be the result? It would not be subject to State control and could always play the dodge of transferring its litigations to the federal courts, causing more delay and greater expense. The principle is a beneficent one, and cannot some measure be devised by which its blessings will fall like the sweet sunlight upon the rich and poor over all these broad lands?

Agricultural Review.

Leading Articles of California Production in 1886.

[Written for the RURAL PRESS by J. R. F.]

The records of the agricultural production of California for 1886 contain many facts of general interest, and no doubt a condensed compilation of statistics, with deductions therefrom and sketches of tendencies in the course of trade, etc., will be found acceptable to the industrial reader and to others who take interest and pride in the growth of the State. It is to be regretted that returns for the aggregate production of the State in some important articles are not available, and in lack of them the receipts of such produce in San Francisco must still be relied upon as an indication of amounts.

Wheat.

The market opened the year at a decline on December prices. The general tendency was lower up to April, when a sharp decline set in, owing to exaggerated crop reports being set afloat. The decline was continued up to June, when a steadier feeling set in, owing to the RURAL PRESS publishing a crop report, with complete returns from each county (and this estimate has been proven to be only about 50,000 tons in excess of the actual out-turn), which made the crop not more than one-half of the other published reports. In July the lowest prices were touched, since when there have been advances with setbacks, until at the close of the year No. 1 shipping sold up to $1.60 per cental—an advance of fully 35 cents per cental on July's opening sales. The causes which conduced to make the advance, this paper gave in July, and, as other facts were obtained, they were given from time to time, so that the RURAL PRESS patrons have themselves to blame if they sold at a sacrifice. The big crop reports sent a large fleet of vessels to this port, which sent freights down. The wheat crop would have been very large, had it not been for the hot north winds in June that almost destroyed the crops in Colusa, Butte, Sutter, Yolo and other central counties. The year closed on a very strong market under light stocks in this State, at the East and throughout the civilized world. The outlook for good prices for 1887 could not be better.

The receipts at and exports from this port last year were as follows in centals:

	Receipts.	Exports.
January	1,133 443	1,168,233
February	1,714,520	1,810,546
March	1,300,445	1,669,553
April	1,139,721	1,036,035
May	1,187,823	829,564
June	811,500	1,156,720
July	702,775	754,422
August	1,256,058	853,080
September	2,102,995	1,841,998
October	1,369,763	1,255,766
November	1,940,979	1,888,474
December	1,227,013	1,567,764
Totals	15,887,037	15,832,155
1885	11,853,200	11,727,895

The exports of flour last year aggregated 1,108,754 bbls, which reduced to wheat gives 3,318,262 ctls, making a total export for the year of 19,150,417 ctls, equal to 957,526 short tons. The exports of wheat by sea last year were 635,748 short tons to Great Britain and 96,804 short tons to France. Of the latter shipments, all were made the last half of the year, excepting 6605 short tons. Of the flour exports, 469,385 bbls went to Great Britain, 421,498 to China and the remainder to Japan, Hawaiian islands, British Columbia, Society islands, Central America, Mexico, Panama, Australia, Saigon, Siberia, etc.

Barley.

The market ruled very strong and high up to June, owing to light supplies and a very large increased consumption owing to more railroad construction and a larger number of transactions in other trades. Published estimates of a very large crop in this State, placed at 900,000 tons, operated against the market as harvesting commenced, notwithstanding the RURAL PRESS' estimate in June was not over 400,000 tons. Prices in June opened low for new and fell below 90 cents for No. 1 feed, but when the crop was found not to be even 400,000 tons, together with a large consumptive and export demand, prices began to recover, which were still further advanced by dry weather and a very large short interest. The market closed the year very strong at $1.15 to $1.17½ for No. 1 feed. The supply held by farmers on farms is less than on January 1, 1886.

The receipts at and exports from this port last year were as follows in centals:

	Receipts.	Exports.
January	34,180	25,866
February	52,185	12,350
March	42,551	11,281
April	88,859	5,571
May	38,545	5,864
June	125,695	9,327
July	197,284	79,161
August	295,580	31,734
September	425,657	120,991
October	429,668	154,907
November	257,561	112,923
December	182,256	87,477
Totals	2,170,071	661,462
1885	1,014,490	185,297

There was also shipped overland 249,372 ctls, against 92,760 ctls last year. Of the exports, 391,151 ctls were exported to Great Britain, 8103 ctls last year. There was received from Oregon, etc., last year, 28,318 ctls, which was not included in the tabulated receipts.

Oats.

The market, under light supplies and a good demand, ruled high and very strong up to June, when an easier feeling set in, resulting in lower prices in July, which was followed by further declines into August. From August the market began to improve, with a slow increase in prices, which brought about higher rates at the close of the year. The crop of the coast is less than that of 1885, but the importation of Nebraska oats operated against values to some extent, notwithstanding their inferior quality.

The receipts last year were as follows in centals:

	Ctls.		Ctls.
January	769	July	17,372
February	940	August	36,035
March	1,360	September	18,300
April	2,103	October	19,317
May	4,660	November	5,980
June	3,177	December	12,322
Total			122,335
1885			157,895

The receipts from Oregon, etc., last year aggregated 379,957 ctls.

Corn.

The market ruled strong and high, under light supplies, up to harvest, since when lower prices have ruled. Heavy importations of western had to be made so as to meet the consumption, but, notwithstanding the large imports, September found us with only moderate stocks. Since harvest, low prices have prevailed; but the year closed with a steadier tone.

Receipts of California corn last year were as follows in centals:

	Ctls.		Ctls.
January	10,206	July	6,378
February	10,465	August	12,741
March	15,604	September	21,666
April	16,329	October	18,879
May	46,475	November	16,329
June	25,858	December	26,655
Total			227,785
1885			57,509

Rye.

The market has varied very little, owing to the light crop and still lighter consumption.

The receipts last year aggregated 24,424 ctls, against 61,301 ctls in 1885.

Buckwheat.

The market held steady throughout the year, due to the demand and production being about equal.

The receipts of last year aggregated 7688 ctls, against 2464 ctls in 1885.

Bags.

The market opened dull, weak and inactive, but under a concentration of stocks an advance began to manifest itself by March, which became more marked by published exaggerated statements of the prospective cereal crops. Prices were by May doubled, but as the true condition of the crops became known, together with freer outside selling, the "bag pool" had to lower prices, which by July were fully one-third less than the highest prices touched. Since then there was a gradual sagging to the close of the last month of the year. The market closed fairly steady at the lower prices

Hay.

The market ruled very high up to June under light stocks and a good demand. In June an easier feeling set in, which, as supplies came forward more liberally, resulted in lower price; but still choice to extra choice was well maintained by reason of the light crop of these grades, notwithstanding the crop of fair to good was the largest known for years. Dry weather and a large increased consumption kept prices fairly steady toward the close of the year, with a strong closing in December.

The receipts of hay and straw last year were as follows in tons:

	Hay.	Straw.
January	5,115	207
February	7,769	234
March	6,472	177
April	5,659	259
May	6,113	245
June	9,215	201
July	11,832	341
August	15,707	588
September	10,455	1,013
October	9,991	383
November	5,526	251
December	5,528	359
Totals	99,382	4,558
1885	79,779	3,634

Beans.

The receipts of beans last year were as follows in sacks:

	Sacks.		Sacks.
January	30,278	July	6,707
February	12,589	August	8,104
March	20,419	September	13,114
April	23,004	October	56,689
May	10,600	November	150,897
June	9,864	December	116,070
Totals			458,335
1885			330,600

Potatoes.

The market has held to strong and good remunerative prices throughout the year. The crop of 1886 was considerably below that of 1885, with the quality generally poor. These combined operated to maintain values, the last half of the year, with a higher range in December for the more choice varieties. Utah and also Oregon contributed to this market but slightly, owing to the light supplies to draw from in those markets.

The receipts of potatoes last year were as follows in sacks:

	Sacks.		Sacks.
January	82,846	July	75,687
February	81,902	August	74,342
March	77,146	September	94,918
April	49,344	October	103,661
May	59,828	November	97,377
June	73,617	December	94,181
Total			964,849
1885			923,629

There was also received from Oregon 116,734 sacks, and about 14,500 sacks from Utah.

Onions.

High prices and a good demand last season stimulated production, which gave a large crop for 1886, causing prices the last half of the year to rule low, but with a stronger closing under lessening supplies and a good demand.

The receipts of onions last year were as follows in sacks:

	Sacks.		Sacks.
January	5,746	July	11,912
February	4,556	August	13,979
March	3,041	September	18,354
April	2,723	October	15,264
May	8,914	November	9,020
June	11,943	December	9,063
Total			114,515
1885			83,874

Receipts from Oregon aggregated 4096 sacks.

Butter.

The market opened the year strong, but, under the best of pasturage, the production soon outran the consumption, which, as the season advanced, resulted in a lower range of values. Prices fell to such low figures that heavy packing was the result. For a time these steadied values, only to be followed by another drop when packing stopped. The stock of solid butter, and also pickled butter, was never known to be so large as they were at the close of the year, and this, too, in the face of a large increase in the consumption. The heavy stock caused low prices to obtain at the close, with a decided selling pressure setting in.

The receipts of butter last year were as follows in pounds:

	Californian.	Eastern.
January	516,600	56,400
February	749,500	47,200
March	1,027,400	62,200
April	1,115,000	11,800
May	1,208,900	38,400
June	1,072,100	105,700
July	728,600	73,400
August	708,300	101,500
September	973,600	54,500
October	943,900	48,600
November	494,200	16,500
December	412,400	11,400
Totals	9,955,500	627,800
1885	8,019,600	894,515
1884	10,780,300	535,250

From Oregon, receipts aggregated 53,400 lbs.

Cheese.

Receipts last year were as follows in pounds:

The market ruled strong throughout the year, with a strong closing, owing to a lighter production and a good demand.

	Californian.	Eastern.
January	178,100	49,700
February	207,800	31,300
March	424,500	68,700
April	523,800	33,600
May	568,000	44,000
June	424,500	18,600
July	427,500	15 000
August	336,500	43,800
September	357,100	49,300
October	294,400	80,000
November	247,800	77,000
December	113,400	37,100
Totals	4,103,400	548,100
1885	3,657,500	394,000
1884	6,440,300	475,510

From Oregon, 35,700 lbs were received.

Eggs.

By reason of low freights from the East, the receipts of western eggs were very heavy throughout the year, causing prices to rule low. Even at the low prices, values favored buyers, excepting during the hotter months, when choice or gilt edged eggs were in active demand and commanded quite an advance. The market closed the year weak and in buyers' favor.

Receipts last year were as follows in dozens:

	Californian.	Eastern.
January	127,200	22,500
February	185,140	.....
March	260,089	65,071
April	210,810	332,180
May	204,730	420,190
June	138,550	123,420
July	127,790	190,370
August	112,170	137,110
September	79,640	275,020
October	63,790	254,030
November	60,380	278,910
December	96,750	94,040
Totals	1,667,030	2,192,900
1885	2,778,281	1,774 515
1884	2,980,254	1,610,010

Receipts from Oregon aggregated 47,820 dozen.

Poultry.

The market for all kinds of poultry averaged higher than in 1885, with choice, well-conditioned fowls always in demand at an advance on the highest quotations. The consumption is said to be all of 25 per cent more than it was in 1885.

Live-Stock.

Owing to good pasturage and a mild winter, there were throughout the year heavy offerings of beef cattle and mutton sheep, with the prices averaging below those of 1885. The low prices even ruled up to the close of the year, which is something never before known. The increase in the number of cattle and sheep is said to be quite large. Hogs ruled strong up to harvest, since which time a lower range of prices have obtained in sympathy with lower prices for hog products, and also a free selling pressure. Prices ruled the last half of 1886 lower than for several years past. In horses there has been more trading, with an advance in prices toward the close of the spring, due to a good demand for draft horses for farm and also railroad work. In this city the demand has ruled good for single-footers and general utility horses, with good prices obtained. The year closed weak for draft horses, but firm for matched horses, general utility horses and single-footers.

Hops.

Under the low freights overland that obtained last spring, all the hops on this coast were sold and sent East. Considerable were sold as low as one cent per lb. As summer approached values began to appreciate, owing to reports of heavy damage to the crop in New York, and also a lighter crop on this coast and in Europe; and as these reports became verified, quite an impetus was given to values, sending them up to high figures for both old and new for future delivery. Many parcels bought in this market at from 1 to 2½ cents per lb. were sold at from 9 to 15 cents per lb. The crop of 1886 was placed at, on an average, from 22½ to 25 cents per lb. Up to the close of the year fully 45,500 bales were marketed, leaving only about 15,000 bales as a carry-over. The consumption is increasing quite steadily.

Seeds.

The mustard crop was unusually heavy, but the bulk was marketed at the East at fair prices. The market closed steady. In other seeds the demand proved less than in 1885, causing a lower range of values, with a larger carry-over stock at the close of the year.

Fruits.

The crop of small fruits was very large, but canners were liberal buyers, which kept prices fairly well maintained. Of the larger fruit, the crops were all large, excepting apricots. Owing to the light crop, apricots were bought up and prices advanced to high figures. The crop of cherries, peaches, plums, prunes, etc., was quite large, and, notwithstanding free shipments to the East, prices ruled, on an average, low. The crop of apples was very large, causing low prices to obtain. Considerable quantities of the pears and apples were wormy, and had to be sold at concessions to effect sales. The grape crop was unusually heavy, allowing heavy shipments to the East. At times our market, under heavy receipts, became glutted, and no reasonable offer was refused by dealers, so as to clean up.

The low freights to the East admitted of the shipping of oranges on a liberal scale, causing the market to be cleaned up at an early day at higher prices. The crop this year was larger than in 1885, but owing to a better outlet, prices are better maintained. The year closed the market in better shape than did 1885.

The overland shipments last year aggregated 22,793,989 lbs. of green fruits and 5,830,200 lbs. of dried. Of the green fruits, 19,413,700 lbs. were shipped from Sacramento and 2,211,200 lbs. from San Jose. Of the dried fruits, San Francisco shipped 327,680 lbs. and San Jose 1,861,800 lbs. While the rates on fruit to the East have been reduced since the opening of this trade, they are still considered rather exorbitant. The season's rates were as follows: Passenger time to New York, $800 per car; slow freight, $400; passenger time to Chicago, $600; slow freight, $300. The Sacramento Horticultural Convention, through a committee appointed for the purpose, endeavored to have the rates reduced as follows: Passenger train time to New York, Philadelphia and Boston, $400 per car; passenger train to Chicago, $300; slow freight to Chicago, $200; and that 10 cars comprise a $200 fruit train. While such sweeping reductions, it was stated, could not then be entertained, there was at the same time expressed a willingness to attach fruit cars to regular passenger trains as far as Chicago at $500 per car, or to carry freight at $250 per car. Further than this, the statement was made it would be necessary to get the concurrence of the Eastern lines. Subsequently, the Committee on Transportation appointed by the fruit-growers at the State Convention received information to the effect that the Union Pacific had agreed to pro rate on fruit transportation on any terms agreeable to the Southern and Central Pacific. Mr. Huntington then favored the $300 rate to Chicago, and $400 to New York, fast time, and 10-car trains. Arrangements could be made on that basis at San Francisco. These concessions on the part of the railroad companies will undoubtedly encourage fruit-shippers to largely increase their business next season with the Eastern markets.

Dried Fruits and Nuts.

Low freights to the East last spring allowed heavy shipments of dried fruits and nuts, which cleaned the market up of all kinds, advancing prices for the better kind, so that the new crop

came in on a bare market and at good prices. The crop of dried fruits, excepting prunes, was lighter than last year, which, with heavy orders from the East, caused higher prices to obtain than for several seasons past, with a strong closing at the close of the year. The nut crop, taken as a whole, was lighter than in 1885, which, with a good demand, caused higher prices to rule. Free importation of Chili walnuts operated somewhat against this variety, but at the close prices were stronger. The honey crop was larger and of better quality than that of 1885, but owing to stocks being well cleaned up, combined with a fair export demand, prices did not recede to the extent that it was claimed they would. The year closed on a dull but strong market, with light stocks and still lighter supplies to draw from. Beeswax ruled fairly steady throughout the year. In raisins there was a very large increased pack, with the quality very considerably above any former season. Owing to the better reputation of California raisins, there has not been any difficulty in working off the product at good prices, when compared with former seasons. Eastern commercial papers claim that California raisins will soon outrank the foreign and sell for more money side by side. The year closed on a fairly firm market, both here and at the East.

The following statistics and remarks relating to the dried fruit, raisin, prune, almond, walnut, peanut, comb and extracted honey crops of California for the year 1886, are from the annual circular of George W. Meade & Co., of this city.

THE PRODUCT OF 1886.

	Lbs.
Honey, extracted	6,000,000
Honey, comb	800,000
Beeswax	80,000
French Prunes	2,000,000
German Prunes	125,000
Apples, sun-dried	300,000
Peaches	750,000
Plums	500,000
Pears	50,000
Grapes	175,000
Apricots	150,000
Nectarines, sun-dried	30,000
Figs, sun-dried	150,000
Apples, evaporated	500,000
Apricots, evaporated and S. D. (bleached)	450,000
Peaches, evaporated (peeled)	100,000
Peaches, evaporated (unpeeled)	200,000
Plums, evaporated	85,000
Nectarines, evaporated	25,000
Walnuts	750,000
Almonds	600,000
Peanuts	275,000
Raisins, 20-lb. boxes	703,000

We estimate the total raisin product of 1886 at 703,000 boxes, and apportioned as follows:

	Boxes.
Fresno District	225,000
Tulare District	8,000
Riverside District	185,000
Orange and Santa Ana District	160,000
San Diego District	25,000
San Bernardino Co. (outside of Riverside District)	10,000
Yolo and Solano	75,000
Scattering—Yuba, Butte, Sacramento, etc.	15,000
Total	703,000

The raisin shipments overland for the first 11 months in 1886 were as follows in pounds:

From	Lbs.
San Francisco	1,479,230
Sacramento	1,712,070
Stockton	1,466,740
Marysville	93,470
Colton	1,019,960
Los Angeles	5,832,600
Total	11,604,070

Oranges.

The shipments of oranges out of the State overland were as follows in pounds:

	Lbs.
December, 1885	44,670
January, 1886	1,152,920
February	6,342,100
March	4,700,810
April	7,050,380
May	5,665,900
June	1,479,070
July	103,130
Total	26,538,980
1885	23,335,516

Of the shipments last year 21,360,320 lbs were billed from Los Angeles and 5,137,210 from Colton.

Vegetables.

The tomato crop was very large, but canners bought freely to fill heavy contract orders. The crop of other vegetables was quite large, but the consumption was free, which kept prices from going below 1885 prices.

Wine.

J. Gundlach & Co., of this city, have estimated the yield of wine in this State for 1886 at 19,500,000 gallons, credited to the following counties:

Counties.	Gals.
Napa	4,800,000
Los Angeles and San Bernardino	4,200,000
Sonoma	3,100,000
Fresno and San Joaquin	2,000,000
Santa Clara and Santa Cruz	1,700,000
Contra Costa and Alameda	1,200,000
Sacramento, Tehama and Solano	2,000,000
Placer, Yuba, Yolo and El Dorado	500,000
Total yield	19,500,000

About one-seventh has been converted into brandy. The season was favorable for a good return, and the result was up to the general expectation. Messrs. Gundlach & Co., in a circular issued by them, state: "The production of sweet wines has been much restricted, owing to low prices. Ports, sherries, etc., will therefore not be plentiful. The proportion of red and white wine will be as two to one. The abundant crop of light wines of 1884 has gradually found its way into the hands of the trade, and they seem to be well appreciated. There are no stocks of any consequence of 1884 and 1885 in growers' cellars. San Francisco merchants and shippers control the bulk of the stocks. Shipments overland and by sea last year were 5,217,246 gallons, of which quantity 5,063,413 gallons went to the Eastern States."

Wool.

The following review of the wool trade for the past year has been furnished by George Abbott, of the Wool Exchange:

Spring Clip Quotations—

Choice Northern (Humboldt and Mendocino)	22@25
Good Northern (Red Bluff, etc.)	19@21
Defective Northern	15@17
Good to Choice San Joaquin	15@18
Good San Joaquin (12 months)	15@17
Southern Coast	12½@15

Fall Clip Quotations—

Choice Northern (Humboldt and Mendocino)	20@22
Good Northern	15@18
San Joaquin	14@16
Heavy Northern and Southern	11@13

Oregon Quotations—

Choice Valley	23@25
Choice Eastern	20@23
Good Eastern	18@17

Freights During the Past Year—
Grease wool ½@1c per pound by rail.
Grease wool 1c per pound by sailing vessel.
Grease wool $3@5 per ton by steamer.
Scoured wool ½@1½c per pound by rail.
Scoured wool $3@5 per ton by steamer.

Stocks are mostly Fall wool from Northern counties.

WOOL PRODUCTION.

Receipts at San Francisco.	Bags.	Receipts at San Francisco.	Bags.
January	282	July	8,100
February	35	August	4,969
March	2,111	September	12,199
April	15,140	October	17,469
May	16,655	November	3,516
June	12,832	December	932
Total			94,240

	Pounds.
Spring wool, 59,124 bags	18,328,440
Spring wool shipped from interior	4,984,330
Total spring production	23,312,770
Fall wool, 35,116 bags	11,763,860
Fall wool, shipped from interior	1,734,630
Total fleece wool	36,811,260
Pulled wool shipped from San Francisco and interior	1,697,900
Total production of California	38,509,160
On hand December 31, 1885	2,000,000
Received from Oregon, 21,565 bags	6,469,500
Foreign wool received, 493 bags	246,500
Grand total	47,225,160

EXPORTS.

Per rail, including shipments from interior	31,073,520
Sailing vessels	499,681
Steamers	3,011,249
Total shipments	34,583,450
On hand December 31, 1886, about	4,500,000
Value of exports	$5,500,000

N. B.—Difference between receipts and exports arises from consumption of local mills and wool on hand awaiting shipment in the grease or scoured. Foreign wool is chiefly from Australia in transit to Eastern markets. The weights of above are gross. The tare on bags received is 3 lbs. each.

PRODUCTION FOR A SERIES OF YEARS.

	Lbs.		Lbs.
1854	175,000	1871	22,187,200

Goats for Milk.

EDITORS PRESS:—Please inform me what kind of goats are the best for milk, and where they can be had. OLD SUBSCRIBER.

Who has goats for milk and who will write us about them?

A FINE FLOODGATE.—Our friend L. F. Moulton, of Colusa, has been building a two-arched floodgate, 12 feet wide, which he regards as the finest in the State. He expects it to carry water enough, six feet deep, from the river just below Butte City, to irrigate throughout the year a vast extent of outside land belonging to himself and others. As it is in a very deep slough, its completion will involve but a small outlay.

OREGON WHEAT FIELDS never looked better at this time of year than they now appear—so says the *Willamette Farmer* of the 7th instant.

THE VINEYARD.

Experiments on Methods of Fermentation.

University Experiment Station, Bulletin No. 63.

In view of the great interest attaching to the determination of the effect of various methods of fermentation upon the resulting wines, a series of experiments with one and the same kind of grape, treated differently both in respect to temperature and the appliances used, was carried out at the Viticultural Laboratory with the results given below.

These experiments were all conducted within the limits of temperature adapted to "high fermentation," since the question of how best to manage the fermentation at the prevailing vintage temperature of California is the one having the greatest practical interest. As no means were at hand for maintaining a temperature sufficiently low for "low fermentations," proper, these were omitted, but it is intended to arrange for such experiments next season.

It should be distinctly understood that these few experiments were selected from the large number of possible ones, in order to test the influence of certain conditions upon the composition and quality of red wines, so as to deduce therefrom principles that shall apply to large as well as small-scale practice, when allowance is made for the known difference of circumstances in each case.

The grapes used are a very good article of second-crop Zinfandel, courteously donated by Mr. J. Gallegos, of Mission San Jose. About one and one-sixth tons were sent, in University basket crates. They arrived in excellent condition; the berries were rather small and the bunches quite loose, but thoroughly sound; taste agreeably sweet, and juice abundant. The composition of the latter was as follows:

Solid contents by spindle	21.05
Sugar by copper test	19.75
Acid	.65
Ash	.27

Nine different samples were fermented, under the following conditions:

(A.) In a hot chamber kept at a temperature ranging from 98 degrees to 102 degrees, two batches of about 63 pounds each; one (No. 557) left entirely open in the tub; the other (No. 556) covered with a "floating top" that rose and fell with the pomace, screening it from access of air. Both were subjected to "foulage" or stirring.

(B.) In a room kept at a temperature ranging from 72 degrees to 75 degrees: five 50-gallon tanks, each charged with about 230 pounds, nearly filling the tanks, and arranged as follows:

No. 558. Mash put in in three successive portions, kept separate by a lattice framework wedged in place, thus forcibly keeping the pomace submerged and divided into three separate portions—according to Perret's system; the uppermost frame being about two inches below the surface of the must before fermentation. Tank covered.

No. 559. Mash put in at once and the pomace kept submerged about two inches by means of a single Perret's frame, as practiced to some extent at Fresno and elsewhere; no cover.

No. 560. Mash left uncovered aad subjected to frequent "foulage" or stirring, at least three times a day, during fermentation; a common French and Californian practice.

No. 561. Mash covered with a "floating cover," rising and falling with the pomace, any froth on upper side being washed off; stirred three times a day; a French method, and adopted at the Viticultural Laboratory.

No. 563. Grapes put in whole, stems and all, to be gradually crushed by means of a cross-peg stirrer, used energetically three times a day; no cover. A Burgundy method, used at several California wineries; known as "Morel process."

No. 564. A tub charged with about 140 pounds of mash, and then left to itself, cap, vinegar-flies and all; without stirring or cover; the old Californian, or "go-as-you-please," method.

(C.) In the cellar of the laboratory kept at a steady temperature of 62 degrees.

No. 562. Fifty-gallon tank charged like the rest with 230 pounds of grape mash, provided with a "floating cover," and stirred three times daily.

In all cases the temperature was ascertained thrice daily; during the hight of fermentation every few hours; and in the tanks provided with frames the temperature of the top liquid, and of the pomace beneath each frame, was taken separately, in order to follow the exact course of fermentation. Similar observations were made every morning in the tanks subjected to stirring, so as to ascertain the temperature of the top and bottom layers of the pomace cap formed during the night, and that of the liquid beneath.

The details of the fermentations, however instructive, are too lengthy to be given in this place, and will be found fully recorded in the forthcoming report for the year 1886. It need only be said that while No. 556, fermenting at 100°, went dry within 48 hours, No. 562, at 62°, required ten days. Of the rest, No. 560, the open tank subjected to frequent stirring, went through most rapidly and energetically.

Composition of the Wines.

The table below shows the composition of the wines resulting from the several fermentations. They were all analyzed, and their color determined, within a few days after pressing, the murk being filtered for the purpose.

Composition of Wines Produced by Different Methods of Fermentation.

Number.	SAMPLE.		Alcohol. By Weight.	Alcohol. By Volume.	Acid as Tartaric.	Tannin.	Color. Intensity.	Color. Tint.
556	Foulage, with floating cover	T. 96—100	7.78	9.73	.49	.14	15.4	purple-red
557	Foulage, without cover		7.78	9.73	.59	.13	12.4	purple-red
558	Three Perret's Frames		7.76	9.73	.49	.11	30.0	purple-red
559	Single Perret Frame		7.23	9.00	.51	.10	27.8	purple red
560	Foulage, no cover	T. 72°—75°	7.28	9.72	.65	.10	46.4	purple-red
561	Foulage with floating top		7.28	9.73	.53	.12	47.6	purple-red
563	Morel Process		7.16	8.93	.97	.13	47.6	purple-red
564	Old style, no cover nor foulage		7.06	8.85	.56	.12	40.6	purple-red
562	Foulage and floating top. T. up. 62°		7.78	9.73	.56	.12	34.1	purple-red

As regards, first, the *alcoholic contents* of the several wines, it will be noted that the same percentage was obtained in six out of the nine; while three, viz., Nos. 559, 563 and 564, corresponding respectively to the single-frame, Morel, and "old-style" processes, show a deficiency which does not differ widely for the three, being not quite one per cent.

In the single-frame process, a relatively thin layer of liquid was exposed to the air, constantly agitated by the gas coming from below, and heated by its position just over the hot cap. The alcohol simply evaporated from this isolated portion of the wine, and where this mode of fermentation is practiced on the large scale I have sometimes found this layer so warm that toward the end of the fermentation the bulk of its alcohol was gone and it had a vapid, flat taste, often more of vinegar than of alcohol.

In the case of the old-style process, also, it is easy to see where the loss of alcohol occurs. It is here the hot pomace cap, offering a large surface to the air and kept drenched with the fermenting liquid by the bubbling up from below, which assists the evaporation. That the latter is accompanied by its transformation into vinegar is apparent to the nostrils so soon as the first violent stage of the fermen ation is past.

In the case of the "Morel process," the cause of the loss of alcohol is not so obvious. It must be partially accounted for by the abundant stirring and high temperature; but it is possible that from some cause a part of the sugar may have been converted into some other compound than alcohol.

A somewhat unexpected result is the fact that the two hot fermentations (556 and 557) yielded the same amount of alcohol as those fermented at a much lower temperature. The obvious explanation is, that the short duration of these fermentations balanced the influence of the high temperature as compared with those in the slower fermentations, in which the opportunity for evaporation lasted longer. It will be highly interesting to compare, hereafter, the other products formed alongside of the alcohol in the three sets of fermentations.

As regards, next, the *acid* of the several wines, it is not unexpected to find that the open *foulage*, No. 560, on the one hand, and the Morel process on the other, have given the highest figures; the one because of the constant access of air, the other from the same cause, in addition to the extraction of acid from the stems.

The lowest figure for acid (.49) is given by Nos. 556 and 558, the hot fermentation with cover, and by the one with the three submerged frames. In the case of the latter this was to be looked for, and is precisely one of the chief advantages claimed for Perret's method. In the case of the former it is somewhat unexpected, and is the more instructive in contrast to No. 557, the hot fermentation in which no cover was used, and in which the acid is one pro-mille higher. Almost precisely the same difference occurs in the fermentations made at the lower temperature, one with the floating cover on (No. 561), and the other (No. 560) without cover. The beneficial influence of the cover in preventing the formation of acid during fermentation is therefore placed beyond question.

It should, however, be added, that in none of the fermentations made, there is at this time (Nov. 24) a notable amount of volatile (acetic) acid. This is true even of No. 564, the "old-style" one, in which the odor of vinegar was abundantly obvious before pressing. It shows the odor of vinegar plainly in boiling, but the amount is at present less than five thousandths of one per cent.

It is somewhat remarkable that the fermentation No. 562, made at the lowest temperature, should yield a relatively high proportion of

acid, exceeding that found in the fermentation made under the same conditions at a higher temperature. Whether this is to be accounted for by the longer duration of the low-temperature fermentation, remains to be investigated.

Considering, next, the matter of *tannin*, we note at a glance the influence of the high temperature in aiding a complete extraction. The two hot fermentations, Nos. 556 and 557, have given the maximum of tannin, despite their short duration; more even than in the case of the tank with diligent open *foulage*, and as much as the Morel process, stems and all, which was continued for 11 days; the effect in this case is so marked as to leave no doubt of the influence of this factor, and in it lies, probably, at least a part of the explanation of the fact that the hot parts of our State have yielded more tannin in their red wines than the cooler ones.

The two tanks in which the frames were used (Nos. 558 and 559) present a curious problem. In both cases the same amount of tannin was taken up, although in the one the pomace was in a solid mass, and in the other was kept diffused all through. The result is disappointing as concerns the three-frame process, and shows clearly why, despite its apparent advantages, this method of treatment has not been widely adopted, even in France. It is evident that simply keeping the pomace in the liquid cannot replace the grinding and disintegrating action of the direct stirring or *foulage*, so far as the extraction of tannin and color are concerned; for a glance at the color column shows that the deficiency of tannin is accompanied by a similar relative deficiency of color, as compared with the tanks that were stirred. The same holds of the single-frame fermentation, where the color is even less; and the fact that an even amount of tannin was extracted, notwithstanding the pomace was in a solid mass at the top, is explained by the high temperature which, as the record shows, prevailed in that cap. The same consideration doubtless applies to the "old-style" (No. 562), in which the high temperature of the pomace cap offset the lack of stirring, and both tannin and color were fully extracted.

A singular and unexplained fact is the deficiency of tannin in the tank with open foulage, without cover, for which no obvious cause can be assigned; the duplication of the determination, however, leaves no doubt of the fact, which can hardly be explained without assuming that some of the tannin at first extracted was subsequently destroyed by the action of the air. If this were so, the full complement of tannin in the "Morel" product might be explained by the presence of the astringent stems.

The column giving the color-intensities is very instructive also. It will be seen that those yielding a low color were the two tanks with frames, already discussed, and the low-temperature fermentation, No. 562, in which, despite diligent stirring, and the pretty full extraction of tannin, that of the color remained incomplete, being nearly one-third less than the maximum.

The full discussion of the bearings of these fermentation experiments is perhaps best deferred until the development of the wines, and their full analysis in their more advanced condition, shall give more data in regard to the final results of the several treatments. Those familiar with the subject of fermentation may, however, already derive important lessons from what is recorded above. Of course, these results must be verified by repetition the coming season, before they can be accepted as maxims; but there is much that cannot well be upset by any subsequent experiments. Among the points that may be considered well settled is that the method of fermentation adopted by this department (viz.: floating cover, with thrice daily stirring,) is amply justified by the outcome of the nine fermentations. It secures all the advantages of aeration, full extraction of tannin and color, and maximum of alcohol, without any risk of acetification if properly managed. The method has been carried out on the large scale by Mr. John Gallegos for two years past, and has yielded excellent results; the only difficulty encountered being that in the case of very soft-skinned grapes, the frequent stirring reduced them to a pulp which it was difficult to press. In such cases the stirring must be moderated and made with implements having the least crushing effect; but I am satisfied that in the hot vintage climate of California, the leaving-open of fermenting tanks to the access of air is most objectionable, is one of the most common and prominent causes of unsoundness, and should be done away with universally, adopting either the use of floating covers, or at least a cover over the top of the tank. Whether the disadvantages of the single-frame system can be overcome by a repeated pumping-over of the liquid from below over the pomace, is a question yet to be determined; but that in the use of this method there is always a serious loss of color and tannin, can hardly be doubtful.

Regarding the quality of the wines resulting from the several processes, but little can as yet be definitely said. However, the unanimous verdict of those who have thus far tasted them is to the effect that the product fermented at 62°, though light-colored, is the best, and that rushed through within 48 hours beyond comparison the poorest, being flat and without character. Time alone, however, can definitely determine the ultimate outcome.

E. W. HILGARD.

Berkeley, Jan. 6, 1887.

Young or middle-aged men suffering from nervous debility, loss of memory, premature old age, as the result of bad habits, should send 10 cents in stamps for large illustrated treatise. Address, WORLD'S DISPENSARY MEDICAL ASSOCIATION, 663 Main street, Buffalo, N. Y.

"I would not live alway." No; not if disease is to make my life a daily burden. But it need not, good friend, and will not if you will be wise in time. How many of our loved ones are moldering in the dust who might have been spared for years. The slight cough was unheeded, the many symptoms of disease that lurked within were slighted and death came. Dr. Pierce's "Golden Medical Discovery" cannot recall the dead, though it has snatched numbers from the verge of the grave, and will cure consumption in its earlier stages.

Don't Hawk, Spit, Cough,

Suffer dizziness, indigestion, inflammation of the eyes, headache, lassitude, inability to perform mental work and indisposition for bodily labor, and annoy and disgust your friends and acquaintances with your nasal twang and offensive breath and constant efforts to clean your nose and throat, when Dr. Sage's "Catarrh Remedy" will promptly relieve you of discomfort and suffering, and your friends of the disgusting and needless inflictions of your loathsome disease?

PERCHERON HORSES.—Hundreds of stallions are now annually being imported from France to the United States. The immense wealth they are adding to the nation will be better understood from the estimate that the first cross of a Percheron stallion with a native mare doubles the selling value of the colt when mature. The truth of this assertion will be apparent from the authoritative statement that the Percheron-Norman Horse Co., of Colorado, recently received an offer from large operators in New York to contract to buy, at $125 per head, every colt they could raise during the next seven years. The accomplishment of these grand results is greatly due to the energy of one man, to whom the American people are greatly indebted, he having imported and distributed to almost every State and Territory nearly 2500 Percheron horses. A visit to Mr. M. W. Dunham's "Oaklawn Farm," at Wayne, Illinois, will give new ideas of the magnitude of the horse improvement of the country.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, $3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Read His Ad.

Theodore Skillman, of Magnolia Stock Farm, Petaluma, who has done so much to improve the breed and increase the size of our draft horses by selecting and bringing so many good ones to this Coast, has an advertisement in this issue, from which it will be seen that he has just landed another importation, the pick of France, and, in his judgment, a few of the coal-blacks are superior to any heretofore imported. There is one thing we have noticed, which speaks in favor of Mr. Skillman's judgment, and that is that his horses always find ready sale. This lot will, as usual, be put down to living rates and sold on easy terms. He also has a few of the celebrated French Coach Horses, which are becoming so popular in the East, and will soon be in as great demand here, when their merits are more fully made known.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from $10 to $30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from $100 to $200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

TITLE, U. S. PATENT.

TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of $25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,

West Coast Land Co., San Luis Obispo, Cal.

☞Send for Catalogue and Map.

FRESNO COUNTY.

BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, to 20 acres, being 2½ times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is $3.75 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without teams are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for $150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads. Nearly one-half already sold.

Price, $22 to $40 per acre, on very easy terms to actual settlers.

☞For further particulars call on or address

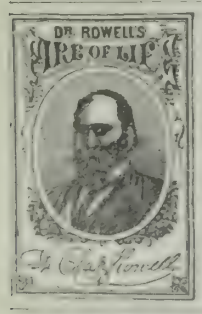
THE "ACME" PULVERIZING HARROW

Is the most Thorough Implement invented for the Cultivation of the soil. It will save its cost many times in a season.

READ WHAT A PROMINENT COLUSA RANCHER SAYS OF IT:



COLUSA, April 4, 1886.

ARTHUR BULL, ESQ.—DEAR SIR: I have given the "Acme" Pulverizing Harrow a thorough trial and find it far superior to any other Harrow I have ever used, not only for the Orchard and Vineyard, but in the Grain Field. It does the work fully twice as quick, leaving the ground in much better tilth. Dead weeds or stubble are no drawbacks to it. It goes along without any stoppages, and clears itself. It ought to be used by all grain raisers.

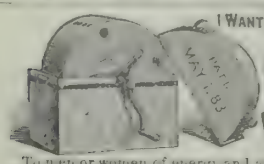
J. R. TOTMAN.

ARTHUR BULL, Sole Agent,

No. 123 California Street, - - - - San Francisco, Cal.

A MAGIC CURE

—FOR—



Rheumatism, Neuralgia, Pneumonia, Paralysis, Asthma, Sciatica, Gout, Lumbago and Deafness.

Everybody should have it.

I WANT AGENTS TO SELL THE

MISSOURI STEAM Washer

To men or women of energy and ability, seeking profitable employment, exclusive territory will be given with Agency. The Washer is made of metal and works on a new principle which saves labor, clothes and soap. **Sample sent on a week's trial to be returned at my expense if not satisfactory.**

$600 to $2.000 A year is being made by competent, shifty agents. Intrinsic merit making it a phenominal success everywhere. Send for my illustrated circular and terms of agency.

J. WORTH, Sole Man'f'r. 1710 Franklin ave., St. Louis, Mo.

Or P. O. Box 1968, San Francisco, Cal.

DEAFNESS

Its causes, and a new and successful CURE at your own home, by one who was deaf twenty-eight years. Treated by most of the noted specialists without benefit. *Cured himself* in three months, and since then hundreds of others. Full particulars sent on application.

T. S. PAGE, No. 41 West 31st St., New York City.

THIS NEW YEAR

Finds us (as 40 or more new years past have found us) still in the field and at the front of the music publishing business. We offer some

CHOICE MUSIC BOOKS,

Among which are to be found the following, which teachers, amateurs, and others will do well to examine:

Song Classics,

By Rubinstein, Gounod, Lassen, Jensen, Grieg, and others. Price, $1. A splendid collection of classic vocal music. A large book, sheet music size, beautifully printed and bound, and containing about 50 carefully selected gems, suitable for all kinds of voices. Many of the songs are favorites on the programs of the best concerts. The music is not difficult.

Young People's Illustrated History of Music,

By J. C. Macy. Price, $1. Containing short biographies of famous musicians, and a **condensed and interesting history** of music from the earliest days to the present time. All persons, young or old, will enjoy the book. **Portraits** accompany the sketches.

Young People's Classics for the Piano.

$1. Very popular collection of the best music in easy arrangements.

Piano Classics

Is a great favorite with good pianists. Price, $1.

The Royal Singer,

By L. O. Emerson; 60 cents. New Singing School and Choir Book. ☞Send for our Catalogue of Music Books.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give express & P. O. address. DR. T. A. SLOCUM, 181 Pearl St. N. Y

James Lick.

At Rest in the Pier of the Great Telescope.

On Oct. 1, 1876, more than a decade ago, James Lick, the philanthropist, died in San Francisco, and was temporarily entombed in the Masonic cemetery. Since that time the various benefactions provided for in his will have been carried forward, and the greatest of them all, the Lick Observatory at Mt. Hamilton near San Jose, is very near completion. According to an arrangement made before Mr. Lick's death, Mt. Hamilton was selected as the permanent resting-place for his remains. This was not by his direction, and it must not be thought that he had any vain idea of securing a lasting monument for himself in his establishment of the Observatory. It was thought fitting by his friends that his tomb should be the solid pier of masonry upon which will rest the magnificent telescope which he has given to the people of this State—the greatest telescope the world has thus far seen. Last week the remains of Mr. Lick were removed from San Francisco to Mt. Hamilton and are now safely inclosed as was planned 10 years ago. The final burial was conducted with simple ceremonies, as will be described.

The remains were taken from San Francisco to San Jose by rail on Saturday, January 8th,

JAMES LICK, PHILANTHROPIST.

with an escort of gentlemen representing the various institutions which have been intrusted with the management of Mr. Lick's benefactions. San Jose was reached at 11 A. M., a procession of citizens of San Jose followed the remains to the borders of the city, and thence to the mountain the body was accompanied by those who went from this city and by the Mayor of San Jose. The mountain-top was reached at about 5 o'clock P. M., and the party proceeded at once to the rotunda, where the casket was opened and the remains identified by Capt. Fraser and others. They then proceeded to the library, where Prof. Davidson read the memorial document of identification as follows:

This is the body of JAMES LICK, who was born in Fredericksburg, Penn., August 25, 1796, and who died in San Francisco, Cal., October 1, 1876.

It has been identified by us and in our presence has been sealed up and deposited in this foundation pier of the great equatorial telescope this ninth day of January, 1887.

In the year 1875 he executed a deed of trust of his entire estate, by which he provided for the comfort and culture of the citizens of California, for the advancement of Handcraft and Rede-craft among the youth of San Francisco and of the State; for the development of scientific research and the diffusion of knowledge among men, and for founding in the State of California an astronomical observatory to surpass all others existing in the world at this epoch.

This observatory has been erected by the trustees of his estate, and has been named the Lick Astronomical Department of the University of California, in memory of the founder.

This refracting telescope is the largest which has ever been constructed, and the astronomers who have tested it declare that its performance surpasses that of all other telescopes.

The two disks of glass for the objective were cast by Ch. Feil, of France, and were brought to a true figure by Alvan Clark & Sons, of Massachusetts.

Their diameter is 36 inches, and their focal length is 56 feet 2 inches.

Upon the completion of this structure the Regents of the University of California became the trustees of this Astronomical Observatory.

The Board of Trustees of the Lick estate:
RICHARD S. FLOYD, President.
E. B. MASTICK.
CHAS. M. PLUM.
GEORGE SCHONEWALD.

The President of the Board of Regents of the University of California and Governor of the State of California.
WASHINGTON BARTLETT,
(by J. W. Winans.)

The President of the University of California and Director of the Observatory.
EDWARD SINGLETON HOLDEN.

The President of the California Academy of Sciences and of the council thereof.
GEORGE DAVIDSON.

The President of the Board of Trustees of the California Academy of Sciences.
GEORGE E. GRAY.

The President of the Society of California Pioneers.
GUSTAVE REIS.

A Director and ex-president of the Society of California Pioneers.
PETER DEAN.

The Mayor of the City of San Jose.
C. W. BREYFOGLE.

The preparation of the above document was assigned to Professor George Davidson. It was approved and then engrossed in handsome style with India ink on fine parchment. A notable feature of the document is the use of the words "handcraft" and "rede-craft," being the old English terms for technical education. The words are certainly most appropriate, although long since fallen into disuse and not being found in the latest dictionaries.

After the signatures given above were affixed, the document of identification was inclosed between two finely tanned skins, backed by black silk and soldered in a leaden box 18 inches long and of the same width and one inch in thickness. It was placed upon the iron casket, after which the lining of the oaken casket was soldered up air-tight and the oak lid screwed down. The casket was then draped with an American flag, and it was left in charge of a watchman until the following morning.

On Sunday morning at 11 o'clock the gentlemen who had escorted the body to Mt. Hamilton ascended the gang-plank leading to the foundation-stone, and, arranging themselves around the vault, now containing the casket, with uncovered heads, were addressed by the president of the Lick Trustees, Captain R. S. Floyd, in the following words: "*Gentlemen:* We are here to place the remains of James Lick in their final resting-place beneath this stone foundation of the pier upon which will be mounted the great telescope that he has given to California and the world of science.

"Mr. Lick left no positive instructions as to the disposition of his remains. The idea of making this place a tomb for his body did not enter the motive of his munificent bequest which has created this great work. The idea was suggested to him long after he made his trust deed, and it met with his approval.

"The trustees have concluded, with the approbation of his son, John H. Lick, now in Pennsylvania, to place his remains in this pier, believing that the most powerful telescope so far made in the world will make his most appropriate monument, and this commanding site overlooking his California home his most fitting resting-place."

At the conclusion of the president's remarks, workmen placed strong iron bars upon the abutments of the vault, upon which was placed heavy iron sheeting. The vault was then built with brick and mortar to the level of the foundation-stone.

A great stone weighing two and one-half tons was then swung, being already suspended for the purpose, and let slowly down upon the brickwork, beneath which was the casket. Three other stones of the same weight were then placed in position, when the four were bolted by suitable bolts, running down to the foundation five feet. On top of the stones will be set the first section of the iron pier of the great telescope. The iron pier itself will weigh about 25 tons and will be about 30 feet high. The mounting of the telescope, the tube and everything connected with it, will weigh 10 tons more.

As many of our readers have come to the State during the last 10 years, and have not, perhaps, seen a portrait of Mr. Lick, we give herewith an engraving from a photograph taken some little time before his death.

How to Save Money.

Wherever you live, you should write to Hallett & Co., Portland, Maine, and learn about work that you can do while living at your own home at a profit of at least from $5 to $25 and upward daily. Some have made over $50 in a day. All is new. Either sex. All ages. Hallett & Co. will start you. Capital not needed. All particulars free. Send along your address at once and all of the above will be proved to you. Nothing like it ever known to workingmen.

It Should Always be Borne in Mind

That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the fittest"—the "DOMESTIC" SEWING MACHINE.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from $5000 to $500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. **

A Blessing.

Nothing adds more to the security of life, of happiness, and of health, than a safe and reliable family medicine. S. L. R. has won for itself the appellation of "the family blessing." If a child has the Colic, it is sure, safe and pleasant. If the father is exhausted, overworked, debilitated, it will restore his failing strength. If the wife suffers from Dyspepsia, Low Spirits, Headache, it will give relief. If any member of the family has eaten anything hard to digest, a dose of the Regulator will soon establish good digestion. It gives refreshing sleep even in cases where narcotics have failed. It is a preventive, perfectly harmless, to begin with, no matter what the attack, it will afford relief. No error to be feared in administering; no injury from exposure after taking; no change of diet required; no neglect of duties or loss of time. Simmons Liver Regulator is entirely vegetable and is the purest and best family medicine compounded. J. H. Zeilin & Co., Philadelphia, Pa., sole proprietors.

HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure the Liver and Kidneys healthy and the Complexion bright and clear.

GRAND SPECIAL EDITIONS

PACIFIC RURAL PRESS

For 1887.

With Extra Pages!
Handsomely Illustrated!
Extra Large Circulation!

Special editions, devoted largely to the subjects named below, will be issued *as nearly as practicable* at the dates and in the order mentioned. Subjects will be presented with fitting illustrations and with special articles prepared by those best informed of the matters treated:

Feb. 26—Live-Stock, Dairy and Poultry Edition,

With engravings of different breeds of stock, and sketches of recent California progress in all departments of the very important animal industry.

March 19—Southern California Edition.

An issue devoted to the progress and development of our southern counties, with engravings of scenery and buildings, maps and statistics of the wonderful growth in settlement and industry.

April 2—Haymakers' and Harvesters' Edition.

In this issue there will be descriptions of the novel and interesting methods and appliances which are original here and characteristic of California enterprise and inventive skill.

May 7—Settlers' and Tourists' Edition,

With information concerning the various immigration societies, statistics of settlement and experience of new comers. The edition will be ornamented with engravings of California scenery and descriptions which will be grateful to the tourist and traveler.

June 4—Educational Edition.

This edition is intended to set forth interesting facts concerning the splendid educational system of California, including both public and private schools and colleges. Illustrated with engravings of leading institutions, etc.

July 2—National Patriotic Edition,

With articles of patriotic tone, illustrated with spirited engravings of national character and fit to awaken and promote loyalty to our grand national institutions.

By the above, and other enterprising efforts on the part of the editors and publishers, we intend to make the PACIFIC RURAL PRESS still more attractive for 1887.

DEWEY & CO., Publishers,

NEW IMPORTATION
—OF—
NORMAN STALLIONS.

Theodore Skillman has just arrived from France with the choicest importation of Norman Stallions that has ever reached the Pacific Coast. Mr. Skillman has selected these horses from the best in France, with a view to the improvement of draft horses on this Coast. They are young and sure to suit the tastes of intending purchasers as regards color, etc, a number being coal-black. He has also on hand some Imported French Coach Stallions. These horses are now very popular in the East and have long been the favorite carriage horses of France. Their merits speak for themselves. Come and inspect this rare collection of horses and be convinced that they are the best ever seen on this Coast.

FRENCH DRAFT STALLIONS,
Kentucky Jacks and Jennets, Work Horses and Mules
FOR SALE.

Some of the Stallions were imported from Europe, others from Illinois, and some young ones were bred in California from imported stock. The prices will be less than animals of equal value can be purchased elsewhere.

Illustrated Catalogue sent free on application; worth $1 to any breeder of poultry. Send me your name on a Postal Card; 5000 copies of fine Illustrated Catalogue for free distribution.

GOLDEN GATE INCUBATOR.

"Seeing is believing." Parties who contemplate using incubators, or who have been unsuccessful in their use or in the rearing of chickens, should inspect our incubator and brooding house. This is the only satisfactory showing in this period of distrust of incubators—a distrust brought about, for the most part, by cheap and inefficient contrivances for the purpose. We have a long and strong list of recommendations, with the written testimony of people who have made the largest average percentages you ever heard of; we have a large number of medals, diplomas and what-not from various Fairs; we have the finest looking machine you ever saw, with a magnificent record of more than four years' duration—but we are quite willing you should discard all these weighty evidences after once seeing the daily hatching of our machine and the hundreds of beautiful, strong and healthy birds, without vermin or blemish, now in our brooding-house. **We show what we can do,** and you are cordially invited to **know what that is.** It is worth your while to witness the results of our more than six years' successful experience. Boats from San Francisco every half hour; fare, 15 cents. Large circulars mailed free. **G. G. INCUBATOR CO., East Oakland, Cal.**

JONESA POLAND CHINA FARM.

ELIAS GALLUP, Hanford Tulare, Co., Cal.

Breeder of pure-bred Poland China Pigs of the Black Beauty, Black Bess, Bismarck, and other noted families. Imported boars King of Bonny View and Gold Dust at head of the herd. Stock recorded in A. P. C. R. Pigs sold at reasonable rates. Correspondence solicited. Address as above

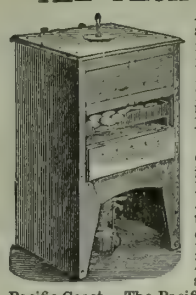
GRIND YOUR OWN Bone, Meal, Oyster Shells, Graham Flour & Corn, in the **$5 HAND MILL** (F. Wilson's Patent). 100 per cent. more made in keeping Poultry. Also POWER MILLS and FARM FEED MILLS. Circulars and testimonials sent on application. WILSON BROS. Easton, Pa.

Are you using Wellington's Improved Egg Food for Poultry? IF NOT, WHY NOT? Every Grocer, Druggist and Merchant Sells this Egg Food.

HENLEY'S IMPROVED MONARCH FENCE MACHINE.

Patented July 21, 1885, May 18, 1886, August 3, 1886. The only practical machine in use that makes the fence in the field wherever wanted; makes the best, strongest, and most durable fence for general use and farm and stock purposes; weaves any size picket and any size wire. The fence will turn all stock without injury to same. For catalogue and full particulars, address

M. C. HENLEY, Sole Manufacturer.



Factory, 523 to 533 North 16th St., Richmond, Ind.

LIGHTNING WELL SINKING MACHINERY. Our Artesian Well Encyclopedia contains near 700 engravings, illustrating and describing all the practical tools and appliances used in the art of well sinking; diamond prospecting machinery, windmills, artesian engines, pumps, etc. Edited by the "American Well Works," the largest manufacturers in the world of this class of machinery. We will send this book to any party on receipt of 25 cents for mailing. Expert well drillers and agents wanted. Address, **The American Well Works, Aurora, Ills., U. S. A.**

INCUBATORS.

THE PACIFIC INCUBATOR!

Awarded the Gold Medal at the **State Fair, Sacramento,** and at the **Mechanics' Institute Fair of 1884 1885 and 1886,** over all competitors as the **best** machine made. It will hatch any kind of Eggs better than a Hen.

Pacific Coast Agency for the celebrated Silver Finish Galvanized Wire Netting, The Wilson Bone and Shell Mill, and the American Meat Chopper. Poultry appliances of every kind and every variety of Land and Water Fowl can be found at the Oakland Poultry Yards, the oldest and largest establishment on the Pacific Coast. The Pacific Coast Poulterers' Hand Book and Guide; price, 40 cents. Send 2-cent stamp for illustrated 60-page catalogue to the PACIFIC INCUBATOR CO., 1317 Castro St., Oakland, Cal

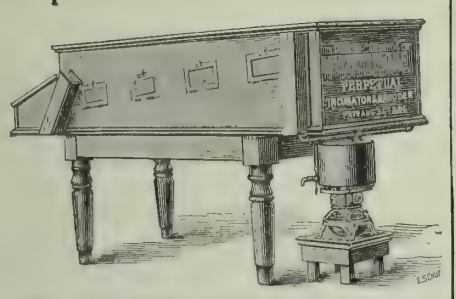
PEERLESS INCUBATOR

THERE IS MONEY IN CHICKENS!

The "Peerless" has the only Regulator that Regulates the flame of the lamp. That it has no equal, seeing is believing.

From five to fifteen minutes in 24 hours is all that necessary to devote to the machine.

The "Peerless" has the best heater, the best self-egg-moistener, and best pure air supplier of any machine manufactured. Its great and crowning feature is its automatic lamp or heat regulator. Its simplicity is taking. Acknowledged to have no competitor.



☞Send for circulars, etc.

BIVEN & CO.

Factory—Corner California and Lindsay Streets. Stockton, Cal.

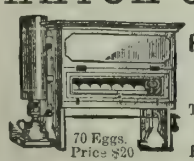
THE

Perpetual Incubator and Brooder.

The most successful "business" Incubator ever invented.

The only Incubator in which eggs can be introduced daily and hatch successfully.

Requires no heat "regulator." The heat is scientifically graduated to suit the different periods of incubation.



Three sizes made, viz.: 1, 2 and 3 dozen eggs per day. Send for circular to

GOULD'S SPRAY PUMP.

This Pump we have gotten up expressly for spraying vines, fruit trees, etc., infested with destructive insects. It has been adopted and recommended by the State Horticultural Society. The working parts are constructed entirely of Brass, and will not be affected by the corrosive solutions used. The BAMBOO EXTENSION is an admirable invention. The operator, by the use of this extension, can get to all parts of the tree while on the ground; also saving himself from getting burnt with the solution. The improved nozzle will save the price of itself within a day. It throws a very fine mist. We have also an attachment for Pump to stir up the liquid in barrel before putting on the solution, thus keeping the liquid always in condition to be laid on evenly, and not allowing the preparation to settle at the bottom. Send for special Catalogue.

We are prepared to fit these Pumps complete with Hose, Bamboo Extensions, Barrel, all ready to commence spraying with. Write for prices.

WOODIN & LITTLE,
509 & 511 Market St., San Francisco.

SHEEP AND SHEEPWASH.

LITTLE'S CHEMICAL FLUID SHEEP DIP.

Price Reduced to $1.25 PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for SCAB in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yolk. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

FALKNER, BELL & CO.,

S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 12, 1887.

The past week passed without any features deserving of special notice. Cereals weakened off, but at the close were stronger. Wheat abroad has been reported easy, but to-day a better tone reported. To-day's cable is as follows:

LONDON, January 12, 1887,—Cargoes off coast, nothing offering; cargoes on passage and for shipment, buyers hold off; Mark Lane, quiet; California wheat, off coast, 38s; California wheat, just shipped, 38s 9d; California wheat, nearly due, 37s 9d; English country market, turn dearer; French country market, turn dearer; Liverpool wheat, spot, very dull; Liverpool wheat, California, 7s 5d to 7s 8d; weather in England, wet.

Foreign Review.

LONDON, Jan. 10.—The *Mark Lane Express*, in its review of the British grain trade during the past week says: The trade in English wheat has been inactive, but values have been maintained owing to supplies being limited. The sales of English wheat during the week were 30,817 quarters at 35s 4d, against 39,961 quarters at 29s 10d during the corresponding week of last year. Flour is steady. Foreign wheats have rather slackened off during publication of the London stocks, which show an excess over the general estimate. The increased quantities afloat, combined with the continued accumulations in America, also had their influence on prices. At to-day's market wheats were quiet. Flour was quiet. Oats 3@6c higher.

Eastern Wool Markets.

BOSTON, Jan. 8.—The sales of all kinds of wool during the past week have been 3,818,100 pounds. Transactions in domestic wool show considerable increase over the previous week. This is usually a quiet week, stock-taking and the settling of the year's accounts occupying considerable time of the dealers. Business would have been larger but for the moving of two of the most prominent houses in the trade. The market has been enlivened by the presence of a number of manufacturers and a more favorable tone of advices from abroad. The week has shown a steady and firm market, with some slight concessions of fractions of cents granted to move large lines, but without any material change in the prices. At the close, holders were firm in their views and felt encouraged at the situation. In spring California, no sales of consequence have been reported, and stocks are small. Fall California has been moved quite freely, one lot of 300,000 pounds and another of 50,000 pounds having been sold on private terms. Oregon wool is quite active. Sales have been reported of 60,000 pounds valley, at 28c; 20,000 pounds valley at 25c; 30,000 pounds Eastern at 20@21c; 15,000 Eastern at 16@17c; and 205,000 pounds on private terms. The receipts of the week have been 4169 bales of domestic and 1284 bales of foreign, against 5682 bales of domestic and 1274 bales of foreign, for the corresponding week last year.

NEW YORK, Jan. 9.—The wool market has remained steady and unchanged. There are believed to be no stocks of importance in the interior. The transactions of the week were in moderate lots, but make a considerable total. The amount of domestic wool in New York, on January 1, was 6,918,000 pounds, including California spring, Oregon R. C., 422,000 pounds; fall, 450,000 pounds, and 10,755,000 pounds of foreign; total, 17,673,000 pounds. The total stock of domestic wool at Boston on January 1st was 26,251,000 pounds, including 811,000 pounds of California spring, 2,302,000 pounds of California and 1,959,000 pounds Oregon. Total stock of foreign, 2,449,000 pounds. Total, 28,695,000. Quotations: California spring, 12@24c; territory, 22@28c. The Philadelphia market has shown increased activity, particularly in low and medium wools. Among sales were 115,000 territory at 21@26½c, 50,000 pounds fine territory at 18@19c, 30,000 pounds fine medium at 24c, and 27,000 pounds fine medium Montana at 26@27c. At Philadelphia, sales included 1500 pounds California low at 15c, 3000 pounds medium territory at 20c, and 4000 pounds medium territory at 25@26c.

PHILADELPHIA, Jan. 11.—Prices are steady and unchanged, with an improved demand for low and medium wools.

BOSTON, Jan. 11.—Wool is firmer. Michigan X, 32c; Ohio, 34c; No. 1 combing, 40@41c; fine delaine, 34@37c. Other kinds are unchanged.

NEW YORK, Jan. 11.—The wool market is steady, but quiet. Domestic fleeces, 30@38; pulled wools, 14@35; Texas 9@29c.

Dried and Canned Fruit at the East.

CHICAGO, Jan. 9.—California oranges were noticed on the market here yesterday, and are sold at $3.50 per half box. The market is rather weak for oranges in general, there being plenty on hand of all varieties, while the sales are rather slow. Prices for dried fruits are quoted steady and firm for all lines of domestic fruit; at the same time the market rules rather quiet. The arrivals are such that the offerings remain small. Prices remain about steady for all California varieties, with the exception of raisins, which are quoted easy at a price a shade lower than last mentioned. Quotations are as follows by the pound: French prunes, 10½@11¼c; pitted prunes, 11@13c; halved peaches, 12@14¼c; peaches, halved and pared, 25c; nectarines, 9c; and pears 8½c. Raisins per 20-pound boxes each: London layers, $1.55@1.60; loose Muscatels, $1.35@1.40.

NEW YORK, Jan. 9.—In canned goods, the past week, the principal feature of interest has been the sudden increase in the demand for corn. Packers are now open to contracts for next season's growth, and buyers are in the market to cover anticipated wants and already some 15,000 cases of Maine corn have been contracted for at $1.25 f. o. b. Tomatoes are firmer. Canned peaches are dull but strong. California pears, $2.50@3.25. Raisins are more active and firmer. Two-crown, loose Muscatel, $1.40@1.45; London layers, $1.90@1.95; California, loose, $1.60@1.80; do London, $1.90@2. Prunes—Turkish are weaker on free offerings at $4.50@4.75; French, steady at 7⅞@8c for sixties and nineties. Currants are weaker on large arrivals, selling at 4⅞@5c. Citrons quiet at 17½c.

California Raisins at the East.

NEW YORK, Jan. 11.—The *Commercial Bulletin* says: California raisins have developed an easier tendency, due wholly to the actions of Western operators, particularly in Chicago. In that city some holders endeavored to work off their surplus stock, and selected Philadelphia as the market to bring their goods to the attention of Eastern buyers. The supplies forwarded are of very good quality, though probably not up to the standard of the principal packs that have been sold here since the opening of the season. They are Fresno goods, and with the average buyer would be taken without hesitation. These are offered in Philadelphia at $1.40 for two-crown loose, $1.55 for three-crown and $1.85 for London. The more popular brands of this market are held and are selling at $1.40 to $1.80, and $1.90 and $1.70@2 respectively. If Chicago holders continue to push these goods at the former quotations it is doubtful if our city commission men can maintain the market, and the result will be a loss to the California shippers.

California Products in New York.

NEW YORK, Jan. 9.—Beans—California Lima steady at $1.80@1.90. Seeds—California yellow mustard, 3¾@4¼c. About 800 bags of California rape, most of which had been previously sold, recently arrived, but buyers generally refused to accept deliveries on the ground of inferior quality. The goods were then reoffered at low prices. The nominal quotation is 2½c.

New York Hop Market.

NEW YORK, Jan. 9.—The market is without encouraging features for sellers. Brewers buy in a hand-to-mouth way, and the supply of foreign and domestic goods is still sufficient to keep values unsettled. Coast crop of 1886, prime to choice 24@25c; some fair to good, 20@23c; 1885, good to prime, 8@10c.

New York Wheat Market.

NEW YORK, Jan. 9.—Wheat has showed fair request, and sales have generally been at full improved prices. Spot closed ½c higher, and options closed 1½@2½c lower for the week.

Local Markets.

WHEAT—Notwithstanding unfavorable foreign advices our market holds very strong, with buyers unable to purchase much even at quotations. The stock in the State is below general expectations, although the RURAL PRESS' estimate of the crop out-turn, published in July last, did not warrant any larger stock on hand. On Call, transactions have been free, with high prices maintained up to Tuesday when a lower range was established, with another decline this morning, although actual wheat was no lower. To-day's sales were as follows on Call:

Morning Session: Buyer season—1600 tons, $1.65¾; 500, $1.65⅜; 200, $1.65½; 300, $1.65⅝; 1000, $1.65¾; 200, $1.65⅞; 4300, $1.65; 4500, $1.64¾; 1000, $1.64⅝ ₩ ctl. Afternoon Session: Buyer season—1900 tons, $1.65⅝; 2000, $1.65½; 1100, $1.65¾; 500, $1.65⅞; 1000, $1.66; 700, $1.66⅛ ₩ ctl.

BARLEY—The market held strong at advancing prices up to yesterday, when a decline set in, owing to the Produce Exchange reporting the stock in the State at over 125,000 tons; but to-day the market is higher, owing to a large short interest and large operators having confidence in the market. On Call, transactions the past week were very large. The following are to-day's sales:

Morning Session: Buyer season—200 tons, $1.18; 1100, $1.18¾; 400, $1.18¾; 1400, $1.18½; 700, $1.18⅝; 1200, $1.18¾. Seller season—100 tons, $1.11¾; 100 tons, $1.11½. May—100 tons, $1.13 ₩ ctl. Afternoon Session: Buyer season—1400 tons, $1.19; 200, $1.18⅞; 900, $1.19½; 1800, $1.19¾; 100, $1.19⅝. May—100 tons, $1.13¾; 100, $1.13½. Seller season—100 tons, $1.13; 100, $1.13½ ₩ ctl.

BUTTER—The market is demoralized, with buyers masters of the situation. The supply of pickled pressing the market is largely in excess of the consumptive demand, which breaks the market for fresh.

CHEESE—The market is stiff, with much difficulty reported by the retail trade in getting choice.

EGGS—The market closed the week strong at the reduced quotations. The consumption is very large, which keeps the market well cleaned up.

BAGS—The market is quiet, with no speculative movement noticeable. Buyers are deterred from entering the market, owing to continued dry weather.

FLOUR—The market is strong at the last quoted advance. Both the export and home demand is active, but with buyers trying hard to obtain concessions.

[COMMUNICATED.]

Market Information.

Fruits.

Heavy frosts on Monday and Tuesday nights are reported to have done considerable damage to oranges in the orange-growing districts of the State. The orange market is steady, with a firm tone for the better selected. The demand is increasing for both the home trade and shipping north.

Limes and lemons continue weak and in buyers' favor.

Apples, contrary to general expectations, do not appreciate, although choice are reported scarce and wanted. Common are slow to place except at low prices.

Dried fruits continue to rule firm, with full prices obtainable. The quality of all received so far shows a decided improvement over former seasons. The East reports stiff and active markets.

Raisins show a stronger tone, with a good demand from the East for the better selected. The stock in this city is light for the season, yet it is more than enough to meet the trade up to the new season. Dealers claim that the bulk now here will be marketed at the East this spring.

Cereals.

Oats continued strong through the week, although dealers tried to obtain concessions on asking prices. Receipts are not large, neither are the supplies to draw from.

The Stock of Grain.

The Directors of the San Francisco Produce Exchange have submitted the following report of the stocks of flour and leading cereals of the old crop remaining in the State of California January 1, 1887, and a comparative statement of previous years:

How Distributed.	Flour, bbls.	Wheat, ctls.	Barley, ctls.	Oats, ctls.	Beans, sks.	Corn, ctls.	Rye, ctls.
San Francisco and Oakland wharf, including Wheat afloat in the harbor	98,400	1,021,600	427,500	3,300	149,200	30,000	.....

Corn is essentially unchanged. Dealers talk the market for Californian down while paying an advance on quotations. Choice corn is not in liberal supply. Western advices indicate an advance soon.

The wheat market has ruled strong throughout the week, with buyers unable to secure any considerable sized parcels without paying an advance on current bids. The bulk of the wheat now in the State is in strong hands, rendering it next to an impossibility to buy at less than asking prices. Several buyers express the opinion that toward assessment day there will be liberal selling orders, but holders hold to a contrary view, and think that owing to the light supply that is very liable to be available at that time, prices will be forced up regardless of taxes. The cold, dry weather is causing considerable unnecessary uneasiness, for the ground was well soaked last winter and spring, and consequently can stand a dry winter; what is more to be feared are the hot north winds which generally prevail in May or June. The stock of wheat in the United Kingdom on January 1, 1887, was only one-half the quantity held January 1, 1886. It is now claimed that Peru will draw considerable from us, owing to the Chili ports being closed against her people. The course of foreign grain markets, as for some months past, strengthens the position of those who look for an advance in prices, so far as the statistical position of grain is concerned, and London particularly is slow to weaken. The London *Miller* of December 13th says: From no quarter in sight is there any promise whatever that wheat supplies for the next three months can equal the country's certain requirements. Some further diminution of granary stocks is a probability generally acknowledged. The quantity afloat, after being for many months in excess of the quantity due to arrive a year ago, is now less in comparison, and while Indian shippers are quiet, Russian exporters have almost to a man retired from offers at November's prices. America has its stock, and will know how to whip it up. The London correspondent of the Minneapolis *Miller* wrote on December 7th: America has the reins entirely in her own hands. Europe wants something like 2,000,000 bushels per week from the Atlantic ports in wheat and flour during the next five or six months, and the question only remains, is this easy of accomplishment? * * * With regard to the probable extent of our stocks at the close of this year, I anticipate that they will be reduced to 10,000,000 bushels, against 27,000,000 at the same time last year, compared to which the present difference of 4,000,000 bushels in your visible supply is a mere nothing. The London *Corn Trade List*, December 17th, states that the mild weather permitted navigation from St. Petersburg to remain open to an unusually late date. South Russian wheat exports are mainly to Mediterranean ports. At Odessa supplies are small. Wheat prices in some portions of Russia are reported above those in England. Austria-Hungary is not exporting much. A good share of Indian, Russian and American wheat exports are going to France, Italy and Spain.

The barley market held to strong prices up to Tuesday, due to continued cold and dry weather, with stocks in this State well concentrated. This year's harvest it is now very generally admitted will be later than last year, while the consumption is larger. Experienced dealers are favorably impressed with the situation, and hold firmly to the belief that the market will do much better before next harvest.

Live-Stock.

Beef cattle continue to press the market, with only something very choice, which can be cut up without much wastage, fetching full quotations. Mutton sheep are without essential change. Hogs continue in buyers' favor.

In horses the market is slow, with only well-matched teams selling at good prices.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7@7½c; first grade, grass fed, 6½@7c per lb.; second grade, 5½@6c; third grade, 5@—c.

MUTTON—Ewes, 5@—c; wethers, 5½@—c.

LAMB—Spring, 6@7c. Yearlings, —c.

VEAL—Large, 7@8c; small, 9½ to 10c.

PORK—Live hogs, 2¼ to 3c for heavy and medium; hard dressed, 4 to 6c per lb; light, 2½ to 3c; dressed, 3½ to 4½c; soft hogs, live, 1¾ to 2¼c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Feedstuffs.

Ground barley is not quite so strong at the advance. Bran, middlings, and oilcake meal are steady.

Hay was sold at an advance the past week, owing to the dry weather keeping supplies back. It is claimed that the crop this year will not be large.

The market is quotable as follows: Alfalfa, $9.50@12; barley, $8@11; oats, $8@11; cow hay, $8@11.50; wheat, $10@13 ₩ ton.

Vegetables.

Potatoes sold at an advance the past week, under freer buying and moderate receipts. The supply of choice continues light.

Onions held to strong prices up to Tuesday, when owing to freer receipts the market eased off, but close steady to-day.

Cabbages are steady, as are root vegetables.

Dried ochra and dried peppers are fairly steady at current quotations.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way	215,986	155,490
In port, disengaged	84,255	121,478
In port, engaged	39,349	38,445
Totals	339,590	315,413

The above gives a carrying capacity, as follows: 1887, 543,344 short tons; 1886, 504,662 short tons; increase over last year, 38,282.

There is very little doing in grass seed, causing prices to favor buyers.

Beans continue to hold to strong prices, with all choice quickly taken at full prices.

Ducks are higher owing to the Chinese new year, but other fowls are barely steady.

San Francisco, Jan. 12, 1887.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, Jan. 12, 1887.

Easy Binder.

Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; postage, 10 cents. Postpaid to subscribers of this paper, 50 cents. Send for illustrated circular. Agents wanted.

A TRANSPOSITION.—Readers who attempted to read the articles on "Fruit Shipping" and "Grape-Growers' Meeting" on the first page of last week's RURAL, were probably much confused. By an unusual mishap the printer mismated the parts of the articles, making the end of one fit the beginning of the other. Mechanically it looked well, but the sense rebelled. The end of the first article, beginning with the words "spurious wines," belongs to the second article, and the end of the second, beginning with the word "hardship," belongs to the first.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

MISS TRACY'S SCHOOL WORK, formerly carried on at 1825 Telegraph avenue, has been transferred to 1061 Oak street, Oakland. Lessons are given either privately or in classes.

DIVIDEND NOTICE.

The German Savings and Loan Society.

For the half year ending December 31, 1886, the Board of Directors of The German Savings and Loan Society has declared a dividend at the rate of four and thirty-two one-hundredths (4 32-100) per cent per annum on term deposits and three and sixty one-hundredths (3 60-100) per cent per annum on ordinary deposits, payable on and after the 3d day of January, 1887. By order.

GEO. LETTE, Secretary.

CLIMAX SPRAY PUMPS.

To those in want of a first-class Spray Pump we can say that these Pumps are, without a doubt, the very best Spray Pumps to-day in the market. Made expressly for service in the Orchard, and the only Pump having all its parts, valves, etc., made of non-corrosive metal, and has received the highest awards over all others for the past three years. Send for circulars and prices.

BARREN HILL NURSERY

NEVADA CITY, CAL.

SPECIALTIES:

NUTS, PRUNES, AND GRAPES.

The Finest Collection of Nut-Bearing Trees to be found in the United States.

19 Varieties of Walnuts,

—INCLUDING—

CLUSTER WALNUT,

The newest, most prolific and valuable variety ever introduced into this country.

PRŒPARTURIENS,

Or Early-Bearing, or Fertile Walnut, introduced into California in 1871 by Felix Gillet. "Second Generation" Trees, grown from nuts borne on the ORIGINAL tree; 90% guaranteed to be "genuine Prœparturiens," or having retained the surprising characteristics of **precocity, fertility** and **hardiness** of the **original** Prœparturiens. "Third Generation" Trees, grown from nuts borne on **second generation** Prœparturiens, entirely California-grown; vigorous, hardy and fertile variety.

"Second Generation" Prœparturiens.

Serotina, Franquette, Mayette, Chaberte, Gant, Parisienne, Mesange Walnuts.

The leading varieties of Europe, highly recommended for beauty and quality of the nuts, fertility and hardiness of the kinds.

9 Varieties of French Chestnuts or Marrons (Propagated solely by grafting).

7 Varieties of Filberts.

4 Varieties of April Cherries, the earliest and most prolific in California.

207 Varieties of Grapes, including the very earliest Table varieties known, such as Blue Muscat, Ischia, Magdeleine, Malingre, Pearl of Anvers, Bulhery, Luglienda, Dupont, Gros Sapat, etc.

81 Varieties of English Gooseberries, all sizes, shapes and colors, and "true to name."

PRUNES! PRUNES!

LOT D'ENTE, OR "D'ENTE TRUE FROM THE ROOT."

We have ourselves given this name of "Lot D'Ente" to this type, so extensively propagated in the valley of the Lot (France). **True from the root** and not grafted, and which we have introduced into this country. This type of the D'Ente Prune is not at all propagated by grafting, which would do away with its chief qualities of being more vigorous, more **long-lived** than grafted trees, and a **gum-resistant** stock.

ST. CATHERINE, "True from the root."

This kind is altogether propagated **true from the root** in its home, valley of the Loire (France), and offers greater advantages than grafted trees, as being also more vigorous, more long-lived, and a **gum-resistant** stock.

We highly recommend these two purest types of the two most celebrated kinds of French Prunes, and have divided our stock into three sizes, which we offer at $20, $30 and $40 per hundred. All such trees are imported from the two great prune districts of France, but have been from one to three years in our grounds, and have, like all our mountain-grown trees, a fine system of roots.

For the Season of 1887-88, the —— D'Ente, an *unnamed* variety of the D'Ente, the purest and largest type of the Prune D'Ente, or D'Agen, or Robe de Sergent (solely propagated by grafting).

APRICOTS — Boulbon, Esperen, Duclos, Mexico, the shipping varieties of the south of France.

Constantinople Quince—The largest, most precocious and prolific of all quinces.

Ever-bearing Black Mulberry of Spain—Medlar, Sorbus (all those kinds should have a place in all gardens).

Mulberry Trees for Silkworm Feeding. Silkworm Eggs. Sericulture Chart, 50 cts.

☞Send for General Catalogue and Supplement with Chapters on "Nut-bearing Trees" and "Prunes," illustrated with 20 walnut cuts, 5 prune cuts, and numerous other cuts representing Medlar, Sorbus, Black Mulberry, French Chestnuts, Filberts, etc.

FELIX GILLET,
Nevada City, Cal.

B. V. CUTTINGS.

Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M., 200.000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

WHITE ADRIATIC,

SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Præparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE.—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

STOCKTON, CAL., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

COMBINED HARVESTERS for 1887

MANUFACTURED BY THE

STOCKTON COMBINED HARVESTER AND AGRICULTURAL WORKS,

Stockton, Cal.

PULL AND PUSH,
BELT AND GEARED.

HOUSER,
MINGES,
SHIPPEE,
—AND—
POWELL.

The "HOUSER" Belt

IS OUR STANDARD,

But will build Geared to Order

—ALSO—

Minges, Shippee and Powell.

THE HOUSER COMBINED HEADER AND THRASHER

IS THE BEST KNOWN AND MOST POPULAR HARVESTER ON THE COAST.

It has had 7 years of unparalleled success in our grain fields. A Pull and Belt machine, combining Strength, Durability and Capacity, and as Light as consistent with strength. Every Houser Harvester sold has given entire satisfaction.

We have not space to give a full description of the Houser Harvester, but append as many Testimonials of 1886 as room will permit, showing what the Houser has accomplished, and what our grain raisers think of them. Save this page, keep it for reference; look for issue of RURAL PRESS of January 29th, with a new cut of the Houser for 1887 and further Testimonials.

TESTIMONIALS:

TULARE, Nov. 20, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 14-foot Houser Belt Harvester I purchased of you proved an *entire success*. I tested it 58 days on both heavy and light and down grain and on land containing over 1500 large scattered trees to the section and several fair-sized sloughs. It cut and thrashed grain on uneven land where it could not be gathered with a header. I had no delay from breakages and my extras cost me not to exceed $20. I used 20 rather small animals, which improved in flesh while harvesting. I saved my sack bill and thrashing bill over the old method of harvesting. My machine is good for several seasons. Sixteen good-sized animals would have handled my harvester the entire eason and would require more only on sandy soil. Of 11 Houser machines purchased of you this season by parties I am personally acquainted with, the purchasers were more than satisfied. Yours respectfully, FRED ARNOLD.

ARBUCKLE, CAL., Nov. 25, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 12-foot Houser Machine purchased of you last summer gave good satisfaction. We cut 1000 acres; some of it was badly down and very heavy straw, and our neighbors thought it could not be harvested with a combined machine. We put our wheat in the sack for about what it costs to cut with a header and put in the stack. We were 52 days in cutting, and think it the best combined harvester and labor-saving machine in use. Yours respectfully,

J. C. BROOKS & SONS.

TULARE, Dec. 5, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I used the 14-foot Houser Belt Harvester which I bought of you to cut 1200 acres of very heavy wheat with long straw and badly lodged. I had 12,000 sacks of grain and averaged 200 sacks a day, or 20 acres. I could do better another year, as it was all new to me. It is by far the cheapest and best way to harvest grain. I made an estimate on each day's running expenses as follows, counting my time: Labor, $13.50; horse hire, $14; horse feed, $10; board of men, $3.75; oil, 20 cents; expense keeping machine in repair, 50 cents; a total of $41.95 each day. My yield was 29,000 bushels, costing me a trifle less than seven-eighths of a cent a bushel to put it in piles of from 250 to 400 sacks each. My estimate is the highest that could be made for 60 days' run in a very warm climate. Respectfully yours,

G. H. CASTLE, JR.

VISALIA, Dec. 8, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 16-foot Houser harvester we bought of you gave perfect satisfaction. We cut 1500 acres, employed four men and 21 horses; averaged on one section of standing Sonora grain 33⅓ acres a day; largest number of sacks, 356. Five hundred acres of my grain was heavy Australian and 20 acres very badly tangled. It did better work in lodged grain than any header could do. It cost us not more than 75 cents an acre to pile the sacks in the field, less than one-half of the old way. The cost of extras was comparatively small. We cheerfully recommend it to al' farmers. Yours respectfully,

HARRIS & COUGHRAN.

WILLOWS, Nov. 24, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 14-foot Houser Machine I purchased of you did excellent work. I am well pleased with it—can recommend it to all farmers. I averaged 26 acres a day—had 300 acres of very heavy grain which I saved better than if it had been headed and thrashed. I run my machine 52 days, and with a few dollars expense, it will be as good as new.

Yours truly, P. R. GARNETT.

DIXON, Nov. 30, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I am well pleased with my 14-foot cut Houser machine. I cut 600 acres in 30 days, including all stoppages. My best day's work was 450 sacks of wheat. I had some very heavy grain and some light, and also some that was lodged, but the harvester did good work. Yours truly,

CHAS. HUNT.

FRESNO, Dec. 22, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 14-foot Houser machine we bought of you, gave entire satisfaction. We cut 1760 acres, some very heavy down grain and very rough hog-wallow land, and it did just as good work as on level land. It cleaned better than the ordinary thrashing machines and separators. Our wheat was counted as No. 1 in the market. We cut the grain much cleaner than our neighbors who used headers. The worst objection to the Houser is that we can't sell our stubble fields to stockmen. We can willingly recommend the Houser Machine to any one wishing a combined harvester. Yours truly,

HANSEN, MCLAUGHLIN & SAYRE.

GRAYSON, Nov. 24, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 16-foot Houser Belt Machine I purchased of you this season gave entire satisfaction. I cut about 1500 acres in 50 days and never used over 20 animals, although the weather was very hot, and some of my barley yielded 50 bushels an acre. My expenses for extras for the season were 75 cents. Yours respectfully,

CHAS. D. ELFERS.

GRAYSON, Nov. 27, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 16 foot Houser Belt Machine I purchased of you last summer did excellent work. I cut about 1400 acres, 200 acres of which was very uneven land; used 22 animals on hilly ground and 18 on level land. The machine thrashed well and saved the grain. The cost was hardly half what it would have been had I headed and stacked my grain. The Houser is the machine for the farmer. Wishing you success in your great enterprise, I am, very truly yours,

M. GALVAN.

TULARE, Nov. 30, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: In regard to the 14-foot Houser Belt Harvester which I bought of you, I am well satisfied. We cut 1800 acres of grain, some standing and some of it lodged very badly; it both saves the grain well and cleans it good, and so far as I can see, it is as good as I want. Yours respectfully,

J. T. CHISM.

CROW'S LANDING, Dec. 4, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I cut 1200 acres with the 16-foot Houser Belt Machine, averaging about 30 acres a day in heavy wheat and thrashed about 400 sacks a day without any expense for repairs. I run 4 men and 22 horses, and consider it a fine machine. I can harvest grain for one-half what it used to cost to head and thrash. Yours truly, J. B. CROW.

CHAMBERLAIN RANCH P. O., MERCED, Nov. 29, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I cut this season with your Houser Belt Harvester 1700 acres of grain, averaging 25 acres a day, including stoppages, 1400 acres barley, and 300 wheat. For a combined machine and work intended, it cannot be beat in the field. Yours truly,

A. W. CHAMBERLAIN.

MODESTO, Nov. 27, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 16-foot Houser Harvester which we bought of you last harvest, gave us entire satisfaction. We cut about 1600 acres of grain with it, and averaged about 30 acres a day, with four men and 22 animals, and with great ease. We had but little delay during the harvest season, and the expense will be very little to put it in repair for the coming harvest. From my experience and observation I think the Houser Machine has given more general satisfaction than any combined machine in the field.

Yours respectfully, M. MOYLE & SON.

MCMAHON RANCH, DIXON, Nov. 30, 1886.

Stockton Combined Harvester and Agricultural Works—DEAR SIRS: We harvested about 1800 acres in 45 days with the two 14-foot cut Houser Harvesters purchased of you this past season, at an expense of 60 cents per acre for labor hire for four men for each machine. The grain all stood up and had about average grain. Used 24 animals to each machine, which run them with ease. Twenty good mules can run them. Yours respectfully,

J. B. YOUNT,
MRS. L. E. MCMAHON,
J. E. MCMAHON.

MADISON, Nov. 30, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I sold your 18-foot Houser Harvester to Messrs. Adams & Campbell; they are so well pleased with it they say they would not take the money back for it if they could not get another Houser. They employed three men and 24 horses; run 50 days with an average of 30 acres per day—but think they can do better next year, as they know now how to run and manage it in good shape. They harvested a good deal of grain which gave good returns that could not have been cut with a header to any advantage. Yours truly,

W. LEVY.

WILLOWS, Nov. 21, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I am pleased to inform you that the 14-foot Houser Belt Machine purchased of you this season, has given me entire satisfaction. It did all claimed for it; had a run of 51½ days and did not lose an hour during that time, making an average of 27½ acres per day. Would not do without the Houser Machine at any cost, and cheerfully recommend it to all farmers. Yours, etc.,

WM. KILLEBREW.

☞WE GUARANTEE OUR HARVESTERS TO DO GOOD WORK WITH PROPER MANAGEMENT.☜

Please call at our Works, corner Main and East streets, Stockton, examine our Harvesters, read our Testimonials, see or correspond with those who have used our machines. It is to the interest of all grain growers to inspect our HARVESTERS for 1887 before purchasing Harvesting Machinery. Give us your orders soon, that we may fill them for the early harvest. There is no danger of breaking the frame, gearing or shafting, as we build them so strong in every respect that they cannot be broken with fair usage. They effectually stood the severe strain of field work last season, harvested more grain, at less expense, and cleaned it better than any other Combined Harvesting Machines of any description.

☞Send for Circulars. Correspondence solicited. For further information, prices, etc., address

STOCKTON COMBINED HARVESTER AND AGRICULTURAL WORKS, STOCKTON, SAN JOAQUIN COUNTY, CALIFORNIA.

PACIFIC RURAL PRESS

TWENTY-PAGE EDITION.

Vol. XXXIII.—No. 4.] SAN FRANCISCO, SATURDAY, JANUARY 22, 1887. [$3 a Year, in Advance; SINGLE COPIES, 10 CTS.

The Mohair Industry.

In the PACIFIC RURAL PRESS of last week there was a communication on the mohair market, from a leading firm of wool and mohair dealers in New York City, in which the following sentence occurred:

For choice fine, 36 cents is full value to-day. Good average combing will bring only 34 cents, and fair average will not command more than 30 cents. Carding stock is slow sale, from 15 up to 25 cents for very clean, bright lots.

We have a letter from a prominent mohair producer calling our attention especially to this statement as indicating that the mohair industry is in imperative need of protection by the Government, because the prices named above would only net the producer about 28c per pound for the choicest mohair and of course proportionately less for other grades. We are assured that mohair cannot be produced in America for any such price.

It appears, from the circular cited above, that manufacturers in America went abroad for their supplies of mohair where the prices ruled very low, and, to use the exact words of the circular, "cared nothing for an American industry in which they claimed to have a great interest." Generally we are in favor of only a very moderate tariff, but this and some other California products are exceptional. In the case of mohair there is no one breeding goats at present for their fleece who has not secured the very best stock he could find, and often at a heavy outlay of both time and money, and yet is unable to compete with foreign production. One goat-breeder writes as follows: "I used to get 55 cents a pound for my fleece. Now that I have a superior staple I get only 28 cents net." He adds: "I am truly discouraged." It is no wonder, for it has taken him 10 years to produce his improved mohair. Another breeder says he is going to butcher off his stock and quit the business. Yet another says: "I am wholly dissatisfied with the price I received for my clip of mohair of 1886."

One would suppose that those who entered on the production of mohair have had a hard time enough, and that they are entitled to such tariff protection now as will save them from impending ruin. They have labored long and patiently through times of depression and neglect to maintain their enterprises, and now that the market seemed disposed to improve because of new uses being found for the mohair, in comes the foreign article and seems inclined to knock the bottom out of our promising home product. This industry clearly needs the attention of the lawmakers, and needs protection until it is brought upon a broader basis at least. The goat industry promises to make productive vast areas on the Pacific Coast and in the Southern States and Territories which are ill adapted for anything else. We have counted upon fleece goats to people many of our waste places and to furnish home-grown material for vast mohair-manufacturing enterprises. It will not be wise to deny it the support it needs just at this juncture, and it seems as though it could not be withheld. We respectfully call the attention of our Pacific Coast Senators and Representatives to the matter.

Morning-Glory.

EDITORS PRESS:—I have a large vineyard planted last fall. In it I find about one acre of morning-glory. I wish to kill it, and prefer to kill land with it sooner than leave the weed to spread to the rest of the vineyard. Can you suggest any remedy? Digging it out root by root, the only remedy I know of being too expensive. —MORNING-GLORY.

We despair of a cheap or easy remedy. Whenever we have printed experience of some subscriber looking to such an end, we have always had other statements that the method had failed. Even covering the land with salt, as has been done at Haywards, where salt is cheaply obtained from the Bay Shore Salt Works, has only succeeded in discouraging the plant temporarily. Even digging it out by the root, expensive as it is, has never been done thoroughly enough, we believe, to exterminate the plant. The only successful treatment we have heard of is that adopted by one of our energetic lady horticulturists, and that she has persisted in, if we remember correctly, for over two years and now believes the problem is near solution. She started on the theory that the plant must never be allowed to come to light or sight. She instructs one man to cultivate the infested spot every Monday morning with a sharp tooth cultivator. That is his work to do whether he can see a sign of the plant on the surface or not. It is understood that if the owner sees a sign of growth on the spot the man loses his place. By this method the extension of the plant has been checked and she hopes to annihilate it. She counts the prevention of extension as a great point, and when we asked her if such persistent cultivation would not cost too much, she said it would not cost as much as the ranch was worth, and if the morning-glory is left alone it will take the ranch.

Morning-glory is a subject which could well have some space in almost every issue of the RURAL. Will not all readers who have even a ray of light upon its destruction give others the benefit of it?

Department of Agriculture and Labor.

It was announced by telegraph the other day that one of the Houses of Congress had passed a bill organizing a "department of agriculture and labor." As described by mail advices, the bill provides that there shall be at the seat of Government an executive department, to be known as the Department of Agriculture and Labor, under the control of the Secretary of Agriculture and Labor and Assistant Secretary. There shall be in the Department of Agriculture and Labor a division which shall be under the charge of the Commissioner of Labor, who shall hold his office four years, and until his successor be appointed, unless sooner removed, and shall receive $5000 a year. The commissioner shall collect information upon the subject of labor, its relation to capital, hours of labor, rates of wages, cost of production, of articles produced, earnings of laboring men and women, the means of providing for their material, social, intellectual and moral prosperity, and the best means to protect life and prevent accidents in mines, workshops, factories and other places of industry. The secretary is empowered to inquire into the cause of the discontent which may exist between the employers and employes within the United States, and he may invite and hear sworn statements from both such parties concerning the matters in controversy.

SCENE ON A SUGAR PLANTATION IN LOUISIANA.

A Sugar Plantation.

Our engraving gives a view of a sugar plantation in Louisiana. In the background are the plantation buildings, the most imposing of which is the sugar-house, with its tall chimneys. Stretching quite across the middle ground are the wide fields of growing cane, growing thriftily upon the rich soil abundantly supplied with water from the bayous. In the foreground are the native trees, festooned with the graceful streamers of moss, which are characteristic of the warm, moist situation. The whole makes a landscape combining natural and industrial features peculiar to the region in a pleasing manner.

The scene is, of course, in the lowlands of Louisiana. On these rich alluvial deposits, the chief productions are cotton and sugar, and rice and forage for the animals used on the plantations; and here are to be found the grandest agricultural establishments of the State, great capital being employed in their operation. The farmers in the uplands, prairie and pine-woods, take advantage of the native pastures, nuts, fruits and roots, and raise cattle, sheep, hogs, and a few horses and mules, in addition to field crops. Corn and sugar-cane are cultivated only with the plow or cultivator, in rows from four to seven feet apart. They should be plowed three times, although good corn is made by once plowing out in rich land. Corn is planted from February 14th to March 1st, sugar-cane either in the fall or spring; cane requires only one planting in three years; cotton is also planted in rows, from March 20th to May 1st; cotton is thinned to a stand by one hoeing, and plowed about three times. It is claimed that the lands of Louisiana will yield from 25 to 50 bushels of corn, from one to two bales of cotton, and from one to three hogsheads of sugar per acre. Rice is extensively cultivated, and will yield, it is said, from 30 to 75 bushels per acre, worth from $45 to $115. In the lowlands rice is sown broadcast and irrigated; in the highlands it is drilled in rows two or three feet apart, and cultivated with a plow or cultivator. It is sometimes cut by machinery and thrashed like wheat, and is harvested in August. Oats do well all over the State. Wheat is confined to Northwestern Louisiana. Sugar-cane is very easily grown, but the cost of the machinery is great, and it requires a large capital to build and operate a mill. Small farmers sell their cane to central mills for $4 or $5 per ton (2000 pounds); 20 tons is a fair crop per acre, but 30 tons and over are sometimes made. Sugar-making commences about the middle of October and continues about three months. Cotton-picking commences in August and lasts till January. A quick hand will, it is said, pick more than 200 pounds per day. The scenery of Louisiana is by far the most varied and attractive in the South, especially up and down its bayous and rivers —indeed, the whole country, from the Mississippi river to the Sabine, seems more like an immense garden, dotted here and there with pretty homes, than anything else.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

An Old Californian in Florida.

EDITORS PRESS:—I have been in Florida some five weeks, and traveled over much of the orange and vegetable portions of the State, and I see many things of interest.

The orange crop is much better than was expected after their severe freeze of last winter. There is a large per cent of rusty oranges, which are designated in many places as "Bronze and Russets." They mark on their boxes, "Bright," "Bronze," and "Russets." The bright is very pretty fruit; the bronze is just a shade off—just a little cloudy; the russets are dark, many of them quite so, but they are quite sweet and the growers claim they will keep longer than the bright ones.

From the large groves about Orange lake, they claim to have shipped about two-thirds of the crop. The same will hold good from most of the hammock groves, as far as I can get information; but from the pine-land groves the shipments have been comparatively light. I was in a grove to-day of 100 acres and they have not shipped any. They commenced to pick to-day. I saw the owner of a 75-acre grove and he said he would not gather any before the 20th of this month. I should think there is half the crop to go forward yet, most of which will be shipped in the next six weeks. If the California crop is keeping well, it appears to me it would be good policy to hold it back, at least to the middle of February or the first of March.

There will be a good many vegetables and strawberries ready to ship in the next few weeks (as they have string beans and tomatoes now in many places); but shipments will be light to what they have been, unless they get quicker time and lower rates of freight on the railroads, as the returns for the past two years have not been satisfactory, owing to their berries and vegetables going into the markets in bad order.

The thermometer has stood from 80° to 82° the past two days, but most of the time since I arrived in the State the weather has been delightful—from 50° to 60° in the day and about 40° at night. There were a few mornings that 32° to 29° was reached; it only being that low for a short time, but little damage was done.

Were I planting a grove in Florida, I would use some grafts or buds of California's choice varieties; and were I planting a grove in California, I should certainly use some of Florida's productions—prominent among them the Tangerines. They are much superior to the Mandarins, which appears to be the variety mostly used in California. They have both here, but there is a marked difference. The grape fruit is another of the citrus family that is coming into favor.

The possibilities of this State are very great, and the amount of oranges raised in the next ten years, at the rate of increase they have made the past five years, will be very great—perhaps a hundred times more than has ever been picked so far. I have seen trees, said to be five years from the graft, from which 8 boxes were picked last year, and they will pick 12 boxes this year. It is astonishing with what rapidity they grow, especially in the hammock lands. There are tens of thousands of the sour trees, of large size, grafted and left standing in the woods, and in place of bearing the sour orange they now bear a beautiful sweet fruit, with but little cost of any kind. About the only expense is deadening a portion of the forest trees, oak, magnolia, and other varieties, and after a time cutting them out with care, so as to not damage the orange trees. Many prefer to leave a portion of the forest trees.

The freeze of last year was quite disastrous to the lemon, and there are but very few of them in the State. Some are going to plant lemons largely, but it will be some time before the masses will take hold of the lemon.

There are many new industries springing up. The peach and Le Conte pear are being planted largely in some sections, and the strawberry will be canned extensively. It is said to bear very heavily for four months, and as no irrrigation and but very little cultivation is necessary, they can be raised very cheap.

There is a great difference in the Florida of today and of 10 years ago; and Florida 10 years hence will astonish those who have thought it a swamp or sandbank.

I expect to be in Chicago by the 20th of January, where, no doubt, I would like some of the beautiful weather I have been enjoying here. It is quite amusing to hear the people from the North as they come into the country (and the number is great) express themselves. I tell them they will have to excuse me from gushing, for have lived in a country for 37 years, portions of which enjoy for 300 days out of the 365 as fine weather as any one week they can select, and the land is much richer, and all the products that can be grown successfully in this State can be raised there (California), and many things that can't be raised in Florida. At the same time I admit they have a great State, and I think the next best one, take it all in all, to California. It is surprising to see the money being spent in railroads and indeed all kinds of improvements.

Sanford, Fla., Jan. 1. J. M. HIXSON.

Information About Reclaimed Lands.

EDITORS PRESS:—Could you or any of your experienced readers give me some reliable information on the following questions?

1. Is the reclaimed soil of the Sacramento valley (original tule land) suitable for growing rhubarb, canteloupes, squash, grapes, red currants, strawberries and other berries; and which vegetables do best on that soil (always provided one can irrigate whenever required and is no more subject to overflow)?

2. What quantity of such land is required to raise sufficient food (alfalfa or something else) for every cow kept for milking or dairy purposes (per annum)?

3. How many acres, set out in fruit trees, with some of the above-mentioned products raised between the trees, when they are young, can one work with one horse (distance from landing, two to three miles): and if one should require one horse for say 10 acres, how many horses should one be required to keep for 50 or 100 acres (I understand the proportion of horses required is comparatively less for larger quantities of land)?

While every year more land is being reclaimed, I have no doubt that reliable information on the above subjects will interest many of your readers beside myself. J. P. KOCH.

San Jose.

[No doubt our readers have much information on these and similar points. We should like to have a general contribution of experience on the subject of reclaimed lands. We have heard but little about them of late.—EDS. PRESS.]

Explosion Extraordinary.

EDITORS PRESS:—A few evenings since, as I was seated near the stove—for the evenings were a little cool—my eyes rested on the lamp chimney. "It is wonderful," said I to myself, "how long that chimney has lasted; it has been in the house a number of years, and in daily, or rather nightly, use for between two and three years, and only an ordinary chimney at that." Now I am not so superstitious as to connect these chance, though rather unusual, thoughts with subsequent events; neither shall I affirm that there was no connection; I merely state facts. The next evening, seated as before, the doors and windows all closed as usual, no appreciable change had occurred in the weather for some days previous—one of my sons, seated reading by the lamp, which had been lighted about half an hour, and turned up but just sufficient to read comfortably, his face partly away, so the lamp did not receive his breath, my eyes again rested on the lamp chimney, when suddenly, and with no word of warning, with a report nearly as loud as that of a revolver, the chimney lay scattered over the table in more than 150 pieces, or, counting the small particles, more than 1000. S. P. SNOW.

Santa Barbara, Dec. 25th.

THE APIARY.

Driving Bees.

EDITORS PRESS:—This is a term applied to the operation of compelling a colony or part of a colony of bees to leave their old hive. With hives having movable frames and straight combs in these frames, no driving is necessary, as each comb can be lifted out separately, and with the adhering bees transferred to another hive, or the bees shaken off and the comb returned to its old place. But when it becomes necessary or desirable to transfer or divide the bees in a box-hive or a frame-hive, having irregular and crooked combs, driving must be resorted to. For this purpose it is necessary to procure a

Driving-Box,

Which is simply a box of the same lateral dimensions as the hive, to be operated upon. If the hive is open at the top, it may remain as it stands; but if closed at the top, it must be turned upside down. The driving-box, which may have a few cross-sticks fastened inside for the support of the bees, is now placed, bottom up, over the open end of the hive, and a sheet or long strip of cloth wrapped round the joint, to prevent the escape of the bees. When all is secure, rap smartly on the sides of the hive with a stick or some tool, but not hard enough to loosen the combs, which may be fastened to the inside. Also give the bees a few puffs of smoke through the entrance or through a hole in the side of the hive. If there is no hole, one may be bored with an inch bit, and closed with a plug as soon as the smoke has entered. The smoke and rapping will frighten the bees and cause them to fill themselves with honey, whereupon they will ascend into the driving-box and cluster there. Repeat the rapping at brief intervals for about ten minutes, at the end of which time most of the bees will have left the old hive. The cloth should now be taken off, the driving-box carefully removed, and the bees disposed of, as desired. If the driving is done for the purpose of

Dividing the Colony,

The driving-box may be simply laid on its side in front of and with the open end facing a new hive, placed on the old stand, and a small piece of board placed so as to reach from the box to the entrance of the hive, upon which board the bees will soon travel into their new home. Sufficient bees must, of course, be left in the old hive to take care of the brood and to raise a new queen. The old hive should be removed to another stand at some distance. If the driving is done for the purpose of

Transferring.

The operator should proceed, as described in my article on "modern transferring." If, however, there is but little brood in the old hive, I have found it more expeditious to make one job of it, by making a thorough drive of the bees, breaking up the old hive immediately, transferring such combs as contain worker-brood, and which are straight and large enough to fill a frame in the new hive, and sacrificing the balance of the brood. As in this case the whole force of the colony are working together, they will in a very short time have more brood and in better shape than that which was lost at the time of transferring.

WM. MUTH-RASMUSSEN.

Independence, Cal.

THE VINEYARD.

The Making of Vineyards Upon Resistant Stocks.

EDITORS PRESS:—From the very numerous inquiries which have been made of me within the past few weeks for cuttings of the wild riparia vine, I judge that there is a greater disposition than has heretofore existed to adopt this remedy against the continued spread or increase of the phylloxera, and I am thereby induced to put on paper a few ideas upon the general subject of making vineyards upon resistant stocks, which I think may be of advantage to those contemplating the use of such stocks.

Allow me to premise by saying that I have already given away all the riparia cuttings of last year's growth that I had to spare. A great drawback to a more extensive use of resistant stocks heretofore has been the difficulty and delay in obtaining "a stand" in the vineyard. If a vineyard be planted with cuttings in the usual way of one cutting to the hill, my experience is that, with the most favorable of seasons and the best of care, a growth of 60 per cent of the cuttings is all that can be reasonably expected. The 40 per cent missing is to be replaced the second year with cuttings or roots, and the third and fourth years there is still other planting to be done before a "stand" is had.

Then, when the vines are grafted, if a success of 80 per cent is obtained, the owner is to be congratulated. Of the missing 20 per cent about one-fourth of the roots are unfit to be regrafted, and must, or ought to, be replanted, and it would be profitable to the owner to dig up and replant even a much larger portion of the roots that had failed to take the graft. It is thus seen that by this process several years pass before a "stand" is obtainable, and in the meantime *all* the land requires the same amount of labor and expense as if a perfect stand existed. In addition to these difficulties, it will at once be suggested to the experienced man that with every year after the second the difficulty of getting replants (of even roots) to grow is greatly increased, the neighboring growing vines sending out their rootlets to occupy the space allotted to the replant.

The sight of a resistant vineyard thus in the process of being made is of itself quite sufficient to discourage any but the most persistent owner, and nothing but the absolute certainty that resistant stocks afford the only remedy against the phylloxera could induce any man who had seen such a vineyard, during the years of struggle to obtain a stand, to adopt those stocks as the base of his vineyard.

I have described the troubles and difficulties just as I have experienced them, and as I have observed them in other vineyards made by gentlemen of large experience in the business. I think I have ascertained and demonstrated that there is no necessity for the existence of these troubles and difficulties, and that there is no reason why as perfect a stand should not be obtained by the use of resistant stocks, and within the same time, as can be had by the use of vinifera stock.

When the first resistant vineyards were started in California, it was erroneously supposed that nothing would be gained by grafting the roots until they were at least three years old. Until they were of that age it was claimed that, when split for the insertion of the graft, they would not have sufficient strength to clasp and hold the graft in place. This may be true, but the error consisted in assuming that the wedge system of grafting was the *only* proper way of grafting the roots. When Mr. Leonard Coates, of Napa, grafted my first planting of resistant stocks several years since, he adopted the system of (what I believe is known as) the "English cleft graft," and which requires that the graft after insertion shall be tied to the root. This system proving to be more successful than any wedge grafting that I had seen, suggested to me that it was unnecessary to allow the roots to grow long enough to give the split root strength to hold in place a wedge graft. This past year I tried the experiment of grafting in the vineyard upon roots respectively three, two and one year old from the cutting, and, as I anticipated would be the case, I had as full a measure of successful grafts upon the one-year-old roots as upon either the three or two-year-old ones. This experiment was not confined to a few vines, but extended to the hundreds and even thousands. I accept it, therefore, as a demonstration that one-year-old roots (from the cutting) can be as readily and successfully grafted as can be either two or three-year-old roots. And, if I am correct in this, the trouble and difficulty of making a resistant vineyard, with as perfect a stand and in the same time that a vineyard could be made with vinifera stock, disappears. It shows *that resistant cuttings planted in nursery can be grafted the next spring after they are planted and transplanted into the vineyard the spring after they were grafted and at two years old from the cutting.* I have abundantly tested the fact that riparia roots two years old can be transplanted with an almost inappreciable loss.

My vineyard is all planted, so that I shall be compelled to graft in vineyard, but I shall this spring, at the same time of grafting in the vineyard, graft about 25 per cent of each of the varieties grafted in vineyard upon one-year-old roots *in nursery* for stock with which to replant all missing vines and failures of grafts in the vineyard, and by this means I am confident that the annoyance, trouble and disgust attendant upon an irregular stand, and the consequent delay in getting the vineyard in full, even bearing, will be avoided.

I am so fully persuaded that the proper and economical plan of making a resistant vineyard is to graft upon one-year-old roots, that if I were making a new vineyard, I would graft all the roots in nursery, and only plant in vineyard roots already grafted.

It may be well to state another very important advantage of grafting upon one-year-old roots. Every one who has attempted to make a vineyard upon riparia roots must have been impressed with the care and expense attendant upon suckering the vines the first year. A three-year-old riparia root, the first year of its being grafted, will throw up a great number of suckers. Unless these are removed, they will divert the sap from the graft and cause a large percentage of failures of the graft to take. It is no small job to remove these suckers; they have to be removed with great care, in order to prevent the disturbance of the scion, and for the first season after the grafts are inserted they should be removed as fast as they show themselves above the ground, which will be once every week or 10 days. This makes it very expensive work. My experience is, that one-year-old roots, grafted, throw up only about one-tenth the number of suckers that are produced by three-year-old roots, thus reducing the expense of suckering to less than one-fourth than is attendant upon suckering three-year-old roots. One-year-old roots seem to afford only about that quantity of sap which is necessary to the growth of the scion, while that afforded by the three-year old roots is so much more than is required by the scion that it finds an outlet in the production of suckers. I trust that the ideas which I have thus hastily penned may be of benefit to others.

JOHN A. STANLY.

San Francisco, Jan. 13th.

A Fresno Raisin Vineyard.

EDITORS PRESS:—On Cherry avenue, in Central Colony, about five miles south of Fresno city, Miss C. M. Artz is engaged in the raisin vineyard business, and just as the picking and drying season was going out, we called at her establishment, and found her busily engaged in finishing up her last dryings, and gleaned from her the following notes:

Her varieties consist of the Muscat and Seedless Sultana. The Muscat is so far considered the finest and most profitable. In answer to a question as to the prospect for the future of the Sultana, she said: "As to the Sultana, we don't yet know what we may or may not do. The Sultana is fast coming to the front. The Muscat has the advantage of ripening earlier." This season she commenced picking the first crop of Muscat August 24th. The Sultana is not fully ripe till about a month later. The Muscat has also a great advantage over the Sultana in the matter of its much larger size.

Miss Artz has only eight acres in vineyard. Of varieties she has 1500 Sultanas, 1039 Muscats and 60 Cornichons. This last mentioned is one of the finest table grapes, being large, shapely, of beautiful color—a very dark purple—and of the finest flavor.

In the past season she had the extra expense of furnishing redwood stakes for the Sultanas and Cornichons, which cost $32 per thousand; the labor for staking and tying up, $10 for the whole. The cost of plowing or cultivating three times and hoeing twice was $26. Add to all this the interest on money invested and the taxes, and we have a summary of her expenses for 1886.

It is believed that the production has, for the

year, been about 1½ tons per acre. The Sultana shrinks in drying about 4 pounds to 1; the Muscat about 3 to 1. The Sultanas were not yet sold, but it was believed there would be between 5 and 6 tons after drying. The grapes from several Sultana vines, when fresh picked, were weighed, and the average was set down at 35 pounds per vine. The yield from one vine, not wholly exceptional, was 72½ pounds.

Miss A. thought it would be quite safe to estimate the production of four tons raisins from her 1039 Muscat vines. The entire crop of Muscats was sold in the sweat-box to parties in San Francisco, and delivered on cars at Fresno city at 4½ cents per pound. The extra care and expense involved in the packing is thus avoided.

The Sultanas after drying are cleaned and put up in sacks of about 100 pounds each. As her Sultanas are very nice, she hoped to realize from their sale at least as much per pound as she did in the sale of her Muscats. The large, handsome bunches of the Sultanas on the vine when ripe, and before picking commences, furnish a magnificent spectacle. The flavor and size of the Muscat raisin secures for it among consumers a popularity that bids fair to continue its reputation among growers as the most profitable variety. McD.

Fresno Co.

Sulphuring Vines.

EDITORS PRESS:—I have read in your valuable paper many comments on mildew on grapevines and remedies for the same. Many of them, however, were theoretical; and thinking that practical experience may be of use to some of your readers, and to confirm the theories already advanced, I beg leave to give you my experience.

I find that sulphuring can hardly be done too soon, particularly in localities where the vines are subject to the disease. I commence when the shoots are but an inch or two long and when many of them are but just starting. At this early stage but little sulphur is required, and, with me, has proved a very effectual preventive of disease. It also has the effect of destroying a small black borer which makes its appearance at about that time and does considerable damage if let alone.

The second sulphuring is applied by me when the vines are in blossom. These two sulphurings, if well done, and a good article of sulphur employed, are sufficient to check mildew. There may appear a few isolated cases of sickly vines later in the season, but with care they also can be cured.

The different qualities of sulphur have also been discussed in your paper. We have tried them all, and I, for one, am convinced that there is no economy in using any but the best. Last year I used a Belgian sulphur, branded Koch & Reis, which can be found, probably, at any wholesale druggist's. In former years, although always sulphuring, employing "French sublimed," "French rolled," Sicilian and American, I have always suffered more or less from mildew, whereas, last year, employing the Belgian, not over a dozen vines were affected out of over 40 acres. A neighbor who used the American article, and in larger proportions than I, suffered considerably from mildew.

The time may come when our country will produce an article as good as the imported one, but my experience teaches me that such time has not yet arrived. HENRY MEL.

Glenwood, Santa Cruz Co.

Grape-Grafting.

EDITORS PRESS:—Three years ago this winter, I set eight or ten acres to grape-cuttings, that I supposed were of the Muscat variety. Last year, when they came to bear, not more than half were of that variety, the balance being Black Hamburgs, Missions and some others that I have not learned the names of. I wish to graft these with the Muscats, and so write for information to the RURAL, hoping some one or more of the correspondents of the paper may be able to give a minute description of the process, and also best time of grape-grafting, and greatly oblige READER.

POULTRY YARD.

Lung Disease in Fowls.

EDITORS PRESS:—I have made a discovery in regard to poultry which may be of interest to the readers of the PRESS. Last spring, while living at Santa Cruz, I had a brood of Langshan chickens which I prized very highly. There came on a cold, wet spell of weather, and having to move from one portion of the town to another, and the place that we moved to being infested with rats, consequently I had to house my chickens in close quarters at night to keep them from being destroyed by the vermin. The result was that my chicks became diseased and they gave forth a stench from their nostrils that was quite offensive. As soon as the chicks were old enough to be moved to the perches in the poultry-house I began to carry them to the chicken-house where I kept the rest of the poultry, but they would as persistently return to their former coop. Some of my chicks gave forth a peculiar piping sound. I gave internally and applied externally various remedies, but all to no avail. They ate well, but began to get poor in flesh. One of the largest and poorest of the lot I killed for dissection. I examined the œsophagus, crop, larynx and nasal passages and found them in a normal condition. I next directed my attention to the lungs, and there I found the seat of the disease. Part of the lung substance was shriveled, and in the portions that were not shriveled tuberculosis was well marked—in other words, my chickens had consumption of the lung substance, with asthmatic symptoms. The lesson should teach us that poultry, as well as human beings, need plenty of pure, fresh air. DR. O. F. SHAW.

Oakland, Cal.

German Method of Preserving Eggs.

EDITORS PRESS:—Will you please publish in the RURAL the German mode of keeping eggs? In the winter of 1884–85, I used, in Philadelphia, eggs sent from Germany, and they seemed perfectly fresh, and unlike the "limed" eggs. We could boil them without the shell cracking. MRS. J. H. THOMAS.

White River, Tulare Co.

[Perhaps some of our readers can give the method desired.—EDS. PRESS.]

THE STOCK YARD.

Dehorning Cattle.

EDITORS PRESS:—In your issue of December 4th I noticed an article from the pen of W. A. Henry, Director of the Wisconsin Agricultural Experiment Station, in regard to dehorning bulls. Now if they are so dangerous why not dehorn all when young and avoid the necessity of this severe operation when they are grown? Thinking some of your many readers may be interested, I venture to give some of my boyhood experience.

When a lad of six or seven years of age, I remember being at Grandfather Murray's, in Maryland, when they were handling a lot of calves, and I asked mother what they were doing. She replied they were burning their horns to make "Mulleys" of them. I also remember that grandfather had a number of hornless cows.

We afterward migrated to Ohio; my uncle, James Benson, was already living there, and as years passed on I learned that he was treating his calves in the same manner, and a large proportion of his cows were without horns; occasionally one would have a small horn curled down close to the head; but most of them were so completely without horns that no one would ever suspect but that they were naturally polled cattle. At one time the neighbors thought he had quite an advantage. They had an assessor who interpreted the blank forms literally. They had a blank for "horned cattle" (in contradistinction to horses, mules, etc.); so he assessed none that were without horns, and consequently they escaped taxation. My uncle had some cows with horns, for at times in a busy season they were neglected until it was too late to make the operation a success; so they were allowed to wear their horns. I never saw the operation performed, but my uncle informed me upon inquiry that all that was necessary was to burn the horns with a hot iron just as they began to show through the hair.

Tracy, Cal. J. M. KERLINGER.

Another Way to Get the Horns Off.

There is still another way to get a hornless herd, and we admit we like it best of all. Our friend A. W. Cheever, editor of the *New England Farmer*, tells about it as follows: Pure bred polled bulls have great power for breeding the horns off from other cattle, particularly from the Jerseys and Shorthorns which have horns rather under medium size, and from the common native cattle of the country. When in Chicago a few weeks since, it was our pleasure to be present at an annual meeting of the Red Polled Cattle Club of America, an organization that has been in existence only about three years, but which has done some excellent work in introducing polled dairy and beef stock into this country and in awakening an interest in polled cattle. Just before the close of the meeting a census was taken to learn how many polled cattle were represented by the members present. Many of the members reported more grades than pure breds (though there are nearly 600 of the latter ready for registering), and the writer asked what he was to understand was meant by the term "grade poll," whether the half or three-quarter bloods, having horns, could be called grade polls. The answer given by Mr. J. C. Murray, treasurer of the club, was that the grades very seldom have horns; he had never seen or heard of any among the breeders of red polls. The general absence of horns on the grade polled Angus is probably equally noticeable. In our own experience in breeding from pure polled cattle, the horns were exceedingly rare on the progeny, and in breeding from grade polled bulls the heifer calves rarely had horns; the bulls were more likely to have them.

HORTICULTURE.

Notes on Pruning.

EDITORS PRESS:—The weather is still dry, with cold nights and north winds. Last night we had a little frost and the first ice of the winter, which was thick as window glass. We had about one and one-half inches of rain last week, and the ground is wet enough to work well. Many are plowing in their orchards and vineyards. It is early yet to plow, as the weeds are not large, but if the rain should fall short, those that plow early, often and deep will get the best crops.

Pruning vines was commenced here before the grapes and leaves were off of the vines, which was much earlier than common. Vines pruned early start to grow sooner than those pruned late, and so are more liable to be caught by the frost. Generally, those that are afraid of frost put off pruning as long as the sap does not run free enough to cause the vines to bleed badly. Tokay vines should have much more wood left on than other kinds, especially where there is much wind. When there are but few buds, they grow very rapidly, are very tender, and often the wind strips the vines, whereas if there are a large number of buds they do not grow so rank, but much stronger, and protect each other.

Young peach trees are not so apt to drop their fruit if pruned late, and I think other trees that drop their fruit might be benefited by late pruning.

The "Long French" prune but seldom bears a full crop here. It does well until the prunes are one-third grown, when they fall off. Other prunes are not troubled in that way. Pear and prune trees, after the third year, should be left one year without pruning. This will cause the tree to form a head instead of running into long, thin switches, and cause the fruit buds to form.

Many people see the mistake they made years ago in trimming their trees up and starting them to branch out two or three feet from the ground. With a tree, to make a success, you must have good material to start with; then it is easy to guide it properly if you know how; but once make a mistake and it can never be corrected. Fruit trees that have to be gone over two or three times to gather the fruit should start to branch out not more than a foot from the ground. Then, if cut back properly when it is five years old, the head is formed, and a man can stand on the ground or on a very short ladder and gather the fruit. It is much cheaper to hire four feet square of ground around the tree spaded up than to hire a man to run up and down a tall ladder to pick the fruit. Heavy pruning will cause a large growth of wood, and light pruning will cause the tree to set full of bloom buds.

Cherry and almond buds are beginning to swell, and will blossom in two weeks if warm weather holds. G.

Vacaville, Jan. 9.

Division of Pomology; Department of Agriculture.

EDITORS PRESS:—I have read with much interest your account of the Citrus Fair, in Sacramento, and other pomological matter in late copy of your paper. This division has only been established this winter by Act of Congress, which took effect the first day of last July. We hope to make it a means of good to the people of California as well as the States on this side the mountains. If you will kindly mention the fact of its establishment and ask your readers to communicate with me on any pomological matters, and especially regarding new fruits, it will be gratifying and I trust helpful to each other. The fruit industry is one of the main sources of the wealth of California and needs all the help it can get. It is my purpose to visit your State to examine into the facts upon the ground at my first possible opportunity. Respectfully, H. E. VAN DEMAN,

Chief of Div'n of Pomology, Dept. of Agr.

Washington, D. C.

[We are glad to hear from Mr. Van Deman, whom we have known for some time by his reputation in connection with pomological matters. No doubt the California fruit-growers will be glad to see him out here and to aid him in his useful work in every possible way.—EDS. PRESS.]

Assessment of Trees and Vines.

EDITORS PRESS:—There is legislation much needed to stay the practice of assessing fruit and ornamental trees and vines separate from the land—that is, trees and vines not of natural growth, but those that have been transplanted. The culture is laudable, and deserves encouragement as other industries of the State.

There is nothing in the State Constitution defining the trees and vines as improvements. There are, however, structures, always known as the improvements—such as the usual buildings and fencing; they are assessed separately from the land on which these rest, and these only. Such being my view, I should be satisfied with the repeal of the statutory provision, unsupported by the Constitution or lawful usage, and thus have a speedy and deserved remedy. Never will the like be re-enacted.

Again, further, there is no good law in distinguishing between laudable and, at the same time, lawful agricultural industries in this State. In this latter view the enactment is void.

Were I a member of the Assembly—which I am not, and shall never be—I would unhesitatingly offer a bill for the repeal of the statute.

But for prolonging this piece, I would inform you of the wrongs inflicted. I reserve this part until called for, should there be occasion.

San Francisco. CHARLES AIKEN.

SHEEP AND WOOL.

The Angora Goat Register.

EDITORS PRESS:—Since the establishment of a register for Angora goats, viz.: of pure-bloods or Class 1, and high-grades or Class 2, by the American Mohair-Growers' Association, at their meeting at San Antonio, Texas, held on the fourth and fifth days of October, 1886, which proceedings appeared in the RURAL PRESS in its issue of Nov. 6th, the advantages derived from said register are generally admitted by the breeders of Texas; and it appears that it will be to the interests of the California breeders, at their meeting in September next, to face the question squarely; and to discuss matters connected therewith thoroughly, through the columns of the RURAL PRESS, will help the cause. The *Texas Farm and Ranch* of recent date gives the views of G. A. Hoerle, corresponding secretary of the American Mohair-Growers' Association, on the importance of a register, as follows:

"A joint co-operation of all breeders is indispensable for the success of the industry, and the success of the industry at large necessarily must be an advantage to every individual breeder of good stock. The owner of high-bred stock will be benefited by a union to secure the sale of his animals, and should expose every case of fraud which comes to his knowledge. So should the owner of grades, for he needs a union to help him protect his pocket-book, and it is high time that every honest breeder should recognize this fact and act accordingly. We need a strong association, extending all over the Union, and a carefully kept register."

At the Texas meeting above referred to, committees were appointed, one to represent the pure-blood breeders and one the grade breeders, who were instructed to define certain points of excellence, by degrees, to each class of Angoras. This committee adopted rules for registry, which were printed in the RURAL PRESS of Nov. 5th last, and there were also elected ten members for examining commissioners of Angora goats, whose duty it will be to examine goats presented to them and to issue permits for registry to the keeper of the register for Texas, according to the class to which they belong.

The Texas Association will hold its next meeting on the first Monday of June next.

The Angora goat-breeders of California, at their meeting on Sept. 16th last, discussed the question of joining the American Mohair-Growers' Association of Texas to establish a standard for a pure-blood Angora goat or a system of registry, and it was resolved that action on this subject be laid over until the next annual meeting.

Now as the Texas breeders have already established a register for the Angora goat, we cannot delay acting on this subject at our next meeting at Sacramento, and to do justice to the matter it should be discussed. California breeders who desire to join the association and assist the goat industry by their counsel and in other ways can become members by sending $2.50 to the secretary, and their names will be entered as members of the association.

JULIUS WEYAND,
Sec'y Angora Goat-Breeders' Ass'n.

Colusa, Cal.

UNSHOD HORSES.—Mr. P. H. Fagin, a furniture and piano mover at Malden, Mass., gives his experience with barefooted horses. He has driven three horses (two weighing 1100 pounds each and one 1300 pounds) since January, 1885, without shoes. The large horse has always been lame since he bought him 14 years ago, until he took his shoes off. The animal has not gone lame since. He has driven on hard, flint roads, and, of course, on pavements in Boston. The horses travel better than before their shoes were taken off. They are not afraid on slippery pavement as they were with shoes on, and there is no trouble in getting round on any kind of going in the city. Mr. Fagin drove to Shrewsbury, 35 miles from Malden, after two days' rain, in February, 1885, when it was so icy that a boy could skate all the way, and had no trouble. He left home at 7 A. M., arrived at Shrewsbury at 3:40 P. M., and the horses did not slip. The hoof is hard and broad, and the frog is full and plump and on a level. They have driven two winters on ice and snow altogether better than when they were shod. Their feet are better for all purposes, they can trot faster, pull as much and go more miles in the same time than they could when shod.—*Boston Herald.*

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Joint Installation at Sacramento.

EDITORS PRESS:—The 8th of January was a beautiful winter day. It was the occasion for installing officers of both the Pomona and subordinate Granges for 1887, which took place at 1 o'clock at the hall of the G. C. B. Association. The day was also set apart for the inauguration of the Governor and Lieutenant-Governor of the State at the capitol, which brought together a great concourse of citizens. A large number of P. of H. attended the joint installation. At 12 M. all repaired to the banquet hall, and prepared the inner man for the duties of the afternoon. On reassembling the officers-elect were called from both Granges and took seats set in cross range of hall. W. M. S. G., Wm. Johnston, officiated as installing officer with his assistants, Sisters Hattie Jones, of Yuba Grange, and Jackman, of Sacramento Grange. The W. M. gave the class a fine lecture on the duties before them—perhaps one of his best efforts during the years of connection with the Order. Bro. A. A. Krull, W. M.-elect of Pomona Grange, No. 2, in taking the chair, delivered the following address:

Sisters and Brothers—I thank you for your kind appreciation. In assuming this office to which I have been chosen, I realize well the importance of the position and the obligation taken with the pledge to fulfill the duties of the office as Master of this Grange. I feel that I need your assistance to accomplish the work that we were organized for. Its organization is designed to strengthen the subordinate Granges. The first and most important duty, when elected to an office, is to faithfully perform whatever duty is assigned. I hold when a member is elected to an office it is his duty to promptly fill his place and study to do it well. Every member should be courteous to all, honest in all deslings with his fellow-men, chaste in thought and language, pure in heart and life, an earnest seeker after knowledge, a zealous Patron, a true patriot and an intelligent philanthropist. An Order so composed would be strong and useful in promoting the interest of agriculture of all classes. Fellow-Patrons! let us ever respect our profession, and bear in mind that moral and mental worth ranks before worldly wealth or honor, and as Worthy Patrons in our glorious fraternity, we can justly claim to belong to the true nobility of the land.

As the W. M.-elect of Sacramento Grange, W. W. Greer, was introduced, the retiring Master, G. W. Hack, made a few remarks, and the former responded, thanking him for his kind greeting, reviewed his past administration and congratulated him on his success, saying that words cannot express the deep sen timent of esteem and gratitude the members of Sacramento Grange owed to him for the labor he had performed and the good he had accomplished. Bro. Greer said his earnest hope was that he might be able to present an administration productive of as much good, and be able to retire from office with as good a record. He appreciated the mark of their esteem, and would long retain in his memory the compliment they had paid him, remembering the day with feelings of the greatest pleasure and pride. He said he was not unmindful of the many responsibilities that would devolve upon him in his position as Master, but hoped to discharge them in a manner that would reflect credit on himself and be acceptable to the Order, and would use his utmost endeavor to conduct their business and preside over their meetings in such a manner as to merit the respect and approval of all. He hoped the succeeding year would be one of pleasure and profit; requested all members to put forth their utmost individual and united efforts for the good of this Grange, with the best interest of the Order at large. He closed by asking all Patrons to try and introduce the noble principle of our Order into their lives, and labor to carry out our Declaration of Purposes.

The W. M., in giving the obligation, stated he would follow the course that the W. M. of the N. G. did at the last session, which he thought was far better than the old way—that was, to read it, and let the officers accept the same. All the officers were introduced and made short speeches, showing willingness to fill their respective chairs to the best of their power and usefulness to the Order.

At no previous time in the history of Sacramento Grange have so many young members assumed positions within the gift of the Order. Eleven out of thirteen are young sisters and brothers, and seven of the whole number are sisters. The old members have given way to allow them to step forward. The charge was given them by the W. M. S. G. at the opening: that the gift of the office means something more than filling it; work must be performed to make it a success—the ladder of fame requires step by step to reach the last round, and the ones who gain it stand high in the estimation and approval of their fellow-men. The Grange intends to stand by and encourage them in their work; make it a school for them; educate the mind and heart to enter the drama which they will enact in various vocations as suits their taste and position. I believe it is the intention of each to commit the work to memory, which will make all occasions pass off smoothly and easily and produce a better effect on both candidates and auditors.

The Past Secretary and Treasurer read their annual reports. Work is being laid out for the next literary day, which is soon at hand. The opening year looks propitious, and all expect to be highly entertained in the exercise of musical and elocutionary powers during future sessions.

G. R.

The Farmers' National Congress.

The Farmers' Congress, the call for which appeared in the RURAL PRESS of December 4th, was held last week at Washington, D. C. Resolutions were adopted urging Congress to make the Commissioner of Agriculture a Cabinet officer, and extend the benefits of the signal service to the farmers; to regulate interstate commerce and pass an experimental farm bill; and provide for the complete development of the system of waterways of the whole country. It was also asked that American ministers in France and Germany be instructed to use all proper means to prevent placing of restrictions upon American farm products properly inspected and shipped.

In accordance with resolutions adopted, President Beverley appointed a committee to confer with the Senate in relation to the Secretaryship of Agriculture and a committee to confer with the Agricultural Committee of Congress and the State Department.

Among the resolutions reported was one to the effect that the clause in the charters of national banks, which prohibits their loaning money on real estate, works great injury to farmers of the United States by denying them banking privileges, thus causing them to pay a higher rate of interest than any other class of citizens, and that the farmers of the United States, in congress assembled, do most respectfully but urgently ask the Congress of the United States to repeal the same.

It was proposed that members call in a body upon the President of the United States. A message was sent to the White House to learn the President's convenience. Colonel Lamont replied that the President was then engaged, but would be pleased to receive them the next day, Jan. 14th, and 1:30 o'clock was the hour set for calling.

The delegates of each State and Territory were asked to call upon their representatives in Congress and personally endeavor to hasten legislation on the matters which have been discussed. The congress adjourned to meet in Chicago on Tuesday before the meeting of the Fat Stock Show in November next.

Installation at Stockton.

EDITORS PRESS:—The office of Master in the Grange is full of honor, but no sinecure; and he who takes it has not only to gather the flock, but to see that they make the most of the hour and to combat dullness, and, when driven to the last resort, scatter them with a recess to liven up. In view of this, our sensible young master's gayety at casting the official harness and taking the steward's spud was pardonable.

W. P. M., Ketchum, who has twice before served us, was elected on the first ballot and installed January 8th by District Lecturer Hoffman and Bro. Barber before an open gathering, made up of Stockton and Lodi Granges, and many friends who admired and enjoyed the teachings of the ceremony; after which the wide-awake new Lecturer, Sister Merrill, regaled them with "Sockory Setting the Hen." On taking the chair, each new officer, with a readiness that showed the good of Grange drill, made a neat little speech of appreciation and fidelity.

In the forenoon a Grange meeting was held, finished by forming into march—officers first, then guests and members, who more than filled the three tables, made tempting by willing hands. Gratitude rose in each heart at the Master's charge and Sister Stowe's benediction.

The Feast was one of installation and of thankfulness for the year's abundance—the anniversary of the battle of New Orleans, and perhaps the beginning of a battle with drouth and consequent self-denial; but hope perched on our banner and for the day we had joy and sympathy, and for the parting, a pleasant memory.

MRS. W. D. A.

WORTHY OF MENTION.—The recitation delivered by Miss Jessie Weed, the youngest member of Temescal Grange, after being installed into office recently at Haywards, was well received. The youngest member of Eden Grange, Sister Obermuller, in a musical voice, rendered a very pleasing song. Sister Roxie Dennis, as organist, added much life to the occasion. The new departure made by Worthy Lecturer Flint, in introducing, with installation ceremonies, so much freedom of expression and diversity of comments and recitations, was a much-enjoyed success.

GRANGE ITEMS.—We glean from the *Patron* that Bro. B. F. Frisbie, of Yuba City, assisted by Bro. H. S. Graves, installed the officers of North Butte Grange.....Bro. G. P. Loucks, assisted by P. M., Seaman, conducted installation at Walnut Creek on the 8th....A new Grange is to be organized in Rough-and-Ready by colonists from Grass Valley....San Jose Grange conferred the third and fourth degrees on two new members, Jan 8th, after which Bro. Pilkington acted as installing officer, with Bro. F. Dunn as conductor.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

It is with sincere pleasure that we note how generally not only the Grange, but other agricultural papers, are printing these weekly columns gleaned from our National Grange field. Literally from Maine to Oregon are these good rural papers co-operating in the work of showing the farmers of our country the necessity of organization and laying before their readers the practical work and progress of the 20-year old Grange. A careful record will be kept of all these favorable journals and their names published in our National Grange reports at the end of the year, that Patrons may know who are willing to "aid us in our efforts toward reform," and advance the interests of our whole country by organizing, educating and protecting this most important class that feeds and sustains all the rest. Farmers are more and more learning the value of the agricultural press and to stand by and to support those that are doing most for them.

The Grange recognizes the fact that the American farmer is the victim of certain evils, and it proposes to correct these. In order to accomplish this it organizes the farmers into one harmonious body; makes them a unit, and then exerts their combined strength for their protection.

The *Maine Farmer*, in a late issue, says: "The work of the Grange has been carried on in a quiet manner, yet has been an active influence in elevating the sentiment of the farming classes and educating to an appreciation of the importance of farming as a business, and to the means and methods of promoting its prosperity. So long as the work is carried on in this manner it must meet the approval of every good citizen."

Reports from the late meeting of the Kansas State Grange say: "Good, sound, practical steps were taken to push the organization in the State this coming year." Brother Wm. Sims, who is Secretary of the State Board of Agriculture, after being out of Grange office for a few years, but always a worker, has been again called to the front as Master of the State Grange.

Progress.

Brother A. Shumway, special Deputy, has organized a new Grange in Cottonwood, Idaho Territory. Brother Boice, of Oregon, reports the outlook for the Grange in Idaho very encouraging.

Gerard C. Brown has organized a very substantial Grange at Hanover, York county, Pa., and reports to the National Secretary that 30 or 40 candidates are waiting to be initiated.

A. W. Valentine, special Deputy, with the able assistance of good Bro. D. H. Thing, lecturer of the State Grange of Maine, has organized a new Grange at Newry, Oxford county.

Brothers Boice, Brown and Thing urge, by letter, the Secretary of the National Grange (so the latter writes us) to be lively and send out the necessary documents as soon as possible, in order that these new members may get to work. Secretary Trimble does not object to this urgency, in fact rather likes it, but wishes to know how he can improve on his present "liveliness," which is to send the outfit, etc., by express on the same day on which the application is received. We hope the Deputies will keep it lively for the Worthy Secretary, and we suggest to him to make it lively for the organizers and urge them to send more applications. We doubt if there ever was a period in the history of the Order where better, more practical and solid work was done by the National, State and subordinate officials than is being done to-day.

New Gloucester Grange, No. 28, Maine, has dedicated a fine new Grange hall. It is clear of debt. State Master Robie was the installing officer, and delivered an able address, "for the Good of the Order."

J. H. Walker, Secretary of the Indiana State Grange, writes: "The annual session of our State Grange was short, but, by Joe, the best we have had in many a day."

Nine more different localities in Connecticut are inquiring about and talking of organizing Granges.

Sister S. J. Back, W. L. of the Indiana State Grange, has just finished a successful lecture trip in Kentucky, under National and State Grange direction.

The Lecturer of the National Grange is filling a series of 35 lectures in New Hampshire, arranged by the State Grange. Deputy N. L., D. H. Thing, is hard at work in Vermont. He will lecture in that State once or twice every day until Feb. 1st. Deputy N. L. Whitney is again up and doing in Nebraska. He will probably be kept busy most of the year. Arrangements are being made for more "official" work by other workers.

Question for subordinate Granges: What legislation is needed by the farmers of our State, and are we as an organization doing our share of the work in keeping the needs of such legislation before the Legislature of our State?

"Then with minds that honor freedom,
Strong in strength that shields the weak,
And with freeman's peaceful weapons
We'll enforce the rights we seek."

TEMESCAL GRANGE.—Bro. J. V. Webster made one of his best speeches at Temescal Grange on Saturday last, touching the legislative needs of farmers and the welfare of the Grange Bro. Kelsey gave some information concerning his visit to Merced, Tulare and other counties south. He feels encouraged to believe that a number of dormant Granges can soon be revived in different parts of the State, and will use his best efforts therefor. Two applications for membership were duly received. The members expressed themselves as well pleased with their joint meeting with Haywards Grange on the previous Saturday.

The mentions of the death of Bro. A. D. Nelson were made with much feeling. His daughter, Mrs. C. C. Walter, resides in Oakland, and while visiting her home, Bro. Nelson had repeatedly attended Temescal Grange and become endeared to its members, as he had indeed to all who met him in the State Grange and other gatherings.

Bro. Webster, Sisters Kelsey and Babcock were appointed a committee to report resolutions of respect to the memory of Bro. Nelson at the next meeting.

The Signal Service and Experiment Stations.

The following communication from the Secretary of the National Grange is just at hand:

WASHINGTON, D. C., Jan. 15, 1887.

DEAR SIRS:—Under the instructions of Hon. Put Darden, Worthy Master of the National Grange, I have the honor to forward to you the following resolutions and reports unanimously adopted at the Twentieth Session of the National Grange, Patrons of Husbandry, held in the city of Philadelphia, from November 10th to 18th, and to ask your favorable attention to the same:

WHEREAS, It is of more importance to farmers than to any other class of citizens to know what changes are likely to occur in the weather; and

Whereas, The farmers furnish three-fourths of the exports of the country, and are the largest tax-payers in support of the General Government; therefore,

Resolved, That the Congress of the United States be respectfully requested to pass such laws as shall furnish the benefits of the Signal Service to the farmers of the country.

On motion, the Committee on Education made a special report, under a suspension of the discussion of the report of the Committee on Agriculture, as follows:

Reference of the measure now pending in Congress, as formulated in what is known as the "Hatch bill," providing for the establishment and maintenance of Agricultural Experiment Stations, having been made to this Committee, its members have made critical examinations of the provisions therein embraced, and they unite in the conclusion that the work contemplated is a proper subject for which cost should be met by the General Government.

There is also unanimous agreement by the committee to the proposition that such work should be delegated to Experiment Stations, already established under State control, where such institutions are now in operation, and the committee, therefore, recommends that this body advise such change in the bill as will give it this effect. Manifestly, it is in accord with the spirit and purpose of the bill that the work be deputed to those Stations where they have already been proved worthy of confidence and support. Your committee, therefore, deems it a matter of economy and wisdom that this appropriation for such States as have independent Agricultural Experiment Stations be given to them rather than to new Stations. Without this change, it is very plain that the full purpose of the bill will not be attained.

Another change desired by the committee is, that the appropriation for any State in which there is no Experiment Station under State control, and in which a college has been established under the provisions of the land grant act of 1862, and has departed from the purposes of that act, by neglecting agricultural education, and in which State there is a duly organized Board of Agriculture, the appropriation be made subject to direction by such Board for the uses contemplated in the bill, and that upon the establishment in any such State of an independent Agricultural Experiment Station, the appropriation shall go thereto without the intervention of authority exercised by any college, board or faculty.

It is, therefore, recommended that this National Grange endeavor to make such representations to the House Committee on Agriculture as will result in the changes herein proposed.

Resolved, That the Worthy Master of the National Grange be instructed to bring this matter before Congress, in such a manner as will plainly set forth the views of our National Order.

Resolved, That the Worthy Master of the National Grange is hereby instructed and empowered to enforce the legislative provisions of this body, as embraced in the various reports and resolutions submitted at the present session, by committees or otherwise, as he may deem necessary. Very respectfully,

JOHN TRIMBLE, Secretary N. G.

It will be seen, from the brief report given elsewhere of the doings at the Farmers' Congress, that the latter body took action in the same line with the National Grange. We made mention a fortnight since of the courteous recognition by our Californian M. Cs. of the State Grange's resolution favoring the Hatch bill, and we can hardly doubt that all these combined influences will be felt to some purpose in the national halls of legislation.

Grange Elections.*

ANTELOPE GRANGE.—John Sites, M.; H. A. Loyan, O.; Geo. F. Myrick, L.; Wm. F. Sites, S.; John D. S. Taylor, A. S.; Sister Loyan, C.; John D. Rosenberger, T.; P. Peterson, Sec.; H. C. Stanton, G. K.; Sister Rosenberger, P.; Sister Sites, F.; Sister Clark, Ceres; Sister Cora L. Pryor, L. A. S.

GRASS VALLEY GRANGE.—J. W. Stewart, M.; S. L. Richards, O.; John T. Rodda, L; Thomas Lee, S.; A. G. Peterson, A. S.; Mrs. A. G. Peterson, C.; A. Matteson, T.; A. Henderson, Sec.; M. Berryman, G. K.; Mrs. A. Matteson, Ceres; Mrs. S. L. Richards, P.; Mrs. J. W. DeGolia, F.; Mrs. Geo. Rowe, L. A. S.

*Secretaries, or other officers, are invited to send us lists of officers elected, date of installations, and all other interesting matter for publication.

DEATH OF FATHER NELSON.—A. D. Nelson, affectionately known to Patrons as "Father" Nelson, died at his home in Butte county on the last day of 1886, in the 75th year of his age. He was born in New York State, but moved while yet a boy to the then wild Michigan, where he grew up, married, and followed farming until 1859, when he brought his family to California and engaged in wheat-growing. Upright, truthful, and uncompromising in his support of what he deemed just and right, he was devoted to Grange principles and their earnest advocate with tongue and pen. We hope to refer again to the life work of this venerable and beloved member of our Order. His bright face and hearty greetings will be missed, especially at State Grange, whose sessions he was wont to enliven by his presence.

WALNUT CREEK GRANGE will hold an open meeting Saturday evening, Jan 22. The public are cordially invited. Beside music, readings, and recitations, the following resolution will be discussed: WHEREAS, The use of intoxicating drinks is an evil that it is desirable should be abolished, therefore *Resolved*, That suitable laws should be passed prohibiting its manufacture and sale except for medical and mechanical purposes.

AGRICULTURAL NOTES.

CALIFORNIA.

Butte.

ORANGE AND OLIVE PLANTING. — Oroville *Register*, Jan. 13: In 1875 there were 450 orange trees in Butte; in 1881 the number was 3000, while last year it was estimated at 6500. At the present time there are not less than 10,000 orange trees in the county, and the number will be greatly increased during the present year. Hon. John C. Gray received a large lot of olive cuttings last night by express. He will not cease putting out olive trees until he has 50 acres in bearing.

Contra Costa.

JANUARY GRAPES.—Martinez *Gazette*, Jan. 15: On Tuesday Dr. Strentzel, of the Alhambra orchard, presented us with a box of Black Ferrara grapes, which were picked fresh from the vines January 11th. Although not so firm as the midsummer grapes, they still retain their rich, rosy, dark color, their sweetness and their agreeable flavor. The writer was raised in this county and he remembers how, Christmas after Christmas, he plucked grapes from the Mission vines on the old homestead in the San Ramon valley, looking upon the rich clusters as he did upon the numerous gifts of Santa Claus, as a matter of course. But attractive, eatable grapes in the middle of January are comparatively rare, even in California. These, from Dr. Strentzel's, are far better than the average first grapes of the season.

SEEDLINGS FROM FRANCE.—This week Mr. J. T. Bogue, proprietor of the Alhambra nurseries at Martinez, received a half million seedling pear, apple, cherry and plum trees from France. He also received 150,000 seedlings from New York. It is his intention to set out 250,000 trees in his nursery here. The trees arrived in splendid condition.

Fresno.

DATES.—*Expositor*, Jan. 12: We have long known that the date would grow in this valley, many plants having been raised here, but whether it would fruit has been a question. Now, however, this has been demonstrated, a date palm having fruited at T. C. White's, in the Central Colony, the past season. The date is one of the handsomest of the palm family; it grows readily from the seed taken from the ordinary date of commerce, and we would advise every farmer to plant a few.

DEVASTATING FLOCKS.—*Delta*, Jan. 13: A gentleman from Fresno, just down from the head of Kings river, says the sheep have completely eaten out the feed in that section. Even the pine leaves and tree-mosses around the young trees have entirely disappeared. This close feeding will result in killing the young pine and undergrowth, leaving nothing to check the rapid disappearance of the snow when warm weather arrives. He predicts that in a few years, if this kind of pasturage is continued, our late spring floods will be things of the past, for with no shade to hold back the snow the first warm weather will send it down in a deluge, all at once.

Humboldt.

BLASTING STUMPS.—Eureka *Standard:* An interesting exhibition of the power and utility of "high explosives" in removing trees and stumps from the ground, was given Sunday at the farm of B. Glatt, beyond Ricks' prairie. A party of 25, including several ladies, repaired to the field where a redwood tree six to seven feet in diameter and 100 feet high was selected as a victim. A small hole about eight inches square and three to four feet deep had been sunk at an incline under the roots, 65 pounds of Vigorit powder was placed therein, the fuse attached and the charge tamped down. The fuse was lighted, and the spectators were safely behind trees and stumps, when the tree rose perpendicularly 10 feet in the air, fell back into the pit, jarring nearly all the limbs off, tottered a second and came down with a deafening crash. An inspection showed all the larger roots thrown out of the pit, and the smaller ones jarred so as to be readily detached from the earth. As Mr. Glatt remarked, "a better use to put it to than blowing up street cars."

Los Angeles.

AFTER THE BUGS.—Pomona *Times-Courier*, Jan. 15: The County Inspector of Fruit Pests, Mr. McMullen, was in town Tuesday, and, assisted by Mr. J. A. Driffel, one of the local inspectors, made a careful search for the cottony-cushion scale in the orchards of R. F. House and James Loney, adjacent to the Wolf place, where the scale was recently discovered. These orchards were found to be free from the scale, and it is hoped that the pest is confined to the Wolf place. Mr. Driffel has spent the entire week inspecting different orchards, and finds the San Jose scale quite prevalent. In two of these orchards the trees were condemned, and were immediately dug up and burned. In others only a few were condemned and destroyed, those which were only slightly infected being severely pruned and treated with coal oil and sprays. In every instance it was imported trees that were "buggy," home-grown trees being exempt. Mr. Driffel says he has encountered no opposition thus far, every one displaying a readiness to adopt such measures as the inspector thought best, even to the extent of destroying trees.

TOMATOES.—*Herald*, Jan. 15: John G. Nichols, Jr., had 20 acres of land near Cahuenga planted with tomatoes, and he now has tomatoes until he can't rest. He has made a contract to sell his tomatoes to a firm in this city for 70 cents per box. As he can deliver 300 boxes per week, and the tomato season lasts six months, the gross result of his 20 acres in half a year should be $5460. On that sum Mr. Nichols and his family need not starve.

CORN ON THE "DESERT."—An idea prevails that across the Sierra Madre is the great forbidding Mojave desert, where vultures and wolves are the graves of the traveler. James P. Jones gives an illustration of desert products by presenting the *Herald* with a sample of beautiful white corn grown in the Mojave valley without irrigation. This corn was planted in July last and gathered in September, and yielded 100 bushels per acre. The quality is unsurpassed. A single ear shows 1030 kernels by actual count, and generally each stalk had two ears. A yield of 2000 fold is pretty good for a reputed desert. This grain is grown at an elevation of 3000 feet above the sea level, and appears to be free from the fly and its product, the worm, that infest the ears of the lowland corn.

Monterey.

STARTING ORCHARDS.—Bradley Cor. Salinas *Index*, Jan. 13: A Fresno nurseryman, who sent an agent through here last summer taking orders, delivered hundreds of trees Friday. There were peaches, apples, plums, nectarines, apricots, cherries, prunes and oranges; also grapevines and currant bushes. It is believed irrigation will be necessary at first. Some have dug a large trench and buried the roots till rain comes; others have planted them in the moist sands of the river. Much is expected from the introduction of this new industry.

Napa.

USE FOR PALM LEAVES.—*Register*, Jan. 14: They are utilizing the leaves of the palm and palmetto trees that grow in the garden of "Hedgeside" farm, by splitting them into strings and using the same in place of hemp in tying the vines trained to stakes after pruning. The fiber of these leaves is very tough and as pliable and strong as bale rope. A half dozen trees will supply enough of this tying material for a good sized vineyard. It will thus be seen that the palmetto and palm are useful as well as ornamental.

Placer.

MIDWINTER BERRIES.—*Record-Union*, Jan. 18: A fine sample of ripe raspberries was received at this office yesterday, from the premises of Dr. Frey, near Newcastle, where they were grown in the open air, without any protection. They were as perfect in size and color as if picked in the summer, and the flavor was exquisite.

San Luis Obispo.

FOOTHILL VITICULTURE.—A correspondent of the San Luis Obispo *Tribune* lately passed through St. Remy, the home of A. B. Hasbrouck, and in conversation with him gained an idea of what might be expected from intelligent grape culture in these hills. The lands which he had devoted to this purpose were steep foothills, the soil light and thickly sown with loose friable stones. The hills had been sparsely wooded, but otherwise the land seemed to be entirely valueless, bearing only a scanty vegetation which rapidly dried out. In 1883 Mr. Hasbrouck set out vines as an experiment, using such labor from time to time as could be conveniently spared from the labors of the ranch, which is a large one, covered with cattle. That year he set out about 3000 vines, putting in 700 to the acre. They thrived remarkably and he was so encouraged that the succeeding year he set out about 2000 more. The healthy flourishing growth seeming to warrant it, in 1885 he added 6000 vines, and this year he increases it to 25,000. Experts pronounce the culture eminently successful and these hills and this climate seem specially adapted to the production of grapes, raisin and wine. From the vines set out in 1883 and 1884, Mr. Hasbrouck sold this year over 10,000 pounds of grapes in San Luis and vicinity, realizing therefrom about $300. In addition to which he made three barrels of Zinfandel wine and about 100 pounds of raisins, Seedless Sultanas, sun-dried. The wine promises to be of excellent quality and the raisins are very fine.

San Joaquin.

EDITORS PRESS:—Still no rain, but frost by night and May sun by day. The afternoon of the 15th clouds gathered in the northeast and the air was soft; proprietors and clerks stepped out to look at the few great raindrops from the reluctant sky, made dark by a wide scooping cloud, trailing from the immense burning tules. Soon a rainbow spanned the north and east, and hopes blew away with the frosty wind as the stars came out in the steely blue. The new moon of the 23d is now the last straw of the month to catch at. Pastures are frost-burnt, but grain is slowly coming up. Many have the ground ready, but not sown; others plowed a little and quit. Grain on land well pulverized and smooth looks well. Some are rolling the grain to make it hold out till rain.—MRS. W. D. A., *Stockton, Jan. 17th.*

Shasta.

A PRIVATE EXPERIMENT STATION.—Cottonwood *Index*, Jan. 11: A. B. Humphrey, who lately purchased 850 acres of the Shanahan land, has named his place Oak Lawn Rancho, and ordered 87 varieties of fruits and vines to set in his experimental orchard, as follows: 16 varieties of apples, 10 of pears, 7 of cherries, 15 of plums and prunes, 12 of peaches, 5 of apricots, 15 of grapes, and a few nectarines, quinces, almonds, figs, walnuts, chestnuts, oranges and persimmons. Mr. H. has had great experience in tree and vine culture, and realizes that where one variety of any particular fruit may flourish and bear abundantly, other varieties of the same may utterly fail, from causes not yet fully understood even by our scientific horticulturists; hence his first step will be to set out an orchard for experimental and ornamental purposes, near where he will build his residence.

Santa Barbara.

PLANTING WHOLESALE.—S. Maria *Times:* A tree-planting boom has struck this section. In addition to 500 acres to be planted by Mr. Dargie, Goodwin & Co. propose to plant 30,000 trees on land owned by them seven miles south of town, Geo. Lewis 50,000 on the Jas. Cox place, two or three miles northwest of town, and S. H. Laubach 15,000 on his ranch about three miles south of town.—[The kind of tree is not mentioned.—EDS. PRESS.]

Santa Cruz.

FERTILE FIELD.—*Sentinel*, Jan. 15: John Turner, whose ranch is about three miles from town on the Vine Hill road, has done some remarkable farming the past year. From a field sown Jan. 1, 1886, a heavy crop of hay was harvested May 28 to 30. The land was then twice plowed, and on June 10 planted to corn, and, without a drop of rain, a good crop was harvested Nov. 1. The ground was then plowed once and sown to wheat, and at present has a fine stand three inches high. This is not a rare but a remarkable fact.

Solano.

ROSE OF PERU RAISINS.—The Vacaville *Reporter* a few days since tasted raisins made from Rose of Peru grapes, which were fully as sweet as those of the Muscat variety.

Sonoma.

SHEEP-SLAYERS.—Santa Rosa *Democrat*, Jan. 8: Farmers about Windsor are experiencing much trouble from some sheep-killing animal, presumably wildcats or coyotes. One reports 25 of his finest lambs killed in one week, while another has lost 10 in one night. As L. Kennedy was returning through his field from a neighbor's, he discovered three of his sheep dead, one of the number being partially devoured. The rest of the flock were huddled together in a distant corner of the field, but no other animal was in sight. An hour before, the sheep were all right. Sheep-raisers between here and Petaluma have lost between 200 and 300 sheep within the past week. Julius Ort, Mrs. Roberts and J. T. Cook have lost nearly half that number themselves. The parties referred to feel positive that their sheep have been killed by dogs.

CLOSED OUT BY DEATH.—Pet. *Courier*, Jan. 12: The Petaluma Stock-Breeders' Association was organized a few years since, and purchased the celebrated Norman stallion, Duke de Chartres. Later they bought Crown Prince, paying for the two horses, we believe, $7500. The association comprised none but farmers and stock-breeders, and the horses mentioned were bought especially for improvement of stock of its members. The horses have more than paid for their cost and keeping, and their fine progeny can be found all along this upper coast. "Doc" Upton, their keeper, died several months since, then followed the Duke de Chartres, and still later the Crown Prince. This, we presume, closes the business of the Petaluma Stock-Breeders' Association.

MODEL HORSE FARM.—Yesterday we visited the stables of J. R. Rose, a few miles below Donahue. In one stable, used exclusively for stallions, was McPherson, a full brother to Nellie R., four years old. He is a beauty, both in color and form, and is said to be the coming horse of this section. Arranged alongside were the stalls of several two and three-year-old Duke colts, all truly noble-looking fellows. Near this stable, on an eminence, is the grave of the late Crown Prince. It took two men a good half day to excavate a grave big enough for the old fellow. On another hill is a stable used exclusively for young colts. About 80 youngsters spend their nights here, each one having a complete box stall to himself. They are so well trained that after spending the day out on pasture, each one knows his own stall and takes possession the moment the doors are thrown open. Having learned by experience that it costs no more to raise a good animal than a poor one, Mr. Rose has permitted no poor blood to come on his ranch. The result is that his horses, cattle and sheep are all exceptionally fine.

OLIVES.—*Democrat*, Jan. 15: We have proof satisfactory that the cultivation of olives in this county can be carried on with success and profit. We were shown a sample of pickled olives from the Grosse ranch, Monday, which for flavor are inferior to none. The size of the fruit, owing to the youth of the trees, is somewhat smaller than the imported goods. The olives put up by Captain Grosse are fine, as stated, but for size and beauty they cannot compare with those put up by Mr. McClelland, of the Vine Hill View ranch, near Forestville. The difference in the size of the fruit is easily accounted for, however, as the latter are from trees much older, planted over nine years ago by an Italian named David Giovaninni, of S. F., who bought the land for charcoal purposes, and after the wood had been cleared from it set out olive trees and vines. The olives put up from these trees are what are termed "queen," and are as large and perfect as those from the famous groves bordering the Mediterranean. During the past year the following named gentlemen have set out young olive orchards: William Hill, Vine Hill View; Captain Watson, Glen Ellen; I. De Turk, near Glen Ellen; Korbell Brothers' land, near Guerneville; A. Peterson, on Mark West divide; William Klopfenburg, Occidental, Water-Works Company's property, near Santa Rosa. Captain Grosse now has 4000 trees of the Mission variety growing on his ranch, and will set out this coming season 500 of the Richelieu variety.

Stanislaus.

TEXAS COTTON.—Modesto *News*, Jan. 14: Mr. V. E. Bangs is in receipt of a package of cotton seed from Texas, with which he intends to experiment on his ranch. There are three varieties, two of which are the Sea Island and Storm Proof. It is the intention of Mr. Bangs to cultivate it, both with and without irrigation, and we shall await with interest the result of the proposed experiments.

Yolo.

RAISIN SHIPMENTS. — *Democrat*, Jan. 13: On Friday Jackson Bros. shipped four carloads of raisins, or nearly 40 tons in all, to Coleman & Co., S. F. Mrs. Briggs would have shipped five carloads at the same time had the cars been obtainable. From time to time during the season there have been a great number of such shipments, and still there is a demand for more. Yolo raisins have established an enviable reputation for size and quality. The tule fire was again raging Friday and Saturday evenings. It appears to smolder for several weeks at a time, and only awaits a north wind to be fanned into a blaze and go racing over the tules, destroying all within its reach. A few weeks ago it communicated to the brush and fences along Cache creek, and before it was stopped had burned over a mile of fence, besides much valuable pasturage. Hunters and others should exercise greater care in future.

NEVADA.

ALARMING REPORT.—Genoa *Courier*, Jan. 14: Several cases of pleuro-pneumonia have recently been discovered among cattle in the vicinity of Antelope valley.

Sonoma County Notes.

EDITORS PRESS:—Although many sections of California have been severely punished, because there has been no rain during the past 60 days, "Old Sonoma" is not in that condition. Grain and grass are doing finely. For the past fortnight there have been heavy, wet fogs, which have done much good to the cereals. A larger acreage has been sown to small grains than for many years before, and the outlook for a good crop was never better at this season of the year.

At various points in the county many fruit trees are being planted, while everywhere fine varieties of grapevines are being set out.

Already the spring clip is finding its way into market. The wool is of fine quality, but the price paid is disastrously low for the producer.

Report, apparently well authenticated, says that the S. F. & North Pacific R. R., familiarly known as the Donahue road, is soon to be extended to Ukiah, the county seat of Mendocino. The new road, when built, will reach a fertile portion of the State and give it speedy communication with San Francisco.

There is little doubt of the construction of the Santa Rosa & Benicia railroad. Work will be commenced within a few days, and pushed along with more than ordinary diligence. Sonoma is honestly winning a good deal of honor for her citrus productions. It ought to he known to every one, for it is true, that the county is well adapted to and actually produces figs, almonds, lemons, oranges, persimmons, olives, and all the finest varieties of raisin and wine grapes. Now if this is not a good record, we should like some one to tell us what constitutes such.

Pruning in the vineyards in the vicinity of Santa Rosa has just fairly begun. There are several thousand acres to prune in this part of the county, and it affords a big job for the lucky persons who get employment. But there are at least two men ready for each job of work.

The new year opens encouragingly for all classes of industrious people here. Judging from present indications, there will be a big fruit crop, a fair yield of grain, grapes without number, hops in abundance, and new buildings and railroad improvements to correspond. What more ought to be asked?

District schools will soon open for the spring term. All of the country schools run eight, and most of them 10 months. This is an inducement for men with families to find homes in Sonoma county.

The State Grange, Patrons of Husbandry, meets in Santa Rosa next October. The members of that body will be well entertained. The Grand Lodge, Knights of Pythias, also meets in Santa Rosa next April. Already arrangements are making for the pleasure and comfort of the members. Thus you see Santa Rosa, in Sonoma county, is booming.

Santa Rosa, Jan. 17. OCCASIONAL.

PORTRAIT OF GLADSTONE.—Jos. A. Hoffman, the book-seller and stationer of this city, sends us a fine life-size portrait of Hon. W. E. Gladstone, printed in oil colors, with calendar for 1887 appended.

Meadow Lark.

[Written for the RURAL PRESS by LILLIAN H. SHUEY.]

Bird of my soul, why dost thou blithely sing?
There are no promises of anything
Thy voice exalts and praises in the spring.
No kingly south wind speeding up the sky;
No swift assembling of his court on high;
No clouds like angels' wings in hallowed train,
Down speeding with their benefactions to the sun-dried plain.

Why dost thou sing? You mind me of old springs,
Rich with deep rainfalls and all growing things
That promise beauteous life and fruitful offerings.
There is no promise now; the dusty hills,
The drear lone pathways and the voiceless rills
Inspire no song. The long sad days complain
To hear once more the blessed music of the measured rain.

I cannot join thy song; and yet, bright bird,
The day is better for thy singing heard,
As if thou wert a prophet of good word.
And if thou yet hast hope of rain-spent hours,
Of deep rank grasses and bejeweled flowers,
Sing as thou wilt; my heart's in thy refrain.
Some time, please God, thou'lt sing triumphant in the low soft rain.

The Senator's Daughter.

CHAPTER III.

[Written for the RURAL PRESS by SARAH CAMPBELL SANFORD.]

The next thing I realized was father chafing my hands and calling my name. When I opened my eyes a wet, sorry looking group stood around me. Quite a number got a wetting, but I was the only one whose life was in danger. I was sinking for the third time when father's strong hand grasped my loosened hair and dragged me to shore. A delirium of fever followed; all my friends were very kind, but my blessed father was devotion itself. When consciousness returned I feared the old temptation might come back to him while I lay white and weak at home; but Alvar took every pains to guard him, and father himself proved to us he was stronger than we thought. I was very willing to lie there, day after day, accepting their petting as gratefully as a little child.

The catastrophe brought the merry-making to an end. A few days afterward the Stanhopes accompanied Earl to New York, whence he sailed to the Old World. After his departure, the family took a summer jaunt; but dear Jessie traveled all the way back to stay with me. How surprised I was, that golden summer morning, when she walked into my sick-room! How dainty and sweet she was in her gray suit—not a wrinkle or crease, though she came directly to me from the station. She sang and danced through the house like a sunbeam. There could be no low spirits where the fairy dwelt. The mornings were given up to reading and music—that is, I lounged in an easy-chair, my hands employed part of the time with bright, soft wools, while Jessie entertained me. In the afternoon we drove about town and the suburbs in her pony phaeton.

What a dreamy existence I led! Every want was anticipated. I began to wish to float on in a like manner forever. But I was recalled to this every-day world by a letter from Alvar, who, after I was able to be about, and during Jessie's visit, had taken an outing. Poor lad! he needed a rest, as the care and trouble with his approaching examinations were almost too much for him. It seemed that my father's family for generations had produced lawyers. The family were plain, unpretending farmer folk, but deeply ingrained in their tradition was the idea that every branch must turn out at least one lawyer—a sort of figure-head for the humdrum members who were very willing to plod along on their farms themselves, to reverence and refer to; the one aristocratic element in an old, honest race. And my father was no exception to the rule. When this letter, which I give entire, came, it dealt him a hard blow:

Aug. —, 18—.

DEAR MADGE: I know you will think me a coward, and so I am. [It is something to own it, is it not?] But I find it much easier to write unpleasant things than to speak them and witness the wounds they inflict.

The time is fast approaching when I must choose my calling in life. I know as well as you the profession father wishes me to enter, but, dear sister, I am writing this letter to ask you to beg off for me. You must know how much influence you have over him. Somehow I don't seem to get very near him since mother died. You know I was always *her* boy, and I am unable to break down something, I don't know what, between father and me. I know I am not bright and sparkling like you; I have mother's timid, shrinking nature; and I could no more succeed in the legal profession than I could fly. I don't see the merit for speech-making, and as for taking advantage of other people's quarrels to make money, I won't do it. I admit I haven't ambition and energy, but I do like to work in wood, and I want to learn to build houses. You see I am drawing it as mildly as possible; but to come right down to plain English, I wish to be a carpenter.

I suppose I might draw a bright picture and call it architecture, and talk about rising in my profession—which I hope I may, some time; but first I wish to learn all about the manual labor. I want to do the actual work with my own hands before attempting to direct others. After I master the actual work, perhaps I am artist enough to become a good architect—I sincerely hope so, for your own and father's sake. For myself I care little; to live a good, hard-working life, and feel that I have done something, no matter how little, to build up and make useful my little corner of the world, is enough for me, even though my name never appears in the paper but once, and then in the death column.

Now, dear Madge, perhaps your pride will be hurt as well as father's; but bear in mind all the temptations in a lawyer's life. Mother advised me to seek some other field of labor. I have never told you of the many, many times she has clasped me in her arms, and while the scalding tears rained down my face as well as hers, implored me always to remember her agony caused by the hydra-headed monster that is devouring the flower of the land. Ay, curse it! say I; it will devour the nation itself. You, Madge, are making a heroic effort; you are a brave girl to strive as you are doing against fate itself; but it is like trying to dip the ocean dry with a spoon. A republican form of government cannot stand long with this traffic rearing its head in every place as it is doing now. Monarchies can hold out much longer—*their* rulers are born to their position; but here, where our chief men are raised from the ranks, nothing will avail to hold the government together but the good, homely virtues of the people. As long as the national government receives a revenue from this awful business, I want to know what one can expect from the individual. I haven't a word to say against the saloon-keeper; he is making a living in an easy way, and our government has set him the example. "The grandest government the sun ever shone upon," I believe is the language our spread-eagle orators use in their Fourth-of-July orations. Well, all I have to say is, this great American people would do well to take a few lessons from the Chinese. The Chinese government endeavors to be paternal. It has refused to lay a tax on opium, because that would countenance the sale of it, though it might derive a large income from such a tax. I tell you, Madge, when the law-makers so far forget the welfare of the common people that they legislate to put money in the public purse, regardless of the degradation of the citizen, a government of the people and for the people is tottering and will lie in ruins very soon. I would prefer to stand from under.

Bear in mind what our father would have been had he escaped this evil. Think! we might have our darling mother with us to-day, for she was as surely murdered as though some assassin had struck her down. Because these men were licensed, every one of those places where father spent his nights while mother waited at home, stabbed to the heart, was most "respectable" and fashionable. Every keeper of those gilded gates leading to the infernal regions had in his possession a license from the general and municipal governments for which he paid round sums of money, making his business not only lawful but respectable.

Should the government say "No! the welfare and happiness and prosperity of this people is more to us than all the gold in our mines; we will license no business that degrades our citizens," not one in a hundred of these saloon-keepers would remain in the business. They are law-abiding citizens; they are patriotic, and intend to do nothing unlawful.

The legal profession is closely allied to governmental affairs, and I dare not handle pitch for fear of being defiled.

Forgive me for thus writing to you. Make my peace with father, as I want to be at home. Good-by.

ALVAR.

I received this letter just at dusk and did not open it until after I had gone to my room for the night. Ah, how I sobbed and shook at the mention of mother! At the opening of the letter I steeled my heart against the boy, for I sympathized with father, and felt the sting of wounded pride, and the hot blood mounted to my face in anger; but when he alluded to our poor mother the floodgates were opened and Jessie was alarmed at the passion of tears. She soothed me as well as she could, and after the storm had subsided I handed her the letter to read, while I lay on the bed trying to reconcile myself to this state of affairs.

Jessie at last laid her face on the pillow beside me, and mingled her tears with mine. After a little she said:

"Who would ever think pale, quiet Alvar could write such a letter? It stirs my blood and makes me want to do something in this great fight, too."

"But, Jessie, just think of his being a mechanic—our delicate, refined boy! Oh dear, what *will* father say?"

"Is that what ails you? What does it matter what he *does?* It is what he *is*. You should be proud of such a brother." And Jessie's eyes glowed in her enthusiasm.

"You wouldn't like your brother to be a mechanic—a dirty, greasy mechanic. Faugh! how they smell!" Down came the tears again.

"Aren't you ashamed of yourself, Madge Wilton? Wouldn't you rather smell grease and dust than beer and whisky? I tell you I want *my* brother to be just what nature intended him to be, if it is a blacksmith."

"Oh, that is very well for you to say," said I, as I sat up on the bed. "You know such a disgrace will never come to you. You belong to a privileged class. Why, your father never had to earn a dollar in his life. He and his father before him inherited their property, and so will his sons. What do you know about such things? You have never known a wish ungratified." And I turned away from her, angry with my best friend.

She knelt by my side, grasped both my hands in hers, and said: "You don't mean to taunt me with my people's inactivity. You think we are to be envied; you perhaps imagine we pride ourselves on this manner of living; but I have heard my father say, many times, he would prefer a larger field. He once said, to own mills of some kind, where he could give employment to large numbers of men, and at the same time add to the usefulness of the world, would please him better than any other business. But his property is in real estate, where it was invested before it came to him, and he has no knowledge nor talent for anything else; so he contents himself with his life as it seemed mapped out for him. Oh dear, Madge! think—the Christ who left us such an example was a carpenter. Think of Peter the Great, while Emperor of all the Russias, serving his time at the carpenter's bench! How can you sneer at any honest work? I tell you no trade, however lowly, can ever degrade any one; only our inner life, our real selves, can do that. If we maintain uprightness of character, nothing can lower us. I have heard it said that dishonesty is rewarded, that a premium is paid to vice, and that virtue and honor have no reward in these degenerate days. Now I cannot believe these times are worse than the past. No, I would rather think them better; and just my little observation has taught me better than to believe such sophistry, as father would say, though I hardly know what the word means."

Her bewitching smile was so infectious that I found myself smiling back, and thus our first unpleasantness was swept aside, and I felt better prepared to break the news to father. In the morning, however, he seemed so hurried that I put it off until noon; and when noon came I thought it would be better to wait for the quiet evening.

Jessie was unusually attentive all day. About 4 o'clock, as we were driving on a country road, we met father in his buggy. "Come, girls," he said, "I have just passed a fine piece of woods, back here, and I have time to show it to you."

He turned around and we soon found ourselves in a sweet-scented, aromatic grove. Father leaned against one of the old monarchs of the forest and said:

"I remember wondering what Emerson meant, but I can now understand him when he says: 'In the woods we return to reason and faith. There I feel that nothing can befall me in life, no disgrace, no calamity (leaving me my eyes), which Nature cannot repair. Standing on the bare ground, my head bathed by the blithe air and uplifted into infinite space, I am nothing. I see all the currents of the Universal Being circulate through me.... How does Nature deify us with a few cheap elements? Give me health and a day, and I will make the pomp of emperors ridiculous.'"

My heart was heavy with wounded pride, but glad little thrills shot through my being at father's words and mood. We brought home with us modest wild flowers and the scarlet wintergreen berries.

It required all the courage I could summon to turn the knob and enter father's study. I did not mean to show him the letter, and how to plead Alvar's cause with my pride and sympathy all with father was more than I could plan. My tongue cleaved to the roof of my mouth, but I managed to say:

"I had a letter from Alvar last evening."

"Yes?" said father. "When is he coming home?" without taking his eyes off his paper.

"Very soon; but he wished me to communicate some news to you which I fear will prove to be unpleasant."

"What's up? Has he ruined a horse and wants some money to pay for him; or has he committed some other folly and extravagance? It's about time he began to sow a few wild oats, or he won't be through in time to settle down a staid, professional man."

The good-natured twinkle in father's gray eyes proved to me he had no notion of what was coming. A great lump came up in my throat, but I swallowed hard and said:

"Nothing of the sort; it concerns his profession. He objects to a legal life."

"Oh, that's it, is it?" He spread his paper across his knee and continued: "Now I'll wager something I can guess the first time trying what the little prig wants. He imagines he is called to the ministry. Isn't it so?" And he laughed a good-natured, congratulatory laugh.

Oh, how I dreaded to undeceive him! I sat quiet so long that he resumed his reading after remarking: "It is very natural for 'Preps,'" as he called the students in the preparatory department, "to put on spectacles and converse learnedly on theology; but by the time their college course is completed they generally change their minds."

At last I ventured to say: "But you have made a mistake, father. He says he has no talent for speech-making, and wishes to step out of the professional path altogether."

Father laughed as he repeated my words. "No talent for speech-making? That reminds me of one of Alvar's speeches when he was a little fellow. He took a fancy to ride over the country with me while making a political canvass. One night our drive home was a cold one, and Alvar was cross; he kept very quiet for several miles, and when I rallied him, he roused up and said: 'That may be a very fine speech of yours, father, but I am awfully tired of it.'"

Father's laugh elicited no response. It was serious business to me, and I needed all the fortitude possible to say the next word; but finally I blurted it right out:

"O father! he wants to be a carpenter." And I dropped my head on my hands.

"Why didn't you say a chimney-sweep?"

But the tone was bitter; the merry laugh had died away, and a hard, metallic tone was in its place—a tone I had never heard in my father's voice before.

"Give me his letter; let me see what the 'cad' means."

"I haven't it with me; I would rather not, please," I answered.

"Go get it, then."

An ominous flash of his eye cut short all other words. I brought the letter as meekly as a little child, and stood trembling as he read it.

[TO BE CONTINUED.]

"Man and Wife."

[Written for the RURAL PRESS by MACK.]

The history of the sorrows and struggles of that helpmeet said to have been given to man in the Garden of Eden has not yet been fully written. All ancient history is masculine—a mere record of the thoughts and acts of men. Woman filled a place so low and degraded as to be thought unworthy of mention in the chronicles of those olden times. It is only at wide intervals we find a bright spot in which her deeds and services receive honorable mention; as, for instance, the story of Penelope, Lucretia and Aspasia. The Spartan mothers and the mother of the Gracchi, who repressed every sign of grief when their children were slain in battle, and the courage of Porcia or Arria, are only noticed because they broke away from the thrall of their sex and displayed the heroic daring and fortitude of brave, strong, warlike men. The Bible is a masculine book. Not one of the 60 books that compose it was written by a woman. In the Old Testament times men bought and sold their wives as they did their cattle. Jacob purchased Leah and Rachel, and, according to Homer, the custom was common among the Greeks. Religion had but little use for her, only as a scapegoat, to bear the sins of the race. It was the woman Eve who ate the forbidden fruit. It was the idle curiosity of the woman Pandora who opened the box and let out all the woes and diseases of humanity. Many of the gravest philosophers of antiquity seriously doubted whether she had an immortal soul. It is still a cardinal doctrine of Mohammedanism.

One would think that the ideal of glory the church wove into an aureole around the head of the Virgin Mary for so many centuries would have tended largely to the elevation of woman. But all through the Middle Ages, the chief excellence it wrought out for her was that of a meek, demure devotee of religion, who believed in wearing the veil of solitude as the only means of beatification. Under the old common law she had but few rights above that of a slave. The widow was called the relict of the dead husband, and was provided for as part of the inventoried estate. The law of descent favored the male issue. It is the chief glory of our era that it has slowly but surely made vast progress in the advancement of woman to her proper place in the social and political world.

But after all that has been said and done, some traces of the exclusively masculine element may still be found in the usual marriage formula. The man is asked to love, honor and cherish his wife; the woman is asked to obey her husband. Obedience is her prime duty, and love and honor are expected as secondary qualities. Of course every bride smiles inwardly at this archaic language and interprets it in a Pickwickian sense, but the formal acceptance of this offensive clause in the marriage service places her in a wrong position, and it should be expunged. Still more objectionable is this clause of the marriage service, "Who giveth this woman to be married to this man?" What, is she a chattel to be deeded away, a thing to be handed over from one to another or delivered by a sort of bill of sale, a mere helpless dependent transferred from one protector to another?

What else can be made of it, and what is this but a relic of what in the ancient Roman law was known as the perpetual tutelage of woman? The phrase, "I pronounce you man and wife," is equally offensive. It is all right as to the woman, because it does not pronounce her merely a "woman," but a wife. But what is there in merely calling a man a man that transforms him into a husband? Suppose the officiating clergyman should say, "I pronounce you man and woman, male and female, Mr. and Mrs., or lord and lady," strictly speaking, it is not apparent that he has placed them under any new contract. To make the contract reciprocal he should have said, "I pronounce you husband and wife." This marriage formula came in vogue when woman was not regarded as an equal in the family partnership, but as a meek, silent, passive subordinate.

There is still a grave objection in a minister or magistrate pronouncing two persons man and wife or even husband and wife. The law vests no such power in the officiating person, but only to draw out from the parties an expression of mutual consent which is the essence of the contract, and having done so, to authoritatively attest or witness it, either in the name of the church or the State, as may seem best. The act is the act of the parties, and the parson or magistrate has nothing to do in making the contract, but only to attest that one has been made. The usual marriage services substitute the attestation for the contract. For the sake of correctness and perspicuity, this distinction should be recognized and remedied, though it is not so objectionable as the clauses that relegate woman to a secondary place in the family.

YOUNG FOLKS' COLUMN.

Sweet Cream.

[Written for the RURAL PRESS by M. B. D.]

Trees and flowers grew around Gertie's new home. She liked it much better than the old one, although as yet it was not so nice inside. Trunks full of things were still in corners unpacked, and waiting for her mother to find time to arrange them.

Before her father had brought them to Petaluma, they had lived on the wide, grassy plains of Kansas. How many days they had spent traveling, Gertie could not tell, but it had taken a long time to come, and she had grown tired, wishing many a time that they would stop on the way. The world seemed so big that she was afraid they would never find the place they were looking for. When at last her father took them to a little house in a garden, and said that they would live there, she was delighted. About this neat little cottage there were so many new and pretty things that she never seemed able to find them all out. Every day brought some new wonder that filled her mind for hours thinking about it. Though Gertie was a little girl, her mother always called her a good, helpful child, and often praised her, which made her very happy, and anxious always to deserve it. She did all she could every morning about the house, and was ever ready to take care of the baby when her mother was busy.

In the afternoon she often took the little one out under the trees to play. While standing beneath the branches she could look up among the leaves, where the fruit was growing sweet and ripe. Little wild birds flew about and pecked the cherries that were turning red in the sunshine. Gertie wished that she could get some of them, but they were so far up, and she could not climb the trees like a boy. There was something that she liked even better than ripe cherries, and that was sweet cream.

Just over the hedge that surrounded the garden the cows stood in the meadow lazily dreaming and chewing their cuds. In the evening sometimes she followed her father to the barnyard, and watched him milk them. His strong hands made the white streams tinkle against the tin milkpail at first, and then as the milk grew deep, a beautiful foam bubbled up and covered all the top. When the pails were full he took them to the kitchen, and, after filling the pitcher for dinner, strained the milk into shining pans which her mother set away in the pantry. Every morning she skimmed the sweet thick cream off and put it into a jar. Gertie loved to see her do this. She would stand leaning against the table, watching with her bright eyes every motion of her mother's hands. As the last pan was skimmed, she would sometimes ask, "Mamma, please give me some," and her mother would dip the little islands of cream, that floated about on the pearl white seas, into a saucer, and give it to her, and the skimmer beside. Gertie would run off with them gleefully, and sit down on the kitchen steps to enjoy her feast, where her kitten usually came purring to her, and seemed to ask, by the look in his yellow eyes, for a share. Puss would lick the cream from her finger with his pink tongue, that felt so rough and warm; then he would hump his back and purr as loud as he could to show how glad he was.

Gertie's mother set the cream jar away in the pantry to wait until it was full, when she would churn the cream and mold it into rolls of hard golden butter, which Gertie liked very well, and especially on hot cakes with honey; but she liked the cream so much better that she wondered why her mother should ever make butter at all. Indeed, it seemed foolish to stir that soft snowy cream into butter—all salted, too. Why did not everybody like cream best?

On seeing the pans in a row along the shelf, she had dipped her fingers into them to get some of the cream. One little taste had followed another, until the pans were covered with white dots where her fingers had been, and her mother had decided to put them up out of her reach. Now when she was in the pantry, she could only see the rims of the pans as they projected beyond the edge of the shelf.

One day a lady, Mrs. Morse, came to visit her mother, and Gertie was asked to take the baby out for a little while. "Come, take the babe and play with her under the trees until I call you," her mother had said; then, turning to her visitor, she added: "You can have no idea what a help my little girl is to me. She is a perfect little woman in many of her ways."

By this time Gertie had tied her hat ribbons, arranged the baby's shawl and was ready; so she led her toddling sister by the hand out into the garden. How very proud she felt because her mother had praised her before company, and she wondered what nice things the visitor would say and think about her.

"Now you stay here, baby," she said, spreading a shawl on the grass, "and keep quite still while I get some flowers for you. See, Gertie will bring nice rosebuds if you are good."

She culled the glowing buds and some cowslips, which would not harm baby if she should put them in her mouth, and played with her until she fell asleep. After awhile she grew tired of holding the baby's head in her lap, so she rolled up one corner of the shawl for a pillow, and, making the small sleeper comfortable, tried to amuse herself.

The shadows grew long and narrow, and the birds became quiet. Even the butterflies lingered upon the flowers and seemed waiting for night. Gertie wished that dinner-time would come, for she was hungry. "I'll get a cookie," she thought. "It will only take a minute," and with a glance at her sister she hurried to the house. Her mother was still busily talking with Mrs. Morse, and when Gertie slipped in she took no notice. "I guess I can get it myself," thought she, as she went to the kitchen.

The pantry had been without shelves and her father had arranged fruitboxes to take their place for the present. Gertie looked everywhere she could think of for the cookies, but could not find them. At length she decided to take bread and honey. Picking out the smallest loaf, she climbed on a chair to reach the honey jar. On the shelf with it were some preserves, some cans and spiceboxes, and on the shelf above were the pans of milk.

"Oh! how I would like just one little taste of cream," sighed Gertie, as she stood on her tiptoes, trying to touch a pan with the ends of her fingers. "I'll dip the bread in," she continued.

Climbing upon the lower boxes, and reaching her bread over the edge of a pan which was still above her head, she soon had it dripping with cream, and began to eat it with delight.

After she had finished she said to herself: "That is the sweetest cream I ever tasted. I'll just take one more dip."

This time the bread came out wet only with milk. Straining her little arms and climbing still higher, she was about to reach the cream again, when crash—and the pan of milk was dashed over her head and face, the boxes on which she stood, the preserves, honey, cans, and all tumbled with her to the floor, making a loud noise that brought her mother and Mrs. Morse running into the kitchen with white, scared faces. The milk almost smothered Gertie at first, and she was frightened, as well as hurt a little by the fall.

"Is the child killed!" exclaimed her mother, picking her out of the mass of broken glass, milk and preserves that were all over the boxes and the pantry floor. Seeing that she was not injured, she continued: "You naughty girl! how came you here?" And though she said nothing more, her hands trembled and her face was pale for a long time. She put Gertie into a bath, which was the worst one she ever had. A box of coarse, black axle-grease had been smashed into her thick hair, and her mother was obliged to wash her head until she could hardly hold it up before the fair locks began to look glossy again.

"Please cut off all my nice hair, mamma," Gertie pleaded, while the soap trickled down her face and neck. Mrs. Morse held the baby until her mother was almost done; then her father came home. He was told what had happened, and he looked so surprised that Gertie fairly cried from shame; besides, she expected to be severely punished for her naughtiness. No one said anything about it until bedtime; then her father talked to her for a little while, telling her how foolish and wicked it was to do what she knew was wrong. This had been a severe lesson to her, and he thought she had been sufficiently punished. Little Gertie profited by it, too, and now the cream is on the lower pantry shelves.

IN HER SWING.

In Her Swing.

How life-like is this picture of a little girl in her swing. It will no doubt please our young readers. They may say that their mammas do not let them put on their best clothes to swing in, and we rather think this little girl would feel more comfortable if she had her play dress on. The fact is that she is swinging in a photograph gallery and the artist put her in the swing to take her picture. The reason the picture is so life-like is because the engraving is made directly from the photograph by our process of "photo-engraving"—that is, *light* engraving, or allowing the sunshine to do the work usually done by the engraver with his tools. When this is done the picture must look just exactly like the original. This little girl's name is Belle Ogier, and she lives in Eureka, Humboldt county, California.

GOOD HEALTH.

How to Resist Cold Weather.

A physician gives the following sensible directions for avoiding colds. Now that the winter is upon us, they will be worth bearing in mind: "To be able to stand cold, one must eat such kinds of food as will give plenty of heat, and must also accustom the system as much as possible to cold. Heat-forming foods are rice, sago, tapioca, potatoes, the grains of wheat, oats, barley, and especially maize. I do not recommend fat, because it is difficult of digestion, but in moderation it is useful. Oatmeal porridge eaten with butter and sugar forms a good cold-resisting breakfast. Then rice, with peas, barley and a little oil or fat, makes a good dinner; while for tea some brown bread, with butter and preserves, will not do. To accustom the body to cold, one must not wrap up too much, but make the body adapt itself as much as possible to the cold. The human system possesses in the brain a center for the government of the heat of the body, by which it is always kept at one uniform hight. If we heat our bodies by hot drinks, heaps of clothes, hot rooms, etc., we give this center little to do. But if we expose the body to cold air, take our food nearly cold, and do not clothe too heavily, we keep this in good condition, and it will keep the body warm if we give it the necessary food, and is ready for sudden exposures. The body can be used to cold by means of air baths, or exposing the nude body to the air. This can be done by taking exercise at the same time, and so no cold will be felt. In connection with heaps of clothes, I may say that I have cured two or three weak chests by making the persons throw aside the chest protectors (which are a snare) and sponge the chest daily. When cold do not rush to the fire, but take a sharp run, stamp the feet, and throw the arms across the chest, making the fingers hit the back, like cabmen do. Avoid hot fluids, of tea and soups, which give a fleeting feeling of warmth. They are very good if you want to restore a numb person. But if you are not much in the open air, take your food nearly cold, and the system will then supply the required heat, and you will find you can stand the cold much better than if you took hot drinks."—*Ex.*

CONSUMPTION FROM COWS' MILK.—Dr. Hopkins, of this city, a microscopic specialist, by appointment of the Board of Health, claims to have found in the milk of consumptive cows the germs of the disease. He says that the bacillus is long and tube like, and made up of infinitesimal spores, only visible under the most powerful microscope. By his experiments the doctor believes he has shown that, in the case of a cow suffering from consumption, the germs of the disease are to be found in the milk. He believes that the injury done by these germs when taken into the human body depends on the health and delicacy of the organs of the person who drinks the milk. This discovery having been reported at the late meeting of the San Francisco Microscopical Society, that body appointed a committee consisting of Drs. J. H. Stallard, H. Ferrar and the president, Dr. S. M. Mouser, to visit Dr. Hopkins and examine the slides which he has prepared exhibiting these bacilli. The discovery opens a new and important field for investigation, and presents the question whether consumption may not be contracted from the use in diet of milk from cows suffering from pulmonary complaints. The committee will report the result of their visit and inspection at the next meeting of the society.

CURE FOR A FELON.—An exchange gives the following: That woolen smoke is a cure for a felon, is certainly one of the medical discoveries of the age. Could we give the name of the correspondent who sends us the following, it would be at once recognized as of authority sufficient to guarantee the truthfulness of any assertion to which it might be appended: "If you ever endured the agony of a felon, you will appreciate the fact that it can be cured by woolen smoke. Place the woolen rags under an inverted flower-pot, and put coals upon them, or set them on fire in some other way; then hold the felon over the smoke and it will extract all the pain. This has been done by a friend of mine within a week. I assure you that in my circle we consider it as great a discovery as that ether will temporarily deaden pain."

DOMESTIC ECONOMY.

BEEF SCALLOP.—Two cups of cold underdone roast beef, one cup of raw potatoes, cut into dice, two beaten eggs, mustard, pepper, salt and a teaspoonful of finely minced onion, one cupful of gravy or stock. Peel and cut the potatoes, lay them in cold water for half an hour, drain, cover them with boiling salted water and stew gently ten minutes; drain off the water, add the gravy and the beef chopped fine; cook slowly for ten minutes, turn into a bowl, beat in the eggs, the onion, salt, pepper and mustard, put into a greased bakedish, strew crumbs on top, bake covered half an hour, then brown.

FLANNEL CAKES.—One quart of milk, one cup of cornmeal and nearly three of flour, half cake of yeast, stirred in a half-cup of warm water, one large cup of boiling water, one teaspoonful of salt, one teaspoonful of molasses, bit of soda the size of a pea in the milk. Scald the meal with the boiling water, stir in the milk and strain through a colander, add flour and yeast and let it rise until morning; beat in salt and molasses, and when the batter is smooth and light, bake on a griddle. They are very nice.

SCALLOPED POTATOES.—Cut up cold boiled potatoes until you have about a quart. Put in a pan a generous cup of milk, one teaspoonful of flour and one tablespoonful of butter. Set on the stove and let it thicken; then put a layer of potatoes in a pudding dish, season with salt and pepper, and pour on a little of the gravy. Continue until all is used. Cover the top with rolled cracker crumbs and bits of butter. Bake 20 minutes.

CRACKER PUDDING.—One egg, three tablespoonfuls of sugar, one pint of milk, two or three milk crackers rolled, nutmeg and a pinch of salt. Bake about three-quarters of an hour. Run the handle of a spoon down the center of the pudding; if it does not look milky it is done.

FRIED PARSNIPS.—Scrape and leave in cold water for an hour, then cook half an hour in hot, salted water; wipe, slice lengthwise, dip in melted butter, then in flour seasoned with salt and pepper, and fry in boiling dripping. Drain free of fat and dish.

JOHNNYCAKE.—Two-thirds of a teaspoonful of soda, three tablespoonfuls of sugar, one teaspoonful of cream of tartar, one egg, one teacup of sweet milk, six tablespoonfuls of Indian meal, three tablespoonfuls of flour and a little salt.

COOKIES.—One cup of butter, two cups of sugar, three eggs, two teaspoonfuls each of baking powder and boiling water, and flour enough to knead as soft as can be rolled out.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, $3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

The Week.

We enter another storm area just in time to write a hopeful word. For several weeks the clouds have gathered and some rain fallen just as the RURAL went to press—just in time, as it were, for us to get in a good puff for the elements and the following day the skies have cleared, having done but little. We are becoming rather shy of giving the weather clerk a "real good notice," but we must acknowledge that the wind and rainfall of Tuesday night were the most business-like of the season, and that the upper half of the State has received something of a contribution to its moisture. Before saying anything more flattering of the present storm we shall wait to see the end of it.

To-day, Wednesday, George Hearst was formally chosen to the U. S. Senate, receiving every one of the 65 Democratic votes in the two Houses combined. Henry Vrooman received 52 Republican votes, Chancellor Hartson one, and two Republicans did not vote. In this city, on Wednesday, the new Railroad Commissioners organized and resolved to proceed to Watsonville to hear complaints of the people about matters which work hardship to them. The meeting of the Fruit Union opens well and promises good results. An outline of the early acts of the meeting appears in another column.

King Caucus.

The word caucus is of American origin. It is supposed to be a corruption of the word calkers. In the early history of Boston a number of persons engaged in the ship business used to meet together to talk over matters that concerned their interests. It was known as the Calkers' Club. People curious in tracing genealogies believe that was the cradle of King Caucus. If so he seems to have been a harmless brat, but has grown into an ugly monster.

The earliest use of the word in connection with our political system is found in an entry made by John Adams in his diary, dated Boston, 1763. He speaks of having attended a meeting of the Caucus Club. This was composed of leading citizens who met to smoke, drink flip and talk politics. Here they gradually came to talk over and agree upon the men best fitted for selectmen, overseers, and representatives. There was nothing authoritative in what they did, merely a few leading citizens talking over the situation before election, and suggesting a good ticket. In the change of the Government after the Revolution there was a great increase in elective offices, and politics gradually became a trade. The idea prevailing that it was very improper and undignified for a man to nominate himself for office and enter on a personal canvass, it became necessary to form some sort of a nominating agency. Meetings held for this purpose were called caucuses. Notice of time and place was given and every member of the party was at liberty to attend. This mode of selecting candidates was soon found to be inapplicable, where a constituency was large or scattered over an extensive district. Hence the substitution of a representative caucus, composed of delegates appointed at some primary meeting. The original caucus became merged into a nominating convention and disappeared.

But it was too useful a machine to throw into a fence corner. It soon emerged in another shape. It assumed the power to call the conventions, organize them, judge of the qualification of delegates, dictate who should be nominated, draw the creed and party platforms, and determine what position the party shall take on some important measure. Fidelity to the caucus decision has ever been zealously inculcated by politicians as a political virtue.

To refuse to go into a caucus and abide by its decisions makes one liable to invidious suspicion and the reprobation of the party leaders. To go into caucus and bolt its decrees is the unpardonable sin of politics. Hence the caucus has grown into a machine for the dictation of the laws and distribution of offices, and that, too, often by men more distinguished for intrigue than talent, more audacity than conscience.

Instead of being an organ through which the will of the party may be ascertained and expressed, it has become an arbitrary and irresponsible board of dictation often used to defeat the will of the people. And this by a despicable minority. Take an illustration of the possible evils of caucus jugglery. The present Legislature of California is composed of 120 members, elected for the purpose of enacting laws for the weal of the people and selecting a United States Senator when one is needed. As matters now stand, all this may be despotically done by 14 men and all the other 106 relegated to the vassalage of registering their decrees. The Senate is composed of 40 members, 26 Democrats and 14 Republicans. It is right here lies the black magic of the caucus. Fourteen is a majority of the Democrats, and these 14 may dictate the policy of the Senate, and, as the Assembly is Republican, their brethren in that body must come to their terms or be left to the mercy of the Philistines. Such is one of the infirmities of the caucus system, and the method finds favor in all the States and in all parties.

It is obvious that the whole system is fraught with immense peril. In bad hands, as it is very liable to be, it is a vast and potent engine of political jobs and debauchery. The caucus compels the election to the United States Senate of a man who is not the choice of the people nor his own party. The caucus packs the committees and shapes legislation. The caucus seats or unseats members. It has become the great boodle mill where the sacks are taken and around which the seedy and hungry wait to be fed. Talk as we may of the "machine," "bosses," "strikers," "track-greasers" and the like, we shall never get rid of this gang of political tricksters and brokers as long as we maintain the caucus system. It never was anything but a device by which the minority might rule, and a minority whose ways were dark and suspicious. By its operation, men whose first duty is to the people are bound hand and foot, and their votes delivered by bill of sale. The whole thing is degrading in practice and contrary to the spirit of our political institutions in design. It is rotten from top to bottom and has not one redeeming feature. As all reforms must begin with the people, the only apparent way to crush the head of this serpent that lies coiled in halls of legislation, committee-rooms, and often behind the speaker's desk, is to establish the rule and make it imperative in all parties to elect no man to office who will not give a solemn pledge not to go into caucus.

The Fruit Union.

Annual Meeting of Stockholders.

The meeting of stockholders in the California Fruit Union began, according to announcement, in Irving hall, in this city, on Wednesday, Jan. 19th, at 1 P. M. There was a good attendance of fruit-growers. President Hatch occupied the chair, and in his opening address described the difficulties which beset the efforts of the organization during the last year, and claimed that, notwithstanding the mistakes and unfavorable conditions, the Union, directly and indirectly, rendered a very important service to the fruit interests of the State.

H. A. Fairbank, secretary, read the annual report of the directors, of which we can only give a sketch this week. At first the situation of fruit-growers in Florida and other States was described, and in matters of distribution and transportation it was shown that a striking similarity existed between the California problem and that of other States. The main troubles arose from lack of united action among growers in their own interests. The things to be gained are cheaper and quicker transportation, better distribution and better union of action among growers.

It was shown that there had been a considerable falling off in the interest in the Fruit Union from various causes. It was stated that there are now paid up 9957 shares less than first taken and 6000 less than on the second assessment. The total receipts from all sources during the year were a little over $8000, and expenditures had left but about $130 in the treasury and about $1700 bills unpaid, the greater part being unpaid salaries to the officers.

One thousand and thirty-seven cars of deciduous fruits were sent East last season, of which the Fruit Union sent two-fifths. Mr. Fairbanks' report gave the following condensed summary of the season's business of the Fruit Union:

Total number of packages shipped, 258,149, consisting of 111,933 boxes and 147,216 crates.
Total number of *net* pounds of fruit, 5,897,412; gross receipts, $355,416.98.

EXPENDITURES.

	Amount.	Per Ct.
Freight paid.....	$175,315 53	49.30
Commission.....$35,402 24		
Cartage..... 2,890 57		
Cost of packages. 32,094 53—	70,387 34	19.80
Net receipts of shippers.....	109,714 11	30.90
Total.....	$355,416 98	100.00

The fruit sold for 6.02 cents per pound.

After the reading of the secretary's report, Mr. Buck called for report of committee appointed by the State Fruit-Growers' Convention. Capt. Weinstock, the chairman of the committee, reported that the committee had waited upon the railway authorities and enforced the request of the Sacramento Convention for the following rates: For 10-car trains to Chicago, passenger time, $400 per car by passenger trains, $200 per car by slow freight, and $400 per car to Atlantic points. Some few weeks later a letter was received from Mr. Towne, offering rates of $400 per car of 10 cars, Sacramento to Chicago, time to be within 12 hours of passenger time, but not guaranteed; $500 per car for cars on passenger trains, and $200 per car by freight trains.

In reply to this a letter was sent citing the report of Mr. Lubin, the agent of the committee at the East, that Mr. Huntington had consented to grant the rates asked for by the Fruit-Growers' Convention, and in response a letter was received from J. C. Stubbs, stating that Mr. Huntington must have understood that the rates would have to be fixed in San Francisco and stating that the rates offered in the former letter were the best that could be done.

A letter was then written to Mr. Stubbs stating that the fruit-growers desired to know where the opposition was which prevented granting reasonable rates on fruit shipment, and a strong plea was made for the granting of the rates to which Mr. Huntington had seemingly consented. Reference was also made to the resolutions adopted by the Boards of Trade of San Francisco and Sacramento and telegraphed to Messrs. Huntington, Stanford and Crocker, and to which favorable telegraphic answers had been received. Thus the matter stands, the Eastern authorities of the road seeming to be at discord with the managers in Sacramento.

We have room in this issue for this mere skeleton of Capt. Weinstock's report. It was well received and many complimentary allusions made to the tact and energy with which the negotiations had been thus far conducted. It was decided to appoint a new committee on the part of the Fruit Union to wait upon Mr. Towne and see if rates could not be arranged as asked for by the growers, and apparently approved by Mr. Huntington and Mr. Crocker. The following is the new committee: Drury Melone, Wm. Johnston, H. Weinstock, H. K. Platte, J. H. Flickinger, L. W. Buck, William Barter, A. T. Hatch, A. Block, A. Abbot, H. R. Dodge, W. L. Merry.

The Fruit Union is still in session as we go to press on Wednesday evening, and will probably be employed for another day or two in arranging amendments to by-laws of which we will give an account in our next issue.

DEATH OF THE CHIEF SIGNAL OFFICER.—Gen. Wm. B. Hazen died at Washington, of diabetes, on the 16th. He was born in Vermont, 1830, graduated at West Point with credit in 1855, and served for the next four years against Indians on the frontier. Severely wounded in the Comanche war of '59, he was forced to retire awhile from active service, but soon after the outbreak of the rebellion was able to take command of the 41st Ohio. Having gone through the war in the West with high honors, he was commissioned as Colonel in the regular army. On the death of General Myer, in 1880, he was appointed Chief Signal Officer, with the rank of Brigadier-General, and held the position at the time of his death.

"THE SENATOR'S DAUGHTER."—We are not in the habit of using continued stories, but the one now running in our Home Circle, written by MRS. S. C. SANFORD, is so pleasing in style and so good in its moral lesson that we make an exception in its favor, partially as an experiment, and we would like to hear from our readers as to their preferences for such stories or for the shorter sketches, essays, etc., which we have generally relied upon to fill our Home Circle. "The Senator's Daughter" will be completed in about three more numbers.

GRAPE-GROWERS.—The Viticultural Commission has postponed action upon Mr. Wetmore's resignation for a month. It is hoped by those who desire the continuation of the Commission's work that he may reconsider his action, and that greater harmony and better mutual understanding may prevail among all those laboring for the promotion of the grape industry. Preparations are in progress for the Grape-Growers' Convention in this city next month.

SILK.—A reader at Norwalk, Los Angeles county, asks for information on silk culture. There is a pamphlet on silk culture by Mr. W. B. Ewer, published at this office, and sent postpaid for 10 cents. Other documents can be had by addressing Mrs. Rienzi, secretary State Board of Silk Culture, 21 Montgomery avenue, S. F.

The Supreme Court.

One of our recently elected judges to the Supreme bench, in speaking of the crowded calendar of this court to a newspaper man, said that it was owing to the fact that "our system is too tolerant of vexatious appeals." An appeal may be taken in nearly every civil case over which the Superior Court has jurisdiction, and in all criminal cases of the grade of felony. The result is, that nearly every case is appealed. Man is naturally a quarrelsome animal, and when his dander is up will fight as fiercely and persistently over a lame pig or mangy cur as for a piece of land. There surely ought to be some way to protect the time and labor of the Supreme Court from the petty disputes and spiteful tempers of petulant neighbors. It would certainly be some restraint upon the litigious spirit and a mercy to the court if the limit of appeal was fixed at $500 or even $1000, for no winning party ever went to the Supreme Court for a less amount and had much left after paying the lawyers and deducting expenses not allowed in the cost bill.

But is not the Supreme Court partly to blame for its engorged calendar? A statement on appeal we will suppose assigns 10 errors. The Supreme Court in its hurry to dispatch business looks over the record, finds one error, reverses the case, and sends it back without any expression of opinion as to the other nine. Another trial is had and another appeal is taken with like result. And thus the case is kept in oscillation between the courts till the last error is reached. This sort of practice is certainly vicious. If the Supreme Court would make it a rule to pass on every point of law raised at the first trial, it is clear that all the law involved in that particular case would be settled on one appeal, and it would rarely happen that a case would go to the appellate court a second time.

The Bar Association of San Francisco at its recent annual meeting discussed the causes of delay and the uncertainty of justice in our criminal courts. It is no exaggeration to say that crime flourishes under our evasive and procrastinating system. Witnesses are often badgered out of their wits, technical evasions are allowed, and a fit of frenzy or anger is alchemized into exculpatory insanity. As Judge Wilson said before the association, there was a reform needed in criminal practice; and now that the Bar Association has given an impulse to this subject and voiced the public feeling, it may be well to ask whether the costly delays and impediments to prompt adjudication exist wholly in the Superior Courts. It may be that the Supreme Court has fallen into habits of practice that do not facilitate litigation.

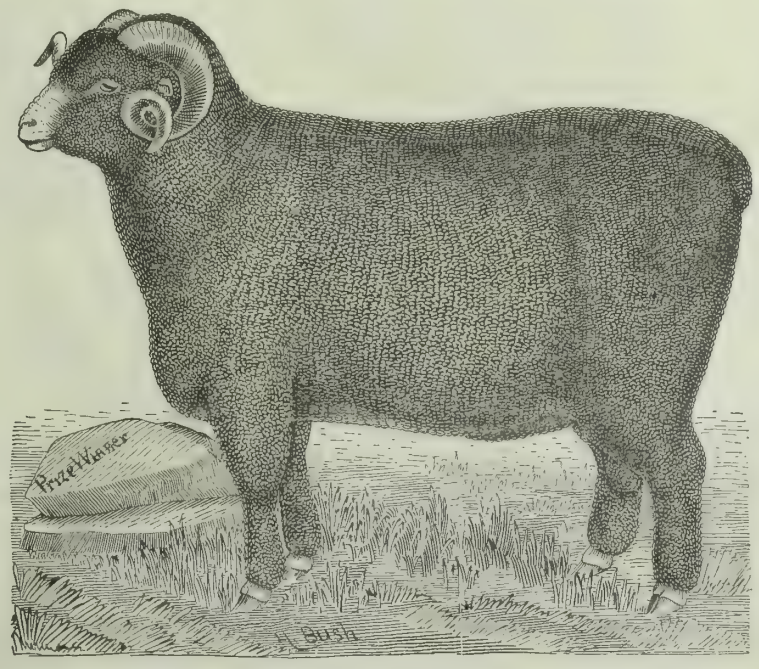
Improved Saxony Sheep.

We give on this page representatives of a breed of sheep which will be new to many of our readers, and yet is one upon which the American idea in the way of improvement has been stamped by many years of breeding, as with the other improved breeds which have been developed in this country. The animals are of the improved Saxony breed and represent the result of a continued effort begun in 1820 by Joseph Clark, of Washington county, Pennsylvania, and continued by his son, John G. Clark, of Lagonda, in the same county, the present owner of the flock. The ram is Prize Winner No. 1, the name being justified by the fact that he has captured six first and one second prizes at fairs since his first entry in 1880 as a ram lamb. His fleece has also taken premiums; it was at the head of the display at West Virginia State Fair, and took silver medal in 1884 and diploma in 1885, as sweepstakes, in competition with all classes.

The ewe in the engraving, No. 17, is registered in the first volume of the National Improved Saxony Sheep-Breeders' Association, and has been one of three ewes taking first prize several times at Washington county and West Virginia State Fairs.

Since this flock was established in 1820, the animals have all been bred in line, with a special regard to the highest class of wool, due attention, however, being given to form, size and vigor of animals. They will compare in size with any of the Merino classes. They are good breeders and healthful. The wool is white, crimpy and beautiful, and commands a ready sale at the highest prices, as it is claimed Mr. Clark's sales for the last 25 years have averaged over 62 cents.

Crystallization of Fruit.



NUMBER I.

Reports by Our Consuls Abroad.

We are led to give considerable space just at this time to information concerning the manufacture of crystallized or *glace* fruits, for several reasons: First, the information is asked for by our readers; second, the efforts thus far made in this State, which have been described in previous issues of the RURAL, have been apparently quite successful; third, owing to the considerable importation of these products from abroad, it is plain there is a demand which should be supplied by California; fourth, our fruit crop is constantly increasing, and it is time every effort was made to secure every avenue for the profitable disposition of the product.

As evidence of the truth of the second point

RAM AND EWE OF IMPROVED SAXONY BREED.

advanced, we have the reports from San Jose and Los Angeles, where the largest establishments are now located, that their product of 1886 was far too small to supply their orders. Of the Los Angeles establishment, one of the daily papers says:

The fruit-crystallizing works at Los Angeles have received more orders from the East than can be handled. They used 80 tons of fruit this year, and will need more than three times that amount next year. They will want large quantities of apricots, figs, blackberries, strawberries, oranges, grapes and cherries. They advertised last season for a large quantity of blackberries, but did not get a berry.

Of the results of the first season's run of the establishment at San Jose, the *Herald* says:

The demand for San Jose *glace* fruits during the holidays was so great as to far exceed the supply, even right here where it is made. A. Damonte and the agents of Barbour & McMurtry could have sold 10 times more than they did if they had had it. And from the other cities and towns of California the same cry for more constantly came, while the Eastern States would have taken a hundred times as much as they did if they could have got it. It is to be hoped that the productive capacity of both factories will be increased before next season so that the local demand at least will be fully met. And, judging from present indications, there need to be no fear of making too much *glace* fruit.

Of the other reasons which we have advanced for more attention being paid to the manufacture of *glace* fruits, there will appear approving data hereafter.

Sources of Information.

The sources of information concerning crystallizing fruits are naturally the countries which have already made the greatest advance in this direction. We shall learn much by local experience, and shall, no doubt, invent methods and processes which will be of advantage under our local conditions. First, however, we look abroad, and fortunately several of the United States Consuls studied up the industry and contributed to the State Department at Washington letters on the subject during the last year. We shall give first the report of

Consul Mason, of Marseilles.

The business of preserving fruits by the crystallizing process is peculiar to Southeastern France, and is practiced on a large scale at Apt, in the department of Vaucluse, at Clermont, in Auvergne, as well as at Marseilles, Grasse, Avignon, and other places of less importance.

The product is exported largely to England, the United States and various other countries, including Algiers, the East and West Indies, and even South America, where the profusion of fresh fruits would seem, at first thought, to render such an expensive import almost superfluous.

The kinds of fruit preserved by this process are mainly pears, cherries, apricots, pineapples, plums, figs, citrons, oranges, melons, and a kind of dwarf orange called "chinois," which grows to some extent in the district of Nice, but is imported here, mainly from Italy and Corsica. Peaches are used for this purpose only to a limited extent in the region of Marseilles, the "free-stone" varieties being too costly and the supply too small for profitable use on a large scale.

The crystallizing process is in principle simple and nearly uniform for all the above kinds of fruit, but it requires a certain skill and delicacy of manipulation, which can only be obtained by experience, and which it is difficult to precisely define.

The essential thing to be done is to extract the juice of the fruit and replace it in the pulp with liquid sugar, which, upon hardening, not only preserves the fruit from fermentation and decay, but retains it in its original form and consistency. For this purpose it is necessary that the fruit should be fresh, clear of all decay or other blemish, and of precisely the correct degree of ripeness. This last is an important and difficult requirement, as the proper degree of ripeness for crystallizing varies with the different varieties, and is so precise as to exclude from use for this purpose much of the fruit sold during the season in open market, and which has not been gathered, assorted, and transported with sufficient care.

Supply of Fruit.

In the neighborhood of Apt and Avignon, where this method of preserving forms a leading industry, fruit-growers are carefully instructed in this respect, and deliver their crop to the confectioners in the best condition. Contrary to what is popularly believed, native fruits are rarely or never really cheap in Southern France, except sometimes for a brief period, when, by reason of some exigency of weather or sanitary trouble, the supply of apricots, figs or melons may temporarily exceed the demand.

Oranges which come from Spain and Italy, and citrons from Corsica and Algiers, are, in favorable seasons, plentiful and reasonably cheap; but apples, pears, cherries, peaches, plums and berries are always costly in the market of Marseilles. At this time (the end of October) ordinary apples command at retail from 4 to 8 cents per pound, and the average price paid by confectioners for the various fresh fruits used in crystallizing varies from 8 to 10 cents per pound.

At Apt and Clermont, which are small towns in the midst of fruit growing districts, prices are somewhat less than this. Refined sugar, the other principal material, costs $9.65 per 100 pounds. If moist or inferior sugars are used, this item of expense may be slightly reduced; but the saving thus effected is more than lost by the inferior quality of the product. This is exemplified by the Corsican citron preserved at Leghorn.

Thus prepared, the fruit is immersed in boiling water, which quickly penetrates the pulp, dissolving and diluting the juice, which is thereby nearly eliminated, when the fruit is subsequently taken from the water and drained, leaving only the solid portion of the pulp intact.

This process of "blanching" must also be done with exact nicety, the period of immersion in the hot water being determined by the size and ripeness of the fruit. If immersed too long, the pulp is either overcooked or is left too dry and woody. If taken out too soon, the juices left in the pulp prevent perfect absorption of the sugar afterward, and, by eventually causing fermentation, destroy the value of the product. In this, as in other stages of the process, the only guide is experience. A skillful workman can tell by the color and appearance of the pulp when it is properly "blanched," and this knowledge invariably commands employment and liberal compensation.

It will be borne in mind that the preserved fruits under consideration are of two kinds—"fruits glaces," glazed, and "fruits crystallises"—but this difference relates simply to the exterior coating of sugar, which results from the final stage of the process. Until that finishing process is reached, the method of preparing glazed and crystallized fruits is identical, and the value of the product is the same.

The Process of Crystallizing.

The fruit is first carefully assorted in respect to size and uniform degrees of ripeness.

Pears, pineapples and quinces are pared, citrons are cut into quarters and soaked a month in sea-water, and the "pits" of apricots, cherries and peaches are carefully removed.

Even this preparatory process requires a certain degree of skill, since the stone must be removed with as little injury as possible to the form and solidity of the fruit. This work is done mainly by women, who earn thereby 50 cents per day.

After being thus scalded, some fruits—apricots, for example—are again assorted into two or three classes, according to the degree of softness that has been produced, for the reason that if kept together they would take up the sugar differently, some losing their form entirely, while others would remain sufficiently impregnated. For these different grades, sugar syrups of different degrees of density are required, the softer the fruit the stronger the syrup required for its preservation.

For the same reason, each of the different varieties of fruit requires a syrup of corresponding strength.

Pears, citrons and pineapples, which remain hard and firm, take best a syrup having a density of from 18° to 25°; while apricots, plums and figs are treated with syrups which gauge from 30° to 42° by the aerometer.

The requisite syrup having been prepared by dissolving the sugar in pure water, the fruit is immersed in it and left at rest for a certain period in large earthenware pans, glazed inside, and having a capacity of about 8 gallons.

The syrup penetrates the pulp, and gradually withdraws and replaces the remaining fruity juice, which, as it exudes and mingles with the transparent liquid, produces a certain filmy or clouded appearance, which marks the commencement of fermentation. When this has reached a certain stage, the vessel containing the syrup and fruit is placed over

the fire and heated to 212° F. This corrects the fermentation and raises all impurities to the surface, whence, if necessary, they can be removed by skimming. If the syrup is of proper density, this process of impregnating the fruit with sugar will be complete in about six weeks, during which time it is usually necessary to perform this heating process, as above described, three times.

The impregnation of the fruit with sugar being thus complete, it is taken out, washed in pure water to remove the flaky particles that adhere, and is then submitted to one of two finishing processes, as follows:

If the fruit is to be "glaced"—that is, covered with an ice or transparent coating—it is dipped in a thick, viscid syrup of sugar and left to dry and harden rapidly in the open air. If it is to be crystallized, it is dipped into the same syrup, but is then cooled and dried slowly in a kiln or chamber warmed to a temperature of 90° Fahrenheit.

This slow cooling causes the thick syrup, with which the fruit is covered, to crystallize and assume the usual granulated appearance. The work is now finished. If properly done, the fruit thus preserved will bear transportation to any climate, and will keep firm and unchanged for years. It is packed in light wooden or cardboard boxes, and may be shipped in cases containing several hundred pounds each.

Uses of the Spent Syrup.

During the process of impregnating the fruit with sugar, the syrup in which it is immersed is gradually deteriorated by losing its sugar and absorbing the juices of the fruit. It is finally utilized in the preparation of "confiture d'Apt," which is made of the soft, overcooked and irregular pieces of fruits of all kinds mixed in irregular proportion and preserved in the spent syrup, which is boiled down to the required consistency. This branch of manufacture, like many others, gives opportunities for sharp practice, particularly in the use of glucose in place of pure sugar, and of certain chemicals, notably salicylic acid, which there is reason to believe is employed to some extent by certain confectioners to shorten and thereby cheapen the process of preservation.

Salicine, the basis of this acid, is a flaky substance derived from the bark of certain species of willow. It is used in medicine as a febrifuge, two grains per day being regarded a safe allowance for adults. Salicylic acid is made by the action of sulphuric acid, bichromate of potash and water upon salicine. In just what degree salicylic acid is deleterious to health I am not informed, but it is the opinion of good judges that its use in the preservation of fruits and wines should be prohibited by law. It is a powerful antiseptic, and is for this reason used in the mixing of wines, and, as already indicated, in the fruit-crystallizing process to arrest and prevent the acetous fermentation of the juice, which would otherwise spoil fruits which have been imperfectly prepared.

As has been shown above, the process of eliminating the natural juices of fruit and replacing them with sugar by immersion in syrup requires about six weeks. By the use of salicylic acid, which penetrates the pulp and exerts upon the juices an antiseptic influence which prevents fermentation, this process can be reduced to a few days only. Time, labor and sugar are thereby saved, but, naturally, at the expense of quality in the finished product.

Cost and Market Values.

The net cost of preserving fruit by this process varies, of course, with the price of sugar, labor, interest on investment, etc., and this is, moreover, a point upon which confectioners are not disposed to be communicative.

But with the facts at our disposal the question of costs can be closely approximated. Sugar costs here this season, as already stated, 9.65 cents per pound, and fruit in condition for crystallizing on an average 8 cents per pound. The labor of women to pare, stone, and otherwise prepare the fruit costs 50 cents per day; that of men sufficiently skilled in the processes of scalding and preserving to work under the direction of a foreman, commands from 80 cents to $1 per day. In most establishments the proprietor or a member of the firm is the superintendent, who personally directs the work.

Most leading confectioners and caterers of Marseilles manufacture their own crystallized and "glace" fruits, which they sell at retail from 50 to 75 cents per pound.

The wholesale trade prices of quantities for export are much less, as will be shown by the following exhibit of the average values, as declared for export to the United States and other countries, of the several fruits during the season of 1884, which was a year of abundant fruit harvest, and the present summer and autumn, when all fresh fruits, except cherries and figs, have been more expensive by reason of a short and inferior supply:

Articles.	1884. Cts. per lb.	1885. Cts. per lb.
Apricots	27½	29
Chinois—Green	24½	23
Ripe	24	25½
Cherries	23	23
Figs (Marseilles)	21	20
Pears—Red	24	25½
White	24	24
Plums—Green Gage	24½	29
Yellow Mirabelles	25	26
Pineapples (from West Indies)	33	35
Citron	13	22
Melons	24½	25½
Strawberries	29	29
Mixed fruits	25½	30

This would give an average of about 24 cents per pound for 1884 and 26 cents for 1885.

Deduct from these values, say 20 per cent. for manufacturer's profit, and we reach from 19 to 20 cents per pound as the average cost of production.

Add to these values the cost of importation and a duty of 35 per cent ad valorem, and the crystallized fruits of Provence become a rather expensive sweetmeat to American consumers.

The Industry in the United States.

But there would seem to be no good reason why this dainty and profitable industry could not be established with immediate and complete success in the United States, where most ordinary fruits grow in profuse abundance and with finer flavor than is developed by the same varieties in any part of Europe. Sugar is equally cheap, and fuel far less expensive in our country than it is here. From the foregoing account it will be seen that the process of crystallizing fruits, as well as the requisite apparatus, are exceedingly plain and simple. But the most profusely furnished kitchen, abundant raw material, and a library of books on cookery, will not enable a novice to prepare a well-cooked dinner.

There is so much in the art of crystallizing fruit, which can only be learned by experience, that in order to begin the experiment with certainty of success, American pioneers in this manufacture should employ competent French workmen to superintend the construction of their plant, instruct the operatives, and superintend the whole process of preserving and packing during the infancy of the business.

The extent to which the crystallized fruits of this country are imported by the United States would seem to indicate that here is an opportunity for a new and profitable enterprise.

FRANK H. MASON, Consul.
U. S. Consulate, Marseilles, Oct. 31, 1885.

Citrus Fair at San Jose.

EDITORS PRESS:—At a regular meeting of the Horticultural Hall Association, it was decided to invite exhibits from San Benito, Santa Cruz, San Mateo, Alameda, Monterey, Contra Costa, Stanislaus, Merced, Fresno and San Joaquin as county or individual exhibits in the coming citrus fair, called the Central California Citrus Fruit Fair, to be held in the New Horticultural hall, San Jose, commencing February 7, 1887, and continuing one week. Nuts, berries or other winter fruits of any kind will be thankfully received. The association pays no premiums, but may give diplomas to counties. Fruit will be at the disposal of the exhibitor after the close of the fair, and all exhibitors will be admitted free. All exhibits consigned to Cyrus Jones, San Jose, will be properly attended to.

CYRUS JONES, President.
FRANK DUNN, Sec'y.
San Jose, Jan. 15th.

Some of the Latest Fashions.

Misses' Dress.

FIG. 1.—A noticeable simplicity of style characterizes this dress, and its full skirt renders suitable the use of all kinds of fancy materials. In this instance the mode is brought out in *mordore* silk and fancy plaid wool goods. The skirt is of the plaid goods, and is gathered all round at the top to fall in graceful, loose folds about the figure. It is hemmed at the bottom and joined to the lower edge of the body, which is in plain, round basque style, with jaunty jacket fronts of the silk opening over a vest of the plaid goods. The vest closes down the center with buttonholes and small metal buttons, and is fitted closely to the figure by bust darts. Under-arm gores, side-back gores and a curving center seam fit the body superbly, and over the seam joining the skirt and body is arranged a pretty girdle-like section of silk that is pointed and seamed at the center of the front and has its ends concealed under a large sash bow of *mordore* satin ribbon that is fastened at the center of the back. A fancy clasp is fastened at the throat, and the fashionable high finish is achieved by the standing collar. The coat sleeves are of the plaid goods and are trimmed with bands of silk that almost encircle the wrists, the ends on the upper side being decorated with two buttons. Very picturesque and *distingue* effects may be achieved in a dress of this kind by the choice of colors and materials. For festal wear delicate or bright colors are in good taste, but for street uses more subdued effects are liked, unless a long coat or wrap is worn, when the bright hue will scarcely be perceived. All varieties of dress goods may be made up in this way, and one material may be used throughout if preferred. The skirt may be of lace flouncing, if an airy effect be desired; or it may be of wool or silk, and striped with velvet or fancy ribbons or braids. On China silks and tissues insertions of ribbon with loop finished edges are exceedingly effective and novel.

FIG. 1.—MISSES' DRESS.

FIG. 2.—LADIES' FELT TURBAN.

FIG. 2.—LADIES' BONNET.

Ladies' Felt Turban.

FIG. 2.—A gray felt turban is here shown. It has the high crown and somewhat stiff, rather high brim that is just now fancied. The brim is faced quite smoothly with fancy piece fabric showing silver and green velvet in its pattern. Green velvet with tiny silver dots upon it is drawn up in drapery fashion from each side to form high loops and give a full, soft, puffed effect just in front. Gray wings are placed about this and emphasize its artistic arrangement. In black and gray this decoration is very effective, especially for those who find the stiff felt outline rather trying to the face.

Ladies' Bonnet.

FIG. 3.—The keynote to the style of this bonnet is simplicity. It is of dark-green felt, its rolling brim being faced with velvet of the same shade. Extending well over on one side, and yet apparently quite in front, are long, draped loops of green velvet that form a fine background for the many-shaded brown bird that is placed against them. The ties are of warm-brown gros-grain ribbon, with the usual picot edge; they are folded to form a finish in the back, and after being securely fastened at each side flare into the proper length ties and are looped under the chin.

"Man's work 's from sun to sun;
Woman's work is never done."

Work is a necessity to all; but, upon how many, women especially, does it fall with the burden of the "last straw," and this, because their peculiarly delicate constitutions are so liable to functional derangement. We cannot lessen your toil, ladies, but we can make it easier for you, by making you stronger and better able to do it. Dr. Pierce's "Favorite Prescription" will relieve you of nervous and other weaknesses, and all the many ills peculiar to your sex.

Delicate diseases, as nervous debility and premature weakness, however induced, radically cured. Send 10 cents in stamps for treatise. World's Dispensary Medical Association, 663 Main street, Buffalo, N. Y.

A Black List

Of diseases follows an unhealthy condition of the liver, one of the most important organs of the body. Impure blood, bronchitis, asthma, malarial diseases, consumption, sick headache, diseases of the skin, kidneys and heart—all may be traced to faulty action or torpidity of the liver. No other known preparation so rapidly and thoroughly restores a disordered liver as Dr. Pierce's "Golden Medical Discovery." It is pleasant to the taste, mild but sure in its action, and a gift to suffering humanity from one of the most successful physicians of the age.

It Should Always be Borne in Mind

That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the fittest"—the "DOMESTIC" SEWING MACHINE.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from $5000 to $500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. **

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

HENDERSON'S PATENT TRUSS.
Comfortable and Reliable.

This simple truss can be worn without inconvenience, and gives all the comfort to the wearer that can be obtained from a perfect-fitting, pliable apparatus. The pad is soft and yielding, and on account of its peculiar construction and the connections of its securing bands, cannot get out of place. It will remain in place no matter what position the wearer may assume. The engraving shows the construction of the appliance. It is simplicity itself, and is comfortable and reliable. Address,

JESSE G. HENDERSON,

R. E. JACK,	C. H. PHILLIPS,
C. H. PHILLIPS.	Secretary and Manager.

THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from $10 to $30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from $100 to $200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

TITLE, U. S. PATENT.

TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of $25 will be required in all cases to cover expenses of sale.

A Great Bargain!
A Remarkable Chance Offered.
124 acres of as good Fruit Land as there is in this State. About 40 acres improved and a good Orchard on it. Also two tracts of 160 and 166 acres each. Title guaranteed. Homestead and a pre-emption. The right to the two latter tracts will be relinquished. These pieces lie right in the mountains, and 200 acres can be cultivated when cleared up. There is plenty of good timber valuable for shakes, posts, or pickets; 1000 inches of the best water in the world for drinking and irrigating purposes; plenty of fish, deer, grouse, and bear. Also, 10 miles of the best mountain range for stock in the Northern part of the State. Twenty-five miles from the railroad and seven miles to the nearest village. A good price can always be obtained for produce; never less than 2 or 2½ cents per pound for potatoes. Water free on all the land.
Correspondence invited. Apply soon. Address, Ranch Owner, Box 2361, S. F.

CHAS. J. HOLMES, Manager.

A Stupendous Blast.

On Wednesday of last week the schooner Parallel, Miller master, cleared from S. F. for Astoria. Her cargo consisted mainly of dynamite—1635 50-pound cases—amounting to something over 40 tons, shipped by the manufacturers, Bandmann & Nielsen, and intended for blasting on lines of railroad construction in Oregon. Beside this, she carried in her hold a quantity of hay, coal, kerosene oil and pig iron, and a large case of detonating caps, and on deck lumber and a salmon boat.

By Saturday night her owner, S. B. Peterson, of this city, supposed her 200 or 300 miles on the way to her destined port; but owing, as the captain states, to light winds, she had barely got outside the heads, and the breeze dying out altogether, was found to be drifting toward the Seal Rocks.

Seeing that the vessel was bound to go ashore, and fearing an explosion as soon as she struck, the captain and seven men abandoned her, taking to the boat and pulling across to the shores of Marin county. The schooner soon went upon the rocks north of the Cliff House, just around and beyond the rugged point shown in the engraving, and was bumped upon them by the waves for three or four hours before the final crash.

Meanwhile, a number of persons in the vicinity had become aware that a vessel was ashore, but knew nothing of the perilous load she carried, and were watching her from the bluff above or endeavoring to save something from the wreck. Before long it was discovered that no soul was left aboard; and happily most of the watchers had betaken themselves to rest when, a little past midnight, came the frightful concussion that blew the craft to splinters, shattered buildings on the adjacent hights, and showered the neighborhood with fragments of rock, broken timbers, and scraps of rigging. Had the explosion occurred an hour or two earlier, many lives must have been lost; as it was, three of the crew from the Life-Saving Station received serious injuries.

Those who were on the spot give thrilling accounts of their terrible experiences, which are narrated in detail by the city press. The shock was felt as far away as Vacaville, Stockton and San Jose. The scene of the disaster was visited on Sunday by curious crowds—the largest, probably, that ever gathered at the Cliff—the Ocean railroad proved unequal to convey the myriads back from the beach, and while greedy hackmen charged almost any price they pleased, many pilgrims were compelled to plod their weary way homeward on foot to the outer termini of the cable-roads.

The principal damage was done to the further side of the Cliff House, and to structures beyond and above it, which do not appear in the picture.

Cornering Turkish Prunes.

NEW YORK, Jan. 17.—The *Commercial Bulletin* says: The market for Turkish prunes continues to excite the interest of the entire trade. The six-cent point prices they were expected to attain has been arrived at, and the advancing tendency of the market has not been checked. The situation to-day is regarded stronger than at any time past. It is generally conceded that speculators have matters pretty well their own way. At Trieste the market has been excited by the operations of the syndicate here and it is difficult to obtain free offers of stock. The syndicate now claims to possess control of the world's stock of Turkish prunes, and they announce the action they propose to take in governing the future market. They intend working in the interest of all dealers, and will arrange matters so that all will be protected. They will lead off immediately with an offering of 1000 casks, in lots of not less than 100, at six cents, and will enter into an agreement with the buyer that no sale in quantity or at a less price will be made, the seller to forfeit $50 per cask upon proof of any such transaction. Following the placing of the first thousand a second thousand casks will be offered at six and a half cents, and so on in lots of 1000 by half-cent advances until the price of 10 cents is reached, after which time it is believed the stock will be small and further governing will be unnecessary.

DEATH OF A VALUABLE HOLSTEIN-FRIESIAN COW.—A telegram from San Luis Obispo reports the death, on the 16th inst., of E. W. Steele's famous Holstein-Friesian cow, Anna Dulytra, a portrait and account of whom appeared in the RURAL PRESS last September. Many interested in the improvement of stock and friendly to Mr. Steele will be with us in regretting the loss of this noble creature and sympathizing with the disappointment of her owner. It is reported that Mr. Steele paid over $1000 for her last year.

PHŒNIX, ARIZONA.—We have received from G. W. Ingalls & Co., mining and real estate agents at Phœnix, a large and singularly handsome chromo-lithograph, giving a birds-eye view of that city, set about with 10 or 12 lesser pictures of noteworthy buildings and other interesting objects in the neighborhood. A concise account of the town—its location, climate, industries, institutions and prospects—completes a publication at once pleasing and valuable.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in DEWEY & CO.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING JANUARY 4, 1887.

355,371.—PATTERN FOR HORSESHOES—J. E. Bingham, Walla Walla, W. T.

355,586.—VENTILATING CARS—Buckley & Koefoed, S. F.

355,587.—VENTILATING CARS—Buckley & Koefoed, S. F.

355,436.—WIRE CLOTH STRETCHER—P. A. Buell, Stockton, Cal.

355,602.—GOPHER GUN—F. L. Emerson, Brentwood, Cal.

355,463.—CAR AXLE—W. J. Murray, Jolon, Cal.

355,412.—ELECTROLYTE—W. Y. Quinby, S. F.

355,655.—STEAM BOILER—G. H. Sutherland, Walla Walla, W. T.

355,656.—SELF-OILING PULLEY—E. S. Sutton, Snohomish, W. T.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

California Canned Fruit.

EDITORS PRESS:—I have thought for some time that a word from here in regard to California canned fruit might be of interest to you. I think the goods of only two canning companies are on the market here this winter, A. Lusk & Co. and the Cutting Packing Co., though a year ago the California Packing Co.'s goods were on the market. In my family we have been using peaches, Muscat grapes, German prunes and egg plums, put up by A. Lusk & Co., apricots by Cutting Packing Co., and green gage plums by the California Packing Co., alternating these with fruit put up by Baltimore firms. The superiority of the California fruits over those put up by the Eastern firms is too marked to be for a moment doubted by any one who tries them. Indeed the wonder is how those delicate flavors so peculiar to such fruits as Muscat grapes, apricots, and in fact all the fruits mentioned, can be so completely retained.

G. H. FRENCH.

Southern Illinois Industrial University, Carbondale.

A PRESENT TO A PRESIDENT.—The students of the Pacific Business College, in this city, surprised Prof. T. A. Robinson two days before New Year's, by giving him a handsome black cane, with an elaborate gold handle, suitably inscribed. Felicitous presentation speeches were made by Messrs. A. D. Ewing and W. A. McNamara; and Pres. Robinson, though taken off his guard by this manifestation of his pupils' kind regard, responded in a strain playful yet feeling.

"THE WINNERS" is the title of a brilliant X-mas card, 24x18 inches, from D. M. Osborne & Co., Auburn, N. Y. It bears life-like portraits of Jay Eye See, Maud S., and other famous flyers, as well as delineations of the Osborne Mower and Steel-frame Binder.

New Subscription Terms.

Our recent new terms for inducing payment of subscriptions in advance are meeting with favor in all quarters. New subscribers are coming in and old patrons are again entering their names.

We are confident of greatly increasing our large list of subscribers within the next few months.

A few subscribers have complained of paying at the rate of $3.50 when fully one year in arrears. To induce all such to settle up, we will, *during the next 30 days,* give all such the privilege of paying all back dues at the rate of $3.25 per annum.

Jan. 22, 1887.

The Chamber of Commerce on Fruit and Silk.

At the annual meeting of this body in this city, Jan. 18th, an address was made by the retiring president, H. L. Dodge, in which the following allusions were made to agricultural subjects:

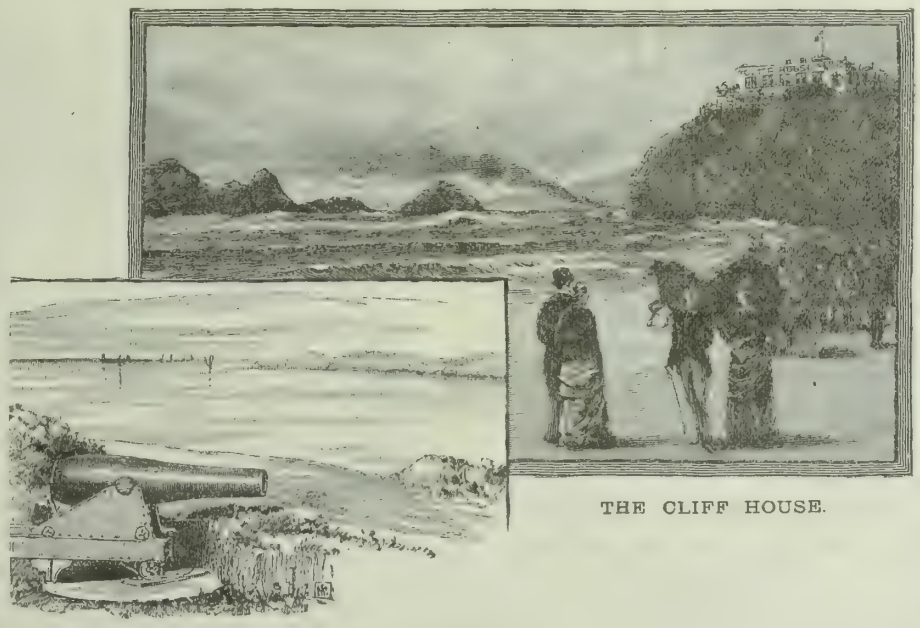
Freight Rates on Fruit.

A special meeting of the trustees was held Jan. 14th, at which resolutions were adopted requesting the railroad company to take green fruit to Chicago in ten-car lots at $300 per car.

The substance of these resolutions was telegraphed to Messrs. Stanford, Huntington and Crocker, with the gratifying result that on the following day a telegram was received from Mr. Huntington, saying:

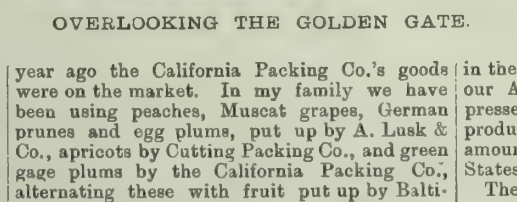
"We wish to move fruit product at lowest price possible and still pay any net money to carriers. Have telegraphed Mr. Towne, General Manager, to do the best he can, with the request that he take fruit to Chicago at $300, and to New York at $400, per car, unless he has good and substantial reasons why it should not be done."

Silk Culture.



This industry has become of sufficient importance to merit notice here. The soil and climate of California are admirably adapted to the culture of the mulberry tree, 20,000 of which already dot our foothills.

The enterprise can be entered into at a minimum of expense. The wives and children of our farmers can do the work and the cocoons find ready sale to the manufacturers.



Improved machinery of American invention has placed our country in the lead of all others in the manufacture of spun or waste silk, and our American consul at Lyons recently expressed the opinion that in a few years the product of silk and silk goods could be made to amount to $50,000,000 a year in the United States.

The value of the manufactures of a single town—Paterson, N. J.—increased from $5,000,000 in 1874 to over $18,000,000 in 1880. The production of the raw silk in the United States last year is estimated at 40,000 pounds.

Very large importations of raw silk are made at great expense which could and should be produced in this country. The enterprise has received considerable encouragement from Congress and from the State of California, and it is to be hoped that more material aid will be rendered.

THE CLIFF HOUSE.

OVERLOOKING THE GOLDEN GATE.

A Blessing.

Nothing adds more to the security of life, of happiness, and of health, than a safe and reliable family medicine. S. L. R. has won for itself the appellation of "the family blessing." If a child has the Colic, it is sure, safe and pleasant. If the father is exhausted, overworked, debilitated, it will restore his failing strength. If the wife suffers from Dyspepsia, Low Spirits, Headache, it will give relief. If any member of the family has eaten anything hard to digest, a dose of the Regulator will soon establish good digestion. It gives refreshing sleep even in cases where narcotics have failed. It is a preventive, perfectly harmless, to begin with, no matter what the attack, it will afford relief. No error to be feared in administering; no injury from exposure after taking; no change of diet required; no neglect of duties or loss of time. Simmons Liver Regulator is entirely vegetable and is the purest and best family medicine compounded. J. H. Zeilin & Co., Philadelphia, Pa., sole proprietors.

ORANGE CULTURE A practical treatise by T. A. GAREY, giving the results of long experience in Southern California. 196 pages, cloth bound. Sent post-paid at reduced price of 75 cts. per copy by DEWEY & CO., Publishers, S. F.

Rural Seed Offering—1886.

Great Inducements for New Subscriptions.

To encourage gardening and further extend the circulation of the PACIFIC RURAL PRESS, we will offer, while this notice remains in our columns, to furnish to all old or new subscribers the following seeds on the favorable terms named below:

VEGETABLE SEEDS.

83 Varieties.

In Papers, postpaid. Cts

BEET.
1 Early Blood Turnip... 10
2 Early Extra Bassano.. 10
3 White Sugar..... 10
4 Yellow Sugar..... 10
5 Early Long Dark Blo'd 10

CABBAGE.
6 Early York..... 5
7 Early Dutch..... 10
8 Early Wakefield..... 10
9 Ex'a Fine Large Dutch 10
10 Early French Oxheart. 10
11 Large Late Drumhead 10
12 Red Dutch (pickling).. 10

CELERY.
13 White Solid..... 10

CAULIFLOWER.
14 Early Paris..... 10

CARROT.
15 Extra Early Forcing.. 10
16 Long Orange..... 10
17 Early Horn..... 5
18 White Belgian..... 5

CUCUMBER.
19 White Spine..... 10
20 Early Cluster..... 10
21 Early Frame..... 5
22 Long Green..... 5
23 Eng. Gherkin, Pickles. 10

LETTUCE.
24 Early Curled Silesia... 10
25 Ice Drumhead 5
26 Simpson's Early Curl'd 10
27 Prize Head..... 10
28 White Paris Cas..... 10
29 Hanson..... 10
30 Boston Market..... 10

MELONS.
31 Large Yel. Canteloupe 10
32 Extra Fine Nutmeg... 10
33 Casaba (new)..... 10
34 Cuban Queen W'melon 10
35 Mt. Sweet Watermelon 10
36 Iron Clad Watermelon 10
37 Scaly Bark do..... 10
8 Black Spanish do..... 10
39 White Imp. or Lodi do 10

ONION.
40 Early Red..... 10
41 Red Wethersfield..... 10
42 Yellow Danvers..... 10
44 W. Por'gal or Sil. Skin 10

PARSNIP.

☞ *Refer to Nos. in latest issue when ordering.*

For $1.00 we will furnish new subscribers the PACIFIC RURAL PRESS for three months, and $1.00 worth of the above seeds. For $1.75 the RURAL six months and $1.00 worth of seeds. For $3.25 the RURAL one year, and $1 worth of seeds. For $4.50 the RURAL for eighteen months and $1 in seeds. The seeds will be carefully forwarded, post paid, from some one or more of our leading and reliable seedsmen, whose name will accompany the package. In ordering, write on a separate sheet the *number only* of each article wanted as numbered, together with your address.

Old subscribers can advance payment so that their subscriptions will be paid the same length of time in advance and receive the same terms as above. Those who have remitted since this offer was made can send the additional amount which would have entitled them to a premium, and receive the same by stating which numbers they prefer.

For other kinds of seeds, or for seeds in larger packages, patrons are referred to reliable seedsmen advertising in this paper. We wish to aid in increasing the planting and cultivation of gardens.

We are not going to embark in the regular seed business, and have not time to investigate or answer many questions of private interest only, nor respond to orders received without remittances.

Subscribers will please notify neighbors who do not take this paper of this offer, and the merits of the RURAL.

In writing correspondence, items of information, or on other business, please use a separate sheet.

FLAX-GROWING IN CALIFORNIA.—The Ventura *Free Press* says: "About 2000 acres of flax have been sown in this county this year, and we hear the most favorable accounts of it. As this is a cash crop, and worth four times as much as barley, and takes no more work, is hardier, without risk from insect, rust or disease of any kind, it is a most desirable industry for our county."

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

POULTRY.

CALIFORNIA POULTRY FARM, Stockton, Cal.; send for illustrated and descriptive catalogue, free.

E. C. CLAPP, South Pasadena, Cal. Light Brahmas and Plymouth Rocks. No fowls for sale. Eggs from first-class stock, after Nov. 1st.

O. J. ALBEE, Santa Clara, has the finest fowls this season he has ever raised. Parties needing new blood will do well to write him before buying. Prices to suit the times.

H. J. GODFREY, San Leandro, Cal., first-class P. Rocks and Wyandotte eggs, $2 per setting; no circulars

PABLO POULTRY YARDS, San Diego, Cal. Large establishment. Send for catalogue.

W. C. DAMON, Napa, Wyandottes, W. and B. Leghorns, P. Rocks, L. Brahmas, Pekin Ducks.

MRS. M. E. NEWHALL, San Jose. White and Brown Leghorns, Langshans, Plymouth Rocks, Light Brahmas, Pekin Ducks and Bronze Turkeys.

JAS. T. BROWN, 18 Georgia St., Los Angeles, Cal. Breeder of Thoroughbred Poultry of the leading varieties. Send for circular and price list.

CHOICE LAND AND WATER FOWLS for sale at all times of all the most popular and profitable varieties. Please inclose stamp for new circular and price list to R. G. Head, Napa, Cal.

T. D. MORRIS, Sonoma, Cal. Toulouse and Embden Geese, Bronze and W. Holland Turkeys, and all leading varieties of Thoroughbred Poultry.

D. H. EVERETT, 1616 Larkin St., S. F., importer and breeder of Thoroughbred Langshans and Wyandottes.

AXFORD'S IMPROVED INCUBATOR.—400 eggs, $50; 150 eggs, $25. Guarantee satisfaction. For particulars address, I. P. Clark, Mayfield, Cal.

J. N. LUND, Box 116, Oakland, Cal. Wyandottes, Langshans, L. Brahmas, P. Rocks, B. Leghorns, B. B. R. Game Bantams, T. Guineas, Hom'g Antwerp Pigeons.

D. D. BRIGGS, Los Gatos, Cal. Fancy Poultry breeder

HORSES AND CATTLE.

J. A. BREWER, Centerville, Alameda County, Cal. Shorthorns and Grades. Young stock for sale.

GEO. BEMENT & SON, Redwood City. Ayrshire Cattle, Southdown Sheep, Essex Swine.

R. J. MERKELEY, Sacramento, breeder of Norman, Percheron Horses and thoroughbred Shorthorn Cattle.

Estate of M. E. BRADLEY, San Jose, Cal., breeder of recorded thoroughbred Shorthorn Cattle and Berkshire Hogs. A choice lot of young stock for sale.

M. D HOPKINS, Petaluma, Cal. Eastern Imported registered Shorthorn Bulls and Heifers for sale.

HOLSTEINS, AAGGIE, JACOB; NETHERLAND and Artis strains; all ages; largest herd to select from. Young bulls, low. (All registered.) F. H. Burke, 401 Montgomery St., S. F.

E. J. TURNER, Hollister, Breeder of Percheron-Norman registered Horses and Roadsters.

E W. STEELE, San Luis Obispo, Cal., breeder of Thoroughbred Holstein and Jersey Cattle.

SETH COOK, Danville, "Cook Farm," Contra Costa Co., breeder of Aberdeen Angus, Galloways and Devons (Registered). Young stock for sale.

PETER SAXE & SON, Lick House, San Francisco, Cal Importers and Breeders, for past 16 years, of every variety of Cattle, Horses, Sheep and Hogs.

WILLIAM NILES, Los Angeles, Cal. Thoroughbred Poultry, Cattle and Hogs. Write for circular.

J. R. ROSE, Lakeville, Sonoma Co., Cal., breeder of Thoroughbred Devons, Roadsters and Draft Horses.

THE BEST HERD OF JERSEYS, all A. J. C. C. registered, is owned by Henry Pierce, San Francisco.

P. H. MURPHY, Brighton, Perkins P. O., breeder of Shorthorn Durhams, and Poland-China Hogs.

ONTARE RANCH, three miles west of Santa Barbara, Santa Barbara county, California. Coach Horses, Draft Horses, Trotting Bred Horses and pure Holstein-Friesian Cattle. Young cattle and matched teams always on hand. Francis T. Underhill, Proprietor. C. F. Swan, Manager.

COTATE RANCH BREEDING FARM, Page's Station, S. F. & N. P. R. R. P. O., Penn's Grove, Sonoma Co., Cal. Wilfred Page, Manager. Breeders of Short Horn Cattle, English Draft Horses, Spanish Merino Sheep and Berkshire Swine.

P. S. CHILES, Davisville, Yolo Co., importer and breeder of registered Shorthorns of the best families.

STINSON & MARSH, Dayton, Nevada. Registered Shorthorns of choice breeding strains.

T. P. A. WILLIAMS, Columbia, Boone Co., Mo., breeder and importer of Thoroughbred Herefords.

LEONARD BROS., Mt. Leonard, Mo., importers and breeders of Galloway, Aberdeen-Angus and Shorthorn cattle.

HYDE & MOORE, Visalia, importers and breeders of Shorthorn cattle. Young stock for sale.

SHEEP AND GOATS.

KIRKPATRICK & WHITTAKER, Knight's Ferry, Cal., breeders of Merino Sheep. Rams for sale.

HORSES AND CATTLE.

BEAUFORT.

NEW IMPORTATION

—OF—

NORMAN STALLIONS.

Theodore Skillman has just arrived from France with the choicest importation of Norman Stallions that has ever reached the Pacific Coast. Mr. Skillman has selected these horses from the best in France, with a view to the improvement of draft horses on this Coast. They are young and sure to suit the tastes of intending purchasers as regards color, etc, a number being coal-black. He has also on hand some Imported French Coach Stallions. These horses are now very popular in the East and have long been the favorite carriage horses of France. Their merits speak for themselves. Come and inspect this rare collection of horses and be convinced that they are the best ever seen on this Coast.

☞Catalogue for 1887 sent free on application.

FRENCH DRAFT STALLIONS,

Kentucky Jacks and Jennets, Work Horses and Mules

FOR SALE.

Some of the Stallions were imported from Europe, others from Illinois, and some young ones were bred in California from imported stock. The prices will be less than animals of **equal value** can be purchased elsewhere.

Call at or address Patterson's Ranch, Hueneme, Ventura County, or Patterson's Ranch, Grayson, Stanislaus County, or for further information call on or address JAMES M. PATTERSON, No. 8 Davis St., San Francisco.

JOHN D. PATTERSON.

Also a fine stud of Clydesdale Stallions, mares and fillies, and choice standard-bred Hambletonian stallions. Send for Catalogue giving full records and pedigrees. In writing, always mention RURAL PRESS.

SMITHS, POWELL & LAMB, Syracuse, New York.

AN INCUBATOR FRAUD!

At the Mechanics' Institute Fairs of 1884 and 1886, the highest premium, a Silver Medal - **the only medal given** —was awarded the **Golden Gate Incubator.** These medals are in our possession and on exhibition. We do not propose to advertise an unscrupulous business competitor; but if in your reading of incubator advertisements you see one claiming S. F. Mechanics' Institute Medals in the years stated, **spot the fraud,** and take every statement from such an institution at a corresponding value. The concern does not value the reputation of its machine hereabouts—it is established. It is angling for suckers farther afield. We have a machine which requires no misrepresentation to induce numbers of people to discard the contrivance referred to in its favor. At the last Mechanics' Fair we received a **Silver Medal and several Diplomas** for the Golden Gate and its accessories.

G. G. INCUBATOR CO., East Oakland, Cal.

Redwood Duke, 13,368.

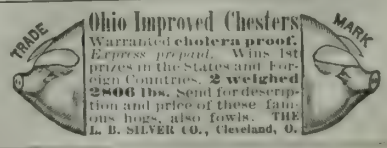
LITTLE'S CHEMICAL FLUID SHEEP DIP.



Price Reduced to $1.25 PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for SCAB in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yolk. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

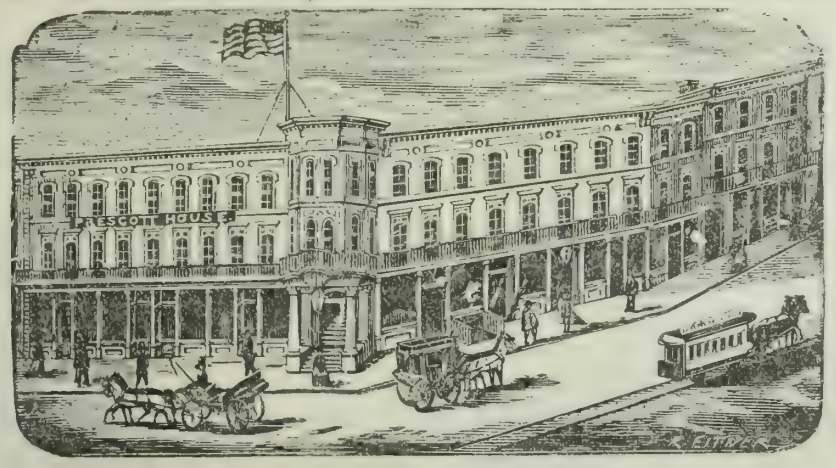
E. VAN EVERY, Manager. A. M. BELT, Assistant Manager.

GOULD'S SPRAY PUMP.



This Pump we have gotten up expressly for spraying vines, fruit trees, etc., infested with destructive insects. It has been adopted and recommended by the State Horticultural Society. The working parts are constructed entirely of Brass, and will not be affected by the corrosive solutions used. The BAMBOO EXTENSION is an admirable invention. The operator, by the use of this extension, can get to all parts of the tree while on the ground; also saving himself from getting burnt with the solution. The improved nozzle will save the price of itself within a day. It throws a very fine mist. We have also an attachment for Pump to stir up the liquid in barrel before putting on the solution, thus keeping the liquid always in condition to be laid on evenly, and not allowing the preparation to settle at the bottom. Send for special Catalogue.

We are prepared to fit these Pumps complete with Hose, Bamboo Extensions, Barrel, all ready to commence spraying with. Write for prices.

It is easy, durable and cheap. Sent by mail. Circulars free. EGGLESTON TRUSS CO., Chicago, Ill.

S. F. MARKET REPORT

NOTE. Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 19, 1887.

The past week was characterized by quite a move in cereals, owing to the dry weather up to Tuesday, when rains were reported in the interior, followed by a heavy rainfall here, but clearing skies to-day create a stronger feeling in futures. The European wheat market has shown few changes the past week. To-day's market is as follows:

SAN FRANCISCO, Jan. 19.—Cargoes off coast, slow; cargoes on passage and for shipment, weaker; Mark Lane, steady; Cal. wheat off coast, 37s 6d; Cal. wheat just shipped, 38s 6d; Cal. wheat nearly due, 37s 6d; English country market, quiet; French country market, stiff; Liverpool wheat, spot, downward tendency. Liverpool wheat, Cal. 7s 5½d to 7s 8½d; weather in England, mild.

Foreign Review.

LONDON, Jan. 17.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says: The demand for English wheat has slackened, and the deliveries in London have been small. Values are, however, supported, as sellers are holding firmly to their prices. The weather deteriorates the condition of grain deliveries in the provincial markets and causes a decline of from 6d to 1s. The sales of English wheat during the week were 45 832 quarters at 36s 3d, against 57,659 quarters at 29s 1d during the corresponding period last year. Flour is steady. It is expected that there will be an immediate and material increase in the demand for flour, owing to the bad state of the potato crop in store and the immense destruction of vegetables by frosts. Oats are in steady demand, though values are lower. Barley is firm. The trade in foreign wheat is slow, and prices are in favor of the buyers. American brands of flour are selling at 6d lower in London and 8d lower in Liverpool.

New York Wheat Market.

NEW YORK, Jan. 16.—Wheat—Spot has been fairly active during the week, and there has been a fair inquiry from both millers and shippers, but at lower prices, and since Wednesday the market has been dull and weak. Options have been irregular, with moderate trading. The market ended firm at the best figures of the week; January, 92⅛c; February, 92⅞c; March, 94c; April, 95¾c; May, 96⅝c; June, 97⅜c; July, 97⅞c; and August, 98c.

London Wool Market.

LONDON, Jan. 18.—Since the last sales, a good demand for wool has been maintained, which is chiefly attributed to an improved French trade. Four thousand bales have been sold at an advance of from 5 to 10 per cent over the lowest prices of December last. This, with the light stocks in most of the markets, brightens the prospect for the sales which will commence on January 25. The following are the arrivals: New South Wales, 34,245 bales; Queensland, 106,493; Victoria, 58,226; Tasmania, 61; South Australia, 18,249; Swan river, 787; New Zealand, 11,507; Cape of Good Hope and Natal, 39,142 bales. The wool sales at Antwerp opened last evening. There was a large attendance and the bidding was brisk. The prices there recovered 15 per cent on those of last December.

Eastern Wool Markets.

NEW YORK, Jan. 16.—The market remains about the same of late. Possibly fine wools are under neglect, but low and medium grades are in favor, and there has been a particularly good demand for combing, pulled, with business restricted by the paucity of supply. Among sales were 11,000 pounds scoured California at 54@65c; 50,000 pounds Eastern Oregon at 23c; 35,000 pounds fine Montana at 23c; 3000 Territory at 23@25c; 10,000 pounds of fine delaine at 38½c; 35,000 pounds medium, unwashed fleeces, at 29@30c. The Philadelphia market retains an improved tone, but no decided activity in demand, except for quarter and medium wools. Among sales were 10,000 lbs scoured California at 62c; 1000 pounds scoured New Mexican at 32c; 3000 pounds Territory fine at 23c, and 5000 pounds Territory fine at 22c. The Boston market has taken a start, the demand last week being quite active, and dealers are firm for full values on all desirable grades. Among sales were 531,000 pounds Territory at 18@26½c; 90,000 pounds Oregon at 16@24c.

New York Hop Market.

NEW YORK, Jan. 16.—For fine quality goods, the foreign and domestic market is fairly steady. Good, useful hops seem to be as cheap as at any time within the past six weeks. Arrivals, while falling off somewhat, are still sufficient to keep competition rather keen. The top figures on best qualities are 23@25c for new Pacifics, 25@27c for Germans, and 12@13c for 1885 States. The bulk of the business is in grades that may be had 1@2c under the inside figures named.

Dried and Canned Fruit at the East.

CHICAGO, Jan. 15.—The dry fruit market is rather quiet. The stormy weather has a tendency to restrict communication with the country and made orders a little light. Jobbers also took in moderate stocks at the close of last year. This, and being busy the first of the year taking inventories and closing up business, has kept them off the market to some extent. Sales of fruit can, however, be made by going on the market and offering goods for sale. This is not being done, for the supply is generally small and the present quietness is regarded as only temporary. Although the market rules quiet, a steady feeling continues and prices hold their own. California dried fruits—prunes, French, per lb, 8½@11¼c; plums, pitted, per lb, 11@13c; peaches, halves, per lb, 12@14c; peaches, halves, pared, per lb, 20@21c; nectarines, per lb, 9c; pears, per lb, 8@12c; raisins, London layers, 20-lb boxes, per box, $1.55@1.60; loose Muscatels, per box, $1.35@1.40.

NEW YORK, Jan. 16.—The prices of California fruits are rather high. California winter Nelis are $1 a dozen. Selected Duchess run as high as $2. Raisins—Malagas are quiet, and Californias are selling somewhat better. Valencia, steady and in demand; two-crown loose Muscatel, $1,40@1.45; London layers, $1.90@1.95; California, loose, $1.55@1.90; do Londons, $1.70@2. Prunes—Liberal purchases of Turkish have been made on speculative account and with the supply of spot closely bought up, prices have rapidly advanced, the last sale being reported at 5¾c, and the market closed with 6c bid, with no sellers; French, firmer—sales, 1000 boxes 60's and 90's at 8. Currants are in fair jobbing request, and firm at 4⅞@5c. Citron is quoted at 17c. Figs sell slowly at 6½@12c. The canned goods trade is beginning to show some improvement, the small dealers offering more attention, and jobbers are in the market for large quantities. Tomatoes are wanted, but supplies are under good control, and are held at $1.02½@1.05 for three-pound cans.

California Products in New York.

NEW YORK, Jan. 16.—Seeds—California yellow mustard, 3¼@4½c.

California Raisins in Philadelphia.

EDITORS PRESS:—January is a dull month in such staples as raisins, because dealers are reluctant to commence new operations until the old year's business is squared up, and therefore there will be little natural movement and no regular resumption of business before February. The few holders here have been making no effort to urge the business; but some Western operators, principally in Chicago, have set to working their stock here, and this only has created an unsettled feeling for the time. They offer Fresno brands delivered here at $1.40 for two-crown, $1.50 for three-crown, and $1.80 for Londons; such goods as would under usual conditions find quick buyers at higher prices. If Chicago holders press sales here at such remarkable concessions we cannot regulate prices on the fair basis of supply and demand, and the suffering California shipper should know the reason.

Phila., Jan. 11. PANCOAST & GRIFFITHS.

Local Markets.

WHEAT—Exporters are continuous in their efforts to break prices, but so far without avail, owing to stocks being well held. The dry weather up to Tuesday aided the market, and admitted of higher prices, but cloudy and rainy weather on Tuesday caused the bear element to short the market only to create a higher range under strong buying, with clearer skies to-day. On Call, transactions were very heavy throughout the week. To-day's sales were as follows:

Morning Session: Buyer season—200 tons, $1.66⅜; 200, $1.66¼; 100, $1.66¾; 500, $1.67; 500, $1.67¼; 100, $1.67⅜; 3600, $1.67½; 2700, $1.67⅝; 1200, $1.67¾; 1200, $1.67⅞ ₩ ctl. Afternoon session: Buyer season—8100 tons, $1.67¾; 1100, $1.67⅝; 200, $1.67½; 2100, $1.67⅞ ₩ ctl.

BARLEY—The market held strong up to Tuesday, when, under a strong bear selling, prices dropped off, only to recover to-day under heavy buying orders. On Call, transactions were unusually heavy throughout the week, with some sharp fluctuations. To-day's sales were as follows:

Morning Session: Buyer season—100 tons, $1.17¾; 300, $1.18; 1000, $1.18⅛; 2000, $1.18¼; 300, $1.18⅜; 1700, $1.18½; 100, $1.18⅝; 1300, $1.18¾; 200, $1.18⅞. Seller season—200 tons, $1.09 ₩ ctl. Afternoon session: Buyer season—100 tons, $1.17½; 1200, $1.17¾; 1100, $1.17⅞; 100, $1.18. Seller season—200, $1.09; 500, $1.08½; 500, $1.08¾; 100, $1.08; 100, $1.07⅞; 500, $1.07¾; 200, $1.07⅝; 600, $1.07½; 200, $1.07⅜. No. 1 Brewing, buyer season—200 tons, $1.27½; 100, $1.27¼ ₩ ctl.

BUTTER—Owing to a continued selling pressure from holders of pickled butter, prices are low, with the market weak and easy for all kinds. The demand is good, but the supply is too heavy.

EGGS—Lessening receipts of Eastern create a steadier, firmer tone, but it is difficult to get 30 cts per pound for gilt-edged, even by the single box.

CHEESE—The market continues strong, under light supplies and a steady demand. Choice is very hard to find, consequently the market is being cleaned up on all kinds.

BAGS—Continued dry, cold weather creates an inactive market, with a weak feeling for futures, notwithstanding our market is below the parity of the Calcutta market for standard.

FLOUR—The market gains strength in sympathy with the high cost of wheat. Millers claim that the higher cost of wheat shuts off much of their export trade. The home demand is fully up to former seasons at this date.

[COMMUNICATED.]

Market Information.

Cereals.

The barley market ruled very strong and excited at sharp advances up to Monday, when an easier tone set in, resulting in lower prices yesterday by reason of rainy weather. Although the market is lower and easy, yet it is claimed that the pool which has been running the corner is well organized, and if they succeed in getting a large line of shorts a much higher range of prices will be witnessed before April next. The consumption is very large, while the warehouse stocks do not show any increase, but on the contrary are growing lighter quite rapidly.

Oats continue scarce, causing full prices to be paid. Nebraska oats are coming to hand, but the quality not being up to Pacific Coast oats they sell at a lower range.

California corn appears to have a steadier tone, owing to a lessened selling pressure and an improved demand. Western corn to arrive is firmly held, with much difficulty met in buying even at $1 per ctl for the carload to arrive.

Rye is more or less neglected, but buckwheat moves off fairly well.

Fruits.

Choice apples continue to hold to strong prices, but common favor buyers.

Under lighter receipts and a good demand, oranges were advanced, and at the close are steady. Limes and lemons are slow and weak.

Dried fruits hold strong, with the more choice wanted for shipping East.

Raisins are dull for home trade, but the better grades are in good request for shipping to the East.

The local wheat market can, with safety, be affirmed to be cornered, if the high prices ruling on Call are to be taken as a criterion. Many operators who were long on the market last week sold for a turn, but have, up to this writing, been unable to buy back, except at higher prices. Many shorts were filled at a heavy loss. The cold, dry weather aided bulls not a little in putting up prices, for large holders in the interior are slow to let go until better assurance of a large crop this year is had than now manifests itself. Take the State as a whole and our advices are favorable for early sown grain, which has rooted well, and promises, with well-distributed rains in February, March, and April, to turn out a large yield. Land seeded to grain during the dry spell requires more rain, as the plant, so far as we are advised, has not shown itself above ground. Oregon, Washington Territory, and Idaho Territory advices report the outlook for a crop above an average, as of the best. The acreage seeded is above an average, while the rains have been well distributed. Eastern advices report that the outlook for winter-sown wheat in the Northwest, West, and Southwest is good, and without some unforeseen event will give a yield to the acre fully up to the average of seasons. The European markets, as usually obtains in January, are more or less lifeless, but cables state that holders of wheat who are not financially pressed are not offering on the market, believing that higher prices will rule later on. This view they base on the statistical situation of wheat, and also to the general outlook of crops the world over, not warranting the belief that returns usually made in March and April will be favorable for over average crops. The crop returns made in the months of March and April control, to a very great extent, the values for the next incoming harvest.

Feedstuffs.

Hay ruled exceedingly strong and in good demand up to Tuesday, when light rains caused dealers to bid down, but up to this writing no concessions were made. Choice to extra choice hay is in light supply.

Ground barley is strong at the advance, as are middlings. Bran and oilcake meal are unchanged, as are feed carrots.

Live-Stock.

The past week did not bring any change in the situation for beef cattle, although at the close a steadier feeling manifests itself. The offerings have been in excess of the consumption, causing slaughterers to virtually dictate prices. In mutton sheep there is less offering, which produces a firmer tone. In hogs there is a better tone at higher prices. Horses are essentially unchanged. The prevailing opinion is that all kinds of horses will be in better request the coming spring and summer.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7@7½c; first grade, grass fed, 6½@7c per lb.; second grade, 5½@6c; third grade, 5@—c.

MUTTON—Ewes, 5@—c; wethers, 5½@—c.

LAMB—Spring, 6@7c. Yearlings, —c.

VEAL—Large, 7@8c; small, 9½ to 10c.

PORK—Live hogs, 3¼ to 3¾c for heavy and medium; hard dressed, 5¾ to 7c per lb; light, 3 to 3¾c; dressed, 5 to 6c; soft hogs, live, 2 to 2¾c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

Potatoes are very strong for the better varieties. Early Rose are in more liberal supply, with some shading in prices. Sweet potatoes have a wide range, owing to the difference in the quality.

Tomatoes, from Los Angeles, are offering in the market at from $1.50 to $2 per box, according to quality.

Sweet peas, from Los Angeles, are in the market, and, as usual, command fancy prices; the range being from 8 to 10 cts per pound.

The shipping demand for cabbages is reported to be quite active, but is met without creating a higher range of values.

Onions are in fair supply, with the more choice wanted at full prices. Cut onions are slow.

Dried peppers and dried okra are steady.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way	208,807	147,796
In port, disengaged	83,776	108,912
In port, engaged	35 728	54.756
Totals	328,311	311,464

The above gives a carrying capacity, as follows: 1887, 525,297 short tons; 1886, 498,342 short tons; increase over last year, 26,955.

Hops, as usual at this season of the year, are dull and inactive. It is claimed that quite an active demand will set in after next month.

In wool, trading continues light, owing to poor grades constituting the bulk of the stock on hand, but holders even of defective wools express confidence.

In seeds there is very little doing.

Choice beans, both colored and white, rule strong. Poorer grades are slow, yet holders only make concessions to either close out a consignment or to save cost.

San Francisco, Jan. 19, 1887.

A Great Offer.

No matter in what part you live, you had better write to Hallett & Co., Portland, Maine, without delay; they will send you free information about work that you can do and live at home, at a profit of from $5 to $25 and upward daily. A number have earned over $50 in a day. Both sexes. All ages. You are started in business free. Capital not needed. Every worker who takes hold at once is absolutely sure of a snug little fortune. Now is the time.

A WORD ABOUT CALENDARS.—There are calendars and calendars, big and little, good, bad and indifferent, useful and ornamental, high-priced, low-priced, and no price at all. But for a substantial, practical calendar, especially suitable for business offices, etc., with figures that can be read across a large room, and that will hang on the wall in good shape from January to December, few will mind paying 25 cents. This just about covers cost and postage for the one issued by N. W. Ayer & Son, Newspaper Advertising Agents, Times Building, Philadelphia.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, Jan. 19, 1887.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Sore Throat, Coughs, Colds, and Diphtheria have for 46 YEARS yielded to Perry Davis' Pain Killer When promptly given.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, *to those who pay fully one year in advance of date,* IF REQUESTED, the following articles (while this notice continues), at the very greatly reduced figures named at the right:

1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price $1).....$0 25
2.—World's Cyclopedia, 794 pages, 1250 illustrations; (exceedingly valuable).....50
3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.....50
4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated.....25
5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations.....05
6.—To NEW Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new".....Free
7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates
9.—Pacific Coast and Eastern Dailies, Books and Periodicals, *except special publications,* we can usually give 10 to 15 per cent off advertised retail rates.
10.—March of Empire, by Mallie Stafford.....25
11.—Life Among the Apaches, 322 pages, stiff cloth .25
12.—$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application .25
14.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.) .25
15.—European Vines Described, 63 pages.....05
19.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable.....50
23.—Architecture Simplified, 60 pages.....15
24.—Mother Bickerdyke's Life with the Army; patriotic and ably written; 166 pp., cloth, $1.00.....50
25.—Ropp's Easy Calculator, cloth, 80 pp.....25
26.—How to Tell the Age of a Horse.....05
27.—Percheron Stud Book—French—bound in leather, 192 pages (full price, $3).....1.00
Beautiful Poetic Review, entertaining and instructive; 35 pages (a handsome and pleasing present)..25

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F.

Inform your neighbors about our offers and paper. Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired.

WILD-DUCK FAT.—It is said to be a fact that the fat from wild ducks makes leather pliable and thoroughly water-proof.

BARREN HILL NURSERY

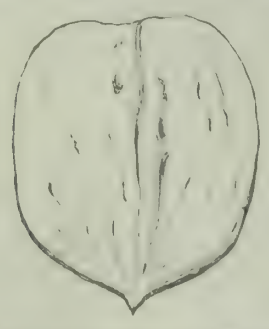
NEVADA CITY, CAL.

SPECIALTIES:

NUTS, PRUNES, AND GRAPES.

The Finest Collection of Nut-Bearing Trees to be found in the United States.

19 Varieties of Walnuts,



—INCLUDING—

CLUSTER WALNUT,

The newest, most prolific and valuable variety ever introduced into this country.

PRŒPARTURIENS,

Or Early-Bearing, or Fertile Walnut, introduced into California in 1871 by Felix Gillet. "Second Generation" Trees, grown from nuts borne on the ORIGINAL tree; 90 % guaranteed to be "genuine Præparturiens," or having retained the surprising characteristics of **precocity, fertility** and **hardiness** of the **original** Præparturiens. "Third Generation" Trees, grown from nuts borne on **second generation** Præparturiens, entirely California-grown; vigorous, hardy and fertile variety.

"Second Generation" Præparturiens.

Serotina, Franquette, Mayette, Chaberte, Gant, Parisienne, Mesange Walnuts.

The leading varieties of Europe, highly recommended for beauty and quality of the nuts, fertility and hardiness of the kinds.

9 Varieties of French Chestnuts or Marrons (Propagated solely by grafting).

7 Varieties of Filberts.

4 Varieties of April Cherries, the earliest and most prolific in California.

207 Varieties of Grapes, including the very earliest Table varieties known, such as Blue Muscat, Ischia, Magdeleine, Malingre, Pearl of Anvers, Bulhery, Luglienda, Dupont, Gros Sapat, etc.

81 Varieties of English Gooseberries, all sizes, shapes and colors, and "true to name."

PRUNES! PRUNES!

LOT D'ENTE, OR "D'ENTE TRUE FROM THE ROOT."

We have ourselves given this name of "Lot D'Ente" to this type, so extensively propagated in the valley of the Lot (France). **True from the root** and not grafted, and which we have introduced into this country. This type of the D'Ente Prune is not at all propagated by grafting, which would do away with its chief qualities of being more vigorous, more **long-lived** than grafted trees, and a **gum-resistant** stock.

ST. CATHERINE, "True from the root."

This kind is altogether propagated **true from the root** in its home, valley of the Loire (France), and offers greater advantages than grafted trees, as being also more vigorous, more long-lived, and a **gum-resistant** stock.

APRICOTS — Boulbon, Esperen, Duclos, Mexico, the shipping varieties of the south of France.

Constantinople Quince—The largest, most precocious and prolific of all quinces.

Ever-bearing Black Mulberry of Spain—Medlar, Sorbus (all those kinds should have a place in all gardens)

Mulberry Trees for Silkworm Feeding. Silkworm Eggs. Sericulture Chart, 50 cts.

☞Send for General Catalogue and Supplement with Chapters on "Nut-bearing Trees" and "Prunes," illustrated with 20 walnut cuts, 5 prune cuts, and numerous other cuts representing Medlar, Sorbus, Black Mulberry, French Chestnuts, Filberts, etc.

CYPRESS AND GUM TREES.

All fresh, hardy, stocky trees. Monterey Cypress, 8 to 12 inches high, transplanted in boxes of 70 trees each, at $2 per box or $25 per 1000; 12 to 15 inches, of 50 trees per box, at $4 per 100 or $35 per 1000. Seedlings, 3 to 4 inches, at $5 per 1000. Blue Gums, 8 to 12 inches, of 100 per box, at $1.50 per 100 or $14 per 1000; 12 to 18, of 70 per box, at $1.50, or $20 per 1000; 18 to 24 inches, 50 per box, at $1.75, or $30 per 1000. Large, straight sacked or bulked Gums or Pines shipped only after the roots have sprouted through sacking. Blue, 4 to 6 feet, at $15 per 100; 6 to 8 feet at $20 per 100; 8 to 10 at $25 per 100. Red or Round Leafed Gums, 4 to 6 feet, at $20 per 100; 6 to 8 feet at $25 per 100. Pines, 2 to 3 feet, at $20 per 100. Acacias, 2 to 3 feet, of 30 trees per box, or 3 to 4 feet of 20 trees per box, at $2 per box. Also fresh-gathered, strong-growing seeds of the Monterey or Italian Cypress, Blue, Red or Iron Bark Gum or Acacia in variety at lowest rates. Postage Stamps taken for orders not exceeding $2. No other than the best of stock will be sent from this nursery, as we desire to make a friend of every cash customer.

B. V. CUTTINGS.

Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M., 200,000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

V. H. HALLOCK, SON & THORPE
EAST HINSDALE, NEW YORK.

What Mr. Beyer says:

"Please accept my best thanks for the splendid seeds received from your firm. It would be a rather lengthy list if I should name all, but will say that amongst 38 first, and 3 second premiums awarded me at our fairs in Northern Indiana and Southern Michigan, 28 first premiums were for vegetables raised from your seeds. What firm can beat this?"
AUGUST BEYER, So. Bend, Ind.

Seed of this quality I am now ready to sell to every one who tills a farm or plants a garden, sending them FREE my Vegetable and Flower Seed Catalogue, for 1887. Old customers need not write for it. I catalogue this season the native wild potato. JAS. J. H. GREGORY, Seed Grower, Marblehead, Mass

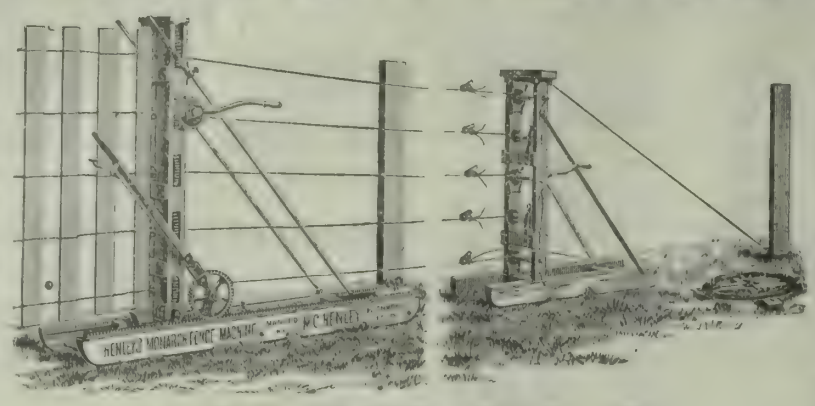
HAWLEY BROS. HARDWARE CO.



WHOLESALE DEALERS IN HARDWARE AND AGRICULTURAL IMPLEMENTS.

GENERAL AGENTS FOR

HENLEY MONARCH FENCE MACHINE.

IS THE BEST AND HAS NO EQUAL.

1. **BECAUSE** the wire is stretched the full length of the field before the weaving is commenced.
2. **BECAUSE** any sized wire can be used, and with this advantage: using a large size wire, the strongest fence can be made.
3. **BECAUSE** any size, length, or style of picket, or slat, or board, can be used, weaving all equally firm and solid.
4. **BECAUSE** the picket or slat can be woven in more firmly and solidly than in any other machine.
5. **BECAUSE** it will make a fence over rough and uneven ground, or up and down hill alike, making as good a fence as on even, level ground; and the machine being adjustable, the pickets are always woven plumb.
6. **BECAUSE** the **Monarch** machine stretches the wire tighter, thus making the strongest and best wire and picket fence.
7. **BECAUSE** any one can operate it, and there are no parts to get out of order or repair.
8. **BECAUSE** a boy can work it as well as a man, it being light and easily managed.
9. **BECAUSE** it is made of the very best materials, and with proper care, will last a lifetime.
10. **BECAUSE** the price is within the reach of every farmer.
11. **BECAUSE** it is the only machine that forces the slat or picket firmly against the wire, thus securing the slat in such a solid and permanent manner that it cannot be pulled out, and breakage is impossible.
12. **BECAUSE** the fence made by this machine will turn all kinds of stock, and is much stronger than any barb wire fence, and completely obviates all danger of injury to stock.

A FEW OF THE ADVANTAGES

OBTAINED BY THE USE OF

THE WIRE and PICKET FENCE:

It will turn all kinds of stock, sheep, hogs, and poultry, without injury to same.

The strongest wind will not blow it down, if properly put up, and the farmer can go to bed at night and rest undisturbed, knowing well that his crops are safe and well protected.

The amount of ground saved by this style of fencing over the common rail fence, is alone a great object, and would soon save the price of the wire and picket fence.

This wire and picket fence is generally set from two to four inches from the ground, thus allowing the farmer to mow down the weeds and undergrowth, and keep his farm in first-class condition.

While it is possibly not quite as cheap as barbed wire, it has many advantages over it, as any one can readily see.

It is cheaper than board fencing, as any kind of lumber may be used for pickets, and, if it is properly put up, will last a lifetime with very little expense. By weaving past the posts in wire and picket fencing, and not fastening the pickets to posts, the wood parts of fence do not come in contact, thus preventing rotting, as is the case with board fencing, as they rapidly rot off at posts.

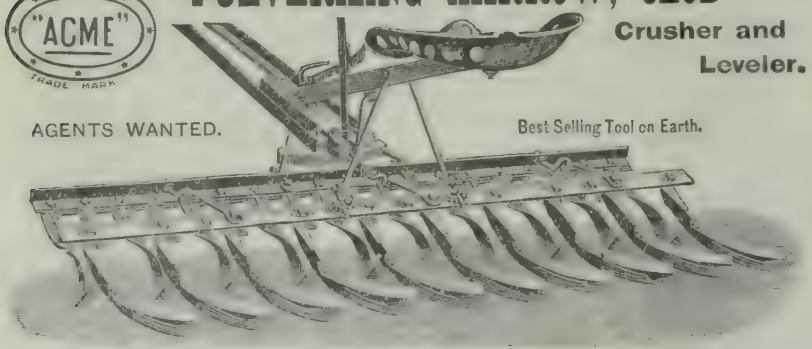
Price $40 Each.

SEND FOR CATALOGUE.

IS THE BEST AND HAS NO EQUAL.

13. **BECAUSE** by weaving past the posts, and fastening the wire strands to the posts with staples, and not nailing the slats to posts, thus keeping the wood parts from coming in contact with each other, it will not hold moisture or rot. This is a very important matter, as all boards in board fencing soon rot off at post, and occasion continued expense for repairs. And finally,

BECAUSE it makes the handsomest, best, strongest and most durable fence, and is the only first-class, practical Fence Machine in the world.



The foregoing are only a few of the points of superiority of the IMPROVED MONARCH FENCE MACHINE over all others, and a trial will convince any one of its merits, and that it has no equal. The HENLEY MONARCH FENCE MACHINE will make the best rabbit and poultry proof fence for nurserymen, gardeners and vine-growers, by weaving the slats close together; will also weave a handsome picket fence for lawns, gardens, and fronts of lots, with great rapidity and regularity. Will make the most substantial fence for farms and stock ranches. The MONARCH Machine is making a complete revolution in the methods of fencing. The fence made by this machine is destined to rapidly supersede all other styles and kinds of fence, both wire and board, and the cost of machine, and expense of fencing, puts it within the power of every farmer to inclose his land with the very best and most substantial kind of fencing, at a total cost far below that of any other kind.

HAWLEY BROTHERS HARDWARE COMPANY, San Francisco, Cal.

"ACME" TRADE MARK

PULVERIZING HARROW, CLOD Crusher and Leveler.

AGENTS WANTED. Best Selling Tool on Earth.

Subjects the soil to the action of a Steel Crusher and Leveler, and to the Cutting, Lifting, Turning process of Double Gangs of Cast Steel Coulters—immense cutting power. Crushing, Leveling and Pulverizing performed at the same time. Entire absence of Spikes or Spring Teeth avoids pulling up rubbish. The only Harrow that cuts over the entire surface of the ground.

We make a variety of sizes from 3 to 15 feet wide.

The "ACME" is in practical use in nearly every Agricultural County on the Pacific Coast, and has proved itself to be just the tool for

VINEYARDS, ORCHARDS AND GRAIN FIELDS.

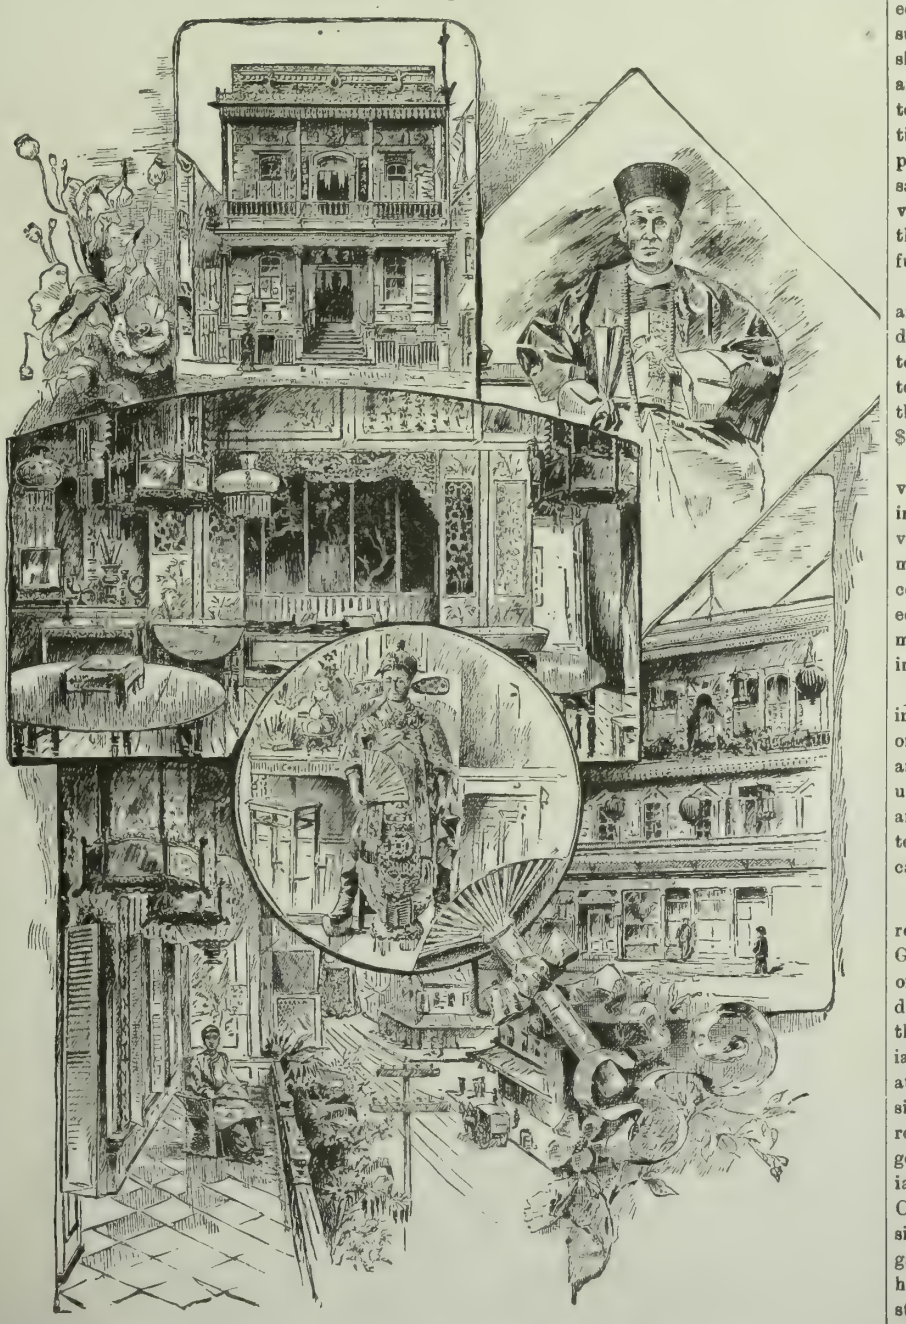
Vol. XXXIII.—No. 5.] SAN FRANCISCO, SATURDAY, JANUARY 29, 1887. [$3 a Year, in Advance; Single Copies, 10 Cts.

Irrigation in the Legislature.

The Legislature seems disposed to make haste slowly on the enactment of irrigation laws, and such seems to us a wise policy on the whole. The State would certainly suffer more from unseemly haste and from unwise legislation than t possibly can from delay. One of the best escapes the State ever had in the matter of laws affecting industrial interests was the failure of law-making at lightning speed, as was contemplated by the extra session of last September. As we have remarked before, that session may be counted profitable for what it refused to do.

Now although there are several propositions before the Legislature, and possibly some of them could be passed with advantage, there seems, according to reports, a disposition to remand the subject to fuller inquiry in the hope that with more discussion among the people and a careful examination by scientific investigators the members of the next Legislature may be better prepared to enact irrigation laws than the one now in session. A good point is also made to the effect that the campaign of 1888 will have no Governor to elect, nor is it likely that another senatorial issue will arise, so that the attention of the people can be directed to the water question as a leading local issue in the canvass.

As we have said, it might secure good results to pass other laws, but it is reported that the disposition at Sacramento seems to be otherwise. The bill which receives most favor from legislators is that introduced by Brierly of Los Angeles, and has been framed substantially in accordance with the recommendations of State Engineer Hall. It provides for the creation of an Irrigation, Drainage and Water-rights Legislative Commission to exist for two years, whose duty it shall be to inquire generally into the subject of irrigation and water-rights, and report a code of laws to the Legislature of 1889. The members of the commission are to consist of five persons not interested in water-rights, to be appointed by the Governor, and to draw a salary of $4000 each. They may appoint a secretary at a salary not to exceed $2000 a year, and the State Engineer is required to act as Engineer of the Board. It is made the duty of the commission to formulate all the data now in the State Engineer's office, examine the laws of other States and countries, hold meetings throughout the State, and obtain the views of all interested in any way in the subject. In October, 1888, they are required to print and distribute an outline of their report so as to elicit discussion before the meeting of the Legislature, upon which they are required to attend and explain the laws codified. To carry out the Act, $50,000 is appropriated.



Of course everything depends upon the appointment of the commission. Governor Bartlett has qualities of insight and appreciation which lead us to expect that he will give us a commission composed not of place-seekers, but of thoroughly competent men, viewed from the two points of science and practice, men who will make for themselves a life reputation if they do good work, and will render a service to the State which will be the key to her fullest progress and development.

Interstate Commerce.—The Interstate Commerce bill only awaits the President's signature to become a law. A full abstract of its provisions may be found upon another page of this issue.

The Chinese New Year.

Reporters who are giving due attention to the festivities in Chinatown assure us that the New Year's celebration the present year is more grand, gloomy, and peculiar than usual. The Chinamen seem to be prosperous and are expending more money in honor of their heathen deities, and more in the gratification of their own gustatory and esthetic tastes, than is common. It seems likely that the restriction act which makes the race a less important factor in our public affairs, at the same time benefits those who have secured admission by securing for them better wages and less competition in their efforts at trade and manufacturing. However this may be, the general processions, and feastings, and the special adornment of individuals and their habitations bespeak an unusual amount of ready money in their hands.

Chinatown remains the Mecca of the visiting tourists in San Francisco, and this year the white faces in the Chinese quarter are many. Many of our readers have never seen the celestial sights of the city, and for their benefit we introduce a sketch which has rather more artistic features than those usually engraved to show this branch of San Francisco's contents. The artist has selected those places which are most prominent in Chinese estimation, and where they are most lavish in their New Year's expenditures. Such places are the josshouses and the restaurants. The upper building in the engraving is the exterior of a josshouse, and the drawing upon the fan is an interior of such a building with the priest in full toggery, and the little joss in the background surrounded by joss-sticks and viands. At the upper right-hand corner is one of the aristocracy of Chinatown—a rich merchant. The large central interior is that of a restaurant, of which an exterior balcony view is given below. On the right is the exterior of another restaurant and high-toned gambling sheol.

SCENES IN THE CHINESE QUARTER OF SAN FRANCISCO.

To Root Out Glanders.

A bill, introduced by Assemblyman Henry, is before the Legislature to eradicate glanders and farcy. It requires any Board of Supervisors, on petition of 25 or more resident taxpayers, to appoint a County Veterinary Surgeon, who shall examine all animals reported to him as having glanders or farcy, and if such animals be found to be so diseased, he shall summons three disinterested residents and taxpayers of the county, who shall proceed to value said animal or animals, which valuation (not exceeding $75 for one animal) is to be paid for out of the general fund of the county; said appraisers to receive $3 per day, and said veterinary surgeon $6 for each day engaged in these duties, also payable out of the general fund of the county.

The owner or keeper of such animals may kill and dispose of them within 10 hours after condemnation and valuation; but should they fail to do so, the veterinary surgeon shall cause it to be done, and there shall be deducted from the valuation of the same a sum not to exceed $10 per head, to pay for the killing, etc.

Any person who obstructs the action of the veterinary surgeon, and so prevents the killing of any animal or animals so condemned and valued, is to be deemed guilty of a misdemeanor, and, upon conviction thereof by any court of competent jurisdiction, shall be punished by a fine not to exceed $75, or by imprisonment not to exceed 30 days, or by both fine and imprisonment, at the discretion of the court.

The proposed measure is criticised as relegating too far to local authorities a subject on which there should be general State action, and as offering to pay for animals already utterly worthless. On the other hand, it is argued that the provision for payment will tend to prevent attempts at concealing dangerous cases.

The Raisin Tariff.—The Secretary of State recently wrote to Congress that the Spanish Government was desirous of having the tariff on raisins and Zante currants equalized at the duty now levied on the latter. The plea is that they are alle same dried grapes, and the Spaniards seem to be real gentlemanly in calling the attention of the United States to the inconsistency in their tariff regulations. The Secretary of State seemed to think it would be a good thing to be consistent and please the Spaniards at the same time. The raisin-producers of California are not anxious for any such consistency, and by the time the California delegation gets through with Mr. Bayard he will have more knowledge on the subject than he started with.

Attacking the Oleomargarine Law.—When the oleomargarine law was secured, it was anticipated that efforts would be made to break it down by amendments. This ball has opened with the bill of Senator Beck, of Kentucky, introduced January 25th, which aims to reduce the annual tax on wholesale dealers in oleomargarine from $480 to $100, and the license tax on retail dealers from $48 to $12 per annum. The license tax on manufacturers of oleomargarine is left unchanged.

It is said that since large numbers of coyotes have been killed on the plains of Fresno, the colonists are greatly annoyed with jackrabbits that destroy vegetation and trees.

How Puget Sound Struck a Californian.

EDITORS PRESS:—I come from the region of San Francisco, but am posted in the characteristics of California generally. Perhaps a brief setting forth, "How Puget Sound Struck Me," may not come amiss. I went by steamer to Seattle, and thence northward to Whatcom county, lying on the sound, next to the Canadian border and extending eastward to the Cascade mountains. This county is said to have more land adapted to farming than all the rest of the region bordering on the sound. The first and chief characteristic appearing is a broad plain stretching southward from the Canadian border some 20 miles, and eastward to the Cascade mountains a like distance. It is quite level, but, unlike California plains, is generally well covered with a goodly growth of trees—pleasant to a lumberman's eye, but wearing a rather forbidding aspect to that of a farmer.

The surface appears to alternate between bottom-lands, often more or less covered with peat, and ridges with a loamy or sandy soil. These ridges have a very slight elevation, frequently not discernible to the casual traveler. The bottom-lands are apt to be of a marshy character, sometimes covered with grass or bushes, but commonly with trees. Alder, vine maple and cedar are the chief growth on the bottom-lands. Passing to the ridges, we may have cedar on the soil of a more loamy character, and then firs as the soil is more sandy. These firs and cedars may be of a size to remind one of California redwoods, and, when left on the ground in the shape of well-rooted stumps, are very enduring. In years past great fires swept through these forests and destroyed untold amounts of timber. Much of the bottom-land requires draining, and water will be running in the ditches the year through.

How They Live.

The soil, except the more sandy ridges, appears very productive. The settlers upon it have an unbounded faith in its capabilities. Generally they have little land in condition for farming—the work of preparing it being so great. Each farmer is sure to have a goodly patch of potatoes and various vegetables, to which, with pork added, he looks for the chief support of his family. Then, if he can boast a yoke of oxen and a few cows, he feels himself in comfortable circumstances. He needs a hayfield large enough to give him a ton of hay for each head of stock in the winter. The forests around furnish an abundance of fine timber for buildings and fences. The house is probably of logs, more or less nicely hewed. It may be covered with clapboards split from the easily riven cedar, and perhaps planed to a fair surface. Split cedar "boards" may inclose his barn. Like boards, planed to surface, form his floors. As sawmills enter the country he may use sawed lumber. With enterprise he begins to add an orchard and enlarges his garden to include various kinds of small fruits.

Meantime the poultry have not been forgotten. They, with his cows, if he has them, help pay his grocery bills, which he is all careful to have as small as possible. Hogs fattened on peas may give him a little extra cash in the fall, with perhaps, in rare instances, a beef animal. If he goes to town with or for a load he takes his oxen, otherwise he goes afoot. A sled may serve all the purposes of a wagon. Possibly out of sawed or split planks he may have formed wheels and has a cart. Some do have wagons.

The above is written with a Whatcom county family in view. There is another object in very frequent view here, and it is called a "bachelor." I have never before seen them so abounding. Some of the settlers look upon them as not altogether a desirable addition to the country. A few would be well, but then there are so many of them. Like the men with families, they generally have little means and are apt to be away in summer at work and wander back to their claims in winter. This kind of management brings slow development to the country.

I like the looks of the people, as a class. They are generally American born. Foreigners that I have seen are German or Scandinavian—a good class of people. The nearness to Canada brings a good deal of wandering back and forth. I judge that at present Canada affords the better openings for workmen. The people are not so nervous, not so much given to driving ahead, as in California. They must have a wonderful amount of patient pluck. After being here years they seem to me to have only made a beginning. I brought my team from California and counted it the slowest in all my neighborhood there. It was weeks before I found anything that would go by me on the road here. The first was a man on horseback, the next was a man afoot. The latter was making the better time. People going afoot is a marked characteristic of this country.

The Roads.

Years ago I was hearing the expression of "Jordan is a hard road to travel." It isn't possible that the originator of it ever traveled over a Whatcom county road. He would have lost all thoughts of the way to Jordan. The climate is to be classed as wet, the surface of its wide plain as flat, and the roads lead through dense timber. Where it is found otherwise impossible to have a roadbed that will bear up a team, the way will be "corduroyed," and a goodly portion of the roads here are corduroyed. Over it the carriage goes at a foot pace, joltity-jolt and jouncety-jounce. With use I must confess it does not appear so bad, especially when one remembers that the corduroy keeps him out of a deep mudhole. A change from the corduroy is found sometimes in the "chuck-hole" road—little mudholes here and there of varying depth. My ponies, with the wit possibly peculiar to a California-born horse, have readily adapted themselves to the new order of things. If they see a crack in the corduroy too wide for the hoof, they step over it; if a corduroy rail turns and lets the foot through, they quickly pull it out; they hate a chuck-hole, but plunge in if I insist; if the peat lets them in so deep that they cannot handle themselves and the wagon too, they lie still till loosed from the wagon.

Crops.

While water is abounding, running in the draining ditches along the roads and around the fields throughout the year, there appears no malaria. I suppose it is on account of the coolness of the climate. Snow-covered mountains are ever in view, Mt. Baker standing chief among them. The nights are generally cool. Early ripening kinds of corn are raised. Peaches, tomatoes, watermelons grow, though not so freely as in some other sections. These facts, I suppose, give a sufficient indication of the warmth of the summer climate.

All kinds of vegetables grow freely and attain a goodly, and it may be said an enormous, size. Of grain crops, oats succeed better than others. The common fruits, large and small, grow finely. The bottom-lands are held to be first class for hop-growing. Cattle indulge in green grass the year through, except when the snow lies too deep, though I fear in the late fall and winter they find it very short or much mixed with old rain-washed stalks. I see indications that the grass is not so "strong," so hearty, as in sections where water is less abounding. The people do not seem to realize the fact, but I think they will find, on comparison, that cows do not produce so much butter, and steers do not take on flesh so readily, as in dryer climates. But it must become, when cleared, a grand stock country. So far the stock is a good deal lacking and is held at high rates. People have little money to buy, but try to hold fast to what few head of stock they have.

The country is new. A few settlers came 10 or 15 years ago, but the majority date a very few years back. Then there was a great "boom," and land prospectors crowded in so fast that sometimes at night the old settler found his floor pretty well occupied by them, and the land was nearly all covered by the filings. Some hastened to perfect a "pre-emption," and then followed it by a homestead—perhaps thus holding 320 acres with not 10 acres ever in crop—possibly not one acre. Not a few "proved up" and left the country. In some cases Government has annulled such claims for fraud or failure to comply with requisitions. Land uncleared is selling at from $5 to $10 an acre. By the time the buyer has cleared it he will conclude that he has paid more.

Requisites for Development.

It manifestly requires muscle and pluck to develop this country. The young will view the prospect with a more cheery eye than the old. It is not prairie land into which one needs only to plunge the plow. It will be difficult to find a spot naturally clear of trees that does not require ditching. The work of clearing away the trees, one may estimate for himself. Commonly the roots do not extend far below the surface, even of the cedar and fir. I suppose it is on account of the abundant moisture below.

It is a country for small farmers. All recognize this, yet as a rule each one tries to get hold of and hold fast to all the land he possibly can. In time the matter will probably remedy itself. If each old settler would dispose of one-half of his land to a new-comer and invest the receipts in stock, he would find he had made a long stride onward in the way of attaining a comfortable independence.

This land bordering on the sound is so generally hilly, as well as wooded, that roads are not made with facility. Many steamers ply between the towns, which are largely built within the reach of navigation. At the head of the sound railroads are already in operation. They are surveying for a railroad from Seattle to Whatcom city, thence to run in two branches north across the Nootsak plain to the border and on to the Canadian Pacific railroad line. The Nootsak river has been occupied by a small irregularly running steamer, but the navigation has been a good deal impeded by snags. These, a Government vessel is now engaged in pulling out. The current is swift. The bottom-lands on this stream have a character of their own and are very productive. Sometimes a jam in the river causes them to be widely overflowed.

Climate.

Potatoes, etc., are commonly heaped up on the ground in the fall and a foot or more of earth piled above them against the winter cold. A root cellar may be made above the ground, perhaps by setting short rails gable fashion and putting plenty of earth upon them. The winter may be "open," with little snow and freezing. But there may be snow for a month or more and the ground freeze to the depth of a foot. Generally there is a "spell" of the winds blowing from the snowy mountains, and then the cold appears to be searching for a body's marrow.

Progress in Schools

Is a good deal hindered by the fact that Congress will not yield to the long-expressed desire of the Territory to become a State. The present condition is far below that of schools in California. The law requires a three months' school in a year here; in California it will not tolerate less than six. The requisitions of teachers and wages paid them are perhaps one-half the California standard. I like the appearance of the young people here. I see evidences of good home-training delightful to a teacher's eye.

Farmers here are fond of setting forth how much they raise to the acre, but before the story is completed you may find that a quarter of an acre is the outside limit of the crop. I heard one man the other day boasting how much he got from a single hill of corn. I have seen but one field with a large growth of stalk to the grain, but I judge the heads fill out well. Timothy is chiefly grown for hay and is also used in seeding lands for pasturage. Red clover grows freely. I see a white clover native and also a kind of red-top and also of blue-joint.

Fish abound in the rivers in their season, but by the time the salmon have worked their way well up the small streams they are not fit to be eaten. A bear may pick up a pig now and then, and the settler in turn may pick the bear off. Lynx, or "wildcats," are as fond of chickens as in some parts of California. The deer, black-tail, is of a larger species than that in California. We have the cougar, or California lion. Bird life is not abounding, neither does animal life appear so to me, except in the case of mice.

Lands and Settlers.

There is said to be good unoccupied land back on the upper waters of the Nootsak, but very difficult of access. A man afoot can scarcely get to it. A number of settlers going in might be able to cut roads to it. Good roads are the great desideratum here. There are many projected, surveyed and perhaps "cut through," but when all is done, the new-comer is hardly willing to admit that a fair beginning has been made, so rude and rough are they. But when he considers, he sees that much work has been done, albeit his aching bones and impatient spirit will wish to add that very much more is needed. The state of the roads agrees with the development of farms. With patient labor the work has been begun, and with patient labor it must go on. Sometimes a settler for a long time packs his supplies upon his own back to his claim, because he lacks a team, or even a horse, or because the trail would not admit the passage of even a horse if he had one. Perhaps the first butter and eggs he produces may go to market in the same primitive fashion. It does seem to me that the people here should have the palm for patience and pluck.

They Love the Country.

I called at a house the other day, a half dozen miles from town by road and trail. The lady of the house said she came from a large city to her present abode, about a year ago, and had been afoot to town once. The father was working here and there, earning what he could. The children packed the provisions from town. She seemed contented and felt she would be blest if they could only have a cow. In brief, the people appear in love with the country—the reason not always appparent to a new-comer. The soil is productive, so far as they can get it in condition for farming; the climate is healthy and free from the extremes of heat and cold; no cyclones sweep through; no venomous reptiles abound. They try to have things as comfortable as they can in the present and they sweetly dream of the future—their prophetic vision piercing through tall forests, bounding over giant trunks of prostrate trees, across undrained plains of peat. Shall I ever be as strong in faith in the country, as enthusiastic as they? Perhaps so—perhaps when I too raise my 50-pound cabbage I shall make a horizontal cut across the head, reckon up the square feet and inches in it, and then estimate the amount to be produced to the acre.

Cities and Markets.

Whatcom "city" is the county seat. A few years ago it started ahead in the boom; now its appearance is not altogether one of life. It appears to me to lack in public spirit. It has not even a graveyard. A stranger dying there a short time ago was buried in the public highway. Owners of land may have a spot fenced in where lie the family dead. The roads near the "city" are much uncared for and marked by abounding chuckholes. Unless a change is inaugurated, I fear the people in the Nootsak valley will agitate the matter of having the county seat on that river. With united action they can do as they please.

The opening of the Northern Pacific railroad appears to have brought prices of goods down to the San Francisco standard. Eastern goods are now imported direct. Seattle is the chief point on the sound. Tacoma is pushing itself forward as a rival in the struggle for supremacy, but Seattle will doubtless retain the present advantage.

As far as I see there is a sale for produce. A good deal is now brought to Seattle from San Francisco. Our prime flour has the California brand. Cornmeal in the market is not a home product. Ground feed for stock may come from California as well as many kinds of manufactured goods. Potatoes sell here now at 30 cents a bushel; wheat is 1½ to 2 cents; oats 1½ to 1½ cents; apples ½ to 1 cent. I state prices as I have bought for my own use. Beef and pork are 7 cents, the producer selling to his neighbors. Lumber at the mills here is, rough, $10; dressed, $16 per M.

We do not have the strong storm winds of California. Usually the rain comes down very quietly. It appears to rain in the stormy half of the year with a very little effort, but rain-gauges do not show a greater fall than is recorded in New England—but we have less here than on the upper waters of the sound. So far I have seen little fog. Thunder and lightning are not abounding. Of course in a region so far north the days are short in winter—from 8 A. M. to 4 P. M.—and proportionately long in summer.

Woman here, in the exercise of the right of suffrage, has stood grandly for temperance. Outside of Whatcom city, I have not seen a liquor saloon in the Territory. The precincts were allowed to vote severally upon the question, and in my own the decision was 15 to 1 against liquor saloons. S. H.

HORTICULTURE.

Orchard Fruits in Fresno.

EDITORS PRESS:—While passing over the country southeast of Fresno city, in the neighborhood of Malaga and Fowler, we had an interview with D. W. Lewis, of Fresno city, residing near Malaga, and who has a pear orchard of 160 acres two miles west of Fowler—trees of ages three, two and one years. Mr. Lewis has paid much attention to the cultivation of the pear and the varieties most profitable for this central valley of California.

In making a list of the most valuable varieties for this section, the Bartlett would come first as the best of its season. There are other pears that would stand shipment better, but on arrival East would sell cheaper because of inferiority. Next are the Howell and Beurre Clairgeau. These are the two best fall pears, both large in size and abundant bearers. For late fall varieties he grows the Beurre Bosc, Winter Seckel or Dana's Hovey. This last variety is very good, of medium size, fine flavored and choice for market, a good shipper, and probably should be classed as a winter pear. Beurre Bosc is of excellent flavor, large size, great beauty, very russetty and peculiar in form, with a large neck. Winter Nelis, the standard of excellence among winter pears. P. Barry, originated by the late B. S. Fox, of San Jose, is an excellent pear and a good shipper. The tree is very hardy, productive and free from blight. The Eastern Beurre is considered hardly worthy of cultivation; it is an irregular bearer and does not hold its keeping qualities here like other pears.

All pears above named have been tested here in the valley region of Fresno county, and those which are approved of, Mr. L. has growing in his young orchard, as he considers these pears equals of the best in the State. It should be borne in mind that while many remarks made by Mr. L. may be taken as suggestive for other parts, yet that they are founded on experience here, and that the list here given is not intended for any other place. The locality where pears are grown has much influence on their character as shippers. A given variety raised here may prove to be a good shipper, but this fact should not be received as conclusive evidence of its good shipping qualities if raised in some other locality. In fact it might, upon experiment, turn out to the contrary.

Mr. Lewis gave us some points on the value of other fruits adapted to this region, as follows: For peaches we are unsurpassed. The most profitable are of the yellow and white cling varieties. This is because we can ship them out of the State better than others. Ringgold's Mammoth, a clear white cling, is considered among the very best of white clings. As among the very best yellow clings, he mentions the Lemon cling, the different kinds of Orange clings, and the Seller's cling. The last named is very thrifty and productive.

Nectarines also do admirably. The Early Newington is showy and a good shipper. The New White is preferred by canners. The nectarine makes a better dried fruit than does the peach, and perhaps there may be, to the producer, more profit in drying the nectarine for the market than in disposing of it in its green state.

Plums and prunes do not do so well. Kelsey's Japan plum commences very early, and is an abundant bearer. The yellow egg plum does fairly, and is used mostly by canners. The Hungarian prune does here as well as in any place ever seen growing by Mr. Lewis. It is a good shipper, and one of the principal varieties shipped East. It holds its own and keeps its color here better than in most places, even after it becomes soft. A good many plums and prunes do well in certain localities; but, as a rule, few varieties do well generally. For instance, the French prune does well in the lower or bottom-lands, but on the higher and dryer plains is not satisfactory.

As a rule, apples are not grown here with profit. The varieties should be very limited. The Red Astrachan, Gravenstein and Skinner's pippin are good cooking apples for summer and fall months, and such are about all that can usually be grown to advantage and with profit here.

Berries of all kinds, excepting currants and

gooseberries, succeed well. While strawberries only succeed in bearing one crop during the season, yet the life of the plants is well sustained during the hot months of summer. Mr. L. has been very successful with the Cuthbert raspberry, and black caps are known to do quite well; but most people, however, have not succeeded with any of the varieties. For raspberries here the ground should be sloping, so that water may be run over every few days, but at once run off again. This keeps the ground cool during hot weather. Most varieties have at best proved a failure, but Mr. L. thinks, from his success with the Cuthbert, that in localities with sloping surfaces, with the proper treatment, this variety may be made a success in this region.

Blackberries do well all over this country. Mr. L. had this season a fine crop of the Texas Everbearing (Crandall's Early). By cutting back the new shoots and trimming out the old wood in spring and summer, this variety may be made to bear all summer and fall. This would not be profitable, except in the matter of having blackberries late summer and fall, after the berry is out of the market. Texas Early bears profusely and early in point of ripening—ahead of all varieties tested here; it is nearly gone before others come in.

Mr. Myers' Experience.

C. Myers, orchardist and vineyardist, residing six miles north of Selma, in the spring of 1886, just as trees were budding, discovered that two of his four-year-old Bartlett pear trees were affected by scale bugs—one of them badly. It was after the rains had ceased and the weather had become dry. He first cut the limbs back to the extent of a full year's growth. He then applied to the trees a wash prepared as follows: Take from wood ashes 1½ gallons lye of medium strength, ⅛ pound plug tobacco, pound sulphur; put all in a pot and boil 15 or 20 minutes. Apply hot, or as warm as tree would bear without injury. With Mr. M. one application seemed thoroughly to kill the scale and clean the tree. He thinks cutting back important as, devoting attention to the tree thus shortened in, the bark may be more thoroughly moistened.

In the fall of 1883 Mr. Myers budded into stocks grown from seeds planted in the spring of 1882, apricots as follows: 200 into apricot stocks and 100 into peach stocks. Those budded into apricot stocks bore in 1885 only a few apricots, but in 1886, considering age, bore full and matured well. Those on the peach stocks have thus far never borne a single apricot. The buds have seemed to die without blooming.

The apricots on both kinds of stock are all of the same variety from a seedling supposed to be crossed between the Moorpark and Royal, and which bears as well as the Royal, but better fruit than that famous variety.

From observation in the orchard, Mr. M. thinks that apricot roots stand water better than peach roots. On this point especially we would like to hear from others having experience, as in some districts it is a matter of importance to know what roots, among orchard trees, stand water best. McD.

Fresno Co.

FORESTRY.

Report of the State Board of Forestry.

We have received a copy of the first biennial report of the California State Board of Forestry, which was organized upon April 1, 1885, under a legislative enactment approved March 9, 1885, and entitled "An Act to Create a State Board of Forestry and to Provide for the Expenses Thereof."

Prominent among those who interested themselves in procuring the passage of the act was Hon. James V. Coleman, of this city, and he was appointed by Governor Stoneman as one of its members, with Chas. M. Chase and Dr. A. Kellogg as his associates. The latter two gentlemen, upon the organization of the board, elected him chairman, which position he held until May, 1886, when, at his own request, he was permitted to resign the office. Abbot Kinney, of Los Angeles, who had been appointed by the board to fill the vacancy caused by the resignation of Mr. Chase, was then elected presiding officer. As now constituted, the board consists of Mr. Kinney, chairman, Mr. Coleman and Dr. Kellogg. The latter acts as treasurer, and Sands W. Forman is secretary.

The first report of the board, which has just been issued from the State printing office, has 238 pages of type and a number of maps and statistical tables. The report opens with a brief introduction prepared by the commissioners themselves. The commission says:

> The report, unless it has missed its mark, can hardly fail to create the impression that, as regards our forests, matters are in a bad way, and that injudicious legislation is responsible for much of the bad state of affairs. The evil is one which only time will correct—which better enactments, even, would now fail to reach. It is undeniable that something should be done to protect our forests, if only to guard against their exhaustion, danger of which threatens. Statutory legislation—however much it may aid—will not alone prove adequate; our forests need care. It is not without outlay that the evil consequences of a too extensive encroachment upon nature may be sought to be warded off; time, money and labor will be required. It is believed, however, that the burden of expense can be so distributed as to fall lightly upon the community, until a state of equilibrium is brought about, after which little more than a general supervision will be called for.
>
> The opinion is hazarded, that if remedial measures but keep pace with the destruction, the resources of our forests may be freely utilized without evil consequences ensuing. The efficiency of the forests at certain points should be maintained or stimulated, If this be but judiciously carried out we may hope to realize a compensation in the increased efficiency which may be imparted to lands now of little value.
>
> It is, however, essential as a basis for intelligent action to possess a thorough knowledge of the forests of the whole State—a subject which cannot be too carefully studied—and to the accomplishment of which worthy end this report—with all its shortcomings and defects—hopes to be a first step.

Our Supply of Redwood.

The commission has closely studied the subject of the supply and consumption of redwood, and the figures which they have obtained warrant one in assuming that the prospective consumption of sawed lumber will hardly fall short of that of the year 1885, say 215,000,000 feet, to which in estimating the total consumption must be added the production of the sundry items other than sawed lumber, and which may be stated to run, one year taken with the other, about as follows:

Railroad ties—equivalent in feet, board measure	15 000,000
Posts	12,000,000
Shingles and shakes	12,000,000
Making with the consumption in sawed lumber	215,000,000
A total of (feet, board measure)	254,000,000

And if these figures are a correct gauge of the future, the duration of the redwood might be set at about 120 years.

What its duration will eventually prove is a matter difficult to predict, the consumption being materially influenced by several modifying causes and the relation between supply and demand, not altogether a simple one, at least as regards the home market.

Everything considered, the commission thinks that the redwood is not liable to be exhausted in less than 75 or 80 years, and does not promise to last more than a century.

Report of the Secretary.

In the report of Secretary Forman is given a brief review of the circumstances under which the commission was organized, and of the work which has thus far been done. It includes also a statement in brief of the measures adopted by other States and Territories to insure the increase and preservation of their forests, together with a number of "county reports" received in response to inquiries from competent authorities in various sections of the State as to the present condition of their local timber interests. The counties represented are Alpine, El Dorado, Monterey, Napa, Placer, San Joaquin, Santa Cruz, Santa Barbara, Sonoma, San Diego and Ventura; and the replies indicate that in these the native woods have been destroyed in degrees varying from little or nothing in Monterey and Ventura counties to 40 or 50 per cent in Santa Cruz, Placer and Sonoma, or even 75 or 80 in Santa Barbara.

The secretary also says: The prevalence of forest fires during the latter part of the present year, and the immense loss to the Government and the State from these conflagrations, led the board to the printing on canvas for distribution throughout the State of Section No. 384 of the Penal Code, which is as follows: "Every person who willfully or negligently sets on fire, or causes or procures to be set on fire, any woods, prairies, grasses or grain on any lands in this State, is guilty of a misdemeanor, and is punishable by a fine not exceeding $1000, or imprisonment not exceeding one year, or by both such fine and imprisonment."

These canvas signs were posted quite extensively throughout the timbered districts, and although no convictions were procured, owing to the difficulties experienced and the lack of means to hunt up evidence, yet it is believed that the warning thus publicly given has had a salutary effect.

The expenses of the commission have been $4233.68, leaving a balance of $766.32 to the credit of the board.

Report by Abbot Kinney.

Chairman Abbot Kinney has collected considerable information relating to the disastrous effects of the destruction of trees, notably its influence in diminishing the water supply. He says:

James Craig, of the Hermitage ranch, informs me that for some years after the great Edwards fire on the watershed of the Precipica canyon, that stream diminished in its summer flow without regard to the rainfall, and is only now becoming itself again. This fact forced itself on Mr. Craig, as his entire water supply came from this stream. In one place this water-course was filled up 16½ feet, by actual measurement, with sand and bowlders. I am informed that the watershed of my canyon was burned over before my arrival—the traces are still plain in burnt trunks of trees—and that the summer flow of the spring on which I depend was thereby materially diminished, while during the rains great quantities of sand and bowlders were washed from the mountains, altering the appearance of the canyon.

After my purchase of the property from Robert Bayley, I ordered a sycamore to be cut down and the stump taken out. On going to see how the work progressed, I found the men digging out a chicken-coop frame 10 feet below the surface, which must have been buried by the torrent.

About six years ago I settled in the San Gabriel valley. The road to my ranch from Los Angeles passed through what is now the town of Pasadena, then consisting of one store, a schoolhouse and a number of orchards. The road passed on across the San Pasqual ranch, most of which was then used to pasture sheep. At that time between the Arroyo Seco and Precipica canyon there was not a single water-course—not one place where, through pebbles or cuts, a water channel could be recognized. During my residence, until two years ago, no water ever ran across the San Pasqual ranch between the points named. While these lands enjoyed an immunity from torrents, the foothills and mesas were covered with native growths of brush and chaparral, scrub oak, greasewood, sagebrush, etc. Every succeeding year has seen more of this covering removed from the land by clearing or fire, until now nearly all the mesas are bare of verdure.

The Influence of Trees and Shrubs.

Trees and bushes, and in fact nearly all vegetable growth, have a great power of holding rain-water and retarding its flow until it has time to sink into the earth. The leaves, twigs and branches intercept the raindrops and diminish their force. The roots and the fallen leaves and sticks hold back the water and divide its currents. Besides this, these impediments protect the soil so that it does not cut, thus the water does not get into well-defined channels where it can concentrate its force. The humus or soil of the forest and brush-land has remarkable powers of absorbing moisture. It is like a sponge in this respect, a quality of the greatest importance to perennial springs. Thus the destruction of the bushes has caused another change. The rains that were formerly absorbed on these lands are no longer taken in. Torrents have been born; orchards, vineyards, roads, fields and fences, formerly safe and which no one ever thought open to floods, have been damaged, partially destroyed, or altogether washed away.

Two years ago a torrent, now very plain, crossed for the first time the Mutual orange orchard, Mr. McCullum's orchard, and many other places, going down as far as Mr. Foord's. Last year, though the rains were so light, this torrent ran several times. I crossed it twice while water was coursing through it, but it did little additional damage. This year, however, the rains have already been heavy, causing much injury along the line named. Orange trees and hedges have been rooted up and carried off. In some places deep gullies have been cut; in others sand and gravel have been deposited, in one or two places to the extent of several feet in thickness.

Everywhere Mr. Kinney has found that whenever there has been a destruction of brush or trees through fire, clearing or otherwise, the streams have nearly disappeared, all of the water which falls flowing away as soon as fallen in the terrible and destructive form of torrents. Springs are diminished in volume, or dry up, and a general lack of water is found in places where there was formerly an abundance.

Springs Which Have Become Dry.

"Mr Arturo Bandini," says Mr. Kinney, "whose family has long resided in Southern California, tells me that his relatives and their vaqueros, or herders, say that in their experience the perennial character of many streams and springs has been destroyed and the pasture injured by the extensive cutting of oak and other trees and the burning of the brush on the mountains. He gives the following special instances: He says the waters of the Arroyo Seco are now less than they formerly were. The woods and brush have been extensively cut and grubbed up by the roots for fuel or destroyed by fire. He also cites the cienega and springs near the ranch-house of the 'Coyote' ranch, below Los Angeles. At this place formerly existed large springs and a sort of boggy place, or cienega. It was always the same until the monte or wood of willows around and above it was destroyed and the willows cut for fuel. Since the complete destruction of these willows the springs and cienega have disappeared, and now nothing but a white and desolate plain of alkali remains. Water and wood have disappeared together.

"When I first saw the watershed of Mission creek, at Santa Barbara, it was covered with a rich mantle of verdure. This growth protected the steep mountain-sides, and kept in place the soil and humus. By this means the heaviest rains were so detained as to either flow off slowly or to percolate into the deeper strata, to again appear as springs. Mr. Canfield's observations, as superintendent of the water-works of Santa Barbara, show that when the forest covering was destroyed three things happened. First—The green trees were replaced by bare, desolate rocks; thus the beauty and attractiveness of the country to strangers was diminished. Second—The stream took a torrential character, by landslides and washouts, carrying off soil, sand and rocks, to deposit them again on lower grades in its course. Thus every heavy rain filled up the water company's dam and reservoir with debris. Third—While the east fork, with its watershed forest intact, maintained its usual flow of water, the desolated Mission creek was so materially diminished in summer flow as now to contain no more water than its formerly smaller tributary."

Other Features of the Report.

Other important matters in the report which we must reserve for fuller mention hereafter are the following:

The report of Hubert Vischer, which is accompanied by a forest map of a group of counties, comprising the upper redwood district of the State, contains much important data.

A brief report upon the counties of Amador, Calaveras, Tuolumne and Mariposa is presented by Engineer Luther Wagoner, and is also accompanied by a finely executed map showing the original and present lines of saw timber in the counties named, which appears to indicate that between one-quarter and one-third of the lumber-producing trees of the section in question have already been destroyed.

Milton Thomas, of Los Angeles, contributes a short paper on "Forest Trees for Profit."

C. R. Orcutt has an important catalogue of the trees and shrubs of San Diego county.

Dr. A. Kellogg furnishes a catalogue of California forest trees and shrubs which are worthy of attention.

There are also other important matters which we cannot allude to at this time. The report is very creditable to the Board of Forestry and to all who have aided in its work.

ENTOMOLOGICAL.

The Codlin Moth.

EDITORS PRESS:—In the issue of the PACIFIC RURAL PRESS for Jan. 1, 1887, page 9, a question is asked involving the food habits of this insect. From personal observation I can say that it lives readily in peaches as well as in apples and pears. Some two years ago I found quite a number of peaches nearly ripe that contained larvæ from half to full grown. Some of the peaches gave evidence that the larvæ had developed there from first hatching, while others contained larvæ that had but recently entered by holes, showing conclusively that it has the same habit here that it does in the apple, of going from one fruit to another. From this we may assume that the method of starvation and quarantine Mr. Anderson speaks of will not be wholly effectual, probably not enough so to pay for the loss of fruit.

I may say in conclusion that our State Entomologist has been experimenting for the past two years with Paris green in the manner spoken of by Mr. O'Neil on the same page of the RURAL PRESS, and with good results. It seems to be the general sentiment here and in some other States, that the codlin moth can be kept in check by Paris green used at the time the fruit is the size of peas. G. H. FRENCH.

Carbondale, Ill.

The Use of Paris Green.

Concerning the last topic in Prof. French's letter, we find the following statement in the *Prairie Farmer:*

The State Entomologist of Illinois, Prof. S. A. Forbes, reports elaborate experiments made in the apple orchard with the arsenical poisons, the results of which show that an average of at least 70 per cent of the apples now destroyed or injured by the codlin moth may be saved to ripening by one or two sprayings with Paris green, made in early spring, while the fruit is not larger than a hazel nut. Taking one year with another, the codlin moth is found to infest about one-half the apples which set on the trees, and, making all reasonable allowances, it is estimated that the general use of the spraying method must effect a saving to the State in the increased value of the apple crop of at least $1,500,000 annually. The cost of the application would be practically nothing so far as the codlin-moth injuries are concerned, as the benefit to the trees and the crop, resulting from the destruction of curculios, canker worms and other minor leaf and fruit insects, must more than return the small expense of spraying. Observations and analysis have shown that there is not the slightest danger to the consumer of the fruit from poisoning the trees thus early in the season, when the apples are very small and before they have turned downward on their stems. The experiments show, however, that late poisoning is dangerous, and, furthermore, is without effect upon the codlin moth. Paris green was found more effective than London purple or solutions of arsenic, and lime had no effect at all. The experiments on which these statements rest were made under widely varying conditions during two successive years on several varieties of fruit, the number of apples examined being nearly 40,000.

Ladybugs and Codlin Moths.

EDITORS PRESS:—The remarks of some writer in the PRESS that the ladybug larvæ destroy the codlin moth larvæ remind me that my orchard has plenty of the former and few, if any, of the latter. The ground is mostly reclaimed springy tule land, oversupplied with weeds all summer, and the weeds well supplied with the ladybug. The apple trees have been in bearing six years, and I have seen but one apple showing sign of codlin moth. An older orchard, three miles distant, irrigated and clear of weeds,

REDUCING THE WASTE.—It is said that there is not over six pounds of waste to the largest ox now killed at a Chicago packing-house.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

From Indiana.

EDITORS PRESS:—The RURAL comes regularly, and is indeed a welcome visitor, its contents being perused with great interest. It sounds very strange to us Hoosiers to hear of plowing and sowing wheat at this season of the year. To-day, Dec. 30, we are having a northwestern blizzard. The ground is frozen solid with plenty of snow, and mercury playing hide-and-go-seek with zero.

Christmas was observed in various ways. At some of the churches a Christmas tree, and the fishpond, with hook and line, conducted by Santa Claus, beguiled the evening; while others of the more needy were housed around their fires, enjoying the luxuries of life as best they could afford. This little ragged boy, who had only one dime, would spend a nickel for candy and a nickel for shooting crackers. The jingle of merry sleigh-bells is heard from early morn until late at night by the happy sportsman, scarcely realizing how fast time flits away. But lest I should induce some Californian youths to try a polar climate, I will say no more on this subject.

The State meeting of the Patrons of Husbandry was held in Frankfort, on the 14th, 15th and 16th. Nearly every county in the State was represented. Many topics of interest were discussed, the chief one being monopolies. All agreed that they are a great detriment to the interests of the farmer, and that they will have to go. Am sorry to say that nearly all of the Subordinate Granges in this part have ceased to be—lost their charters and forsaken their Lodge-rooms.

Farmers are busily hauling to market their corn, which was a good yield and of better quality than usual. The poor man is making good use of the snow, hauling wood, bolts, elm, or oak and lin for the stave factory, and occasionally a load of hoop-poles, all which command good prices and are very important factors in keeping soul and body together in this cold clime.

Early seed-wheat has been greatly damaged by the fall fly; but plenty of snow and a favorable March will be of great benefit to these fields.

Hog cholera has been very prevalent in these parts this fall. Many farmers have lost almost their entire raising, which makes corn plenty in the market.

Looking at everything as it now appears, we have no just cause to grumble, but great reason be thankful.

Mrs. Wright's letter in the RURAL of December 18th hits the nail on the head. We have no need of middlemen in this free country of ours. Deduct the percentage that many of our commission travelers get from the retail prices, and it would place many articles beside books within the reach of the poor, which now they never see. God bless the Granger woman for speaking out in meeting!

JACOB HODGEN.

Frankfort, Ind., Dec. 30, 1886.

Resolutions of Respect.

Stockton Grange has passed the following resolutions on the death of Bro. Kuhl:

WHEREAS, Our divine Master has called from this life William Kuhl, a member of Stockton Grange, and of the German Methodist church of this city, a man honest and reliable in business, a neat and practical farmer, who was regular at our meetings till failing health prevented, and who loved our land and laws but kept a strong love for his Fatherland. After wearying months of consumption he has gone from the shortcomings and vexations of earthly doing to the unknown. Therefore

Resolved, That we take heed to our speech and acts, and so deport ourselves that we shall not fear to stand before the Judge of the living and the dead.

Resolved, That we tender to our widowed sister our affectionate sympathy, and commend her to the Father who pitieth His children, and to the daughter and son our regret that they were called to part with a father ere he was yet old, and hope that their thoughts will turn to the end that awaits us all.

Resolved, That these resolutions be spread on our minutes, and a copy be sent to the family, and to the *Patron* and RURAL PRESS.

SISTER W. D. ASHLEY,
BRO. WM. L. OVERHISER,
SISTER C. E. OVERHISER,
NATHAN T. ROOT, Sec'y. Committee.

Stockton, Jan. 22, 1887.

The Grange in Oregon.

The *Willamette Farmer* tells how Salem Grange met on New Year's day for installation of officers, and for a general good time in sympathy with the holiday season. There was a full attendance, with friends from other Granges present. After installing officers, a generous New Year's dinner was partaken of and enjoyed by the help of the general good feeling the Grange cultivates. Salem Grange may be said to have certainly commenced a happy New Year.

In the afternoon an open session was held and the members invited friends to be present and participate in the exercises and discussion of important questions. The matter considered was that of assessment and taxation as it is presented to the present Legislature by the committee that last winter drafted a bill for the purpose. This commission, provided for at the last session, was composed of men from different sections, in various walks of life. They met and considered all points. The bill they drafted will come before the Legislature at this session. It is severely criticised by many and will hardly pass in its present state. Discussion on New Year's day called out many objections and created much interest. The Grange is well represented in both houses at the present session and its influence will be felt in shaping legislation, no doubt with good effect.

Memorial.

Sister Ashley, wife of our respected Bro. George H. Ashley, departed this life Nov. 23, 1886, and was buried at the Live Oak church on Thanksgiving day, by the Woodbridge and Pomona Granges. She was a charter member of Woodbridge Grange and among the first to come forward and help build up the Order that makes us all brothers and sisters. Sister Ashley was the first Lady Assistant Steward, and every year has filled some important office in Woodbridge Grange. Her many friends will remember with peculiar pleasure her and her home, where they always found a glad welcome and plenty of sunshine.

Inasmuch as the messenger of death has entered the home of our respected brother and taken from the family circle the beloved wife and mother, therefore be it

Resolved, That we, the members of Woodbridge Grange, do hereby extend to them our heartfelt sympathy in this their great affliction, and may He who doeth all things well sustain and comfort them in their sorrow.

Resolved, That these resolutions be spread upon the minutes of the Grange and a copy be sent to the *California Patron* and RURAL PRESS for publication.

MRS. W. P. WHITE,
MRS. WM. TREDWAY,
MRS. E. J. MCINTOSH,
Woodbridge, Jan. 18, 1887. Committee.

Yes, thou art gone; but many a trace
Of thee is lingering still—
The badge unworn, the vacant place,
Which thou wast wont to fill.
To meet in the social Grange we come,
But heavy hearts we bear;
We cannot make it seem like home
When thou art wanting there.

We cannot feel that thou hast passed
In the cold grave to lie;
The fearful thought aside we cast,
And deem thou liv'st on high.
The gentle voice that whispered peace
In that dread hour when each alone
Lies where all earthly voices cease,
To tread a pathway all unknown.

O Savior! for thy loving hand,
Reached forth in that dark hour of fear,
To lead us to that blessed land,
We give thee praise and blessing here.
'Tis thine to hear the lonely prayer,
That comes up frequent to thy throne;
Thy merit is the offering there
That saves the faint and trusting one.

There broken links are joined again,
The severed paths once more unite, beyond the shadow and the pain,
As one by one we pass to the unknown.
When the shadows have a little longer grown,
And the ties that bind to earth,
Shall one by one be severed,
Not long apart, but closer drawn,
Soul knit to soul we wander forth
And look on that celestial dawn
Which follows the immortal birth.

MRS. E. J. MCINTOSH.

Grange Elections.*

PLACERVILLE GRANGE.—Installed Jan. 15: Albert Norris, M.; P. J. Isbell, O.; A. S. Cook, L.; J. Waters, C.; Miss Annie Bliss, Sec.; J. P. Allen, T.; A. L. Kramp, S.; Walter Carpenter, A. S.; J. C. Marsh, G. K.; Miss Drusie Allen, F.; Miss Etta Barlow, Ceres; Miss Maggie Springer, P.; Miss Luella Carpenter, L. A. S.

SAN JOSE GRANGE.—Installed Jan. 8: H. G. Keesling, M.; S. P. Sanders, O.; W. C. Kingsbury, L.; Joab Powell, S.; C. Jones, A. S.; Ps G. Keith, C.; G. W. Tarleton, T.; E. T. Pettit, Sec.; F. Dunn, G. K.; Helen Hicks, P.; Mr., S. T. Ingalls, F.; Sister Kingsbury, Ceres; Jennie Sanders, L. A. S.

WALNUT CREEK GRANGE.—Installed Jan. 8: C. Sharp, M.; J. Foster, O.; A. Holbrook, L.; J. W. Jones, S.; J. M. Daley, A. S.; H. P. Dunning, C.; J. Larkey, T.; Miss M. Baker, Sec.; N. Jones, G. K.; Mrs. I. Wagner, P.; Miss E. Kusch, F.; Miss L. Sharp, Ceres; Miss C. Wagner, L. A. S.

*Secretaries, or other officers, are invited to send us lists of officers elected, date of installations, and all other interesting matter for publication.

GRANGE INSTALLATIONS.—Mention is made, in last week's *Patron*, of Santa Rosa installing officers on the 8th....W. L., Flint gives a pleasant account of the initiation and installation at Yuba City, which he attended on the 14th....District Lecturer Loucks, assisted by Bro. Overhiser, W. O. S G., installed Alhambra's officers on the 15th, and gives a good report of that Grange's activity.

Grange Work and Progress.

[Prepared weekly by M. WHITEHEAD, National Lecturer.]

The Grange has made the farmer a thinker; it has made him a man demanding his rights; it has enlarged his views; it has developed his talents; aroused his social nature; made him better morally; brightened his life; beautified his home; increased his income; kept his boys and girls on the farm; given him an honored place among men, and is fast securing him his just rights. Yes, the Grange has a vast influence for good.

During the discussion in Congress a few days since of the bill creating a Department of Agriculture and Labor, with its head as a member of the President's Cabinet, Mr. W. H. Hatch, of Missouri, chairman of the Committee on Agriculture, made a telling speech, in which he used these words: "So long as I hold a seat on this floor, my voice will be raised in behalf of that great body of people, who have demanded, through every organization known to agriculture in this country, that this bill should pass the Congress of the United States. Agriculture has, in the United States, few organizations. We have an organization in this country known as the Grange. It has a national organization, and it has State, county and local organizations. For the past ten years it has spoken at every one of its meetings for the passage of this bill."

Mr. Hatch also said: "Why should the farmers not have it? Why should not one-half of the people of the United States engaged in that great industry which is the foundation of your financial and commercial prosperity, why should they not have it? What would you do for commerce if it were not for agriculture? How much finance would you have in this country if it were not for agriculture? Who produces the balance of trade, which has to-day made the credit of the United States better than that of any other nation on the face of the globe? What use would we have for an interstate commerce bill if it were not to take charge of agriculture? Take out of the commerce between the States, wheat, corn, cotton, tobacco, rice and hogs, and there is not a railroad in the United States to-day upon the roadbed of which grass would not grow inside of six months."

Mr. Hatch made another good point, so often advocated in our Granges: "It is not the man who is appointed to the proposed secretaryship; it is the office, it is the position I contend for. It is the power that a representative of this great industry will have in the Cabinet councils of the country, the power he will have as a member of the Cabinet of the President of the United States. Do you suppose that his councils will be confined simply to agriculture? The agriculturists of this country are interested in something else as well as in tilling the soil and selling its products. They are interested in the tariff question, in the silver question, in finances; they are interested in the proper administration of the powers of the Government; they are to-day the foundation upon which rests not only your prosperity, but the hope of the perpetuity of the Government of the republic."

"This Order of Patrons of Husbandry had its origin in the desire of farmers to secure protection against the rapacity of interests that find in agriculture their chief support, and through insidious aggrandizement of their power become irresponsible oppressors. It was found that in one way or another farm products destined to distant markets were, upon arrival, so burdened with cost that but the poorest earnings could be saved by those whose labor had produced them. For this great wrong partial correction has been made. The highest judicial authority has declared that transportation companies engaged in carrying our products are public servants, and therefore amenable to such regulation as the State may prescribe. Such is the fruit of well-directed effort, inaugurated and sustained by this Order. It is gain that encourages further effort looking to complete regulation of a traffic essential to profitable agriculture."—*W. A. Armstrong, Master New York State Grange.*

We are pleased to note that the agricultural press generally, following in the wake of the *Homestead*, is giving much more attention than formerly to the Grange. This is most encouraging. The Grange is worthy of the fullest attention. And it does wisely in promoting the competitive spirit among journals devoted to agriculture.—*N. E. Homestead.*

Progress.

New Grange.—Ashland, No. 811, Schuylkill county, Pa.

Excelsior Grange, No. 5, of Maine, has 150 members, fine hall, dining-room and store connected; 70 horse stalls in a large stable. Has initiated 33 members this past year and is in a strong, healthy condition.

At a farmers' club-meeting recently held in Nebraska, it was unanimously resolved to change the club into a Grange, and word was sent to National Deputy Whitney to come and perform the work.

Within one week National Deputy Lecturer Whitney has reorganized five Granges in Minnesota, and more are nearly ready to do the same thing.

At the late meeting of the Vermont State Grange all the officers were present and 83 delegates. The secretary's report showed that there are in the State 56 subordinate and 7 Pomona Granges, with a total membership of 2000. Active campaign work is now going on in Vermont.

Brother J. H. Brigham, Master of the Ohio State Grange, writes: "We had a grand gathering at the State Grange, and I think the cause has been materially advanced thereby in Ohio."

The Executive Committee and Secretary of the National Grange have laid before Congress and its appropriate committees the various resolutions and reports of the National Grange, referring to legislation by Congress.

"On then, forward, fearless, onward,
Till our destined task be done,
With the eye of Hope cast sunward,
Tho' our toil be but begun."

THAT RIVERSIDE FROST.—Having learned years ago to put little faith in such sensational telegrams, we did not think it worth while even to mention the woeful story a fortnight or so since about the dire frost-work in Riverside orange groves. Consequently we have not been surprised to find that the damage to the crop was grossly overestimated and is not likely to exceed from two to five per cent.

AGRICULTURAL NOTES.

CALIFORNIA.

Contra Costa.

LATER GRAPES.—Concord *Sun:* Mr. Ike Smith, who owns a handsome vineyard near Clayton, left at the drug store a box of luscious Flame Tokay grapes which he picked from the vines on Thursday morning, 20th inst. This is nothing extraordinary from Pacheco valley.

ALAMO PLOWMEN.—The farmers in the valley have almost completed their plowing, and the grateful showers have been of such great benefit to the hill-lands that plowing and sowing thereon will be unusually lively.

Inyo.

FINE BULLS AND STALLIONS.—*Independent.* W. S. Enos has brought some very valuable stock to Independence. Among the rest are three thoroughbred Durham bulls and ten high-grade bulls. These will all be placed with the herd owned by Mr. Enos. One of the three thoroughbreds is known as Duke of Sacramento; he is a very fine-looking animal and no less can be said of the other two. All are recorded in the herdbooks. The graded animals, except to an expert, appear to be quite as valuable as the others. Perhaps even greater attraction will be found in some horses brought here by Mr. Enos. One of these is by far the most noted blood ever brought into the county. Albenton is a bright bay, without white, foaled April 14, 1883; bred by Leland Stanford, Palo Alto, Cal. He is 16 hands high, and has size, style and finish. Albenton has been handled but little, on account of his age and large size, but showed a quarter as a yearling, close to a 2:40 gait, and received the first premium at the California State Fair, 1885, for the best two-year-old standard trotter, over colts by Sultan and other noted sires. The presence of Albenton will be of great interest to all our horse-breeders and to all lovers of fine horses. Mr. Enos has also brought a first-class Clydesdale stallion. It is his intention to have the best animals of the various breeds, and to aim at producing the very best animals of the several kinds.

BROOMCORN.—Last spring J. J. Smith had some broomcorn planted at Bishop Creek. It made a good crop in quantity and turned out a first-class article for brooms. Some of the broom was sent to S. F. and put on exhibition at the rooms of the State Immigration Association. Competent judges pronounced it first-class. Mr. Smith is now making brooms of the same material, and their superiority to any imported is apparent on comparison.

Lake.

MIDWINTER MILDNESS.—*Clear Lake Press*, Jan. 15: This week we had a sprig of tomato-vine, bearing, blooming and green, as though taken from the garden in midsummer. It came from D. M. Hanson's ranch, a few miles north of town, where roses and geraniums are in perfect bloom at this time. The latter, a tender flower, blooms the year round, out of doors and without any protection whatever. As yet there has not been the least evidence of ice, nor has the frost injured a vine or shrub at Mr. Hanson's, whose place is in Weldon Valley.

Los Angeles.

SCALE-SQUELCHING.—Pomona *Progress*, Jan. 20: The fruit-growers of Pomona valley, without exception, are acting nobly on the bug question. The few trees infected with white scale have been burned. A rigid search by the inspectors has failed to find them anywhere else in the valley. The San Jose scale, however, is quite widespread. One man heard that the inspector would visit him next day, so he chopped down and burned 100 infected trees, and had the whole matter cleaned up before the inspector came. A vigorous campaign has been commenced, which, if continued, will eradicate every bug within a month.

MOVING THE OSTRICHES.—Anaheim *Gazette*, Jan. 22: The ostriches have all been removed to the new farm in North Anaheim. The transfer of the birds was accomplished without mishap, General Manager Northam handling the fragile creatures with an ease and skill which strengthens the suspicion that he is a Madrasee prince in disguise, sojourning in Anaheim temporarily for the benefit of his health. Mr. Atherton, an expert ostrich keeper, will hereafter assist Manager Northam in caring for the farm.

Mono.

SHEEP TAX.—*Inyo Independent:* One of the sheep men who was forced to pay license under the law established by the supervisors of Mono county sued the county to recover the amount of tax paid by him. The case was tried in the Superior Court, and Judge Hakes gave judgment in favor of the county. Should no appeal be taken to the Supreme Court, the sheep license will continue to be collected in Mono county without further trouble. If an appeal should be taken and the law declared to be unconstitutional, all the money collected would have to be returned.

Santa Barbara.

EDITORS PRESS:—This county, in common with other sections of the State, is suffering for lack of rain. Only three small showers have fallen this season, not aggregating an inch altogether, and therefore farmwork is not progressing much. Many farmers have kept the surface of the ground stirred with cultivators

and harrows, thus killing the weeds and saving the little moisture that has fallen. Some grain has been sown, but it is not doing much. The grass growing in the pastures is insignificant and will soon be dry unless rain comes. The city of Santa Barbara is having a decided boom, in consequence of the near approach of the railroad, and many improvements are being made. Business and dwelling-houses are going up rapidly, the principal drawback being the lack of brick. Large brick kilns are now in operation and will soon be able to supply that deficiency. A sewer has just been completed through the principal (State) street, opening into the ocean, at a cost of $15,000. A telephone service has been established by the Bell Telephone Co., and masts are up for the electric lights, which will send their rays abroad as soon as the machinery can be adjusted. A Board of Trade has been organized and proposes to do much for the benefit of the city. The Agricultural Society spent upward of $15,000 in erecting the grand pavilion and constructing the fine race-track, first used for their highly successful fair last autumn. Other societies for the improvement of the place are in active operation. The outlook of both city and county is promising and only needs the rain to fulfill the hopes.—L. B. CADWELL, *Carpinteria, Jan. 23, 1887.*

DIRECTORS CHOSEN.—*Independent:* At the meeting of the Santa Barbara County Agricultural Association, Jan. 8th, the following directors were elected for the ensuing year: Capt. C. P. Low, G. C. Packard, T. C. Nance, Robert Machin, E. C. Roeder, W. B. James, J. C. Hamer, H. B. Brastow, and F. M. Senteney. Captain C. P. Low was elected President of the Board, H. B. Brastow, Secretary, and A. L. Lincoln Treasurer.

San Luis Obispo.

ARROYO GRANDE CABBAGES. — San Luis Obispo *Tribune:* Mr. E. Leedham has again beat the United States upon raising large cabbages, this time of the Waran and Deep Heart varieties, one weighing 74 pounds and the other 77 pounds, for which he received $15 each.

Santa Clara.

BENEFICENT BUGS.—San Jose *Herald*, Jan 19: The days of the scale-bug are numbered, in Santa Clara county at least. The little black bug with two red spots on its back is multiplying fast, and the scale-bug disappears before it like dew before the sun. No matter how thick the scale may be before this little destroyer, behind him the bark is as clean as though there had never been a scale-bug on the tree. These bugs should be protected with the utmost care. They should be picked from the trees before any spraying is done, and returned to their feeding grounds when the spraying is over. In this way they will soon get ahead of the scale because they not only eat it themselves, but multiply at a great rate, and the larvæ eat scale even faster than their parents.

WINTER PRODUCTS.—San Jose *Times*, Jan. 19: J. P. Bubb, who resides in the Lincoln district, eight miles west of this place, has laid on our table ripe tomatoes of superior red and yellow varieties, and also a branch of tomatoes in blossom, and with some on the same branch nearly ripe; also a branch of red peppers in blossom and some green pods. All these are grown in the open air in the valley on the edge of the foothills. He often raises three crops of tomatoes annually from each of his plants and never less than two. He has 21 orange trees, of which 10 are in bearing, that have not suffered from frost, and from one of them he has taken 164 oranges this season. This is only in the third year from the seed. He says they are of excellent flavor, and he will be one among the many exhibitors at the coming fair.

PROFITS FROM PRUNES AND PEACHES.—San Jose *Herald:* The past season the four-year-old prune orchard of Mrs. Mary K. Thompson, about a mile southwest of San Jose, yielded more than seven tons an acre. These were sold at 1¼ cents per pound, and thus yielded the gross sum of $175 an acre. The cost of cultivation, picking and marketing was a little less than $25 an acre, thus leaving a clear profit of $150 an acre. And this, it should always be remembered, was the yield from four-year-old trees, and is therefore not more than half a crop. The crop of Salway peaches raised by Mrs. Dora M. Skinner, who lives about three miles southwest of San Jose, may be taken as another illustration of the profits of last season's fruit-growing. These yielded a little over $4 a tree, or $432 per acre, and the trees were only four years old. The cost of cultivation, picking and marketing, etc., was in this case also about $25, leaving a clear profit of $407 an acre. These are merely isolated instances, the details of which happen to be at hand, but serve to show what can be done on ordinary soil, with ordinary care and attention.

WINTER FLOWERS.—San Jose *Times*, Jan. 25: J. B. Bubb has favored us with an assortment of 15 different varieties of flowers, comprising several of the most delicate and beautiful species. Among them are the heliotrope, sweet william, calla lily, white and yellow marguerites and almond blossoms. All these on our table and many others have been raised in the open air without any special care and with no shelter whatever, eight and a half miles west of the *Times* office on the edge of the foothills.

Santa Cruz.

IN THE CITRUS BOOM.—*Sentinel*, Jan. 22: Fifty orange trees have been planted on O'Neil and Davis' Chestnut Hill ranch, near Boulder. This ranch is located in the thermal belt, about 1200 feet above sea-level, and Nurseryman Meyers, of S. F., says there is no finer soil in the State, not even excepting Los Angeles, to raise oranges than on this ranch, and in the land included in the thermal belt.

Shasta.

SWEET POTATOES.—Cottonwood *Index:* A. J. Logan left a sample of sweet potatoes which he raised without irrigation on his farm about five miles from here, that are large, solid and delicious. They weigh from two to seven and a half pounds each, and are as fine as any produced in the State.

Sonoma.

COUNTY ITEMS.—Telegram from Santa Rosa, Jan. 19: The Water Works Co. has just finished setting out 250 olive trees on the red hill land near the reservoir. Chestnut and walnut trees will also be planted....The wineries in this section are now busy racking off the large yield of wine made last fall. It is of good quality.... Luther Burbank, the nurseryman, has made large shipments of fruit trees recently to New Zealand, China and Florida.

Stanislaus.

GRAIN AND GEESE.—Modesto *News*, Jan. 21: Farmers in the northern part of the county say that grain is looking splendidly, but that geese in immense flocks alight upon it and pull it up by the roots.

Yolo.

RASPBERRIES TO COME.—Woodland *Democrat*, Jan. 20: There were 80 bundles of raspberry cuttings at the depot yesterday, consigned from Oakland to Lusk & Lusk. These cuttings, about 80,000 in all, will be planted on the land recently purchased by these gentlemen on Cache creek. Why raspberries have never been cultivated to any extent hereabout is a mystery. Strawberries and blackberries here grow to perfection, some of the largest in the world being exhibited each year. There is no shadow of a doubt that the berry will grow in Yolo county, and especially on Cache creek.

ARIZONA.

IMPROVEMENTS NEAR PHŒNIX. — EDITORS PRESS: Water was let into the Arizona canal on the 8th inst. and is now running through its entire length, 35 miles. A colony from Peoria, Ill., has been started 10 miles N. W. of Phœnix, under the above canal, and a town already projected at that point. One section of land under the Arizona canal was sold last week to a Los Angeles party for $9800, with water right. This land was desert a few months ago, and I give this item to show the appreciation of such property. California and Eastern people are buying extensively under the old and new canals. One Los Angeles firm has bought over $100,000 worth of property under the old canals within the past six months. On completion of our railroad we look for the establishment of several manufacturing enterprises. Our city was lighted with gas two weeks ago, and a street railroad enterprise started, with franchise from the city and forfeiture of $5000 if the road is not completed within 12 months.—G. W. I., *Phœnix.*

NEVADA.

A SNUG FARM.—Reno *Gazette*, Jan. 22: D. Angelo, an Italian farmer, has a 40-acre lot near Steamboat Springs, of which two and a half acres are fenced off for a garden and dooryard. Off this little patch he has raised in the last year 100 tons of hay, 100 tons of potatoes and 71 sacks of wheat, netting him $3200 in cash. Besides this, he raised chickens, pigs, vegetables, and kept some cows.

A Triple Calla.

Beside the other friends who have favored us with accounts, and, in some instances, specimens also, of double callas, within the last three weeks, Mrs. A. E. Swift, of Dry Creek, Sacramento county, writes us as follows: "In the month of September I had a clump of callas that threw up three blooms at the same time; two of them were like the one described by you, and one was triple with three spathes on a single stem and an ordinary spadix. All were perfect and very handsome. It was an unusual time of the year for callas to bloom in this part of the State. They were seen by a number of persons, and all remarked they had never seen a double or triple calla before."

ORANGE-CLEANER.—A reader of the RURAL in Chicago writes us that he has made diligent search for the orange-cleaning arrangement which Amory Bigelow wrote us that he had set up at 105 South Water street, Chicago, and which he said would clean two carloads per day. This reader of the RURAL could find nothing of the sort, though he made much inquiry for it of those in authority at the place named. He also inquired of employes of the concern, and the only orange-cleaner they knew of about the premises was a barrel of sawdust. We do not know anything more about the matter either way. We balance one statement against the other.

THE proposed constitutional amendment in favor of woman suffrage was defeated in the U. S. Senate Jan. 25th by a vote of 16 to 34.

IN the Nevada Legislature, a bill disqualifying State officers who are addicted to tippling is under discussion.

Interstate Commerce.

Important Sections of the New Law by Congress.

The principal provisions of the Interstate Commerce bill, as it passed the Senate and the House of Representatives, are embraced in the following sections:

The first section applies the provisions of the Act to any common carrier engaged in the transportation of passengers wholly by railroads or partly by railroads and partly by water, when both are used under common control, management or arrangement through more than one State or Territory or from any place in the United States to any adjacent foreign country. It defines the term "railroad" to include all bridges and ferries used or operated by any railroad. All charges made for any service rendered in the transportation of passengers or property shall be reasonable and just, and every unjust and unreasonable charge for such service is prohibited and declared to be unlawful.

Section 2 makes it unlawful for any common carrier, subject to the provisions of this Act, to charge, demand, collect or receive, directly or indirectly, from any person or persons, greater or less compensation for any service rendered in the transporting of passengers or property than it charges, demands, collects or receives from any other person or persons for doing him or them a like and contemporaneous service in the transportation of a like kind of traffic under substantially similar circumstances and conditions.

Section 3 makes it unlawful for any common carrier, subject to the provisions of this Act, to make or give any undue or unreasonable preference or advantage to any particular persons, company, firm, corporation or locality or any particular description of traffic. Every common carrier, subject to the provisions of this act, shall, according to its respective power, afford all reasonable, proper and equal facilities for the interchange of traffic between its respective line, and for receiving, forwarding and delivering passengers and property to and from the several lines and those connecting therewith, and shall not discriminate in their rates and charges between such connecting lines.

Sections 4 and 5 (the long and short haul and pooling sections) are as follows:

SEC. 4. That it shall be unlawful for any common carrier, subject to the provisions of this Act, to charge or receive any greater compensation in the aggregate for the transportation of passengers, or of like kind of property, under substantially similar circumstances and conditions, for a shorter than for a longer distance over the same line, in the same direction, the shorter being included within the longer distance; but this shall not be construed as authorizing any common carrier within the terms of this Act to charge and receive as great a compensation for a shorter as for a longer distance; provided, however, that upon the application to the commission appointed under the provisions of this Act, such common carrier may, in special cases, after an investigation by the commission, be authorized to charge less for longer than for shorter distances for the transportation of passengers and property; and the commission may, from time to time, prescribe the extent to which such designated common carrier may be relieved from the operation of this section of the Act.

SEC. 5. That it shall be unlawful for any common carrier, subject to the provisions of this Act, to enter into any contract, agreement or combination with any other common carrier or carriers, for the pooling of freights of different and competing railroads, or to divide between them the aggregate or net proceeds of the earnings of such railroads, or any portion thereof; and in any case of an agreement for the pooling of freight, as before said, each day of its continuance shall be deemed a separate offense.

Section 6 requires that after 90 days from the passage of the Act, every common carrier subject to its provisions shall have printed, and keep for public inspection, schedules showing its rates, fares, and charges, and, in addition to requiring railroads to give publicity at all of their depots on their several lines it gives authority to the commission, where it is proper and necessary, to require them to give publicity to the rates to other places beyond the lines of their several railroads. It also provides that rates, fares and charges shall not be raised except after 10 days of public notice, but that they may be reduced without previous public notice. The notice, however, shall be simultaneous with the reduction itself.

Section 7 makes it unlawful for any common carrier to enter into any combination or agreement to prevent the carriage of freights from being continuous from the place of shipment to the place of destination.

Section 8 declares that any common carrier violating the provisions of the Act shall be liable to any person or persons injured thereby, for the full amount of damages sustained in consequence of any such violation, together with reasonable counsel or attorney fee.

Section 9 provides that persons claiming to have been damaged by the action of common carriers may proceed for the recovery of their damages, either in the courts of the United States or before the commission herein provided for; but not before both tribunals.

Section 10 makes it a penal offense to violate any of the provisions of this Act, and puts the maximum fine which may be imposed at the sum of $5000.

The 11 following sections contain the commission features of the bill. They provide for a commission to consist of five persons, whose term of office shall be for six years, except for the first appointments, which are to be for two, three, four, five and six years. The members of this commission are to be appointed by the President, by and with the advice and consent of the Senate. Their principal office shall be in Washington, but they may hold sessions at other places than Washington, and a single member of the commission may take testimony anywhere, as may be directed by the commission. These commissioners are to have salaries of $7500 each. The commission has power to appoint a secretary, with an annual salary of $3500, and has authority to employ and fix the compensation of such other employes as it may find necessary to the proper performance of its duties, subject to the approval of the secretary of the interior.

Section 22 provides that nothing contained in this Act shall abridge the remedies now existing at common law or by the statute.

Section 23 appropriates $100,000 for the purposes of this Act for the fiscal year ending June 30, 1888.

Section 24 provides that the provisions of Sections 11 and 18 of this Act, relating to the appointment and organization of the commission herein provided for, shall take effect immediately, and the remaining provisions of this Act shall take effect 60 days after its passage.

THE PUBLIC LANDS.

Government Land.

EDITORS PRESS:—Among many people the idea seems to be prevalent that at the present time there are no public lands in this State worth filing on, and for the purpose of persuading them to the contrary I would like to say a few words about the Government lands in a certain part of Fresno county.

The San Joaquin & Yosemite Valley railroad now terminates at Raymond, 21 miles from Berenda, a station on the Southern Pacific road. This railroad (the S. J. & Y. V.), by the way, has been surveyed through to "Wawona," 54 miles from Berenda, and, it is understood, will soon be finished as far as surveyed, thus shortening the stage travel over that line on a trip to the Yosemite valley. Raymond is at present barely more than a railroad station to all appearance, but Wells, Fargo & Co. have an office there, a large warehouse, and a few small dwellings can be seen, and a postoffice in the near future is an assured fact. Buchanan, seven miles west of Raymond, is the present nearest postoffice.

In the near vicinity of Raymond, say from two miles out, there is still Government land to be had for filing on. The valuation is $1.25 per acre. It is rolling land, and is, or at least all that I have seen is, composed of decomposed granite, light in color, but not light in quality. Much of it is thickly covered with white oak timber, and all of it bears some white oak and some chaparral; that quarter section I filed on has, it is estimated by a competent man, about 3000 cords of white oak on it. The same man told me when I entered my claim, last May, that it was worth about 50 cents per cord net. No more land can be found with quite as much timber on it, but from a comparison I will venture to say there are still quarter sections near there from which can be cut 1500 or 2000 cords.

One family has been living there 25 years, and seem to be doing well. They raise grain and cattle for market, fruits and vegetables for their own use, and say they like it there.

The climate is agreeable; very seldom is fog seen, and, although the thermometer registers from 80 to 90 through the summer, it is the testimony of a sister of mine who moved down there last August from Oakland, that none of her family felt the heat as much as they did in Oakland. The explanation is probably this: It is a *dry* heat, there not being that heavy, sea-saturated atmosphere found along the coast, so that 90 degrees at Raymond are felt no more than 80 in Oakland. The Sierra Nevada mountains, snow-capped most of the year, are in sight from almost any point, and I am told that in winter a little snow usually falls in Raymond, though so far none has fallen this season.

It is believed that irrigation will not be necessary in order to raise trees or even grapevines, though it will take time to ascertain to a certainty. Schoolhouses are not far off, say from two to three miles. A Protestant minister, graduate of Yale Seminary, lives there and frequently holds public services, and intends to preach regularly as soon as may be possible.

I will be pleased to correspond with any one who may think of taking a trip down there with the intention of settling, merely requiring that correspondents inclose necessary postage.

CHARLES P. NETTLETON.

Haywards, Alameda Co.

NO ACCOUNTING FOR TASTES.—It is said that a bird-dog, owned at San Miguel, appears to consider tarantulas a great delicacy, as he hunts for them eagerly and gulps them down with gusto, and the diet appears to agree with him.

"Give Us a Call."

[Suggested by seeing these words in a saloon advertisement.]

Give us a call! We keep good beer,
Wine, brandy, gin and whisky here;
Our doors are open to boys and men,
And even to women, now and then.
We lighten their purses, we taint their breaths,
We swell up the columns of awful deaths.
All kinds of crimes
We sell for dimes
In our sugared poisons, so sweet to taste;
If you've money, position, or time to waste,
Give us a call.

Give us a call! In a pint of gin
We sell you more wickedness, shame and sin
Than a score of clergymen, preaching all day,
From dawn to darkness, could preach away;
And in our beer (though it may take longer
To get a man drunk than drinks that are stronger),
We sell our property, shame and woe;
Who wants to purchase? Our prices are low.
Give us a call.

Give us a call! We'll dull your brains,
We'll give you headaches and racking pains,
We'll make you old while you yet are young,
To lies and slanders we'll turn your tongue.
We'll make you shirk
From useful work,
Make theft and forgery seem fair play,
And murder a pastime sure to pay.
Give us a call.

Give us a call! We are cunning and wise;
We are bound to succeed, for we advertise
In the family papers, the journals that claim
To be pure in morals and fair of fame.
Husbands, brothers, and sons will read
Our kind invitation, and some will heed
And give us a call; we pay for all
The space in the papers we occupy.
And there's little in life that money won't buy.
If you would go down in the world, and not up,
If you would be slain by the snake in the cup,
Or lose your soul
In the flowing bowl,
If you covet shame, and a blasted name,
Give us a call.

—*Ella Wheeler.*

The Senator's Daughter.

CHAPTER IV.

[Written for the RURAL PRESS by SARAH CAMPBELL SANFORD.]

Father read the letter through to the end, then rose and walked the floor in an agony of mind. His head dropped forward on his breast, and his hands moved nervously. After a few moments of pacing back and forth in silence, I said: "Speak to me, father."

"What can I say? My God! words are too feeble. Nothing short of dashing my brains out would suffice. Oh, this is the hardest! My only son despises me, loathes my very profession. Margaret, you are indeed avenged. Now I realize, if never before, that

"'Our deeds travel with us from afar,
And what we have been makes us what we are.'

"Do you hear, girl—everything you do or say daily will return to you in your old age either to bless or to curse you? 'Stabbed to the heart,' my Margaret! Ah, I know it, I know it;' but to have my son tell me of it! oh, what gall and wormwood! The iron is burning my very life away! My boy, Margaret's baby, with her eyes, her bonny face, despising me! Take this cup from me! It is more than I can bear. Madge, go away a little while; I cannot have even you witness my humiliation."

"Father, before I go, promise me you will do nothing rash, desperate." In my earnestness I went up to him, put my hands on both his shoulders (I was a tall girl, almost as tall as my father), and looked into the thoughts that were mirrored in his eyes.

"Am I necessary to your happiness? Is it just pity for my wretchedness, or do you really love me?"

"Don't hurt me so, father! You must know how I love and honor you, and, more than that, I am proud every day of such a grand, noble father. It would kill me to have anything happen to you." And then the sobs and tears came.

Father stroked my hair and soothed me as I cried on his shoulder. I felt convulsive emotion shake his frame as he supported me. Tears seem to be natural to womankind, but when they are wrung from strong men they fill one with awe. My tears were frightened back by his grief, and I ventured to say:

"Papa, the same pen that wrote 'Our deeds travel with us from afar' wrote, in another place, 'We reap what we sow; but nature has love over and above that justice, and gives us shadow and blossom and fruit that spring from no planting of ours.'"

"Yes, my child, you have saved me once more. I will look up and put the past behind me, and press forward, and try to redeem my life from utter worthlessness. But I cannot discuss this letter now—take it away. I'll come to you in a short time, stronger and better, I hope."

I felt that I could leave him in safety, so I sought my own room, but did not find Jessie. Upon inquiry I found she had gone out to spend the night. Her fine intuition taught her that no human eye should witness this sorrow.

Father did not leave the study until after midnight, but he tapped on my door to say good-night in his pleasant way; so I felt the worst of the storm was over.

At the breakfast-table, the following morning, I noticed that age was creeping on him. He looked worn and haggard, his hand shook when I reached him his coffee; and surely there never were so many gray hairs before.

Our breakfast was late, and before we left the table Jessie came in with the morning mail. Father had all the letters and was soon absorbed in their contents, while Jessie entertained me with some bits of gossip.

At last father said, tossing me a letter, "That will interest you, I guess," and, rising, he left the room.

The letter, signed by a number of prominent gentlemen, tendered father the nomination for the office of Judge of the Circuit Court. Of course I was delightfully surprised, but Jessie said it was no news to her; she had heard it talked about ever since mother died. Jessie and I sought him in the library with congratulations.

"But what shall I do without my mentor? I shall have to be away from home much of the time."

This was a damper on my ardor, but after a moment's hesitation I answered:

"Where you go, I go; your people shall be my people, your home my home, even if it be a poky old hotel."

He drew me to him and said: "All I am, or ever shall be, is due to you, my daughter."

How sweet those words were to me! As he kissed me, Jessie said: "And me too, me too."

He laughingly bent to the lovely face which barely reached my shoulder. "You're very sweet, but there isn't half enough of you," he remarked.

"Oh, valuable articles are done up in small packages, sir."

So Jessie saved us from strong emotion, and in her own sweet way calmed the troubled waters.

During the day, Jessie asked me if I had answered Alvar's letter. I replied in the negative, and suddenly remembered I had made no plea for the boy. What should I do? I could not broach the dreadful subject again. At last I said I would wait until he came home and let circumstances shape themselves. But Jessie said the letter must be answered at once. After a little musing she announced her determination to speak to father herself. What argument she used, I know not. She drove to the office and took him out under the very tree where he quoted from Emerson, and brought some argument to bear that resulted in the following letter:

MY DEAR BOY: God forbid there should be anything between us. Help me to tear it down. I know I deserve nothing but contempt at your hands; but you are too like your mother, the one woman in all the world to me. Bear this in mind, my son—notwithstanding the wrong I have done her, her memory is like a bunch of fragrant violets in the heat and turmoil of every-day life. You have her eyes, her hair, her features, her very expression; and, although a glance of your eye at times cuts to the quick, yet your sweet face is as dear to me as life itself. You are so much to me that my ambition and pride are swept aside [and you will probably never know how strong and overweening that ambition is in my race]. Follow any calling, do anything you wish, only try to learn to love

YOUR FATHER.

I added a brief postscript telling him to hasten home. The next week he came. After hurriedly greeting me, he inquired for father, who was in the library, where he sought him. When the tea-bell rang they entered the dining-room together. Hope and joy shone on one face, resignation and peace upon the other. My heart beat with gladness at the reconciliation. But, to be honest, I must admit that I hoped the learning of a trade would be given up, and something more in keeping with his station in life (as I was pleased to term it) be substituted. I was doomed to disappointment, however. Alvar stood high in his examinations; but, instead of entering college with his class, he engaged himself to a master carpenter for six months. He said he was tired of books, and believed that working hard for awhile would so improve his health that he would gain in his studies in the end. He also said he thought a man made a better farmer and mechanic for having a good education, and that man or boy who thinks, because he has some book-learning, he must not do manual labor, is very weak and foolish, and exposes to the world his superficial education and character.

I think the boy must have endured a great deal of chaff at the hands of his fellow-workmen, but he bore it in silence and, I am sure, did the other boys good in time. I often saw one or more of them coming to his room evenings and Sundays.

The Stanhopes returned, and we lost Jessie from our home circle. In fact, the circle was broken up, father was so occupied with the political canvass, and, after his election, in attending court. I always accompanied him, and consequently saw very little of my old friends.

This sort of vagrancy I enjoyed. Father's speeches were always interesting to me, and I thrilled at the applause which frequently interrupted him. As a stump speaker, few excelled him. On the bench he seemed equally at home, but the courtroom held few attractions for me. I often looked in some time during the day, but the everlasting quibbling and contradicting was very tiresome to me. How father could sit there day after day through such little, mean, contemptible wrangling, I could never understand. When the weather permitted we would take a drive, so that he could have a breath of fresh air before supper. Then we spent our evenings very pleasantly together.

Of course father had a great deal of company; gentlemen would sometimes flock into our parlor until he held quite a reception. I would retreat to my corner and fancy-work. (What would we women do without bright wools and filmy lace to occupy our fingers when topics are introduced which are supposed to be too weighty for feminine minds?)

Father and I led this sort of life about two years, when an urgent invitation came from Mrs. Stanhope for me to accompany them to Europe. Earl was about to graduate. After seeing him take his diploma, they would spend a year or two in journeying through Europe. The route was partly laid out in the letter. They would spend the warm months in the Alps, but would winter at Rome.

Rome! It fairly took my breath! Should I, Madge Wilton, stand within St. Peter's and gaze upon the awful monuments of generations and empires? Of course we would visit Naples and climb Vesuvius, and perhaps peer into the crater. Then Pompeii! Ever since reading Bulwer's "Last Days of Pompeii" I have dreamed about that city of death. Who knows? Perhaps we would happen to be there when some excavation was being made. Perhaps I should see some wonderful new thing uncovered from the ashes and lava. Then the city of Florence, the birthplace of Dante, Michael Angelo, Galileo, and visit the wonderful Duomo, where the great Savonarola preached. We must see Sorrento, where Tasso lived. Oh, how delighted I was at the very thought!

All at once my wardrobe came into my mind. Ancient and modern history vanished. My thoughts went on at lightning speed. My traveling dress should be that lovely shade of gray, "moonlight on the lake," and the new hat I had seen just the day before, with its long curling feathers of the same fashionable tint. Oh, yes, I would be very stylish and a credit to the party.

We happened to be at home; so I ran to my room and turned over the contents of bureaus and trunks in wild confusion. I even dragged out my traveling trunk and began to decide what to pack, and had about concluded to buy nothing but my traveling suit, and replenish my wardrobe at the quaint old shops in the Old World, when I heard father's step in the hall below and his voice asking for me.

I sprang to my feet at the sound, ran to the mirror and gazed long at my reflection. I knew he would raise no objection to my going, and I so *wanted* to go. But what would he do without me? I dared not meet him just then; I feared he would discover my strong desire, and that would make it so much harder to say no. Besides, I wasn't quite ready to say no. There was a hard battle to be fought with myself before meeting him. So I slipped down the back stairs and out the side gate.

[TO BE CONTINUED.]

As to Escorts.

EDITORS PRESS:—It was in evidence in a recent and noted murder trial in this city that the daughter had been permitted to go out late at night in company with a man with whom the parents were entirely and absolutely unacquainted; that they knew nothing of his antecedents, his parentage, his social standing, or the *bent* of his character; that when he came home with the daughter he was shot down at the door by her father.

Nothing herein is intended as a commentary on the question of insanity or guilt of the defendant, or on the character of the deceased.

The fact of permitting a *stranger* to escort a daughter is the one that calls for consideration. The question is put bluntly to parents: Is this a general custom? If so, in the name of woman's virtue and man's honor, abolish the custom. What can be expected? When such callous indifference to parental responsibility becomes general, then consequences which suggest themselves to all must come. Not only will the home be dishonored, but the moral tone of society is lowered.

It is submitted that these rules should be followed:

First. Parents ought not to permit a daughter to keep company with one whom they think in any way unfit to become their son-in-law, and they should diligently, but decently, inquire as to his antecedents.

Second. The daughter should fully ascertain whether a proposed escort has such character as would justify her in becoming his wife, if she should come to love him. It is entirely *too late* to make such determination after the affections are sufficiently potent to sway the judgment.

Third. Before presuming to ask the young lady for the honor of her company, let the gentleman obtain the consent of the father or mother or guardian, that he may be welcome to attend the daughter. In obtaining this privilege from the parents there is nothing indelicate. It is a manly recognition of the position of the parents. It is respectful to the lady and worthy of one's own honor. J. T. R.

S. F., Jan. 13, 1887.

Midwinter in Napa County, California.

[Written for the RURAL PRESS by MALLIE STAFFORD.]

The present is one of the most delightful winters we have known for many years, and if we can trust a memory which looks back over many long years, we think that so far we have never experienced a more genial and lovely winter. Some uneasiness is being felt in the farming community as to the result and success of crops, but this is always the case when the winter rains are backward or delayed. It is an unnecessary "borrowing of trouble"—a desire to "cross the river before we reach it." Enough rain has fallen in many sections to insure good plowing, which is being steadily pursued, many having their grain all in. There is still plenty of time for generous rains, and experience has tanght the California farmer that with sufficient early rains to enable him to put in his crop, if after January a reasonable supply of rain is distributed through the months until May, the result is almost always a bountiful yield; therefore we wait and work, with hope and trust in the Giver of all good for the bountiful rains, which, though delayed, will doubtless come in their own good time.

Despite the general wish for rain, one cannot but revel in the glory of the weather. Where, but in California, are such beautiful skies in midwinter—such warm, bright sunshine, glowing sunsets, with just enough clouds to gild the firmament with roseate hues, with gold and amber and crimson dyes?

The gentle rains, warm sunshine and balmy air have deftly covered the earth with a carpet of green, while the hills and vales are abloom with flowers. The manzanitas are white with their clusters of fragrant flowers, where the honey bee, for which, and the California farmer, there is never any rest in this sunshiny climate, is droning its endless and monotonous murmur among the dense blossoms, shaking them down until the green grass is thickly studded with the snowy blossoms. It all inspires one with a feeling of lazy content, and it is difficult to believe it is midwinter and not spring. Lingering in the garden walk, we smell the sweet perfume of the violets, the different varieties and colors of ever-blooming roses, waving amid their green foliage, the endless varieties and colors of geraniums and fuchsias, growing in the open garden—calla lilies, narcissus, all growing and blooming in the open garden; note the gay linnet perched amid the glossy leaves of the orange tree, and afar, wild and clear and sweetest of bird songs to me, comes the thrilling carol of the lark as he swings on the old oak in the meadow. Turning an angle in the path, we visit the vegetable garden, where the strawberry plants are in blossom, the raspberries are not only blooming but bearing their red, juicy fruit. There are ripe tomatoes still on the green vines, and further on the attention is arrested by a tobacco plant, six feet in hight, full leaved and covered with pink blossoms, "the sweet tobacco posy," and also bearing ripe seed pods. If we had lately been exhumed—Rip Van Winkle like—we might be led to remark: "What a nice cool day for summer!"

For the sake of those who live in the unkindly climes of frost and snow and merciless blizzards, we will just say that this is no overdrawn picture. Pen cannot portray it half so sweet and lovely as it is.

There have been many overdrawn pictures and misrepresentations about other portions of the State, written for bombast and speculation, and which are to be greatly condemned, inasmuch as in many instances they have been productive of much evil and misery. In writing the above true sketch as I see it at my own home, I have no object other than to portray the beauties of a climate and soil, the glory of a certain section, which, to those unaccustomed to such climatic influences, would seem almost marvelous; and while we cannot boast of the same in all portions of the State, there are many beautiful valleys and sunny mountain slopes like this, where the change from winter to spring is so imperceptible as scarcely to be recognized save by the month, where winter is scarcely recognized only by the falling leaves, the return of the rains, and in consequence the reappearance of green grass and hardy flowers.

Arcadian Hights, Napa Co., Jan. 10.

IT is told of Gambetta that once when in the heyday of his power, when he went to some agricultural department to oust a reactionary candidate in favor of one of his friends, he inquired about the agriculturists' wants. "We are sadly in need of rain," came the answer. "I'll see about it when I get to Paris," promised Gambetta. And his listeners believed in his promise. The record runs that the rain came down in torrents a day or two after, and that when the reactionary candidate presented himself he was hooted at. "Let your party do as much for us as Gambetta, and we'll elect you," they said.

Be Kind to Your Mother.

[Written for the RURAL PRESS by ELSIE ANGE.]

Ida Meadows is a favorite with her friends. She is beautiful and charming, and delights every one she meets with her wit, vivacity and intelligence. No company can be dull if she be present, yet there is a flaw in her character that has always given me pain: *She is rude to her mother.*

This grievous fault seems all the more inexcusable because Ada is uniformly pleasant and polite with others and wins the approbation of elderly ladies by her tender deference and her respectful demeanor. Yet how different her conduct toward her own mother! If Ada is entertaining callers and Mrs. Meadows enters the room there is at once a marked change in the demeanor of the former. She treats her mother as though she is an intruder, and a very unwelcome one. If she succeeds in freezing her out of the room, Ada is her own beaming, charming self again and is apparently unconscious that she has wounded that loving heart which seeks to hide its grief in loneliness. Perhaps Mrs. Meadows, cheered by the kindly greetings of their friends, concludes to remain and enjoy their society. Then Ada loses no opportunity of snubbing her, showing contempt for her opinions, or she wholly ignores her presence.

This picture of a daughter's unfilial conduct toward a gentle, sensitive mother is a very sad one. But is not this fault entirely too common? How few daughters are as kind as they ought to be! Sometimes the mother is not fashionable, or her language is not always correct, or she has rough hands that show a closer intimacy with household duties than literary pursuits, and Miss Dainty is ashamed of the parent who sees that *she* is well dressed, and accomplished, and white handed. Many a mother's heart aches in secret over the rudeness and ingratitude of some favored child; and often the daughter's eyes are opened to her own shortcomings when it is too late to make reparation, and she says tearfully: "How could I have been so blind when my dear mother was here not to appreciate her value? In how many ways I could have cheered and helped her; but I was too thoughtless, too selfish, too much engrossed in my own pursuits, to give a thought to my best earthly friend!" How pleasant it is to turn to a brighter picture—that of filial love!

"My mother is queen," said a very intelligent woman to me recently. "Mother has the best room, and the best chair, and the best of everything. When we are all at home, my brothers and myself, we vie with each other in paying her homage. Yes, mother is our queen."

"That is as it should be," I answered.

"Be kind to thy mother, for lo! on her brow
May traces of sorrow be seen;
Oh, well may'st thou cherish and comfort her now,
For loving and kind hath she been.
Remember thy mother, for thee will she pray
As long as God giveth her breath;
With accents of kindness, then, cheer her lone way,
E'en to the dark valley of death."

SHALL THE STATE RUN A GAMBLING-HOUSE?—The Louisiana lottery gobbles up over $100,000 every month in this State, and certain newspapers, which attach greater importance to money than to morals, are agitating the establishment of a home lottery. The Colusa *Herald* meets this proposition with the following sound talk: It seems to us that the only argument in favor of this proposition is that thousands of dollars which now go out of the State each month will be kept at home. Then the question arises: Will it stay at home? It is a fact that at least $500 a month goes from Colusa county to Louisiana. A home lottery would inspire more people with confidence in its honesty, and would not the result be that the same $500 would go to the new institution? Legalize gambling and we would soon have a State full of gamblers. If a bill pass establishing a State lottery, another law might as well be enacted licensing faro games. The dealer in a square faro game does not have one-tenth the percentage that the management of the Louisiana lottery does, and there would be no justice in withholding the protection of the law from one if the other were legalized. Other games would quickly claim the benefit of such a law, and an appalling harvest of blasted prospects, ruined homes and suicides would be reaped. California cannot afford to try the experiment.—*Marin Journal.*

RECONSTRUCTION OF ANCIENT PERFUMES.—Two ancient Egyptian perfumes have been reconstituted through the researches of a young French professor at Lyons, who has devoted himself to studying Egyptian sepulture and the plants of the Nile valley. By hunting through the papyrus texts and the inscriptions on the walls of the temple lavatories, he has found the receipts for the manufacture of "tasi" and "kyphi." The former was a temple perfume, used to anoint the statues of the Egyptian Venus. "Kyphi" was more important, and, beside being used at home for the rites of Isis and Serapis, was imported into Greece and Rome after the conquest of Egypt. It then became the favorite perfume among the luxurious Greeks and Romans, who were anointed with "kyphi" after the bath and were sprinkled with the essence during the grand banquets, while sometimes it was used to perfume the wine.

YOUNG FOLKS' COLUMN.

Samuel Gregg, Jr.

GREGG, Jr., was a very shiftless, untidy boy. Samuel stood by the woodpile on the Gregg ranch one morning not long ago, lazily yawning and wondering how he could best do something real horrible. He had an inward yearning to soil his clothes and make them look just as bad as he could, so that he might "s'prise" his "ma" when he went in to lunch.

In the adjoining illustration we have endeavored to portray Samuel Gregg, Jr., poised in all his wealth of childish grace and unkempt hair, before an artless young thing—a sad-eyed orphan turkey. The apparent ill-proportion of the orphan turklet, I wish to observe, is the result of the youthful imagination of Gregg, Jr., who thinks he has met some very formidable foe. It may be noticed, too, that there is a sort of startled-fawn look about the little turklet. Evidently one is afraid and the other is impressed with fear. The turkey is the first to retreat, however, which it does in a very undignified manner.

In this illustration Samuel may be seen following at a lively run. The young pup Terry joins, interestedly, in the chase. You can tell that the pup is interested by the poise of his tail.

Samuel finds the sad-eyed orphan is no slouch of a runner, and he speeds on after him, leaving Terry far behind.

It is somewhat evident by the next drawing that Gregg, Jr., is mad because of the manner in which that gangling raw-boned turklet flees his grasp. He just spreads out and yearns and pants and reaches for that turklet in a way that makes the little orphan's heart sink within it.

And here below we have the catastrophe. He never knew exactly how it happened, but somehow just when he had the panting, terrified little bunch of bone and pin feathers within his grasp, Gregg, Jr., stumbled and fell, and the young turkey made good its escape.

Samuel skinned his hands pretty badly, and plowed the ground for about two feet with his cunning little nose, and filled his mouth with a good deal more dirt and sand than he knew what to do with. It was evident from his appearance that his intent to "soil his clothes and make them look just as bad as he could" had been a towering success. Sadly he returned home. To this day, I think, there is a doubt in Samuel's mind as to which "s'prise" resulted the more favorably—the one he gave his mother when he reached home or the one she gave him when he presented himself for inspection.—*The Wasp.*

The Baby's Find.

Three tiny, ragged boys were playing together in the sunshine, Thursday, on a sidewalk near one of the North End railway stations. A fourth youngster came up, his eyes glistening with pleasure, his dirty face proud with delight. "O boys!" he cried, "I've found a tin-cint piece!"

The others crowded around, and discussed the treasure excitedly. Then they sat down on the curbstone to compare reminiscences of recent lucky finds.

"I foun' 'mos' a hull piece of a top yesterday," said one.

"I foun' a big bone in our alley, a n'orful big bone!" said a second; "'n' I'm goin' to make a jumper out of it."

The youngest child—the very dirtiest, smallest, thinnest baby that ever walked—had listened with a smile of perfect content; and now he chimed in, in a tone whose pride and joy no words can convey:—

"Thith mornin', I foun' a peanut!"—*Christian Union.*

"MADAME," he began, as he lifted his hat at the front door, "I am soliciting for home charities. We have hundreds of ragged and rude children like those at your gate, and our object is"—"Sir, those are my own children." And the front door was violently slammed to.

A LITTLE city boy, who had just returned from his first visit on a farm, gave this description of butter-making: "You ought to see how Auntie makes butter with a barrel and a broomstick!"

ARTIFICIAL COCAINE is said to have been recently prepared, which is alleged to possess all the reactions of the natural product.

DOMESTIC ECONOMY.

Suggestions.

EDITORS PRESS:—With many thanks for the nice recipes in the valued RURAL, I send another: To clean windows, dip a soft sponge in the best kerosene, rub the window-panes with it, and polish them with tissue paper.

To copy designs, the easiest way is to trace in pencil the design on tarletan, then place the tarletan, pencil side up, on the material; pin the edges tightly over a board, and mark strongly in pencil upon the design, transferring it to the material.

To paint with "dye colors" on glass or silk or bolting cloth, use common oil colors diluted with turpentine. One color is best, say Vandyck brown on "shrimp-pink" silk; stretch the silk and put blotting paper under. Water colors can also be used on the thin India silks for window-screens, fire-screens, window panels, sash curtains and picture scarfs; but oil colors do not fade as water colors will if they be exposed to the air. K. S. B.

San Francisco.

STEWED BEEF.—Cut the beef into inch-square pieces; flour each; cut a small carrot, a small turnip and a large onion into slices, put the fat you trimmed off into a deep spider or saucepan, let it get very hot, lay in the vegetables, cover and leave them to brown (not burn), stirring occasionally. When they are all nicely browned, pour on them a pint of boiling water, and lay in the meat; put with it a moderate teaspoonful of salt and one-half saltspoonful of pepper, with two or three coarse stalks of celery, if you have them, cut fine. Let all stew very gently for two hours at least, or until the meat is quite tender, but remember, if it has boiled or stewed fast, it will never be that, nor would it if you made your stew of tenderloin. Skim free from fat and serve.

MUTTON BROTH.—One pound lean mutton, cut small, two pounds mutton bones, well cracked, two quarts cold water, chopped onion and parsley, salt and pepper. Let the meat, bones and onion simmer slowly several hours. Season and set aside until cold. Remove all the fat and strain out the bones and meat, squeezing out every drop of soup. Have ready half a cupful of rice, which has been soaked in a little cold water for two hours. Add this to the soup, put them on the stove and let them simmer until the rice is soft and broken. Add the chopped parsley and milk, which should have been heated to scalding in another vessel.

BOILED RICE WITH CHEESE.—Wash a cupful of raw rice in cold water, picking it over carefully. Put over the fire in two quarts of water that is boiling hard at the time. Salt slightly and cook 20 minutes, shaking the saucepan occasionally, but never stirring it. Ascertain if the rice is soft enough by pinching a grain between the thumb and finger. Drain off the water through a colander and set this with the rice in it over an empty pot on the stove to dry off. Just before sending to table, mix into it with a fork a teaspoonful of butter and a tablespoonful of grated cheese, with salt to taste.

CHOCOLATE CAKE.—To one cup of grated chocolate add three tablespoonfuls of sugar and five tablespoonfuls of sweet milk and one teaspoonful of vanilla. Melt and keep warm. One and one-half cups of sugar and one-half a cup of butter, beat together, add three well-beaten eggs and two-thirds of a cup of sweet milk, put in the chocolate mixture with three cups of sifted flour and two teaspoonfuls of baking powder. Ice with white icing when baked.

BROWN BETTY.—Cover the bottom and sides of a well-buttered pudding-dish with bread crumbs. Fill the dish with layers of chopped apple and crumbs, sprinkling each layer with common sugar and lumps of butter. Heap the dish high, for the apples will sink. Moisten with a little cold water, cover with a buttered plate and bake three-quarters of an hour, if the dish is large. Take off the cover and brown quickly. Serve warm with hard sauce.

TO STONE RAISINS.—Pour boiling water over them and let them stand five or ten minutes. Drain and rub each raisin between the thumb and finger till the seeds come out clean. Dry the raisins before using and rub them in flour before putting into cake, to prevent their sinking to the bottom. If chopped, flour should be scattered over them to prevent their adhering together.

NUT CAKES.—Half cup of sugar, half cup of butter, two eggs, half cup of water, 1½ cups prepared flour, one cupful hickory nut kernels freed from bits of shell and dredged in flour. Cream the butter and sugar, add the yolks of the eggs, the water and flour and the whites. Last of all, stir in the nuts. Bake in small tins and ice if desired.

FRUIT CAKE.—One cup each of butter, sugar and molasses, three cups of flour, four eggs, one-half cup of milk, one-half pound each of raisins and currants, one-fourth pound of citron, one teaspoonful each of cloves and cinnamon and one teaspoonful of soda or two teaspoonfuls of baking powder.

The Week.

The rain still holds off, and serious apprehension rules everywhere except in the moister parts of the State and those provided with irrigation. Some of our readers are strongly protesting against the dispatches which are sent from their sections to the daily papers, representing fine prospects, etc. One writer denounces such reports as "lying telegrams" and says the outlook was never worse. We have always labored against the policy of exaggeration and misrepresentation, and are sure that such untruth does no real good to man or the State. We sincerely sympathize with those who are facing the chances of an unproductive year. According to the probabilities it is now too late to expect effective rains in certain parts of the State, and on certain characters of soil, but we still trust that the year may yet prove much better than many now anticipate. Though wheat in some parts will probably have to be abandoned for the year, there may yet be moisture enough for some summer crops which will take off the edge of the failure somewhat. We would like to have our readers give us their experience as to what can be profitably done in the way of summer crops, with short rainfall or with a small amount of water such as can be had from deep wells. By such contributions from all who have good points, many may be greatly helped, and we shall do everything we can to minister to the same end ourselves.

Periodical Attacks of Cleanliness.

The public is liable to have periodical attacks of sanitary vigilance and precaution when great efforts are made to prevent or stay the spread of some form of disease that has become epidemic. Great stress is laid by the health boards on city scavengering, and miles of gutters and sewers are flushed and limed. All good citizens are alert and deep in the purchase of carbolic acid and a variegated assortment of mysterious sulphates, and disinfecting, fumigating, scrubbing and calcimining are going on everywhere. The newspaper reporters suddenly become wonderfully concerned about the public health and sally forth in search of leaky sewers, damp cellars, cesspools, foul back yards and the like, and editors give us homilies by the yard on the virtue of cleanliness. While the fit is on every prudent housekeeper goes about with up-tilted nose to catch the slightest whiff of any effluvia from effete organic matter, which, the doctors tell them, is one of the most active agents in localizing the germs of disease. Our San Francisco Board of Health is just getting over one of these periodic spasms of cleanliness. The prevalence of diphtheria aroused the attention of these guardians of the public health to the ancient and filthy condition of our sewers.

Now, all this is very well, and their sapient advice makes interesting reading; but the point we desire to make is, that the precautions which are taken to prevent or check some form of disease that has broken loose and assumed a malignant, pestilential type, should at all times be observed. The city should cultivate the habit of keeping clean. It is not only when the pestilence is in the air and contagion rides on the wings of the wind that it is dangerous to the public health to have the streets littered with decaying cats and dogs and rotten vegetables; choked-up sewers, dirty plumbing, uncleaned cellars, the space in dwelling-houses between the ground and floor where the sun never comes left to the spiders, rats, and bugs; dark, ill-ventilated rooms; cupboards where bits of stale bread are allowed to gather and cheese-mites to poison the air, clothes-presses and closets where soiled linen and old garments hang, cast-off boots and shoes, yellow with the growth of foul things accumulated—all these, and many other things that might be catalogued, are always nurseries of disease. Now, we do not indulge in the luxury of keeping a Board of Health merely to remove epidemic-breeding filth when the epidemic is upon us or about to put in an appearance. The enthusiasm with which vigilant housekeepers at such times clean, scour and souse the premises with bacteria-destroying sulphates and lime-water, or whatever the regulation disinfectant may be, should always be displayed where there is dirt in the way. It is not a revival we want, but a steady warfare on the devil of nastiness. The insidious typhoid fever, diphtheria, in short the whole family of zymotic diseases which pasture on the perennial fields of municipal or domestic filth, are far more to be dreaded than the cyclonic visitations of cholera or other form of the plague. And it is well known, or ought to be, that this class of diseases find their chief breeding-places in gutters, sewers, muck-heaps, swill-barrels, foul sheds and stables; the dust of the streets tainted with hippuric acid, which invades our houses, is inhaled in the air and falls upon the food we eat. And yet day after day, month after month, year after year, we submit to these chronic pests silently eating away the life of the community, with the stolid patience of a Hindoo expecting to reach Nirvana by hanging on a meat-hook, until we notice the undertakers are doing a lively business and funerals are uncomfortably frequent on the streets, and then the Board of Health beats a gong and there is a sanitary panic for a few days.

We should remember that disease is never a dispensation of providence. That most disease is dirt in the wrong place. The energy displayed by our Board of Health the other evening in chasing diphtheria to filthy sewers, noisome holes and corners of the city is a form of energy that should ever be at work. But the learned talk of the said evening is very much like the caution which locks the stable door after the horse is stolen. The transient fury with which housekeepers attack at such periods decomposed garbage, slops, mildew, the fungi of putrefaction and decay, should ever be the ruling passion. But after all, the gloomiest pessimist, the surliest fault-finder, must admit there is something good in these epidemics of cleanliness. If we cannot be clean all the time, let us be thankful we may be clean at intervals.

The Fruit and the Railways.

On another page we give the Secretary's report of the annual meeting of the California Fruit Union. It must be acknowledged that all that was hoped for in the determination of low railroad rates and in the securing of complete harmony between fruit-growers and fruit shippers, was not secured. It seems now settled that the perfect solution of the fruit-shipping problem must be reached gradually and by slow and short steps, and that there is no royal road which will lead straight through all difficulties to the goal desired. The results of the meeting are not without hopeful features, and one must be the selection of a good board of directors. The accession of new members to the board includes those with much knowledge of the subject and much experience as well.

The record of the last few weeks affords a very striking example of the unsatisfactory results of negotiations with the railway managers in the matter of freight rates. There seems to be a certain coterie of pleasant-speaking old gentlemen, holding high official position in the railway companies, who are quite willing to grant the requests of the fruit-growers, and another group of younger men, who hold subsidiary places, who never can see their way to do what the older parties claim to recommend. The experience of our committees of fruit-growers who go seeking concessions is much like that of a certain young Israelitish king who sought advice as to the policy to be adopted in his reign. He asked the old men and they counseled conciliation and mildness; he asked the young men and they counseled force and subjugation—they advised the young king to tell the people that they would find his little finger thicker than his father's thigh, etc. The simile does not fit exactly, but the experience of the growers is that they find little fingers at the railroad offices in this city which carry more weight, apparently, than the thick thighs in Washington and New York.

The present bugbear in the minds of the railway managers in this city is the new Interstate Commerce bill which has gone to the President for his signature. It will be noticed by the report on another page that the management had almost seen their way clear to concede the rates asked for by the growers until the Interstate Commerce bill rose on the Eastern horizon. This enactment seems to have paralyzed all their good intentions in regard to rates on fruit, and they could give no assurance on rates. Now we are not running a railroad, but it seems to us that we would have been more frank and outspoken. It seems to us if the management had a generous feeling toward the fruitmen, they could have said: "Gentlemen, we have decided to grant your request and we will carry your fruit at the prices you name, unless we are interfered with by the Interstate Commerce bill." This would have given growers some courage and they would have been more disposed to show some dislike for the "long and short haul" clause, which really seems to be somewhat inimical to the heavy traffic in California staples for Eastern consumption.

This whole matter of the fruit-growers' experience of the last few weeks in treating with the railways will remind people forcibly of the advantage it would be to have railroads owned and managed by the Government. If there were such ownership, and all the intricacies and expenses of rebates and unrevealed disbursements, etc., were swept away, we have no doubt that the carriage could be done, not only at the rates named by the growers, but for much less. The equivocations and reservations and qualifications plainly discernible in the answers given to committees cast a shade of mystery around the matter of transportation, which should be a very plain, straightforward and business-like affair.

AN ARTESIAN MONSTER.—We notice in an exchange a statement that at St. Augustine, Florida, they are boring an artesian well a foot in diameter. A depth of 760 feet had been reached Jan. 13th—the last 550 feet having been drilled through coral rock—and the flow was estimated at 7,000,000 gallons a day. The work is still going on.

Dynamite and Anarchy.

The use of dynamite as an agent to terrorize Governments and civil authorities has for some time caused considerable solicitude among the nations of Europe. In this country, as well as in England, where this cowardly and savage mode of warfare has been specially resorted to, the question is one of serious moment. True, there is less restiveness and discontent here with the Government, but we have a growing class—chiefly an obnoxious foreign element—who are at war with the whole shape of modern civilization. The Haymarket massacre, in Chicago, is a foretaste of what may be expected in this direction if this fire is not promptly stamped out.

But the danger of this tremendous factor of destruction does not stop here. The recent diabolical outrages in San Francisco show that explosive compounds are liable to become an agent to redress real or imaginary industrial grievances. The carmen had a right to strike. They had a right to organize an opposition line of public conveyance. Had their hostility stopped there, they would undoubtedly have had a liberal share of public sympathy; but the moment they resorted to violence and the use of bombs to intimidate travel on the boycotted line, they became no better than a pack of murderous, red-flagged anarchists. They belong to the class who throw to the winds all sense of justice, honor, and mercy, and become blood-thirsty fiends who stop at naught that is evil to attain their end. So deeply has public indignation been aroused by the recent dynamite outrages that there is little doubt that the Chamber of Commerce last Tuesday voiced the public feeling when the following resolution was unanimously adopted without discussion:

WHEREAS, The time has come when every citizen, business man, corporation and commercial body should use every exertion against the criminal and diabolical use of dynamite, such as we have recently experienced; and

Whereas, There seems to be no law to adequately punish such flagrant attempts to destroy life and property as has recently been made; therefore,

Resolved, By the Chamber of Commerce of San Francisco, that we earnestly recommend to the Legislature now in session the passage of such amendments to the Penal Code as will attach the penalty of death to every attempt to destroy life or property whereby life may be endangered, by the use of dynamite or other explosive, thus making an attempt to destroy or endanger life, whether successful or not, as grave an offense as murder.

This resolution may seem severe, but desperate diseases require desperate remedies. It is clearly apparent that a law should be passed and rigorously enforced, making the manufacture and use of dynamite for improper purposes liable to the heaviest penalties. The interests of humanity and good government require it. It is not likely that anarchy is near at hand in this country, but the people do not desire experiences that suggest the possibility. An ounce of preventive is worth a pound of cure, and this dynamiting business should be firmly suppressed before it goes any further.

THE STATE BOARD OF FORESTRY.—We give on another page an outline of the very valuable report just made to the Governor by the State Board of Forestry. We apprehend that unless the members of the Legislature who have especial appreciation of the advantages of forest conservation and extension in California, exert themselves to have the bills proposed by the commission brought up and acted upon, they may share the fate which awaits many measures, and that is death through neglect. We commend the bills to a speedy advancement that the work now on hand by the commission may proceed in due form.

MOUNTAIN FRUIT.—S. H. Herring has about 14 acres in fruit—pears, apples, peaches, grapes, etc.—on the main summit of the Santa Cruz mountains, eight miles from Los Gatos and 2700 feet above sea level. Fruits there ripen late, and therefore, coming to market at a time when there is little competition, command good prices. For instance, a few weeks ago he brought up some 80 pounds of sweet St. Martin prunes, nicely packed in 4½-pound boxes, and sold them to D. G. Camarinos, of this city, for $10.15 net.

LIVE-STOCK BURNED AT DENVER.—Early on the morning of January 23d, Geo. T. Goulding & Co.'s great corral at Denver was partially destroyed by fire. Twenty-two head of blooded cattle, 11 mules and three thoroughbred horses were burned to death. The loss is estimated at $10,000, fully insured. The fire is supposed to have been started by tramps sleeping in the hayroom.

Death of Father Upchurch.

So many of our readers are directly interested in fraternal societies and others indirectly because of the great growth of these beneficent institutions, that we believe the portrait which we present upon this page will be acceptable in view of the fact that the quiet, unassuming man who originated the idea of the modern fraternal societies, has lately passed away. Father Upchurch, as he was affectionately called by the members of the Ancient Order of United Workmen, the pioneer society of its class, died in St. Louis, Missouri, on Tuesday, January 18th.

Mr. Upchurch was a practical mechanic. His long experience among his fellow-workmen led him to think long and earnestly about ways for benefiting them and improving their condition. In 1868 he mentioned his idea to his more intimate associates, and 14 of them joined with him in establishing Jefferson Lodge, No. 1, of the A. O. U. W., in Meadville, Pa., on Oct. 27, 1868. The Order of course developed and broadened, but its origin was as stated. In speaking of its growth the *Pacific States Watchman* says:

Father Upchurch lived to see that little band of 14 members grow to about 180,000, having disbursed for the benefit of widows and orphans more than $15,000,000 since the formation of that Meadville lodge. The leaven put in three measures of meal has leavened the whole lump. Like the vine that came out of Egypt, the Order has spread over all the land, its branches laden with rich clusters, and thousands of grateful hearts basking in its shade. Such is the monument that now stands to the memory of J. J. Upchurch. In the light of eternity who would not rather have it than the Column Vendome and the glory of Austerlitz? And yet this fraternal blessing, like a mountain spring,

> "Will murmur on a thousand years,
> And flow as now it flows."

The *Watchman*, from which we borrow our engraving, also pays this eloquent tribute to the memory of Mr. Upchurch:

We have heard the sneer that Father Upchurch was a plain, unlettered, simple-hearted man, who had been made great by an accident. Be it so. A swinging-lamp told the secret of the pendulum. A falling apple threw open the gates of the universe. A simmering teakettle disclosed the giant energies of the steam-engine. The quivering of a dead frog's leg, when touched by the poles of a battery, revealed the mysterious force of animal magnetism. But such revelations as these do not come to the crowd of louts and idlers that mope and loiter around the corners of the world. Father Upchurch was a poor mechanic, who had a fellow-feeling with the sons of toil, and had long racked his brain in trying to devise some way to lighten their load and brighten their homes. It is no marvel; he should have been first to utilize the beneficent principle of our Order. Only those who stand and listen in the path of duty hear the rustle of the angel's wing.

Then we may learn from Father Upchurch's example that true greatness does not consist in the blare of brass bands, bronze statues, and a prominent place in history and song. It cannot be ascertained by the weight of the brain. The name of this poor mechanic will live and be honored when poets, orators, statesmen and millionaires are forgotten. It will go on growing brighter with the passing years for the simple reason that he was one of whom it can be truthfully said in the language of Abou Ben Adhem: "Write me as one who loves his fellow men." Perhaps the poor man who wrote "Home, Sweet Home" or the dear little woman who wrote "Nearer my God to Thee," has inspired more trust and gladness in the human heart than all the scientists and professional reformers of the age. Were we all to learn the meaning of such examples, our hearts would be filled with more joy, for we would realize, however lowly our lot, we may do something to make the world brighter and better.

Mr. Upchurch was born in Franklin county, North Carolina, March 26, 1826. His life was passed in earnest efforts to earn an honest living. His last years were happy ones. In 1885 he visited the Pacific Coast at the invitation of the Lodges. He visited many localities, and at every place was made the recipient of most joyous welcome, and then departed for Oregon, carrying away the blessings and many testimonials of a generous people. Father Upchurch had a warm feeling for California. Out of 25 jurisdictions that in 1880 contributed to a fund to make the closing years of his life comparatively comfortable and independent, more than one-fourth of it went from California. So delighted was he with the charming climate and the kindly greetings he received, that he expressed a wish that he could end his days in this State. It is known to many that arrangements were on foot to gratify that wish,

Pavilion at Stockton.

A large meeting was held in Stockton last Saturday, to bring about the speedy building of an Agricultural hall. From an extended report in the *Independent* it appears that the assembly was called to order by L. U. Shippee, President of the San Joaquin Valley Agricultural Association, who said it had been demonstrated that an agricultural pavilion was necessary, particularly if this section wanted to show the advantages of its soil and climate. Last year the association cleared $3000 over expenses, and with a proper hall the society could save from $2500 to $3000 every year. For the past 10 years it had averaged $2000 profits each year, but the money had been invested in permanent improvements. It had been suggested that life memberships could be sold to raise a guarantee fund of $15,000 or $20,000, and then stock could be sold for enough money to pay for erecting the building.

After considerable discussion as to a site for the proposed structure, the question was decided in favor of Washington square by a vote of 29 to 5.

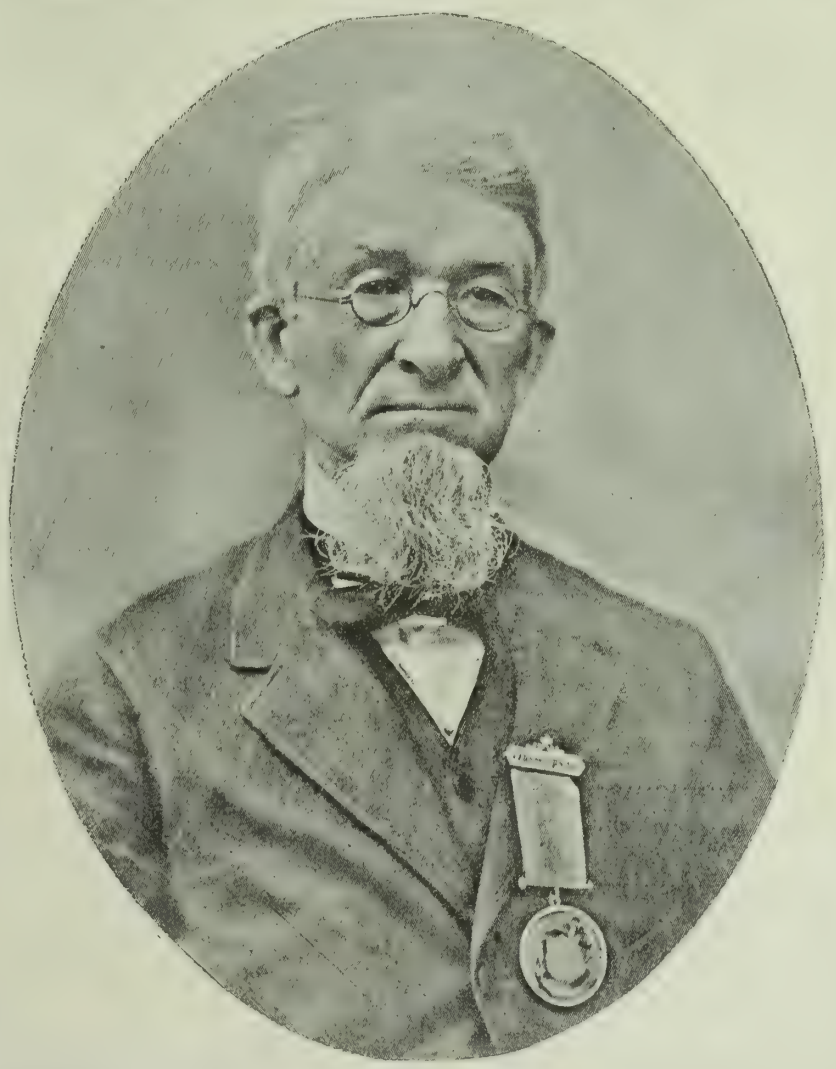
A. L. Levinsky, secretary, prepared a subscription paper reading as follows:

We, the undersigned, do hereby agree that we will take and pay for the number of life memberships by us hereto subscribed at $50 per membership—said life membership being a certificate of membership in the San Joaquin Valley Agricultural Association. Payments to be made therefor as called for by the association for the purpose of erecting and building a pavilion in the city of Stockton; the said subscription not to be binding unless the erection of a pavilion be assured.

L. U. Shippee headed the subscription list with 12 memberships, and in a few minutes 103 life memberships were sold, netting $5150. Several parties subscribed after the meeting closed, and at last accounts there had been 109 memberships sold, thus securing $5450 toward the building fund. After the appointment of committees on canvassing and on securing the building site, the meeting adjourned to January 28th.

HEMP FOR PHYLLOXERA.—A reader at Vacaville asks if there is any experience to warrant the claim which appears in the papers, periodically, that hemp planted in vineyards will attract the phylloxera and prevent their injuring the vines. We have never seen anything to warrant the claim; possibly some of our readers have tried hemp and can report results.

Santa Barbara Horticulturists.



At the January meeting of the Santa Barbara Horticultural Society, as we learn from the local press, the Committee on Semi-tropical Fruits reported that oranges were being marketed earlier than usual, but it was too soon to pronounce upon the quality. Mr. Harper thought the crop would be larger than usual. Mr. Cadwell said that the oranges in the Carpinteria were small this year, but that the trees were loaded down with fruit, although from present appearances it is not as sweet as in other years.

From the Committee on Insect Pests Mr. Harper reported that he had examined trees in all parts of the city, especially the acacias, but had not found any codlin moth in Santa Barbara. He was corroborated by Messrs. Bingham and Cadwell. President Ford stated that the markets of California were full of Eastern apples, and that this fruit is full of the larva of the codlin moth.

Mrs. Sawyer exhibited a plate of the "Alligator pear," a tropical West Indian fruit, from a tree 15 years old, grown in the Montecito, and Mr. Ford read a paper descriptive of the fruit, which adds one more to the list of Santa Barbara productions.

A resolution, unanimously carried at a previous meeting, was amended to read: "That the Santa Barbara Horticultural Society is in favor of and recommends that the 22d day of February of each year be appointed and known as 'Arbor Day' of the State of California."

A resolution was also adopted, urging our representatives in Congress to use every measure to have the Hatch Experiment Station bill finally passed during this session.

THE LATE FATHER J. J. UPCHURCH, FOUNDER OF THE A. O. U. W.

IN Sonoma, Mendocino and Humboldt counties, reaching from Golden Gate to Oregon, are immense redwood forests covering an area of from 2 to 20 miles wide and nearly 200 miles long, from which millions of feet of lumber are now cut annually. Redwood is the most valuable timber in the State. As yet, no railroad traverses this territory, but work has been begun on lines which will soon bring the lumbering camps within easy reach of the market.

LOMPOC can now boast of a lumber yard, which, for size, neat appearance, convenience of arrangement and varied stock of material, would be a credit to a city five times its size. The premises embrace an entire block.

QUERIES AND REPLIES.

Morning-Glory.

EDITORS PRESS:—I notice the many inquiries you have as to the best method of treating this pest. The experience of Mr. W. J. Adams, a neighbor of mine when I lived at Fair Oak, San Mateo county, may be of benefit to those afflicted with this scourge. It made its appearance in his orchard in adobe ground in a small way, and gradually spread over a space of, say 100x150 feet, notwithstanding he fought it all the time for several years with salt, lime, ashes, and everything he could suggest that was practical in its application, and nothing stayed its onward course until he surrounded it with redwood boards, tongued and grooved and reaching down about three feet to clay bottom. He then tried dry cultivation on the corraled morning glory by the use of a plow and spade as often as twice a week—until all were out of sight—and as soon as any showed themselves above ground thereafter he would repeat the process until now not a sign of them exists. I have killed red sorrel, which is nearly as bad, by dry plowing, and if I had much of this weed-killing to do, I should build a weed-cutter that would cut off the roots to a depth of four to six inches, and to a width of say three feet, and not turn over the soil. A blade of good steel attached to a frame like a wheelbarrow, about where the bottom of the legs are arranged to adjust to any depth required, will do the work rapidly and effectually, and should any one desire I will give a more complete description of the machine I have used.—R. G. SNEATH, *Jersey Farm, San Bruno, Cal.*

Morning-Glory vs. Poultry.

EDITORS PRESS:—A neighbor of mine has for two or three years succeeded in keeping the morning-glory in check by simply shutting his hens in the same field with it. They are so fond of it that whenever a sprout is seen they eat and dig and dig and eat as long as possible My own experience has also been that they do not allow it to grow, and such being the case, may not that troublesome weed be in time exterminated by this method?—C. P. N., *Haywards*

Alfalfa for Morning-Glory.

EDITORS PRESS:—I have an orchard on the Mokelumne river bottom which in 1872 was badly overgrown in spots with the wild morning-glory. Cultivation of any kind of hoed crops did not seem to mitigate the evil. A persistent attack of two or three years did not affect its vitality. It had apparently come to stay. I thought I would try a crop of alfalfa. That proved to be the survival of the fittest, as the glory of the morning departed. The growth of alfalfa, six to eight tons of hay to the acre, has not seemed detrimental to the orchard. In 1883-4 I pastured hogs on the alfalfa, and their rooting destroyed so much of it that for the past two years, in order to reduce the sod for resowing alfalfa, I have had hoed crops again; but no signs of morning-glory have appeared. The morning-glory has also occurred in patches in my hopfields. The usual cultivation prevents its seeding and spreading. After the hops are gathered and the stock turned in, as they are very fond of the plant, they help to keep it down. Nothing will kill out alfalfa sooner than to let a cock of hay stand on the ground too long. Has any one ever tried to smother out the morning-glory in this way?—G. C. HOLMAN, *Lockeford.*

Cement for Garden Edgings.

EDITORS PRESS:—Will some of your readers kindly tell what they know about the use of cement for coping or edging for beds and lawns, and thus oblige many in the interior who have need of such work and are beyond reach of skilled labor? In our irrigational districts, wood will not answer, as its shrinking and swelling throw it out of shape, especially when curved; bricks are clumsy and unsightly; and your correspondent concluded that a neat edging of cement would be a thing of beauty, if not a joy forever. Accordingly, he consulted the various local authorities, and as a result procured some long strips of pine, ½ by 6 inches for the curves, and 1 by 6 inches for the straight lines, and fixed them in position by means of stakes, leaving an open space of 1½ inches for the mixture. Then, Portland cement and clean, sharp sand, of the proportion of one part of the former to two of the latter, were worked together dry, and afterward mixed with water to the consistency of stiff mortar. This was put into the molds, well tamped, and when the surplus moisture had disappeared was rounded up by means of a concaved wooden former drawn along the surface. Thus far all worked to a charm; the cement was kept constantly moistened for two or three days; then the boards were removed and the edging, smooth as stone, seemed hard and solid, without sign of check or flaw; so it continued during the week and was regarded as a most gratifying success, when suddenly it broke out into longitudinal checks and crevices, the top began to scale off, and it now seems going into a state of disintegration. Now the question is, was there any fault in the manipulation or proportions of the material, or would an addition of lime prevent this tendency to crack when exposed to the air?—TYRO, *Bakersfield.*

California Fruit Union Meeting.

Minutes of the Proceedings.

The stockholders of the California Fruit Union met in annual session in San Francisco, Cal., at Irving hall, January 19, 1887, at 1 P. M., and were called to order by the president, A. T. Hatch.

The president appointed B. C. Brown, of Santa Cruz county, assistant secretary.

The minutes of the last annual meeting were read and approved.

The secretary read his annual report, and in the absence of the treasurer made a report as to the finances of the Union, which reports were received and ordered placed on file.

The Secretary's Report.

Mr. President and Members of the California Fruit Union: In preparing this, the annual report for the season of 1886, our initial year, we have found that the obstacles encountered by *our* shippers have been strikingly similar to those which have presented themselves to the members of the Florida Fruit Exchange and the Interstate Fruit-Growers and Shippers' Association of Illinois. Nor is this to be wondered at when we reflect that the same causes led to the formation of each organization, and each in its way sought to overcome existing evils.

Quoting from the report of our fellow fruit-growers of the Peninsular State, we read:

"During past seasons no organized system was in force among the growers. Each grower shipped according to his own inclination, few, if any, having reliable information as to the condition of markets. The worst feature of this method was that the shipments were scattered indiscriminately all over the country in such a manner that the fruit was continually competing with itself."

Were we to continue, all of the report would apply, with equal force, to our own situation. Simultaneously we, of the different fruit-producing States, saw the approaching crisis and cast about for some method to avert the calamity; and, as for ourselves, the following report shows, partially, with what result.

In the words of one of our city papers, "The auspices for a year of unanimous action among the fruit-growers of California, which seemed so fair when the last New Year's article was written, were not borne out during 1886. It was stated then—January, 1886—that the chaotic condition into which the fruit interests of the State had drifted was at an end, and that the proposed Fruit Union would straighten out everything. The prediction has unfortunately not been exactly fulfilled."

It is not our purpose in this report to enter into any discussion as to the whys and wherefores of this partial success, but simply to state the facts.

As we have had occasion to say before, *all* now admit that mistakes have been made. Considering that it was an untrodden path and a work of no small magnitude, with many conflicting interests to harmonize, it would indeed seem strange were it not so.

But the opinion seems to prevail among our fruit growers, members, not so much to enter into any wordy controversy over the results of the year that has passed as to take note of the errors that have been made, give them our cool, careful consideration, and establish safeguards against their repetition during the coming year.

As we gather from letters, daily coming in from all sides from those interested in the successful solving of the fruit problem, this meeting is one not so much for *recrimination* as for *reconstruction*.

We have had the pros and cons somewhat thoroughly discussed through our local papers, our long-drawn-out speeches at former meetings, but now the plain fact stares us in the face that we are on the threshold of another season, one which promises fair to far surpass, in quantity of fruit, any previous year; and it would certainly seem to be apparent, to even the most pronounced partisan of whatever party or plan, that the work now in hand and of the gravest importance is for each and all to carefully put aside any ill feeling which the past season may possibly have engendered, and for *every one* to assist in formulating some plan, which, as far as it is possible, where so many with varied desires are united, would seem to be acceptable to all.

Nor, happily, having discovered this long-sought-for medium, does all responsibility, as some in the past year seem to have thought, then leave the many and find itself shouldered upon the few whom you elect to hold the positions of trust and carry out your plans as they may be expressed at this meeting.

Rather let all, who are either directly or indirectly interested in the future of the fruit interests of our State, *whatever* plan may be adopted, even though it may not incorporate every minute detail of some pet hobby you may hold, not only resolve to assist and support the Union, but see to it that these good resolutions are not left behind when you depart for your homes, so that the report at the close of the coming year, instead of showing that four-fifths of the fruit handled came from a dozen members, will present a lengthy list, each one sending his mite which in the aggregate makes the millions.

Without this ready support from all the members, any Union, founded on no matter how adequate business principles, will meet with but indifferent success.

The three great obstacles which have had much to do with the measure of success attained in this our first year, and of importance in the order named, are:

1st. High freight rates and inadequate facilities from the railway companies.

2d. Competition in our own fruits in Eastern markets.

3d. The apathy and indifference, if not actual antagonism, among our own members.

In successfully overcoming these three difficulties and the attending evils and consequences arising therefrom, we will strike the keynote to success.

At a meeting of the Board of Trustees held at the office of the Union in this city, May 27, 1886, they decided to make a second call of 25 per cent of the par value of the stock.

Previous to this, on the issuance of a certificate, 25 per cent had been paid, and there was then outstanding 15,143 shares of stock held by 715 members—an average of 21 shares per member, and an insignificant number, when we glance over the many thousands of acres planted to trees and vines all over these middle counties.

Some responded promptly to this second call, while a great many delayed; but after sending out a second and even a third notice, 50 per cent was collected upon nearly four-fifths of the number of shares originally taken.

The funds in the treasury by this time—Sept. 29, 1886—being very low, the board at a meeting decided to announce a third call levied at 25 per cent and due at once. We now had 11,375 shares, held by 495 members—a falling by the wayside of 220 members holding 3768 shares, on which there was due $942.

The responses to this third call were even fewer and slower in coming in than those to the preceding one. A great variety of reasons were ascribed as the cause for not responding to this appeal. Quite a number did not favor the mode which, in the judgment of the board, it seemed best to adopt for the management of the business of this year. Some thought they were paying more than their proportion for the benefits derived. Their neighbor, with 50 acres and 10 shares, enjoyed the same privileges and indirect benefits as they with their 20 acres and 20 shares. Some had worked their vineyards over entirely into wine grapes; others rented their places for the season; while some had sold their crop entire at a good figure, and so, they argued, had no further use for the Union for this season. "If they thought best, they would see about paying up next year." These last omitted to mention if they had disposed of their future crops equally as well or the cause of the price offered this year pleasing them.

These and many other reasons came in from all sides, but from the larger proportion came no word at all; so that at the present writing—Jan. 13, 1887—our list of stockholders against whom we have no claims numbers only 217 members, holding 5186 shares—a reduction of 9957 shares from the number taken at the outset, and of 6189 shares from the number outstanding at the time of the third call. There is a total amount due from these delinquent payments of $4036.50.

The stock was originally held by members in 25 counties, but the series of reductions through which we have passed has lessened the number of counties represented as well, until at the present the 5186 shares are distributed over only 18 of our middle counties.

Solano takes the lead with 1141 shares, which is about one-third her first holding. Sacramento follows very close with 1135 shares, nearly two-fifths her original issue; Santa Clara, third, with 785 shares—a reduction of two-thirds; and Alameda county fourth, with 622 shares, or about one-fourth her original issue.

Then follows quite a number of counties represented by from ten to a few hundred shares each, and Fresno, San Mateo and Kern counties foot the list with five (5) shares each.

We have had but two sources of revenue, one of which was of but little assistance, as will be seen by the following balance. These were the amounts paid into the treasury from subscribers to stock and the amount received from the agent of the Union at Denver, the board in appointing him having made the arrangement that, of the 10% commission which he charged members for handling their consignments, he was to retain eight and refund two per cent to the proper officer of the Union. The sales at that point having been very limited, the amount received from such agent is proportionally small.

The following balance will show how the funds of the Union have been received and expended:

Rec'd from payments on stock	$8156 75	
" " 2% returned by Denver agent	261 05	—$8417 80
Paid sundry expenses, *i. e.*, canvassing, telegraphing, etc.	$301 15	
Paid office rent and janitor	310 05	
" " fixtures—Desk, box brands, etc	239 50	
Paid stationery—Books for stock issue account, etc	105 73	
Paid printing—Circulars, notices, etc	210 40	
Paid advertising—Notice of meetings, papers, etc	116 05	
Paid salaries of officers	4517 80	
Paid postage	182 86	
Paid fuel	25 50	
Paid traveling expenses of members of the board in attendance on meetings and business of the Union	902 00	
Paid bills contracted by the organization committee before incorporation	522 65	
Paid telephone rent and bills	47 30	
" maintenance of office at Sacramento during the shipping season	803 95	
Cash on hand held by secretary	15 54	
Cash in bank held by treasurer	117 32	—$8417 80

The following bills are yet outstanding, *i. e.*:

Due L. W. Buck balance of salary as general manager for 4 months	$932 50
Due A. T. Hatch balance of salary as president for 4 months	384 70
Due H. A. Fairbank balance of salary as secretary for 2 months	250 00
Due office rent and janitor for 1 month	25 00
Due taxes, 10 cents on each certificate iss'd	75 00
Due hall rent for present meeting	30 00
Due dailies, advertising notice of meeting (present)	25 00
Total due	$1722 20

We have kept an account with each individual consigning produce through the Union, by a system of duplicate account sales returned the Union by its Eastern selling agent, showing the number of boxes or crates forwarded, the gross receipts, the amount of freight, cartage and commission paid and the net returns. From books showing such accounts, we gather the following facts and figures:

The shipping season has extended over a period of six months, the first car being forwarded from Winters, Yolo county, May 19, 1886, and the last leaving Wrights, Santa Clara county, Nov. 18, 1886. The early shipments from Winters and vicinity consisted largely of apricots, and, although sent by express train, paid extremely well, the net returns averaging nearly 4½ cents per pound.

Shortly after the Vacaville district commenced shipping, prices in the East dropped considerably, so that from that section the net returns on apricots were a trifle short of 3 cents per pound. But while prices on this product were beginning to weaken in the East, the local market, being left almost entirely bare, began to brighten, prices were materially increased, and a number of buyers started out to secure choice lots, and soon two-thirds of the remaining apricots from these localities were bought up at prices ranging from 3 to 4½ cents, delivered at local points. As the season advanced, from two to six cars were being sent daily by the Union, though it did not dispatch a train until the 20th of July.

During the early part of the season quite a number experimented in shipping currants, and with a single exception, lost money on the transaction, as on arrival the currants were, in most instances, in such a condition that their sale would not cover freight charges. The exception noted was that of a member from Haywards, who, in his last shipment, made a radical change in manner of packing and met with a decided success when compared with the prices then ruling in the local markets.

The ruling price for plums in the East the past year has been low, the total average net per pound received by our shippers being only 1¾ cents.

Quite a number of boxes of cherries were forwarded during the early part of the season, and though considered by the consignors a rather risky experiment, the shipments have usually returned a good profit to the senders, the average net per pound for the year being 8 cents. A shipper from San Lorenzo received the highest price reached during the season, on a consignment of 22 boxes, if we are correctly informed, of Royal Anns, for which he received net $33.08, or 15 cents per pound.

What few peaches have found their way out of the State, have paid exceedingly well; but when we consider that prices in our home market ranged from 2½ to 4½ cents, we will soon see why few preferred to run the risk attendant on sending them across the continent. On those consigned East, the total net average has been 4 60-100 cents per pound.

A member from Vacaville received the highest price reached during the season, on two consignments made during the latter part of October and early part of November, of 96 and 40 boxes respectively of 20 pounds weight, on which he received net returns for the 136 boxes of $285.76, or a shade over 10 cents per pound

With regard to prices received for grapes, which have ruled very low, considerable might be said. Some natural causes combined with others led to very disastrous results during the greater part of the season. Because of the unusually heavy rainfall last winter, grapes contained considerably more water than commonly, and grapes, the past season, from localities heretofore considered especially favored in producing fruit admirable in its carrying qualities, arrived in an almost worthless condition at their journey's end.

Another *main* cause of failure in securing remunerative prices for this fruit was, that the larger proportion was sent by the special fruit train, the shipper being misled by the railway offer of "approximation to passenger time." As a consequence, when the train was nearer eight than five days, with a day or so added in delays consequent upon getting together 15 cars, the consignor considered himself extremely lucky if he were not called upon for freight money. The average net receipts per pound for the year amounts to only 1 18-100 cents. The grapes shipped during the latter part of the season naturally paid much better, averaging over 3 cents per pound net.

Bartlett pears were sold very low during the months of August and September, but prices greatly improved during the latter part of the season, the net receipts showing a total of 2 1-5 cents per pound, while *late* pears sold very much better, yielding net returns of 3 5-7 cents per pound.

Quinces and figs have been shipped in small quantity, the first netting 1 85-100 and the latter 1 44-100 cents.

But one shipment of almonds was made, on which the consignor received a net return of 14 cents per pound.

The grand totals of all fruit shipped by the Union during the season are shown in the following table, taken from our books, which are open for inspection at all times to all stockholders:

Number of boxes	111,933
" " crates	147,216
" " pounds of fruit, *not* including weight of package	5,897,412
Gross receipts on same	$355,416 98
Freight paid, amounting to	175,315 53
Cartage paid, amounting to	2,890 57
Commission paid, amounting to	35,402 24
Gross charges, total	213 609 04
Net returns, gain	$146,090 31
Net returns, loss	3,955 06
Total net receipts	$142,135 25

Giving a total average net per pound of 2 41-100 cents.

Were we to deduct the cost of the total number of packages, by computing the cost of the boxes at 5 cents each, and that of a single crate, including baskets and paper, at 18 cents, a total of $32,094 53-100, it would then leave the total net receipts a trifle short of 2 cents per pound.

To one carefully examining this table some particular features present themselves. We find that about 2,800,000 pounds of this fruit, or a little over one-half, was shipped from Solano county. Of this amount, nearly 1,980,000 pounds, or about five-sevenths, was loaded at Vacaville; while nearly seven-tenths of this came from two consignors at that point.

Santa Clara county follows next, with, in round numbers, 1,200,000 pounds, or nearly one-fifth of the whole amount; and Alameda county is third, with 650,000 pounds, or about one-ninth of the total shipment.

Yolo county comes fourth, with 480,000 pounds, almost entirely from one shipper, and about one-twelfth of the whole amount shipped during the season.

From Placer and Sacramento counties the shipments have been about equal, Placer leading with 363,790 pounds, nearly 45,000 pounds more than Sacramento county.

Butte county furnishes 125,420 pounds entirely from one shipper; while Sonoma, Napa and Colusa counties have contributed a small amount each, in the order named as to quantity—the total from all amounting to 78,500 pounds, of which Sonoma sends 56,020, Napa 21,980, and Colusa, 500 pounds.

One hundred and twenty-seven members, or about one-sixth of our entire membership, have availed themselves of the shipping privileges of the Union, making 1395 consignments, an average of 11 shipments each for the entire season.

The smallest total amount sent by one shipper was one consignment of 100 pounds, while the largest amount from a single member was 688,960 pounds, embracing 42 shipments.

So much for the season's shipping. While it is not as satisfactory as we had hoped, or had cause at the beginning of the year to expect, still it but serves to emphasize the fact which must now be patent to all—that if we would hope for success we must have a Union of all concerned in the fruit interests of this part of the State. By such a Union we can successfully eradicate the second of the evils mentioned as working disastrously to us during the past year—competition—and certainly hope for far better results in our endeavors to lighten the burdens of the first and most serious drawback to our success.

Quoting again from our Florida colaborers, words which seem most opportune, we read:

"One of the principal aims of this association is to secure lower freight charges. One of the greatest drawbacks to the prosperity of Florida fruit and vegetable-growers is the present high freight rates. Ever since the growing of fruit and vegetables in Florida began to assume important proportions, the war cry of the grower has been '*lower rates.*' Year after year the same complaint is made against the transportation companies—'poor facilities, rates too high.' Yet the same old order of things continues to exist.

"You all admit that there is a right and a wrong way to do everything. The question of securing lower rates is no exception to this rule. There is a right and a wrong course. Results show that the efforts made by the individual growers in the past have practically amounted to nothing. Growers have petitioned, formulated resolutions and ventilated their grievances and opinions in the papers of the State. Notwithstanding all this, the rates remain pretty much the same.

"Now this obstacle can be overcome; and the solution of the difficulty is in the hands of the growers. You must *unite*. You have tried the old system of 'every man for himself' long enough. In order to secure lower rates, better and quicker transportation facilities and a uniform price for yonr produce, you must organize. 'In union there is strength.'"

These are but the echo of words which have time and again been brought to the ears of the California fruit-growers, and would certainly seem to *now* be presented with additional power born of the experience of the year just closing.

One thousand and thirty-seven cars of deciduous fruits were sent East this year, of which the California Fruit Union furnished nearly two-fifths.

Should matters be so arranged that we can all work in unison the coming season, no one will believe that we will exaggerate when we say that *we*, as a Union, can *easily* dispatch to the East 1500 cars of our fruits and still have enough left to meet all requirements of the local trade many times over. To *talk* it is one thing; to *do* it, another. You are here now to decide what we *shall* do.

In closing, we know of no words more appropriate than those addressed to the Interstate Fruit-Growers and Shippers' Association:

"We therefore feel proud that the result, yet with all its failures, is so gratifying that we see from the past much to encourage us in renewed efforts to make the association directly and indirectly beneficial to all fruit-shippers in the (Mississippi valley) State and the greatest fruit-shipping association in America. What's to hinder? The field is here. It only requires concert of action; confidence in the honesty and integrity of the officers; unconquerable energy; unity of purpose and a determination to succeed in spite of all opposition, and the work is accomplished. Then, and then only, will the drooping spirits of the fruit-grower be enlivened and a ray of hope beam upon his future prospects."

Report of Committee on Transportation.

On motion of L. W. Buck, H. Weinstock, Chairman of the Committee on Transportation appointed at the last annual session of the State Horticultural Society, held at Sacramento, to report at this annual meeting, was requested to submit his report. The report of Mr. Weinstock showed that a great amount of very important work had been accomplished by the committee. The following is an epitome:

Rates were offered by General Manager Towne as follows: Single car by passenger train, $500, 10 cars to constitute a "special fruit train" to approximate passenger-time, at least not to exceed that by 24 hours, and they would try to arrange it so that such train should arrive at Chicago early in the morning in order to meet morning sales. The rate on 20,000 pounds on such trains would be $400 and a slow-freight rate of $210 per car.

This proposition was not accepted by the committee, but they wrote Mr. Towne that they held a telegram from Mr. Huntington in which he said he had instructed the proper officials of the road to accede to the request of the fruit-growers for a rate of $300 on 10 cars and fast time, provided that in their judgment such a rate was not directly opposed to the best interests of the road. They had also advices from Mr. Kimball, of the Union Pacific, that he would accept the $300 rate on 10 cars.

A lengthy letter, replete with statistics, had been sent Messrs. Huntington, Crocker & Stanford; and copies of resolutions passed by the San Francisco Board of Trade and Chamber of Commerce, and also by the Sacramento Board of Trade, stating that in order to protect the fruit interests of the State, in their judgment, the requests of the fruit producers were both wise and necessary, were also forwarded to these gentlemen.

On motion of Mr. Johnston, the report was received and ordered placed on file.

Mr. Melone moved the appointment of a committee on transportation, to consist of seven members, which should be composed, as far as possible, of the members of the committee last reporting, to wait on the railroad authorities for

the purpose of ascertaining if they were willing to make any concessions further than those indicated in their last communication to the committee. Carried.

The president appointed as such committee the following gentlemen: Drury Melone, Wm. Johnston, H. Weinstock, H. K. Plate, J. H. Flickinger, L. W. Buck, Wm. Barter.

On motion of Mr. Johnston, President Hatch and A. Block were added to the committee.

On motion of Mr. Buck, A. Abbott and H. L. Dodge were added to the committee.

On motion of Mr. Weinstock, Capt. W. L. Merry was added to the committee.

Mr. Johnston moved the appointment of a committee on order of business. The president appointed Wm. Johnston, H. Weinstock, Wm. Blackwood, L. W. Buck, Wm. Barter and W. B. Parker.

The committee withdrew, but shortly reappeared, and Mr. Johnston, the chairman, reported as follows:

Mr. President: Your committee on order of business beg leave to recommend the following as the

Order of Business.

1. Reports of committees.
2. Revision of by-laws.
3. Election of officers. And we recommend that when this meeting adjourns it adjourn until to-morrow at 9 A. M.

On motion of Mr. Melone the report was adopted.

The president announced the revision of by-laws as the order of business.

L. W. Buck moved that during the session this afternoon the privilege of the floor be granted all persons, whether stockholders or otherwise. Carried.

Mr. Johnston moved that the by-laws be read section by section for the purpose of receiving suggestions for amendments thereto, and of provoking discussion thereon, and that action on the adoption of amendments be deferred until to-morrow's session. Carried.

The by-laws were then read by the secretary in accordance with this motion.

Pending the discussion, Mr. G. M. Gray moved the appointment of a committee of five, to whom should be referred the whole subject of amendments to the by-laws. Carried.

The president appointed as such committee G. M. Gray, H. Weinstock, James Rutter, Wm. Johnston, Drury Melone.

On motion, the meeting adjourned until 9 o'clock the following morning.

Second Day.

Meeting called to order at 10 A. M. by A. T. Hatch, president. Minutes of the meeting of the previous afternoon were read for the information of those who were absent.

Report of Committee on Transportation.

Mr. Melone, Chairman of the Committee on Transportation, reported that the committee met Mr. Towne the previous evening. That Mr. Towne stated that, as a result of correspondence with the leading officers of their own company and connections, they were willing to grant a rate to Chicago of $500 per car on cars to be attached to passenger train in such number as could be accommodated on said train, and a rate of $300 per car for trains of not less than 10 cars, the time to not exceed passenger train by more than 24 hours, and a rate on slow freight of either $200 or $210 per car—he could not exactly remember the figure, but thought it safe to say $200. Mr. Towne said they were about to submit these rates to the fruit-growers when he was informed by wire that the officials in the East apprehended difficulty from the effect of the interstate commerce bill, and that it might prevent the concessions above suggested; otherwise the concessions were absolute.

On motion, the report was received and the committee given further time.

Mr. Gray, Chairman of the Committee on Amendments to By-laws, reported as follows:

Mr. President: Your Committee on Amendments to the By-laws recommend as follows:

To amend Section 1 by inserting in line three, after the word "number," the words "three of whom may be shippers."

To amend Section 5, Subdivision 2, by adding the words, "Shippers may become members of the Union by taking not less than 100 or more than 500 shares of stock."

Your committee also recommends that the trustees be empowered to sell to the highest bidder the privilege of securing a choice of shipping point.

The report was received and ordered placed on file.

The amendment recommended by the committee to Section 1 was adopted by viva voce vote.

F. B. McKevitt moved that Section 4 be so amended as to provide for *semi*-annual meetings of the stockholders.

The motion was lost on viva voce vote. Consideration of the amendment to Subdivision 2 of Section 5 recommended by the committee was then had.

A. Block moved to amend the amendment proposed by the committee by striking out the words "one hundred" and inserting "fifty;" also by striking out the words "five hundred" and inserting the words "one hundred."

Mr. Melone moved as a substitute the insertion of the following: "Any shipper may become a member by taking 200 shares of stock."

Mr. L. W. Buck moved as an amendment to the proposed substitute that the word "shipper" be stricken out and the word "non-producer" be inserted.

The proposed amendment was accepted by Mr. Melone as a part of his motion.

The question being raised as to the accepted definition of the word "shipper," Mr. Block moved as a further amendment the following substitute:

Any non-producer engaged in buying and shipping fruit may become a member of the Union by taking 200 shares of stock.

Mr. Melone agreed to the substitute. Viva voce vote being had on the adoption of the amendment, it was carried unanimously.

Mr. Weinstock moved to amend Section 10 by striking out the whole of said section and inserting the following:

SEC. 10. The Board of Directors shall, by compiling such facts and statistics as may be at their command, arrange a table of distribution subject to such changes and modifications as the market may, from time to time, demand; and it shall become the duty of the General Manager to regulate the distribution strictly in accordance with such provisions.

The Directors may delegate, subject to revocation, the power to change or modify the table of distribution to the General Manager.

The General Manager shall appoint, subject to confirmation by the Board of Directors, a commissioned agent, also an auctioneer, in every city east of the Rocky mountains that can use a carload or more of California green fruits at a time.

The Board of Directors shall establish regulations to control the quality, weight, and packing of all fruits offered for Eastern shipment, and it shall be the duty of the General Manager, through his inspectors, to enforce such regulations, and to reject all fruits offered for shipment that do not come up to the standard requirements.

All fruits consigned by the Union to Eastern agents shall be offered, by the auctioneer appointed by the General Manager, at public auction, and sold to the highest bidders for choice of lots; the auctioneer's fees to be deducted from the agent's commission.

The auctioneer shall forward by the first mail, to every member having fruit at such sale, a copy of the catalogue, giving in print the prices realized for every lot of fruit sold at said sale.

Subscribers of stock shall contract with the other subscribers that they will not sell any fruits for Eastern shipment to any except to members of said Union (Eastern shipment meaning east of Ogden), reserving the right to sell any and all fruits for any other purpose.

Members of the Union shall be privileged to name points of destination for their fruits, and they shall be further privileged to name their own consignees. It shall be the duty of the General Manager to faithfully observe such wishes: provided, the space allotted to such points of destination be not all previously applied for, and provided such members agree to have their fruits sold by public auction, by the auctioneer employed by the Union, and at the same time and place at which the fruits consigned to the agents of the Union are sold.

The Board of Directors shall establish such rules as will give all members an equal chance in naming preferred shipping points. Should the application for space to certain shipping points be greater than can be furnished, the Board of Directors may entertain sealed bids from members of the Union, at the rate of so much premium per ton, for the privilege of securing a choice of shipping points for quantities not to exceed one carload at any one shipment, provided, the term for which such privileges are let shall not exceed 30 days; and, provided, that due notice to all stockholders be given through the mails by the Secretary at least five (5) days before the time appointed for the opening of such sealed bids, which shall be addressed to the Secretary, and opened by him in the presence of the Board and such bidders as may desire to be present; the highest bidder to have first choice during the term of 30 days or less, and so on, the Directory retaining the privilege to reject any and all bids.

Mr. Blackwood moved that consideration of the proposed substitute be had by subdivision seriatim. Carried.

Pending discussion, recess was had.

The session convened again at 1:30 P. M.

Mr. Markley offered, as a substitute for the pending motion, a motion to amend Section 10 by adding the following:

The Board of Trustees are authorized to sell fruit at auction, when in their judgment they think it best to do so.

Subscribers to stock shall contract with the other subscribers that they will not sell any fruit for Eastern shipment to any except to members of said Union (Eastern shipment meaning east of Ogden), reserving the right to sell any and all fruits for any other purpose.

Adopted by viva voce vote.

Mr. Block moved to amend Section 1 by inserting in page 2, line 5, after the word "Board," the following: "and such other assistance as they may from time to time deem necessary." The motion was lost.

Mr. Weinstock moved to amend Section 10 by striking out the first eight lines of the section.

Mr. Johnston moved as a substitute to amend by striking out the words: "provided that on all fruit and vegetables so consigned, a commission of not to exceed five per cent of the sale value of said fruits and vegetables, and the actual freight, shall be paid to the Union." Lost.

Vote being had on Mr. Weinstock's motion, it was carried.

Mr. Block moved to reconsider the vote on Mr. Markley's motion, whereby two additional clauses were added to Section 10. Carried.

Mr. Meek moved to amend the motion by striking out the last clause, leaving to be added to the section only the following: "The Board of Trustees are authorized to sell at auction, when in their judgment they think it best to do so." Carried.

On motion of Mr. Block, the lines last above quoted were adopted as an addition to Section 10.

Mr. Johnston moved the appointment of a committee of five (5) to nominate a Board of Trustees for the ensuing year. Carried.

The chair having called for nominations for the committee, the following were nominated, and were appointed by the president: C. T. Adams, of Newcastle; W. W. Smith, of Vacaville; Wm. Johnston, of Richland; Wm. C. Blackwood, of Haywards; Drury Melone, of Oak Knoll.

Pending the report from the committee, Mr. Markley offered the following resolution:

Resolved, That the Board of Trustees are hereby requested to give the auction plan of selling fruit a thorough and systematic trial.

The resolution was adopted.

Report of Committee on Fruit Packages.

The Committee on Fruit Packages, appointed at the Sacramento Convention, reported as follows:

To the Stockholders of the Fruit Union—GENTLEMEN: The committee appointed at the Sacramento meeting of the State Horticultural Society to fix uniform sizes for boxes for Eastern shipment, recommends that the following sizes be made standard:

		Length, in.	Width, in.	Depth, in.	Capacity lbs.
Cherry boxes	Inside..	16½	10⅜	2½	10
	Outside.	18	10⅞	3	
Plum boxes..	Inside..	18½	11¾	4	20
	Outside.	20	12⅛	4⅜	
Apricot or Peach boxes.....	Inside..	18½	11¾	4⅜	22
	Outside.	20	12⅛	4¾	
	Inside..	18½	11¾	4⅞	25
	Outside.	20	12⅛	5¼	
	Inside..	18½	11¾	5⅜	27
	Outside.	20	12⅛	5¾	
	Inside..	18½	11¾	5⅞	30
	Outside.	20	12⅛	6¼	
Pear boxes..	Inside..	18½	11¼	8½	40
	Outside.	20	12⅛	8⅞	

Sides, tops and bottoms of cherry boxes shall be of ¼-inch lumber; of plum, peach or pear boxes, of 3-16-inch lumber; all ends shall be made of ¾-inch lumber, all cleats of ⅜-inch lumber.

Each side of the cherry box shall be made of two strips, each of ¼-inch lumber, and ⅞ of an inch in width. All lumber to be as smooth as possible.

L. W. BUCK,
GILBERT TOMPKINS,
For the Committee.

Election of Directors.

The Committee on Nominations, after a brief absence, reported the following named gentlemen as candidates for members of the board for the following year: A. T. Hatch, Solano county; H. Weinstock, Sacramento county; L. W. Buck, Solano county; Webster Treat, Yolo county; G. D. Kellogg, Placer county; P. E. Platt, Sacramento county; H. C. Morrill, Santa Clara county; H. W. Meek, Alameda county; John Markley, Sonoma county.

On motion, the secretary was instructed to cast the ballot for the above-named gentlemen. The secretary having done so, the president declared them duly elected trustees of the California Fruit Union for the ensuing year.

No further business appearing, the meeting adjourned sine die.

H. A. FAIRBANK, Secretary.

Dr. Pierce's "Pellets" cure sick and bilious headache, sour stomach, and all bilious attacks.

The Housekeeper's Complaint.

"I am discouraged. I have too much to do. I am tired. I am sick. I suppose I was put into this house to keep it clean, but it is too much work. I won't try. I will go to sleep. I don't care what becomes of the house."

The above is an allegory. The discouraged housekeeper is the liver, which, indeed, is often called "the housekeeper of our health." If it does go to sleep as it threatened, a crowd of diseases are all ready to spring up as a consequence. Dr. Pierce's "Golden Medical Discovery" acts upon the liver and assists it in its work of housekeeping and house-cleaning. It is the great liver remedy and blood cleanser, and cures all the long train of chronic maladies resulting from a torpid or sluggish, *sleepy* liver, such as sick headache, scrofulous diseases, as ulcers, "fever-sores," "white swellings," hip joint disease, consumption of the lungs (which is really only scrofula manifesting itself in the delicate tissues of these organs), also all skin diseases, as blotches, pimples and eruptions, and all blood taints, however acquired.

Favoritism

Is a bad thing, but Dr. Pierce's "Favorite Prescription" deserves its name. It is a certain cure for those painful maladies and weaknesses which embitter the lives of so many women. Of druggists.

Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with samp, naming this paper, W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

It Should Always be Borne in Mind

That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the fittest"—the "DOMESTIC" SEWING MACHINE.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from $5000 to $500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. **

A Blessing.

Nothing adds more to the security of life, of happiness, and of health, than a safe and reliable family medicine. S. L. R. has won for itself the appellation of "the family blessing." If a child has the Colic, it is sure, safe and pleasant. If the father is exhausted, overworked, debilitated, it will restore his failing strength. If the wife suffers from Dyspepsia, Low Spirits, Headache, it will give relief. If any member of the family has eaten anything hard to digest, a dose of the Regulator will soon establish good digestion. It gives refreshing sleep even in cases where narcotics have failed. It is a preventive, perfectly harmless, to begin with, no matter what the attack, it will afford relief. No error to be feared in administering; no injury from exposure after taking; no change of diet required; no neglect of duties or loss of time. Simmons Liver Regulator is entirely vegetable and is the purest and best family medicine compounded. J. H. Zeilin & Co., Philadelphia, Pa., sole proprietors.

A GOOD MUSIC TEACHER

—WILL USE—

THE BEST INSTRUCTION BOOKS.

There is no mistake about the great **Richardson's New Method for the Pianoforte** Sales nearly 400,000 copies! The favorite of thousands of teachers! Many times revised. The most correct of instruction books. Price $3.

Since the advent of "Richardson," many excellent instructors have been published, and have attained great favor. Pre-eminent among them are

New England Conservatory Method

(Price $3, or in parts, each $1.50) and

Peters' Electric Piano School. Price $3.

The first book has had the important indorsement of the great Conservatory, and the second has sold immensely, solely on its own merits.

For Reed Organ. Clarke's New Method.....$2 50
For Mandolin. Winner's Complete Method.... 75
For Zither. Winner's Complete Method..... 75
For Violin. Listemann's Method..... 3 00
For Flute. Kummer's Flute School..... 3 00
For Guitar. Curtiss Method..... 3 00
For Banjo. Curtiss Acme Method..... 1 25
For Cornet, Flute, Clarionet, Flageolet, Banjo, Accordeon, Violin, Guitar, Reed Organ, and Piano, Sep. Winner has prepared very good easy Methods, costing 50 cents each. All are called IDEAL Methods.

Mailed for Retail Price.

OLIVER DITSON & CO., Boston.
C. H. DITSON & CO., - - 867 Broadway, NEW YORK.

HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

417 Sansome St. San Francisco

Reasons why Sherwood's Steel Harness is the Best and should and will be Universally Used:

1.—It is a common sense Harness. 2.—It is made of material that will last a lifetime. 3.—In plowing, dragging, logging and scraping there are no whiffletrees. 4.—In all farm work you can change from plow to wagon quick. 5.—In plowing in the orchard, you can't bark fruit trees. 6.—In plowing and cultivating hops it has no equal. 7.—In plowing along the fences you can get two furrows closer. 8.—Horses cannot step over the traces, or calk themselves. 9.—A small boy will handle plow readily. 10.—There is no weight on plow beam. 11.—Team works one-third easier. 12.—There is no chafing, crowding or fretting of team. 13.—For man and team it has no equal. Do not hesitate, but order at once from your nearest agent. Address

C. J. WETMORE,
Livermore, Cal.

FRESNO COUNTY.

BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 fe 6 inches of water, to 20 acres, being 2½ times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is $3.75 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without teams are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for $150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads. Nearly one-half already sold.

Price, $22 to $40 per acre, on very easy terms to actual settlers.

THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from $10 to $30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from $100 to $200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

TITLE, U. S. PATENT.

TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of $25 will be required in all cases to cover expenses of sale.

Central California Citrus Fair.

[Written for the RURAL PRESS by H. M. H.]

The Citrus Fair to be held in San Jose, under the auspices of the Horticultural Hall Association, promises to surpass the most sanguine expectations of the managers. The Board of Directors, consisting of Hon. Cyrus Jones, President, Capt. Frank Dunn, Secretary, H. G. Keesling, A. R. Woodhams, Mrs. S. P. Saunders, Mrs. Ingalls, and others, are sparing no pains to make this the most successful fair ever held in San Jose.

The fair will be held in the new Horticultural hall, which is 80 feet wide by 166 feet deep. Hon. David Belden, Judge of Department 1 of the Superior Court, will be invited to deliver the opening address on Monday evening, Feb. 7th. There will be a musical and literary entertainment every evening during the week. On Tuesday evening Company B, of the First Regiment, Capt. A. K. Whitton, will give an exhibition bayonet drill. This will be followed by musical selections under the direction of L. Jacox. Thursday evening Prof. J. W. Rainey will have charge of the program, and on Friday evening Prof. Boots will act as manager.

Responses have been received from nearly all the counties invited to send exhibits. Fresno will make a fine show of raisins. Stanislaus will contribute a large number of oranges; San Joaquin will make a specialty of English walnuts; and Santa Cruz will have a floral display.

The hall will be elaborately decorated. The Decorative Committee consists of Mrs. D. C. Feely, chairman, Mrs. G. W. Tarleton, Mr. and Mrs. A. Loomis of Wright's Station, S. P. Saunders, A. B. Hunter, J. Powell, and G. C. Glendenning.

President Cyrus Jones, accompanied by G. W. Tarleton and Capt. Frank Dunn, has made a tour of Santa Clara county, visiting many of the principal orchards. President Jones in an interview said that there will be about 75 exhibitors of oranges grown in orchards of 10 to 160 trees. He found the trees in very fine condition, and all that are old enough were bearing.

In the orchard of J. J. Groom, of Los Gatos, 150 orange trees were planted 20 months ago, and from them he will bring 150 pounds of oranges. In nearly all the orange orchards Mr. Jones found from one to a dozen lemon trees, and they were all doing well.

On Mr. C. Yocco's place, in the foothills, one mile south of Saratoga, an orchard of 300 trees, consisting of oranges, lemons, and limes, was examined. The limes, as well as the oranges and lemons, were bearing heavily. As an evidence that these limes are appreciated, it might be mentioned that some of them were seen in the fruit stores in Saratoga.

Santa Clara produces a large number of almonds, English walnuts, and Italian chestnuts, of which there will be a fine display at the Citrus Fair. Some of the largest almond orchards in the State are to be found in this county.

Another leading interest here is the grape and wine industry. The number of people engaged in it is large, and it will be well represented at the fair. Capt. J. C. Merithew, of Cupertino, will make a fine display of wines. The Paul O. Burns Wine Co., which is about to increase its capital to $250,000, will make an exhibit regardless of expense. The table space to be used by this company will be 12 by 16 feet, and all its former efforts are to be excelled.

Judge R. F. Peckham, President of the San Jose Woolen Mills, has engaged to show blankets, cassimeres, and flannels. C. P. Bailey, President of the Angora Robe and Glove Co., has also agreed to exhibit.

Among the promised entries are the following:

San Jose—A. C. Woodsum, one box oranges; Judge Rhodes, one box oranges, also English walnuts; Mrs. E. Hagenmeyer, one box oranges; A. S. McWilliams, dried fruits, egg plums, etc.; C. R. Seeley, five boxes oranges, English walnuts; H. M. Hervey, English walnuts; Mrs. Kipp, oranges; John Klee, oranges.

Berryessa—Isaiah Shaw, four boxes oranges, one box lemons; W. Crites, two boxes oranges; W. R. S. Foye, eight boxes oranges.

Milpitas—Mrs. Mary Miller, four boxes oranges, one box lemons; W. Cameron, one box oranges, three dozen lemons; Evans Bros., one box oranges, two boxes lemons; James Janes, one box oranges, one box lemons; Henry Curtner, two boxes oranges, one box lemons; Walter J. Curtner, several boxes.

Mountain View—J. B. Bubb, one box green tomatoes and peppers.

Evergreen—Dr. Mintie, three boxes oranges, two boxes lemons; Dr. Babb, one box oranges; P. Pellier, one box oranges, English walnuts and olives; D. B. Fuller, three boxes oranges; G. Cain, one box oranges; Chas. Smith, three boxes oranges, one box lemons; A. J. Fowler, two boxes oranges, one box lemons.

Arrangements have been made to run excursion trains from Los Angeles to the fair, the rate for the round trip being fixed at $21 with a rebate of $5. Renewed interest in Santa Clara county as a citrus-growing region is being awakened. A large number of real estate transfers have been made during the last two weeks.

It is to be hoped that all the invited counties will exhibit, and that the interest in the Central California Citrus Fair will not be confined to Santa Clara.

HULLING CALIFORNIA WALNUTS.—A Vacaville reader wishes to know how to take the hulls off California walnuts. Who will tell?

The Colonists at Topolobampo.

In the PRESS of July 10th last was given a brief account of the plan and prospects for a co-operative colony (the Credit Foncier) which it was proposed to found in Sinaloa. Under concessions from the Mexican Government 200 or 300 settlers have since gone upon the ground and literally pitched their tents by Topolobampo bay. It was, if we remember rightly, Dec. 9th when we saw L. A. Gould, the successful Placer county fruit-grower, and our old friend and contributor, Isaac B. Rumford, with his wife and son, embarked upon the steamer Newbern for a Mexican port. A few days since we had the pleasure of receiving one letter from them and seeing others, portions of which will no doubt prove interesting to our readers.

It appears that the colonial party on the steamer numbered 33 men, 6 women and 12 children, some of whom were evidently unused to that mode of travel. The earlier pages of the letters are full of cheery and entertaining notes of the voyage, with many suggestions as to conveniences and comforts on the way down by water, for the benefit of those who may follow as steerage passengers.

Extracts from Mr. Rumford's Letters.

TOPOLOBAMPO CITY, Dec. 21, 1886.

We got off the steamship on to our sloop at 8 P. M., Sunday, for Topolobampo, but were becalmed so that it was sunset, Monday, before we came alongside the stone pier, where the colonists—some 170 of them—were waiting to receive us, the Stanley family playing strains of musical greeting. After three cheers for the different bands of colonists, we came ashore to the hand-shaking and warm supper that should have satisfied any appetite with its variety of beef, fish, bread, butter, mushes, sauce, tea, coffee, etc. The city is built now with tents on the hillside and looks like a mining camp. It is a minor city, which will look very different when it comes of age. The families are to move from here 35 miles to the new ranch on the Fuerte river and build a city there.

We met A. K. Owen and Mr. Peet on the steamship. They are both live men. They have now gone back to the States to attend to business for the colony, after which they will return hither. Mr. Owen said: "Tell all who come to bring a tent with them," and we say bring plenty of blankets, as we find use for such clothing as we wore in Oakland.

We sent you letters yesterday. Sara posted them while I was out rolling rock to make a road on which we may haul our traps to the Fuerte river. When the road is finished, say in two or three weeks, we expect to move all the women and children there and build the first city at that place of sandstone and lime. One of our company is now off to burn the lime. At the Fuerte there is a regular farm and fruit ranch, with plenty of good water; while here is nothing but stony hills, covered with brush, except where it has been cleared for the tents.

In front of us is a beautiful bay or harbor, full of splendid fish in great variety. There are also two kinds of oysters—large ones that grow on rocks, and a smaller variety, similar to California oysters, which grow on trees or plants that are under the water. I got a stick, night before last, about 18 inches long, thickly covered with bivalves of fine flavor. Willie protests that they are not Edenic if they do grow on trees! There has been so much else to do that the colony has not found time yet to develop that branch of industry, so few of them have been brought in by the boatmen.

All our drinking water is brought in boats from the islands in the bay, where it is found abundantly by digging into the sand. Dry grass is also brought from the islands for bedding. Our people have put up a variety of shelters—none very secure in case of rain, which we do not expect for some months. Our neighbor, Mr. Patrick, brought lots of carpet; one turned over a frame makes a fine roof, and another is for flooring, while the sides are of the same. Our linen tent answers well for shelter, but we wish the carpet had not been left behind.

Axes are always needed—one for every tent. But no one need cut wood for private cooking stoves, as all the cooking is done by the company, and those who brought provisions, dishes, etc., turned them all over to the company for general use. We are the only party, so far as we know, that does not eat at the public table; and our only reason for not doing so is, that we have no use for the cook, but take our grain and fruit in our own tent at the close of the day. Grain is very scarce here this year, some three and one-half cents per pound, when it is usually only one-half cent. Corn is the only grain they produce; but our farmers are planting, and in three months a supply of green corn will be ready, and other kinds will come on later. The company has to pay $1 per 100 for oranges, and sells them to us for 15 cents per dozen in labor. That is all the fruit we have had so far, except Alden apples, of which we brought a 20-pound box. The people have been afraid they might run out of some kinds of provisions, and Mr. Owen has telegraphed East for no more colonists to come until we get provided for and be better organized o receive them. Especially do we want no more women and children, of whom we have a very full supply. A class of eight boys are to be schooled during the morning and work for three hours, say from two to five, at building road, or whatever there is they can do. We are to have a kindergarten here soon.

The climate is lovely; cool enough for two or three blankets at night, with medium warm clothing for the day. The company takes your provisions and credits you for them. You eat at the public table at 45 cents a day (three meals), but it is proposed soon to establish a restaurant where you shall pay for what you call for.

Mr. Rumford closes by wishing all his friends a joyous Christmas and a Happy New Year; and we wish him and his fellow-pilgrims success.

EXPLANATION.—Cl. for clear; Cy., cloudy; Fr., fair; Fy., foggy; — indicates too small to measure. Temperature Wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours.

A Ghost

Is a myth, but solid reality will be known by those who write to Hallett & Co., Portland, Maine, thereby learning, free, about work that they can do and live at home, wherever they reside, at a profit of from $5 to $25 and upward daily. Some have earned over $50 in a day. Capital not needed. Hallett & Co. will start you. All is new. Delay not. Pay absolutely sure from start. Wealth awaits every worker. Both sexes. All ages.

THE NATIONAL STUDS OF FRANCE.—No Government exercises an influence upon the horse breeding of its country equal to that of France. Under the Minister of Agriculture a department exists that expends $3,000,000 annually for the promotion of horse breeding. This department comprises 22 great National Studs, in which are kept 2500 of the finest bred stallions, that during the breeding season are distributed for service throughout the country. Large numbers of Percherons are owned by the Government, whose preference for this breed is plainly indicated by the following emphatic language in a speech, at the great Percheron horse exhibition of France this year, by the Minister of Agriculture, M. Develle, who said: "I must not forget, gentlemen, the reason of this fete. Allow me therefore to speak of the Percheron horses, and congratulate you on the sucessful efforts you have made to perfect and perpetuate the grand old race of the Perche; a race *that is by far the best if not the only true race* in France. Under the direction of distinguished men the Societe Hippique Percheronne has become large and powerful, and to-day it is controlling and guiding the whole of the breeding district. The Societe possesses its 'Golden Book,' and after having seen is concours, I can say, without fear of saying too much, that the Government means to give the whole of its power, influence and support to the Societe Hippique Percheronne, which, by its stud book, is keeping up the true breed." The Minister's regard for this breed is further shown in his subsequently ordering the purchase of 50 registered Percheron stallions this season for the Government studs.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.
G. W. INGALLS—Arizona.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, $3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

New Subscription Terms.

Our recent new terms for inducing payment of subscriptions in advance are meeting with favor in all quarters. New subscribers are coming in and old patrons are again entering their names.

We are confident of greatly increasing our large list of subscribers within the next few months.

A few subscribers have complained of paying at the rate of $3.50 when fully one year in arrears. To induce all such to settle up, we will, *during the next 30 days*, give all such the privilege of paying all back dues at the rate of $3.25 per annum.

Jan. 22, 1887.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

NORMAN HORSES —By some oversight Theodore Skillman's advertisement of his latest importation of Norman horses has appeared in the RURAL without having his name and address printed at the bottom. Really, however, it does not matter much, because Mr. Skillman is so prominent as a horseman, and so well known as a resident of the Petaluma district, that most readers could supply the deficiency of their own knowledge. For the benefit, however, of newcomers, we shall append the name and address hereafter.

REMOVAL.—Arthur Bull has removed his growing business in this city to No. 26 Beale street, where he has an ample and convenient warehouse for displaying his line of agricultural implements and machinery.

MINERAL WOOL has come so largely into demand that it is now made directly from raw materials placed in the furnace, and not from such ores only as will produce other merchantable products.

J. PROCTOR THOMAS, commission merchant of this city, publishes free a Produce Report, to inform farmers and country dealers what their consignments will bring in round lots on the wharf.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, *to those who pay fully one year in advance of date*, IF REQUESTED, the following articles (while this notice continues), at the very greatly reduced figures named at the right:

BEAUFORT.

NEW IMPORTATION
—OF—
NORMAN STALLIONS.

Theodore Skillman has just arrived from France with the choicest importation of Norman Stallions that has ever reached the Pacific Coast. Mr. Skillman has selected these horses from the best in France, with a view to the improvement of draft horses on this Coast. They are young and sure to suit the tastes of intending purchasers as regards color, etc., a number being coal-black. He has also on hand some Imported French Coach Stallions. These horses are now very popular in the East and have long been the favorite carriage horses of France. Their merits speak for themselves. Come and inspect this rare collection of horses and be convinced that they are the best ever seen on this Coast.

☞Catalogue for 1887 sent free on application.

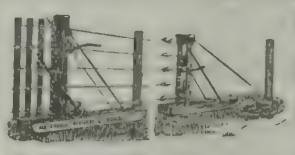
LITTLE'S CHEMICAL FLUID SHEEP DIP.



Price Reduced to
$1.25
PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for SCAB in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yolk. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

FALKNER, BELL & CO.,

S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 26, 1887.

The past week has ruled dull except in grain options on Call, which were active at slight fluctuations. The English wheat market for cargoes just shipped is slightly higher, but at the close the tone is weaker, as the following cable shows:

LIVERPOOL, Jan. 26, 1887.—Cargoes off coast, slow. Cargoes on passage and for shipment, buyers hesitate to operate. Cal. wheat, off coast, 37s. Cal. wheat, just shipped, 38s 6d. Cal. wheat, nearly due, 37s 3d. French country market, steady. Liverpool wheat, spot, quiet but steady. Liverpool wheat, Cal., 7s 4½d@7s 7½d. Weather in England, fine.

Foreign Review.

LONDON, Jan. 24.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says: The damp weather has lowered the condition of the English grain offering, causing a general decline. Sound parcels, however, maintain their values. In London the buyers made bids two shillings below the local and country values. The sales of English wheat during the week are 49,793 quarters, at 36s 4d, against 63,191 quarters, at 29s 9d, during the corresponding period of last year. The trade in Foreign wheat is irregular, and values are against the sellers. Flour, owing to large American shipments, has declined from 6d to 1s. Corn is rather weaker. Linseed advanced 6d. Seventeen cargoes of wheat have arrived; 8 were ordered away and 9 are remaining, including 7 California, one Oregon, and one of American red winter. To-day there was some inquiry for wheat, and values were firmer. Flour was steady. Oats are dull and 3d cheaper. Linseed is from 3@6d cheaper.

Eastern Wheat Market.

NEW YORK, Jan. 23.—Wheat has ruled rather quiet; the transactions the past week have been comparatively moderate, and the fluctuations small. Spot closed quiet, ¼c and ¼c higher for the week. Options closed firm and quiet as follows: January, 92⅝c; February, 92⅞c; March, 94c; April, 94¼c; May, 96½c; June, 97¼c; July, 97¼c; August, 98¼c.

London Wool Market.

LONDON, Jan. 25.—The new series of wool sales were opened to-day. About 8000 bales were offered. There was a large attendance. The competition among foreign buyers was brisk, compared with the closing prices at the last sales. Australian greasy improved ½d, and scoured, from 1d@1½d; Cape of Good Hope and Natal white, ½d@1d, and greasy ½d. At present advices 242,481 bales are available.

The following are to-day's sales in detail: Victoria, 1300 bales, scoured, 9½d@1s 7½d; greasy, 1d@1s 1½d; New South Wales, 800 bales, scoured, 1s 2d@1s 6d; greasy, 6d@11. South Australia, 1500 bales, scoured, 1od@1s 6d; greasy, 5½d@10. Queensland, 200 bales, scoured, 11d@1s 5½d; greasy, 9½d@10½. New Zealand, 800 bales, scoured. 1s@1s 2d; greasy, 6½d@11½. Cape of Good Hope and Natal, 200 bales, snow white, 1s 2d@1s 7½d; greasy, 4½d@9½. Sundries, 600 bales.

Eastern Wool Markets.

BOSTON, Jan. 22.—The demand for wool the past week has been active, and sales of all kinds amount to 2,694,100 pounds. Business, however, has been larger than these figures show, as considerable domestic wool has been sold which will not be reported until next week. Some 1300 bales of Australian also has been sold, to arrive. The market is very firm on all desirable wools. The only weakness is found in Territory wools. All the improving features noticed last week are retained, and, although no material advance has taken place, the tendency of the market is upward. It would be no surprise to see prices go higher. There has again been a large number of manufacturers present here in search of bargains, but they found none, and bought freely at full prices. There was a firm tone in the market, and at the close all branches of the trade spoke encouragingly of the situation. The demand is moderate for California wool, and sales are reported of 20,000 pounds spring and 100,000 pounds fall, on private terms. There have been no sales of spring California wool reported; small stocks. Fifty thousand pounds Valley Oregon sold at 25c, and 50,000 pounds super and extra at 33@40c. California spring is quoted at 22@27c; ditto fall, 17@21c. The receipts of the week have been 3771 bales domestic, and 1414 bales foreign.

NEW YORK, Jan. 23.—A more decided improvement was developed this week in the wool market, low and medium grades being taken more freely by manufacturers. Fine wools seemed more or less neglected, but holders remained confident, especially in view of the recent improvement in European markets, and the advance attained at the opening of the Antwerp sales. The London sales, which open next Tuesday, are awaited with considerable interest by dealers, and an improvement is confidently looked for. The sales for the week included 50 bales California, at 22½c; 150 bags of fall, scoured California, at 48c; 25,000 Mexican, at 15@18c; 25,000 fall California, at 14c; 20,000 Eastern Oregon, at 24c. The Philadelphia market is active, and a stronger demand is running chiefly on low, quarter, and medium grades. Lower grades are in supply, and have advanced 1@2c above the prices accepted in December. In all cases previous asking rates are more easily obtained. Among sales were 25,000 pounds Territory fine, at 22c; 30,000 pounds Nevada fine, at 20c; 1000 pounds Oregon fine, at 30c. The Boston market continues active, and manufacturers are quietly renewing stocks, believing that wool will go no lower, and may go higher. Among sales were 93,000 pounds Territory, at 20@25c; 330,000 pounds California spring and Oregon, at 22@25c.

PHILADELPHIA, Jan. 25.—Wool is firm and prices are unchanged.

BOSTON, Jan. 25.—Wool is firm with a good demand. Ohio and Pennsylvania X 34c ₩ lb; XX 34@36c; XX and above, 36@37c; Michigan X, 32@32½c; No. 1 wool held at 38@39c.

NEW YORK, Jan. 25.—Wool is quiet and about steady. Domestic fleeces, 30@38c ₩ lb; pulled, 14@35c; Texas, 9@25c.

New York Hop Market.

NEW YORK, Jan. 23.—There are some indications of a change for the better. Receipts of foreign hops have fallen off materially, and there is a demand here for choice Pacific Coast hops for England. This demand may not be attended by results of striking importance, but it has assumed such shape that no one need be surprised if several hundred bales are found moving across the Atlantic before the end of the month. It is stated on good authority that a first-class article can be sold for export at very near the best prices bid by local dealers. States, 1885 crop, are in rather better demand, with rumors of some export inquiry. Coast crop of 1886, prime to choice, 23@25c; same, fair to good, 18@22c; 1885, good to prime, 8@10c.

Chicago Fruit Market.

CHICAGO, Jan. 22.—California oranges are slow, the market being overstocked with fruit from Florida, and rules weak. The prices range from $2.75@3.50 for California varieties; Washington Navels, $5@5.50. The dried fruit market rules firm and steady. Those who have any fruit on hand are holding it, as it will soon be wanted. There is very little fruit to be had from the country, and there is no prospect of any coming forward very soon. California dried fruit is selling moderately, and prices rule steady. Prunes, French, per lb, 8½@11½c; plums, pitted, 11@13c; peaches, halves, 12@14c; halves, pared, 20@21c; figs, 6@8c; nectarines, 9c; pears, 8@12c; raisins, London layers, 20-lb boxes, per box, $1.55@1.60; raisins, loose Muscatel, per box, $1.35@1.40.

Dried and Canned Fruit at the East.

NEW YORK, Jan. 23.—Canned tomatoes are moderately active, with sales reported at $1.05@1.10. California pears, $2.50@3.25. Dried fruit—For raisins, excepting Valencia, which are mainly inquired after and command full prices, the market rules easy, on account of the limited demand. New Valencia, 5¾@6c; do layer, 8@8¼c; two-crown loose Muscatel, $1.35@1.40; three-crown, $2.15@2.50; London layer, $1.87½@1.90; California loose, $1.55@1.90; do London, $1.70@2. Turkish prunes are firm, at 6@6¼c; French, scarce and strong, at 8½@8¾c for 60's and 90's. Currants, firm, at 4⅞c; Citron, weaker, at 16¾c. Figs, quiet, at 6½@12c.

California Products in New York.

NEW YORK, Jan. 23.—Seeds—California mustard quoted at 3¾@4½c. No sales reported. California walnuts, 12c.

Local Markets.

BARLEY—The market for sample parcels rules exceedingly strong, with buyers finding some difficulty in meeting their requirements. Quite a number of interior points are purchasing in this market, which is something unusual at this season of the year. On Call, trading has been large, with marked fluctuations reported. Sales on Call to-day were as follows:

May—100 tons, $1.10¼. Buyer season—300 tons, $1.18½; 500, $1.18¼; 300, $1.18; 100, $1.17⅞; 400, $1.17⅝; 200, $1.17½; 500, $1.17½ ₩ ctl.

BAGS—Both buyers and holders are watching the weather, and in the meantime there is nothing doing.

FLOUR—Retail dealers have bought more heavily, in anticipation of another advance soon. Millers, as a rule, report a continued good demand.

EGGS—Under heavy receipts, cool weather, and a moderate demand, the market is easy at lower quotations.

BUTTER—The market is completely demoralized, notwithstanding heavy shipments to the East. This condition the PRESS foretold early in April of last year. The supply of pickled and packed butter is simply excessive and is sold at almost any figure.

CHEESE—The market, under light receipts and a continued good demand, is very strong at an advance.

WHEAT—Holders continue to offer sparingly, necessitating buyers to pay well up so as to have their wants met. The supply in the State is light and well concentrated, with holders indifferent sellers as long as the rain holds off. To force sales, lower prices will have to be accepted; to buy, full figures are paid. On Call, trading has been very heavy the past week. Sales, to-day, were as follows:

Morning Session: Buyer season—1400 tons, $1.69; 600, $1.68⅞; 1600, $1.68¾; 500, $1.68⅝; 1100, $1.68½ ₩ ctl. Afternoon Session: Buyer season—500 tons, $1.68; 1100, $1.67⅞; 300, $1.67¾; 500, $1.67⅝; 1800, $1.67½; 100, $1.67⅜; 1700, $1.67¼; 100, $1.67⅛; 800, $1.67; 560, $1.66⅞; 200, $1.66¾; 100, $1.66⅝; 100, $1.66½; 100, $1.66⅜; 1100, $1.66¼; 400, $1.66⅛; 200, $1.66 ₩ ctl.

[COMMUNICATED.]

Market Information.

Cereals.

Immediately following last week's report the wheat market became stronger, with slight advances each day up to Tuesday under fair buying orders and holders' firm attitude. On Tuesday the Call board weakened off. Answers received from inquiries instituted in leading farming counties show there can be no doubt but the acreage seeded to wheat is very considerably below last year at this date. Take the San Joaquin and Sacramento valleys, and all answers are of a uniform character, viz., that the plant on summer-fallowed and early-dried plowed land is looking exceedingly well, with the outlook favorable to a large outturn with well-distributed rains from now on; but on lands not seeded, work, as a rule, has only been commenced, and as the ground is only wet to on an average of six inches deep, the prospect is not of an encouraging character. A better idea, probably, can be formed of the situation by the following: Mr. Louis Howes owns several thousand acres of land in Stanislaus county which he rents out. His contract calls for his tenants to have the land seeded by January 12, but owing to the extreme dryness the farmers were unable to plow and seed the land, consequently he had to extend the time, and it is only the past week that plowing was inaugurated, and unless heavy rains are had within the next ten days, work will have to be suspended. Mr. Howes says that to insure a crop in Colusa, Sutter, Sacramento, Butte, San Joaquin, and Merced counties, seeding should be finished by January 20, at the latest. Oregon and Washington Territory advices continue favorable. Advices from the East, taken as a whole, are not favorable regarding crop prospects, but, as yet, it is too early to form a correct idea of the outlook in the large wheat-producing States.

Continued dry weather since our last review, together with a large short interest and strong holding, made further advances in the barley market, up to Tuesday, when a bear raid was made and prices shaded off. It is now very generally conceded that the supply in this State is not in excess of our requirements, and with rains holding off a higher range of values is not at all unlikely in the near future. Dealers have taken hold of the market more freely, under the impression that the market will likely rule considerable higher before next harvest.

Oats are steady, but dull at full prices, with a light supply of choice to draw from. Western oats continue to come to hand, but the quality is only fair, and consequently are only taken by consumers under protest.

Rye and buckwheat move slow at unchanged prices.

Corn has a firm tone, with a fair inquiry ruling for the more choice grades, but fair grades are dull. The supply of choice Californian is light for the season, but heavy supplies of Western are against the market.

A sensational report s telegraphed to this coast from Chicago regarding the Bank of Nevada dealing in wheat. From all that can be ascertained, the bank has nothing to do with wheat or anything else further than making advances in money to operators requiring them, provided the margin is safe. But there is no doubt that the bank loans, in a season, several millions of dollars on wheat and barley.

Feedstuffs.

Owing to holders' firm attitude and only moderate receipts, dealers have been compelled to bid up on hay so as to meet their consumptive demand. Choice to extra choice hay is in light supply, necessitating higher bids to induce selling. Other grades are also firmer. Choice to extra choice hay, $13@14.50; good, $11.50@12.50; fair, $9@10.50.

Bran, middlings, and ground barley are stronger, with a good demand ruling.

Feed carrots are slow at unchanged prices.

Fruits.

Notwithstanding that the receipts of oranges the past few days show an increase, still the market holds strong at full prices. The home demand and shipments up north are reported to be larger than at this time last year.

Lemons and limes are slow and in buyer's favor.

Apples more slow, with some difficulty in getting over $1.50 per box for the more choice. The consumption is light.

The following, taken from the *Anglo-American Times*, will prove of interest to horticulturists: "California can unquestionably send fruits to England in fine condition if the growers will properly organize. The fruit that is reaching New York from California is coming in quicker and in better condition, and rising in the market yearly. An immense quantity of grapes reach England packed in sawdust, and California 'beats creation' as a grape-grower. The waste of fine fruit in California is shocking, considering there are so many consumers, and to this subject, at the American exhibition in London, Chicago should devote the closest attention. London is the best market for fruit; for grapes, peaches, nectarines, fine pears, and this sort of fruit California produces in perfection; and the carriage across the continent is now so rapid and by a system so perfect, as well as across the ocean, that the gardens of Southern California should never be at a loss for a sale. The fruit gardens of California are a far better investment than cattle ranches; indeed, we are only now being educated up to the fruit-consuming point, which any nation would be sure to reach, given the opportunity of a full, cheap and continuous supply."

In dried fruits a continued good demand is reported for both home and Eastern orders.

In raisins there is nothing of interest to note, further than a strong tone for the better grades.

Live-Stock.

In beef cattle the market is reported easier, owing to free offerings by sellers. It is claimed that with improved pasturage, herders will be indifferent sellers, when a better tone can be expected. In mutton sheep there is no decided selling pressure, which steadies the market. In hogs there is a fair demand at unchanged prices, Quite a large number of medium horses were sold last week, ranging from $75 up to $150 each. Several matched teams also sold at from $500 to $1000 per span. The latter price was only reached by a span of good steppers, well mated.

For grain or stall-fed animals on foot, the price is about one-third less than dressed, and for grass-fed about one-half less.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7@7½c; first grade, grass fed, 6½@7c per lb.; second grade, 5½@6c; third grade, 5@—c.

MUTTON—Ewes, 5@—c; wethers, 5½@—c.

LAMB—Spring, 6@7c. Yearlings, —c.

VEAL—Large, 7@8c; small, 9½ to 10c.

PORK—Live hogs, 3¼ to 3¾c for heavy and medium; hard dressed, 5½ to 7c per lb; light, 3 to 3¼c; dressed, 5 to 6c; soft hogs, live, 2 to 2¾c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

Cabbages are in good demand at an advance for shipping to distant points. It is claimed that a still higher range will obtain soon.

Celery and cauliflowers are firmer, with a better demand ruling.

The market is better supplied with garden truck, with some shading from last week's high prices.

Potatoes continue to hold strong prices, with choice in good demand, at full figures. New potatoes are coming in more freely, with the quality improving and prices receding.

Onions, if choice and good keepers, are in request at high prices, but cut and otherwise defective are slow, with prices favoring buyers.

Miscellaneous.

In wool, trading continues light. The market has a better tone, owing to the improvement abroad.

In hops there is nothing new to report. Both buyers and sellers are waiting for the coming of spring, when an improved demand is looked for.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way	212,568	154,010
In port, disengaged	86,267	108,000
In port, engaged	35,306	53,076
Totals	334,141	315,086

The above gives a carrying capacity, as follows: 1887, 525,297 short tons; 1886, 498,342 short tons; increase over last year, 26,955.

Overland shipments from California last year were the largest since the railroad opened. We sent East 231,397 tons, against 169,741 in 1885. Most of this was California produce, some of it being coffee, tea, etc., in transit. Some of the items were: Barley, 12,292 tons; beans, 8628 tons; wool, 15,321 tons; wine, 5,548,500 gallons; canned goods, 15,059 tons; raisins, 6347 tons; hops, 2937 tons; flour, 1802 tons; ripe fruit, 11,308 tons; oranges, 13,337 tons; dried fruit, 3045 tons.

Ducks have receded in price, owing to the subsidence of the Chinese New Year demand. Geese are steady, as are turkeys. Choice hens, roosters, and broilers are wanted at full figures.

Beans are strong, with Eastern shipments continued, which keep stocks well in hand.

In seeds there is an inactive demand ruling.

San Francisco, Jan. 20, 1887.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

BARREN HILL NURSERY

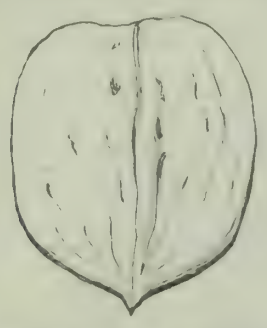
NEVADA CITY, CAL.

SPECIALTIES:

NUTS, PRUNES, AND GRAPES.

The Finest Collection of Nut-Bearing Trees to be found in the United States.

19 Varieties of Walnuts,



—INCLUDING—

CLUSTER WALNUT,

The newest, most prolific and valuable variety ever introduced into this country.

PRŒPARTURIENS,

Or Early-Bearing, or Fertile Walnut, introduced into California in 1871 by Felix Gillet. "Second Generation" Trees, grown from nuts borne on the ORIGINAL tree; 90% guaranteed to be "genuine Prœparturiens," or having retained the surprising characteristics of **precocity, fertility** and **hardiness** of the **original** Prœparturiens. "Third Generation" Trees, grown from nuts borne on **second generation** Prœparturiens, entirely California-grown; vigorous, hardy and fertile variety.

"Second Generation" Prœparturiens.

Serotina, Franquette, Mayette, Chaberte, Gant, Parisienne, Mesange Walnuts.

The leading varieties of Europe, highly recommended for beauty and quality of the nuts, fertility and hardiness of the kinds.

9 Varieties of French Chestnuts or Marrons (Propagated solely by grafting).

7 Varieties of Filberts.

4 Varieties of April Cherries, the earliest and most prolific in California.

207 Varieties of Grapes, including the very earliest Table varieties known, such as Blue Muscat, Ischia, Magdeleine, Malingre, Pearl of Anvers, Bulhery, Luglienda, Dupont, Gros Sapat, etc.

81 Varieties of English Gooseberries, all sizes, shapes and colors, and "true to name."

PRUNES! PRUNES!

LOT D'ENTE, OR "D'ENTE TRUE FROM THE ROOT."

We have ourselves given this name of "Lot D'Ente" to this type, so extensively propagated in the valley of the Lot (France). **True from the root** and not grafted, and which we have introduced into this country. This type of the D'Ente Prune is not at all propagated by grafting, which would do away with its chief qualities of being more vigorous, more **long-lived** than grafted trees, and a **gum-resistant** stock.

ST. CATHERINE, "True from the root."

This kind is altogether propagated **true from the root** in its home, valley of the Loire (France), and offers greater advantages than grafted trees, as being also more vigorous, more long-lived, and a **gum-resistant** stock.

APRICOTS — Boulbon, Esperen, Duclos, Mexico, the shipping varieties of the south of France.

Constantinople Quince—The largest, most precocious and prolific of all quinces.

Ever-bearing Black Mulberry of Spain—Medlar, Sorbus (all those kinds should have a place in all gardens)

Mulberry Trees for Silkworm Feeding. Silkworm Eggs. Sericulture Chart, 50 cts.

☞Send for General Catalogue and Supplement with Chapters on "Nut-bearing Trees" and "Prunes," illustrated with 20 walnut cuts, 5 prune cuts, and numerous other cuts representing Medlar, Sorbus, Black Mulberry, French Chestnuts, Filberts, etc.

FELIX GILLET,

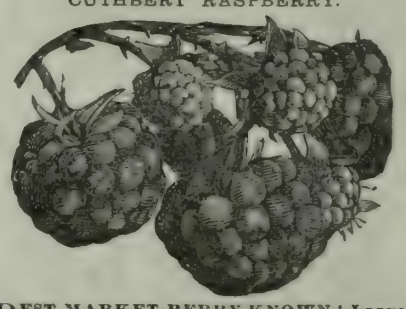
B. V. CUTTINGS.



Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M., 200,000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

TRUE FIG OF COMMERCE.

Send for Catalogue.

SHINN & CO., Niles, Alameda Co., Cal.

33d YEAR. **STOCKTON NURSERY.** 33d YEAR.

WHITE ADRIATIC,

SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Præparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

STOCKTON, CAL., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

WM. H. ROBINSON, Quarantine Guardian San Joaquin Fruit District.
JOS. HALE, County Commissioner of Horticulture.

What Mr. Beyer says: "Please accept my best thanks for the splendid seeds received from your firm. It would be a rather lengthy list if I should name all, but will say that amongst 38 first, and 3 second premiums awarded me at our fairs in Northern Indiana and Southern Michigan, 28 first premiums were for vegetables raised from your seeds. What firm can beat this?"

AUGUST BEYER, So. Bend, Ind.

Seed of this quality I am now ready to sell to every one who tills a farm or plants a garden, sending them FREE my Vegetable and Flower Seed Catalogue, for 1887. Old customers need not write for it. I catalogue this season the native wild potato. JAS. J. H. GREGORY, Seed Grower, Marblehead, Mass

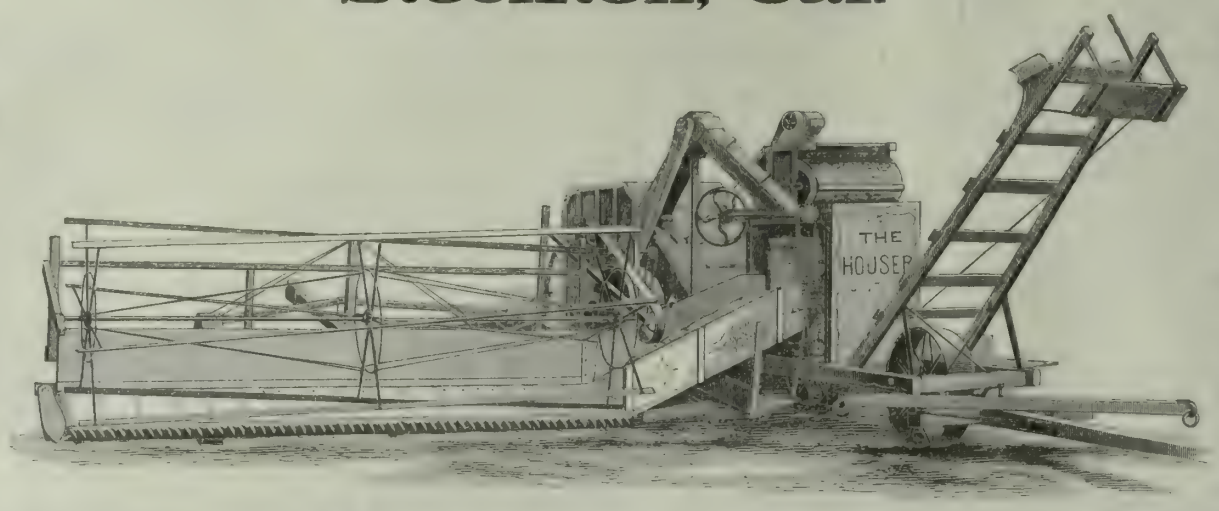
COMBINED HARVESTERS for 1887

MANUFACTURED BY THE



STOCKTON COMBINED HARVESTER AND AGRICULTURAL WORKS,

Stockton, Cal.

PULL AND PUSH.

BELT AND GEARED.

HOUSER,
MINGES,
SHIPPEE,
—AND—
POWELL.

The "HOUSER" BELT IS OUR STANDARD, But will Build Geared to Order.

—ALSO—

MINGES,
SHIPPEE,
—AND—
POWELL.

THE HOUSER COMBINED HEADER AND THRASHER

IS THE BEST KNOWN AND MOST POPULAR HARVESTER ON THE COAST.

It has had 7 years of unparalleled success in our grain fields. A Pull and Belt machine, combining Strength, Durability and Capacity, and as Light as consistent with strength. Every Houser Harvester sold has given entire satisfaction.

We have not space to give a full description of the Houser Harvester, but append as many Testimonials of 1886 as room will permit, showing what the Houser has accomplished, and what our grain raisers think of them. **Save this page—keep it for reference, and read further Testimonials on outside page "Rural Press," issue of January 15, 1887.**

TESTIMONIALS:

WATERFORD, CAL., Dec. 18, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: In regard to my 14-foot Houser Harvester, purchased of you last spring, will say that I harvested 1400 acres, saving the grain well and cleaned it so nicely that it sold readily for A1 milling wheat. I worked 20 animals throughout the season, and my entire crew were boys under 21. They had no trouble in the management, although without any experience with a combined machine. It was the cheapest and easiest harvesting that I have ever done. I have carefully examined other Harvesters in field work, and from my observation and experience can safely assert that the Houser was the lightest draft and most perfect working machine in the field. After finishing my harvesting I rented my machine to a neighbor, who cut between 500 and 600 acres, using 18 animals. I am perfectly satisfied with the Houser and cheerfully recommend it to all grain-raisers. Yours respectfully, R. H. BENTLY.

SMITH'S FERRY, CAL., Nov. 30, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I have two 16 foot Houser Harvesters. Purchased one in 1885, hitched on to it, and run four miles without stopping, and then to turn around, cut right along 1500 acres in 54 days with four men and 20 animals and paid out for extras and repairs only $1.65, and it cost me less than $25 this year to fit it for field work, and have averaged 31 acres a day with it this season. I also purchased a 16-foot Houser of you this season, which run right along and did good work. They are a success. I don't want anything else. Have never run over 20 head of stock. They cut and cleaned the grain well. I harvested 100 acres in two and one-fourth days, yielding 2750 bushels, and a goose would starve on what was left. I farm some 6000 acres, and if I had to head and thrash the old way, would give up farming. I put my grain in the sack as cheap as I used to head and put in the stack. The work is lighter and my stock came off 75 pounds each heavier than they went on. I cannot say enough in favor of my Houser machines. Yours truly, T. G. REED.

STOCKTON, CAL., Nov. 28, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 14-foot Houser Harvester I purchased of you last harvest gave entire satisfaction. I harvested 1200 acres, a part of which was very heavy straw, lodged and badly tangled. I had no trouble in cutting a full swath in all kinds of grain, with four men and 20 animals. I harvested my grain for 80 cents an acre. Say what you choose in favor of the Houser Harvester—you cannot say too much. Yours respectfuily, O. R. SMITH.

HILLS FERRY, Dec. 18, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I take pleasure in stating that I bought of you, in June of this year, a 16-foot Houser Harvester, and cut with it 1400 acres of grain. It gave entire satisfaction, saving the grain well and cleaning it in a satisfactory manner. I consider the Houser Harvester the most profitable farming machine in use and would recommend it to all farmers in need of a combined Harvester. Yours truly, J. C. STURGEON.

MODESTO, CAL., Dec. 7, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 14-foot Houser Combined Harvester I purchased of you gave entire satisfaction. I cut 1180 acres, averaging 26 acres a day; 20 animals pulling it easily through heavy grain. My expenses for the season were, including oil, $22. It is the only Pull Combined Harvester that is so geared as to do away with side draft, and a great saving over the old way of cutting and thrashing; not only in cost but in time.

Yours respectfully, JAMES THOMPSON.

BUTTE CITY, Nov. 25, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I have used a 14-foot Houser Harvester for two years, and cut about 900 acres each year to my satisfaction, averaging 25 acres a day. The land was sandy loam, with heavy crop; worked 4 men and 24 animals. Yours truly, JOHN M. WILES.

WILLOWS, Dec. 5, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: I am well pleased with my Houser Harvester. I cut 1050 acres of barley and wheat in 38 days. My grain all stood up, but had some very heavy straw to handle. My expenses and trouble were about half they would have been by the old mode of harvesting. My machine was a 16-foot cut. I run it with four men and it never cost me one dollar the whole season. Yours truly, J. A. HILL.

TULARE, CAL., Dec. 2, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: In reply to yours of Nov. 19th, we will say that in our knowledge and judgment the Houser Harvester is far ahead of any that has ever yet been built, and is given up to be the best by a great many in this section, even those having machines of a different make. They require less animals to do the work. Our Houser will go through any grain, standing or down, unless the straw is too long to be carried to the cylinder without going in large bunches. It is 14 foot cut. We harvested 1370 acres, taking 56 days—an average of over 24 acres a day—thrashing all the way from 100 to 400 sacks per day. We worked four men and 22 animals, and the team walked along quite easily—was not hard on them. Would rather work my team to a Houser Harvester than a Header. Yours truly, THOMAS & J. L. TURNER.

TURLOCK, Nov. 26, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 18-foot cut Houser Harvester we purchased of you this season came fully up to our expectations in every respect. With four men we cut 3000 acres of very weedy grain in 87 days, an average of 34½ acres a day and 11 bushels per acre. Our land was very sandy, and we used from 20 to 30 horses. Yours truly, OSBORNE BROS.

DIXON, CAL., Nov. 29, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: The 14-foot Houser Harvester I purchased from you last summer was a complete success. I harvested 925 acres in 37 days with 4 men and 18 small mules. They pulled it very easily and came out in better order than after a run of heading the season before. The wheat was mostly heavy, and a portion lodged. My machine did not cost me $5.00 during the whole season. It is ready for another season without any expense for repairs whatever. It is in perfect light-running order. The Houser is the machine for any farmer that wishes to make money. Respectfully yours, R. E. L. STEPHENS.

WINTERS, Dec. 16, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: We harvested our 1300 acres with the 14-foot cut Houser. Some of the grain was heavy and some light, and much of it badly lodged. We used four hands (two of them boys); part of the time we used 16 mules and a portion 18, and all were in better condition when we finished than when we commenced. Our expenses for repairs were only 50 cents. It did excellent work in both cutting and cleaning our wheat, and we find that we put our grain in the warehouse for $1 an acre. Yours respectfully, J. L. RICHARDS, J. R. BRIGGS.

SELMA, Nov. 30, 1886.

Stockton Combined Harvester and Agricultural Works—GENTLEMEN: Our 14 foot cut Houser gave us great satisfaction, having harvested about 900 acres, 80 acres of which (belonging to our neighbor, Mr. John Elder,) yielded 150 sacks more than 80 acres—as good a stand—alongside harvested with at header and thrashed with steam thrasher. Our grain was very heavy; in places lodged flat, and large tracts having tar-weeds nearly as high as the wheat. We could get all the down grain. Yours, very respectfully, A. C. RYCE, JAMES W. RYCE.

WE GUARANTEE OUR HARVESTERS TO DO GOOD WORK WITH PROPER MANAGEMENT.

Please call at our Works, corner Main and East streets, Stockton, examine our Harvesters, read our Testimonials, see or correspond with those who have used our machines. It is to the interest of all grain growers to inspect our HARVESTERS for 1887 before purchasing Harvesting Machinery. Give us your orders soon, that we may fill them for the early harvest. There is no danger of breaking the frame, gearing or shafting, as we build them so strong in every respect that they cannot be broken with fair usage. They effectually stood the severe strain of field work last season, harvested more grain, at less expense, and cleaned it better than any other Combined Harvesting Machines of any description.

☞ **Send for Circulars.** Correspondence solicited. For further information, prices, etc., address

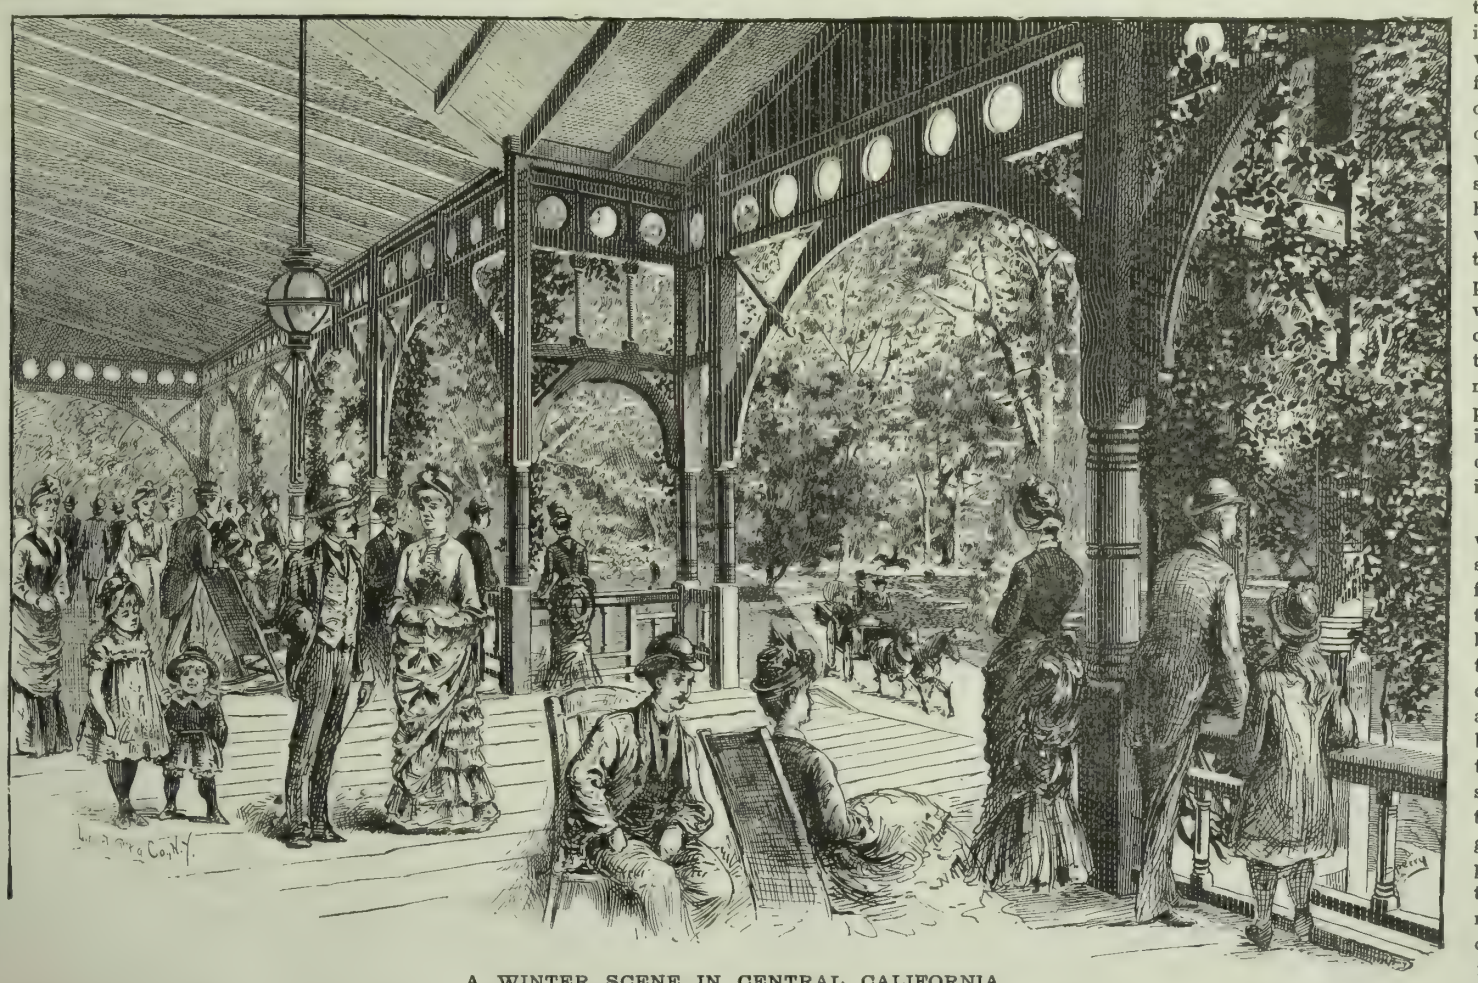
TWENTY-PAGE EDITION.



Vol. XXXIII.—No. 6.] SAN FRANCISCO, SATURDAY, FEBRUARY 5, 1887. [$3 a Year, in Advance; Single Copies, 10 Cts.

California Winter.

Our whole people seem now determined that the world shall have a better knowledge of the climate and resources of California. The heralding of California's charms, which was so well and diligently done by our southernmost counties, has brought them wealth, population and progress beyond the expectations of the most sanguine. The lessons of their success have been so striking and forcible that there is now throughout the whole State a disposition to advance all parts of the commonwealth to the light of public favor. Next week there will be a grand display of the winter products of the San Jose district in Horticultural hall, San Jose. An account of this display will be found upon another page of this issue.

We have given many pictures to show the beauties of the winter landscape in California. The one which appears upon this page presents rather a different phase of the subject, and while giving glimpses of the beauties of nature in the background, prominent position is awarded to the people who are reveling in them. The engraving is especially timely because just at this season our resorts are full of the winter-fliers from all the harsher climes of the world. They have been coming by train-loads, and are still braving the rigors of the overland routes in the hope of dropping finally into the paradisaic mildness of California. They will not be disappointed. They are receiving this year far more sunshine than their contract calls for, for in lauding the climate we always reserve some days for heavy rainstorms, but this year it has been tourists' weather continuously. The engraving shows how the Eastern visitors pass the midwinter in California and the beauties which surround them.

We do not give this picture for our own people; they know it well enough already, but it may please them to send the engraving to distant friends and thus illustrate the claims which perhaps they make for the State in their correspondence. In affirmation of such claims we can say that it would be difficult to exaggerate the delights of life in California; we seldom go out into the air without feeling if not voicing the sentiment, that the climate of California is beyond ordinary powers of description. Let those who do not believe it, try it.

A WINTER SCENE IN CENTRAL CALIFORNIA.

Sawdust in the Truckee.—On the 28th of January there was received in our State Senate a message from the Governor, accompanied by a joint resolution of the Nevada Legislature, calling attention to the fact that citizens of California are throwing sawdust into the Truckee river, thus destroying the food fish in it, and injuring the volume and power of the water, which is used in Nevada for reclaiming desert wastes, and requesting that measures be adopted preventing such injury to the river. In noticing the above practice, the *Nevada State Journal* adds: "This is an old grievance and a positive injury to the people and agricultural interests of the State, that should have been abated years ago. The waters of this fine little river are much injured for irrigation and domestic use below the mills, and the valuable trout fisheries comparatively ruined. Appeal after appeal has been made to California for justice in this respect without effect. The upper section of the river is in California, and her millmen care little for the detriment to us caused by running their sawdust into the river."

Hog Cholera.—J. G. Fredericks informs the Winters *Express* that, since adopting G. W. Scott's remedy, he has lost but two or three hogs by the disease. The remedy consists simply of stone coal pulverized and mixed with the feed given the animals. They eat it greedily, and it seems potent in effecting a cure.

The Stockton Pavilion.—The committee on the building fund have been very industrious and successful in selling life memberships in the San Joaquin Valley Agricultural Association at $50 each. Notwithstanding some differences of opinion as to the best location, about $19,000 had been secured up to last Monday night, and they were still pushing the canvass.

Carp on the Increase.—Stray items now and then go to show that the interest in carp-culture, which was so lively a few years since, left some solid results. For instance, the Stockton *Independent* mentions that one day last week Antone Galgiani shipped to San Francisco, per steamer, 20 large boxes of carp. The fish, which were of fine quality, were caught in the French Camp slough. There is a fair demand for carp in the S. F. markets.

The San Jose Fair.—On another page of this issue will be found quite a full announcement of the preparations for the citrus fair at San Jose next week, with an engraving of the front of the new Horticultural hall. There is every reason to expect the fair will be a notable success, and we advise our readers generally to take this opportunity to visit San Jose. We acknowledge receipt of complimentary tickets to the fair and return our thanks to the management.

The Santa Clara Valley Agricultural Association has decided to hold an exhibition of stallions and agricultural implements, open to all competitors, March 5th.

Pure Wine.

There has arisen what appears to be an irrepressible conflict between two parties in the California wine interest, and the result is seen in many meetings, many words, many resolutions, and a state of feeling quite different from that attributed by history and tradition to the mellowing influence of wine. We do not claim to be censors or doctors on wine topics, and do not propose to run the chances of getting between the upper and the nether millstone in the issue which is now made, by venturing too far on the intracacies of the questions involved. It seems to us, however, that when it comes to a matter of pure wine and wine which may contain anything which is not absolutely poisonous, there is not much question about it.

We have always understood that California wine was to win its way because it was the pure juice of the grape, and we have been taught by those who now seem to object to having a legal definition of pure wine, that the foreign makers and rascally importers in Eastern cities were filling the throats of the people with all kinds of abominations. If this is not so, if California desires the right to put anything in wine so long as it is not rank poison, then we might as well hush up about the rascality of Eastern and foreign wine compounders.

It seems to us that if the California wine interest cannot come fully and squarely upon the platform of pure grape juice, to which nothing is added except it be also a product of the grape, then all the talk and worry and expense of legislation against adulteration has been wasted. It is a nice card for the aforesaid rascally Eastern importers and compounders, to be able to point the people of the United States that California wine men attempted to defeat a definition of pure wine which the California Legislature proposed to make, because, forsooth, it would interfere with their manufacture of a *pure* product. Can there be more than one inference from such action?

San Diego is wrestling with the question of issuing $400,000 bonds for a system of sewerage.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions

Gophers and Morning-Glory.

EDITORS PRESS:—There are a number of things I have been thinking about lately and wish to say, through the medium of your paper, to those engaged, as I am, in horticulture. Number one is

The Gopher.

I think he is the most industrious, persevering, plucky little animal we have to do with. He will live on anything, from cereals and vegetables to the bitter man root, and he is a hoarding little fellow, like the red squirrel or chipmunk in the East, only he does not have so good a place to store in. Hence his activity as soon as the heavy rains set in; for the rains spoil his store that he has laid up, and he is forced to forage till roots mature. Then is the time to bestir one's self if one has trees or vines, for anything is eatable then; and that is the chance for taking advantage of his need and giving him some poison—it matters not whether it be strychnine in beet, carrot or potato, or some of the poisoned wheat prepared and put on the market. I have tried several kinds and found them all good; and as the season of the year is at hand to do the most effective work, I will give my experience for the benefit of others who are troubled with them. There are thousands of them all around me, and I have to keep constantly on the watch.

Trapping is good, but too slow, for in the months of March and April they migrate in large numbers. I think that as many as 20 have come upon my 20 acre place in a single night. They come out of their holes (swarm, you might call it) in the night and hunt new fields. If forage is good, they immediately set about locating themselves permanently.

I use poisoned wheat, as it is the easiest to carry around. I buy it by the gallon, already prepared, and keep a tin match-box full of it in my pocket all the time. When I see fresh signs of work I dig with hoe or shovel down to their main runway and throw in about a thimbleful of the grain. Then I put something in the hole I dug to prevent the loose dirt filling their road, and cover all up dark. When they come along they are sure to find it. That is a better way than throwing it in an open hole, as they frequently shove out wheat, dirt and all as they come.

Eternal vigilance is the price of success. During the long summer heats they rarely come to the surface, but confine their operations to underground, digging and filling up as they go; so it is very difficult to find an open runway to put poison in. They are very fond of carrot, and will eat that when they will not touch anything else; but that is only in the summer when they are hoarding up grain.

Morning-Glory.

And now a few words about the morning-glory. I believe I wrote last summer about a trial made near me to exterminate it. I will say that up to date it has failed to make its appearance. The process was this: About a year ago they piled straw and coarse stable manure on it, about five feet deep, and just before a rain they set it on fire. Immediately afterward they repeated the operation. The weed failed to appear last summer, and the ground is used for gardening, being irrigated at least once a week. Some made its appearance in the road alongside the lot where it did not burn. The patch was about 40x100 feet. If it is not dead it has got a good setback.

I once knew of its being killed in a large field in Iowa. The field was sowed to oats, and just as it was ripening there came a rain, and, with the help of the morning-glory, it all went down, so it was impossible to cut it. As soon as it was dry enough the owner set fire to it and made a complete burn, and that was the last of it so far as I know—and I lived there several years afterward. This method is worth a trial, at least, by those who can apply it.

J. R. SPRINGER.

Woodland, Jan. 27, 1887.

Morning-Glory.

EDITORS PRESS:—Your inquirer upon the above subject in your issue of the 22d inst. is not the only one seeking light upon a very difficult question. The farmers on the Sacramento river are sadly afflicted with this pest in their fields. There are two kinds, known as the "large" and "small." The small kind is much the most prevalent and troublesome. Wherever found, stock eat it with avidity, even to the roots of the larger kind when turned to the surface with a plow. As a consequence, none is ever found where stock range in the summer, continual feeding during the hot season proving destructive to its growth. Its principal season of growth is during the hot months of June, July and August.

In this connection I wish to state some facts recently learned from Judge Snowball and Mr. Daniel Edson, of Knight's Landing, two very intelligent gentlemen and old settlers, both having lived on the river for 35 years. Mr. Edson said that he had a piece of land that he had often sown to wheat for his chickens and the morning-glory had completely "took it." Two years ago he decided to plant the land to fruit trees and did so. Not having any means of irrigating his trees, he determined to supply the want of water by thorough cultivation, and the land was cultivated once a week during the entire season, and he not only got a good growth of trees, but, to his surprise and gratification, he found the next year that he had succeeded in killing the morning-glory. Judge Snowball's experience is similar, only he had but a small place affected where he had planted some grapevines, and he cut it off with a shovel whenever it showed itself above the surface, going over the ground once a week, or oftener if necessary.

From these facts it is evident that the only way to destroy the morning-glory is to keep it from growing, destroying it as fast as it comes above the surface for a certain period. In these cases one season was enough; perhaps in some others two would be necessary. During the hot season it grows with great rapidity, and those that would conquer it must be persistent, but the reward will be worth the effort, for, as far as known, it grows only on the very best land. M. C. WINCHESTER.

Crofton P. O., Yolo Co.

Salt for Morning-Glory.

EDITORS PRESS:—If "Morning-Glory" will use salt after the following directions he will have no trouble to get rid of the weed in time, say from two to four years: First put on some straw and burn it off (if in the fall). Apply the salt, two inches deep, before the rains set in, so it will have a chance to melt. Do not plow nor harrow the patch when plowing the rest of the field. The summer after, look carefully in and around the salted place for any straggling plants, and if any are found salt them; and so on till all trace of the weed has disappeared. In about three years (if no more plants can be found) the patch can receive a heavy coat of manure and will soon be as good as the rest of the field. Vigilance in salting the stray plants is the key to success in this.

I know this is a remedy that never fails. I have tried it on a number of patches (aggregating about four acres) and have succeeded in totally destroying the weed. OBSERVER.

Alameda Co.

HORTICULTURE.

Assessment of Fruit Trees and Vines.

On January 28th, in the Assembly at Sacramento, Constitutional Amendment No. 1 was next taken up for consideration—an Act to propose an amendment to Section 1 of Article XIII of the Constitution, relating to revenue and taxation. This amendment exempts growing trees and vines from taxation. It was referred to the Committee on Constitutional Amendments. The majority of the committee reported against it. A minority report favoring its passage was also brought in and read, as follows:

"The undersigned, being a minority of the Committee on Constitutional Amendments, to whom was referred the Act proposing an amendment to Section 1 of Article XIII of the Constitution of the State of California, relating to the exempting from taxation, under the laws of this State, growing vines and fruit trees, most respectfully beg leave to dissent from the majority report of said committee. The resources of our land are drained to the fullest capacity in support of State, county and city governments. Nearly every enterprise in this State depends ultimately upon the productiveness of our land for its support and prosperity. The profits of the farmer go out to enrich and sustain people engaged in all the other industries of life. A failure in the crops of the farmer produces stagnation in the business of the country, and its prosperity or insertion depends upon the productiveness of the earth. With proper encouragement every fertile spot of land in this State will be set to vines or trees that is not already utilized with that particular improvement appropriate to its locality. If the farmer is obliged to plant his vines and trees, and pass through years of experiment, labor and expenditure, without profit, but with an increased taxation upon his experiments, labors and expenditure, nothing would be more calculated to stifle in its infancy those industries upon which the wealth of the State is destined to be based. The laws and rules of taxation are founded upon policy, and not upon logic. Upon the principle of logic there is no reason why any property should escape taxation. The oak tree which furnishes acorns is a valuable assistance in some parts of the State, at least it represents value in firewood. The natural gases that spring from the ground, the alfalfa and other grasses that are planted, are not taxed, and should not be; but if we argued from such principles of logic the rules and system of taxation would necessarily include these articles. The fruits of the soil while growing should be considered in taxation only in so far as they illustrate the value and capacity of the land. There is as much policy in exempting a certain class of articles from taxation as there is in appropriating from State funds money to encourage and protect these articles. The question, then, is not 'do trees and vines represent value,' but whether it is the policy of the State to protect and encourage the man who seek the hills and mountains to perform his labor, expends his capital, and spends his life in enriching the coffers of the State in building up its wealth and in beautifying its domains. Whether the men who exhaust all their wealth in experiments, and until its success is assured, profitless, and which is attended with more than ordinary hardships, should need encouragement, is a question we candidly submit to the consideration of this house, and most earnestly recommend the submission of the policy contained in said proposed amendment to the people of the State of California."

Signed by F. L. Coombs, Russell Heath, John W. Bost.

The committee reports upon the bill were the subject of much discussion. The minority report was finally adopted.

Speeches were made against the proposed amendment by Ellsworth, Matthews of Tehama, Knox, Brierly and Ohleyer. In favor of it by Wilcox, Coombs and Heath. The vote on the adoption of amendment stood ayes 35, noes 27, and as it requires a two-thirds vote, was lost. Wilcox gave notice of reconsideration.

We shall watch for the future course of the measure.

Horticultural Society Meeting.

An informal meeting of the State Horticultural Society was held in this city Jan. 28. The attendance of fruit-growers upon the meeting of the Fruit Union the preceding week prevented their coming to the city again so soon, and therefore the meeting failed of a quorum. Prof. Hilgard occupied the chair, and Secretary Wickson read several communications from California representatives at Washington in regard to the establishment of experimental stations in connection with the agricultural colleges.

Congressman W. W. Morrow wrote saying that he would present the resolution of the California State Horticultural Society in the House at once, and do whatever he could to aid in securing consideration of the bill referred to.

Senator Williams wrote: "I am in favor of the Hatch experimental station bill, and expect that it will pass this session."

Congressman H. H. Markham wrote: "I will do all I can to promote the passage of the bill."

Congressman C. N. Felton wrote: "I am in favor of the measure, and shall take pleasure in assisting in its passage."

Mr. Wickson continued to say: "By the telegrams from Washington in this morning's papers I find the following:"

Edmunds offered an amendment that nothing in the act shall be construed as binding the United States to continue these appropriations, but that Congress may at any time suspend or repeal all or any of the provisions of the act. Agreed to. The bill was then passed without a division.

"So there can," said he, "be little doubt about the bill passing, as it has always been more popular in the House than in the Senate."

The secretary also read a communication he had received from H. J. Rudisill, of Riverside:

RIVERSIDE LAND AND IRRIGATION CO., RIVERSIDE, December 28, 1886.

Dear Sir: It requires about $500 to secure all the silver and gold medals won by exhibitors from our State, and a plan is proposed in this section to ask our Legislature to donate that sum from money returned by Colonel Andrews to the State, with the condition that for two or three years the medals shall be placed en masse in exhibition at all State and district fairs that will give the proper care to them. As you are in communication with many of those entitled to these medals, will you please place the matter before them, and if it meets their approval, ask them to direct the attention of their Senators and Representatives to the matter at once. Yours truly, H. J. RUDISILL.

It was thought to be too late to attempt any action at this session of the Legislature, even if otherwise thought desirable.

Insect Pests.

There was a general discussion relating to insect pests and their repression. On another page we give the new bulletin of the State Inspector concerning winter washes, also an outline of a bill now pending before the Legislature.

For the next meeting the subject will be the French method of curing prunes and the cultivation of cork oak as shown by recent French publications: "The Cultivation of Cork Oak," by Professor Hilgard, and "The French Method of Curing Prunes," by W. G. Klee.

The meeting then adjourned.

February the Month to Graft the Fig.

EDITORS PRESS:—At your request I send you a description of my method of grafting the fig. I saw off the limb; split it through the center. If the limb is two to four inches in diameter, I put in two grafts—one next to each side or bark. I cut the wedge-like taper about four inches long and have one or two buds only. The scions should be one-half inch or less in diameter. When the grafts are both forced into the split there will be considerable space unoccupied. I fill the space with *hot* grafting wax—that is, I heat my wax so hot as to *flow very readily*. I then with a paddle cover the end of limb around the grafts, also the ends of grafts, also the edges of graft and limb, after which I take a strip of muslin one inch wide and three or four feet long (must be strong), and wrap the limb and graft, commencing an inch or two below the lowest extremity of the split, wrapping and drawing the muslin very tight, at the same time waxing each turn of the cloth with the hot wax, using the paddle. When wrapped to the top of the stub, wrap the muslin between and around each scion, waxing carefully and thoroughly. The whole secret is to keep the air excluded from the cut. Fig bark shrinks very quickly—so quick and so much that the graft has not time to take before the bark is drawn away from it and the sap channels are dry. The *hot* wax is the only perfect way to protect it from the air, and the close and tight wrapping is to prevent shrinking of the bark. In other respects the rules of any other grafting hold good. A. M. GASS.

San Diego, Cal.

Preparing Lemons for Market in Sicily.

EDITORS PRESS:—The reason that Sicilian lemons command a high price in our markets while California lemons are ignored is because our orchardists do not understand the proper method of curing them. A lemon ripened on the tree is valueless. It is not juicy, it rots easily and is thick-skinned and of too great size. If a connoisseur in such matters, you will note that imported lemons do not rot easily, are thin-skinned, juicy and of uniform size. Go to a lemon orchard in Sicily and you will find the fruit being picked when perfectly green and placed in boxes of dry sand, where it remains for four or five months to ripen; then it is sorted and shipped. None but perfectly sound fruit is packed for shipment, and, as the peel has become hardened, the danger of rotting is reduced to a minimum. Probably if California lemons were properly ripened in this way the complaints of their being bitter would cease. This fault is not in our soil nor in the varieties grown, but in curing.

Santa Paula, Ventura Co.

Stunted Walnut Trees.

EDITORS PRESS:—Will you please ask some of your expert correspondents to answer the following through your columns?

I have a few English walnut trees, 10 years old, which are very much stunted by having been planted too near a row of cypress and gum trees. They have never borne any fruit. Will it pay to dig them up carefully and plant them where they will have more room? or would it be cheaper to get a fresh lot from the nursery? Does a tree ever resume its growth after being stunted so long a time?

Benicia, Cal. V. NEWMARK, M. D.

THE FIELD.

New Method of Cleaning Wheat.

Millers and manufacturers of flour at the present age of progress have undoubtedly experienced the long-felt want of a thorough cleaning system whereby the crease of the wheat berry can be successfully approached and the impurities therein entirely removed. By the usual course of cleaning wheat by machines alone, the grains of wheat are not thoroughly scoured, as the creases in the wheat retain more or less dirt, smut, etc., that the brushes, screens, etc., do not reach.

This can now be accomplished by a process recently patented by Mr. Elias Reist, of Hamburg, N. Y. The method relates to cleaning wheat, in connection with any machine for cleaning and scouring grains, by the aid of bran put in with the wheat before or during the cleaning process.

To insure a thorough cleaning, and thereby greatly improve the quality of flour, the coarse finished bran that comes from the wheat itself is taken from the bran duster and run in with the grains into any wheat cleaner. The bran aids greatly in cleansing out the crease dirt in the grains, and works it over and polishes it much better than by any machine without its use. Especially does it remove the gum on the grains which brushes and scourers do not usually accomplish.

The coarse bran that the mill makes at the time the wheat is being ground is sufficient for the cleaning. This will be, of course, according to the quantity of wheat being run through the scourer, only the coarse bran being used. The amount of bran used is, however, not considered important.

It is well known that the brush machines are as likely as not to brush dirt into the grain creases. By the use of loose bran the dirt adheres to the bran rather than to the wheat, and, in working the berries over, is continually wiping and polishing them.

A few of the principal points of advantage claimed for this method are: A saving of power, as the wheat may be cleaned better with a less number of machines; as the bran is a powerful cleaner of itself, speed may be reduced, and consequently there will be less danger of fire and hot journals; economy, as all the machines using bran in connection may discharge into the bran bins, thus saving all the scourings. As the bran protects the berry during its course of cleaning, there will be no wheat broken, which is a great saving that alone will in one year nearly pay for the entire right to use and make all necessary changes for its use. It is the only method of polishing the entire surface and removing the dust out of the crease

without first splitting the berry. On wheat that has become musty on its outer surface the bran acts as a disinfectant, as the crease can be thoroughly wiped out and the berry cleansed sufficiently to be ground into family flour of good quality. Purer flour can be made after the crease has been thoroughly scoured and the impurities removed, as brush machines are apt to brush dirt into the crease to a certain extent. After the wheat has been scoured thoroughly and the bran separated from the wheat by aspirators, if desired, it may be run through any line of brush scourers that will not in any way break the wheat, but in all cases, to remove the loose crease impurities, it must again be treated with bran; otherwise it cannot be entirely cleaned.—*Am. Inventor.*

Our Leading Farm Products—Their Value.

In an address before the last annual meeting of the American Association for the Advancement of Science, Prof. Wiley, chemist of the Department of Agriculture, gave the following statement of the leading agricultural products of the country, taking an average of several years, the said statement being based upon the figures furnished him by Hon. J. R. Dodge, statistician for the department. It will be understood that the values of several of the products, as grain, hay, etc., are repeated in part in the products of beef, pork, mutton, poultry, etc. The statement is as follows:

Indian corn	1,900,000,000 bu	$627,000,000
Wheat	450,000,000 bu	440,000,000
Dairy (milk, butter and cheese)		370,000,000
Hay	45,000,000 tons	360,000,000
Beef, veal (dr'sd)	4,000,000,000 lbs	360,000,000
Pork (dressed)	5,600,000,000 lbs	360,000,000
Cotton	3,120,000,000 lbs	250,000,000
Poultry products (estimated)		200,000,000
Oats	600,000,000 bu	168,000,000
Potatoes	200,000,000 bu	100,000,000
Fruits		100,000,000
Vegetables		50,000,000
Wool	300,000,000 lbs	45,000,000
Mutton	500,000,000 lbs	45,000,000
Tobacco	483,000,000 lbs	42,000,000
Barley	60,000,000 bu	33,600,000
Rye	25,000,000 bu	14,000,000
Sugar	250,000,000 lbs	12,500,000
Molasses (syr'p)	45,000,000 gals	11,250,000
Buckwheat	13,000,000 bu	7,280,000
Rice	98,000,000 lbs	4,900,000
Honey	30,000,000 lbs	4,800,000
Beeswax	1,300,000 lbs	325,000
Other soil prod., seeds, wines, etc		408,945,000
Total		$3,994,490,000

Making a sufficient allowance for values that are repeated as above stated, the total of these products will not fall below $3,500,000,000 per annum.

THE CEREAL ESTIMATES.—Dispatches from Washington of Jan. 13th state that the Department of Agriculture estimates of the area, product and value of corn, wheat and oats for 1886, for permanent record, are compiled. The official work of the year has been thoroughly reviewed, with the aid of State co-operation, and all available data of crop productions and aggregates are substantially those recently reported. The corn crop, in round numbers, aggregates 1,665,000,000 bushels, grown on 75,000,000 acres, and has a farm value of $610,000,000. The yield is 22 bushels per acre, 4½ bushels less than last year. There is an increase of area of over three per cent. The average prices have increased to 36.6 cents per bushel. The aggregate product of wheat is 457,000,000 bushels, from an area of nearly 37,000,000 acres, having a farm value of $314,000,000. The average value is 68.7 cents per bushel, against 77.1 for the previous crop and 64.5 for the great crop of 1884. This is 35 per cent reduction from the average value between 1870 and 1880.

THE VINEYARD.

The Planting and Grafting of Resistant Vines.

University Experiment Station, Bulletin No. 64

In view of the growing interest in the important matter of rendering our vineyards proof against the attacks of the phylloxera, and of the delay in the publication of the report for 1886, in consequence of the accumulation of matter at the State printing office, an abstract of the main points discussed somewhat elaborately in the forthcoming report, is here given, in order that those contemplating the use of resistant stocks for this season may be assisted in their choice of varieties.

The true criterion of resistants is that the vine and its roots will not only outlive the attacks, but flourish and bear remunerative crops, under the same conditions under which the more sensitive European vines will succumb.

But every vine, like every other plant, is subject to certain conditions of soil, climate, and atmosphere for its welfare. Any vine, or any other plant, may be planted where from unfavorable conditions it will not flourish, and where a slight addition to the adverse influences may cause it to either die or maintain only a feeble existence, useless to the cultivator for profit. The resistant vines are no exception to this general rule.

Adaptation of Vines to Soils.—It is not reasonable to suppose that a vine which is naturally at home in rich, heavy lowland soils, should not only flourish but supply extra strength against attack from without, in thin, meager uplands, or on land exhausted by long cultivation; nor that a vine whose hardy roots resist the phylloxera when growing in its natural location on dry, rocky uplands, will necessarily retain this character when grown in rich, moist lowland. To a certain extent, cultivation does modify and equalize the natural soil-conditions, especially when it is thorough and is faithfully kept up. But there always remains a certain margin of natural adaptation which must be respected even in the cultivated plant, and the more because climatic and seasonal conditions may render a strict fulfillment of the best culture impracticable, or unavailing for the time being. Those cultivating adobe soils will appreciate the importance which this consideration may acquire, not only for one but for several consecutive seasons.

Species and Varieties of Resistants.—Of the American species and varieties that, for practical purposes, may be considered as resistant under proper conditions of soil and moisture, the following are the most prominent:

1. The *Vitis riparia*, or northern riverside grape and its cultivated varieties, of which the Taylor and Clinton are the chief. The resistant power of the latter is now, however, pretty generally admitted to be inferior to that of their wild prototype, although they are better adapted to a great variety of soils. The *Riparia* is in its wild state emphatically a "riverside" grape, which in its natural condition ascends into the uplands only exceptionally, when these are unusually moist and fertile. Under cultivation, nevertheless, it does well in good upland, but is of slower growth than in its natural *habitat*. It does not frequent the heavier soils as much as the alluvial loams of the upper Mississippi valley. It is of very long-jointed, slender growth, so that its canes, while of great length and bearing abundance of foliage, are often borne by a surprisingly thin trunk, which is not as easy to graft as most other varieties. The cuttings root with great ease, but generally only a portion, varying according to the soil and seasons from one-half to three-fourths, are large enough to be successfully grafted the third year; seedlings arrive at about the same condition the fourth year from the seed. To offset these disadvantages, the *Riparia* is now usually considered the most generally and tenaciously resistant toward the attacks of the phylloxera. It is very little liable to mildew.

2. *Vitis cordifolia*, the southern riverside grape, so greatly resembles the *Riparia* that for some time it was not distinguished as a separate species. While it is undoubtedly a very resistant stock, the fact that it is at home in a region noted for its perpetually moist atmosphere, seems to render it less promising for general success in California than the *Riparia*, over which, so far as known, it possesses no special advantages, save, perhaps, in the case of very heavy adobe soils, to which it is better adapted than the *Riparia*.

3. The *Vitis aestivalis* or summer grape is a native of the uplands of the States east of the Mississippi, and is at home on loam soils of good or fair fertility. It also descends into the lowlands of the smaller streams, so that it and the *Riparia* vine are not uncommonly seen side by side. But it is rarely if ever found in the larger bottoms, though quite at home in the lighter and usually well drained "second bottoms" or "hammocks." Unlike the riverside grapes, it objects to "wet feet." It is little subject to mildew. Of the cultivated varieties of the *aestivalis* grape, those of chief interest as resistants are Norton's Virginia, Herbemont, and the well-known Lenoir. The cuttings of these, as well as the wild vine, root with some difficulty; they should be rooted in nursery, and not in the vineyard itself.

4. *Vitis rupestris*, the sugar or rock grape of Missouri, is a very hardy vine, at home on rocky knolls and hillsides, where its wiry roots extract nourishment from the scanty soil and the crevices of rocks, in a climate already partaking somewhat of the aridity of the great plains. It would, therefore, seem to be of considerable promise for the foothills of California especially; of its resistance to the phylloxera there can be no question. It is, however, not easy to root from cuttings, being in this respect like the *aestivalis* varieties. In my personal experience I have found it to be of slow growth on rich upland adobe, even more so than the *Riparia*, so that very few cuttings were ready for the graft the third year; moreover, even when the top of the stock is sufficiently stout for grafting, that portion generally tapers off very rapidly downward, so as to afford very little "grip" for the graft, which has to be tied in very thoroughly. The successful grafts, however, have shown a vigorous growth and seem well joined. The multitude of wiry suckers which the stock persists in putting forth to the end of the season constitutes an inconvenience, shared to some extent by the *Riparia*, and least of all by the *Californica*, which soon gives up sprouting its easily detached suckers. The *Rupestris* is least subject to mildew of all the resistant stocks.

5. *Vitis Californica*, the California wild grape (not, as some still imagine, the "Mission" vine, which is very sensitive toward the phylloxera), has been prominently brought forward as a resistant stock for use in its native State, to the climate of which it must be presumed to be especially adapted. This reasonable presumption gives it so great a claim to attention and renders its pre-eminent success so probable, that nothing but the strongest proof of its non-resistance should induce us to relinquish its use; but experience speaks strongly in its favor. Even a cursory examination of its root habit shows that it understands the climate thoroughly. Two or three strong cord-like roots start a few inches below the surface of the ground, from a short but very stout trunk; and, without branching or emitting rootlets, they go almost directly down for from 8 to 12 inches, according to the nature of the soil. Then they begin to branch, but still with downward tendency, and without splitting into fine rootlets until they are fairly below the point to which the summer drought is ordinarily expected to reach. Unlike the *riparia*, its roots are thick and fleshy, or cartilaginous rather than wiry. It goes without saying that the *Californica*, like any other vine, may be planted in the wrong place, where its half-starved roots become hardened, and instead of yielding so as to render deformation from the bite of the phylloxera impossible, will curve and curl, and finally die and decay.

The *Californica* is very liable to mildew, and it is probably from this cause that it is but rarely found on the coastward slope of the Coast ranges, which are much exposed to the sea fogs. There is, however, no difficulty in protecting it by repeated sulphuring, up to the time of grafting.

6. *Vitis Arizonica*, the wild grapevine of Arizona and Sonora, resembles somewhat the *Californica* in its general appearance and habits of growth. In rapidity of growth it seems to be nearly or quite equal to the *Californica*, and quite its equal in resistance to the phylloxera, as well as to drought. It is subject to mildew nearly as much as the former. Its roots, also, seek the depths of the soil before branching, and the stock is stout and easily grafted. From experience had at the University, it deserves more attention than has heretofore been bestowed upon it.

Special Adaptations of the Several Resistant Stocks.—There is no reason why, in grafting grapevines, as great care should not be exercised in the selection of stocks adapted to the soil, and to the variety to be desired for bearing purposes, as is done by orchardists here and elsewhere. Just as every intelligent fruit-grower will carefully consider, when planting an orchard, what will be the stocks best adapted to his soil and locality, so the grape-grower must consider, so far as experience or other considerations can forecast it, which among the resistant grape stocks will be likely to do best in his vineyard. An improper choice will be just as fatal to success in one case as in the other; there is no *one* stock that is adapted to *all* cases.

In none of the stocks mentioned above does there appear to be any intrinsic difficulty about making a sound joint with the *vinifera* varieties. But when a strong grower is grafted upon a weak one, there may be difficulty on account of the weak base of a stouter trunk. In the reverse case there is no trouble, for a relatively stout base for a weak trunk is desirable. The strong-growing *Californica* will, in its own home, furnish just such a stock for all, or almost all, the *vinifera* varieties, which it exceeds in growth whenever planted in appropriate soils.

In my personal experience with the *Californica*, I have found only one variety which seems to exceed it a little in growth when grafted, viz.: the *Clairette Blanche*, which is an extraordinary grower. In the case of five other varieties grafted in my vineyard (Black Burgundy, Palomino, Mondeuse, Verdelho, Cinsaut) the graft junction is at the end of the season either straight (*i. e.*, a cylinder), or like a wine bottle right side up, the *Californica* stock forming the body of the bottle, the graft the neck. There can be no doubt that in these cases the stock will push the growth of the grafted variety.

Where the same varieties have been grafted on the *Riparia* or *Rupestris* stock, the case is just the reverse. Here the graft junction resembles a bottle placed *neck down*, and it is at least questionable that the stock will be able to supply fully the needs of the graft, and pretty certain that it will not tend to push the latter beyond what its growth would be if on its own root. In the case of the *Rupestris* and *Clairette* the disproportion is painful to contemplate, the quill-like stock appearing absurdly inadequate to the support of the graft that has swelled to the proportion of a man's thumb. That this is felt by the stock is apparent from the frequency with which the grafts have thrown out their own roots when on either *Rupestris* or *Riparia* stock, thus defeating the primary object of grafting at all. No such tendency is seen in the same varieties where they are on the *Californica* stock. But this, it must be remembered, happens on a soil peculiarly well adapted to the *Californica*, and on which the *rupestris*, at least, should not have been used at all.

Experience which appears in some respects the reverse of my own, has been had by the Briggs Bros. near Winters, in a light alluvial soil.

It appears that in this case the *Rupestris* finds, in the more congenial lighter soil of the Putah alluvium, favorable conditions which are wanting in the rich adobe of Mission San Jose, yet without losing its resistant qualities, which, on the whole, probably exceed those of the *Californica*. The latter represents among the vines what the plum stock does among stone fruits, while the *Rupestris* (and probably the *Aestivalis* varieties) are the parallels of the peach or almond stocks; and doubtless they are as little interchangeable as are the two orchard stocks.

As has been shown in a former bulletin (No. 24) the *Californica* appears in the uplands preferably on heavy, rich soils, although in the valleys it does well on a great variety of lands. In the red gravelly uplands of the Coast Range and foothills, it should probably be replaced by some of the *Aestivalis* stocks, such as Lenoir or Herbemont.

Rapidity of Development of the Several Resistant Vines.—That in our climate the *Californica* develops most rapidly of all, especially as to making a stock of grafting size, is hardly doubtful. The experiments made at the University from 1881 to the present time, as well as personal experience in my vineyard at Mission San Jose, fully corroborate the claim that the *Californica* is a stock of extraordinary vigor on favorable soils, and will bear very early grafting. It will be remembered that in the first experiments made with the grafting of seedlings at the University, in 1881, of seedlings one year old about 40 per cent were found stout enough for grafting, and were successfully grafted; a thing not even remotely possible with any other species of vine yet tested, and least of all perhaps with the *riparia*, whose seedlings are of exceedingly slow development. Thus, of a plantation of *riparia* seedlings located on exceedingly favorable soil on Mr. John T. Doyle's place at Cupertino, not one could have been grafted when two years old, and only a few were fairly graftable when four years old.

At my own vineyard at Mission San Jose, the stocks from one-year-old *Californica* seedlings planted in spring of 1884 were, without exception, large enough to be grafted in spring 1885, despite a very unfavorable season. They were not actually grafted, however, until March and April, 1886, when, notwithstanding the extraordinarily dry season preceding, the trunks ranged in thickness from a minimum of two-thirds of an inch to fully 1¼ inch, and sometimes more; so that two grafts could readily have been inserted in a large portion of them. Of the *Riparia* cuttings planted at the same time as the *Californica* seedlings, few exceeded one-half inch in thickness, and very many were too slender to be grafted with any prospect of success, especially in view of their large pith. Of the *Rupestris* cuttings planted at the same time, few reached the thickness of half an inch, and many appeared no thicker than when planted, three years before, except that they had at the top a short head, like that of an old short-pruned stock, but too short to be of any use in making the graft.

In this case, however, all the conditions were most favorable to the *Californica* stock, as observed on the wild vine on its own ground.

As to loss or gain of time in grafting, a loss of 10 per cent of the grafts made in the field must ordinarily, I think, be considered a very favorable result; it will more frequently amount to between 12 and 20 per cent, varying not only according to the skill of the grafters, but very largely depending upon the condition of the grafts used, and upon the weather following the operation; also, to a not inconsiderable degree, upon the nature of the soil. The influence of the latter becomes apparent from the fact that vine-grafting must be done either several inches below the surface of the ground, or, if done at or near the surface, the soil must afterward be piled up around the graft for protection against drying-out. In the case of an adobe soil, in which the water may remain near the surface for several days after a rain, the intrusion of muddy water into the cleft or cut, and a consequent weakness of the junction and even risk of failure to unite, may take place. Hence, as such soils in good tilth retain moisture very strongly, I incline to think that in them the grafting is best done within one or two inches of the surface, the piling-up of the earth around the graft being relied on to prevent drying. With the same view, my personal experience inclines me to favor late* rather than very early grafting, because then the free flow of sap from the stock keeps the graft in good heart.

I think the average experience will be found to be that there is a loss of one year, or thereabouts, when a vineyard is grafted instead of being allowed to bear directly from the cuttings; and that on the large scale the cases of gain in time will be very exceptional.

Propagation of the Resistant Stocks.—Of the above species the *riparia* is the one of which the cuttings can unhesitatingly be planted directly in the vineyard; the *Arizonica* is next; while the rest, including the *Rupestris*, should preferably be rooted in nursery. Probably it would also be best to graft them there.

From what I have seen of the growth and habits of *riparia* seedlings, I should not incline to their use in preference to cuttings, on account of their delicacy and extremely slow development. It is quite otherwise with the *Californica*, of which even very small seedlings grow very readily and rapidly, and are very tenacious of life under very adverse circumstances.

Considering the advantages to be gained by grafting on vigorous resistant stocks in regions menaced by the possible importation of the phylloxera, one season's delay (which I think should be looked for by those who graft) should not deter any one from taking this needful, and with proper care as to adaptation, ultimately profitable precaution. E. W. HILGARD.

Berkeley, Jan. 28, 1887.

* "Late" as regards the stage of development of the leaves, but not necessarily late in the season.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The Legislature.

The Legislative mill moves slowly. More than half the time fixed by the law as the limit of the session under way has passed, and the net result is about 22 minor bills enacted in the Assembly and three or four in the Senate. After passing through the throes of electing a Senator, the junketing fever, we are now in the midst of what Tennyson would term the season of the "tonguesters" and the glory of parliamentary "babble." And all this going on at an expense to the people of this State of $5000 a day. As it takes some time for such a body of men, many of whom are callow and inexperienced, to get neatly fitted into the harness of business, we may expect the members to become more vigilant and attentive as bills begin to approach the second and third reading.

For a few days past the absorbing topic at Sacramento has been the proposition to divide Colusa county, and create a new county to be named "Glenn." The 717 petitioners contend that it is asking too much of the most of them to travel from 50 to 60 miles in order to transact a little business at the county seat. The bill has strong opponents as well as advocates, and the result will be watched with interest as a precedent, as there are several large counties in this State that many think could be governed more effectively were they divided.

The consideration of the forestry bills was made the order of the day in the Senate last Monday. The first, a concurrent resolution asking Congress to withdraw the government timber lands until a survey could be made for the purpose of ascertaining how far the devastation of the forests of this State affected the rainfall, winds, etc., was firmly opposed by the representatives from the lumber counties. The bill enlarging the powers of the State Board of Forestry and providing $30,000 for its expenses during the next two years was so badly mangled with amendments that its author would not know it. These two bills were made the special order for to-day. The bill to encourage tree-planting was treated more kindly. The 22d of February was fixed for Arbor Day, and $2000 were appropriated for this purpose.

The anti-debris question still agitates the minds of members in both the Senate and Assembly, and has caused some heated discussion and is likely to cause more. The Senate bill came up last week, and, after a short and sharp passage at arms between the valley and mountain men, was referred to the Committee on Mining Drainage and Debris. In the Assembly the Ohleyer bill was made the order of the day for Thursday of this week.

In regard to the irrigation problem the conviction seems to be gaining ground that it is best to move slowly; that no comprehensive and permanent scheme can be eliminated from the vague and conflicting notions entertained by the people and their representatives. That there is wise advice in the suggestion of the State Engineer when he says:

> The question is not in this State a mere quarrel between two influential contending cliques of enterprising men—as, unfortunately, it has been made to appear—but it is the same here as elsewhere in similar climates, a question of public moment, of the first importance, and which will not remain in quiet until deliberately and fully dealt with. In other countries, in order to secure such treatment, the subject has been relegated to special commissions. It would appear, from experience thus far, that, sooner or later, this action will be taken here, and it becomes my duty to say that the sooner it is done the better for the people and the State. Matters in this connection are becoming complicated and more difficult to deal with every year.

Had such an investigation been set on foot three or four years ago, this vexed question would now be near solution. The Senate Committee on Irrigation has resolved unanimously to report that the Langford bill, abolishing the office of State Engineer, do not pass.

It is believed that Senator Caminetti's bill to create a new agricultural district composed of Amador and Calaveras counties will no doubt pass the Senate. It is also believed that the bill to create a viticultural station somewhere on the mineral belt will become a law. The Senate bill relating to the repairing of roads and highways, and empowering Boards of Supervisors to pay for the same out of the General Fund when the road fund is exhausted, has passed to engrossment.

GRANGE MEETINGS AT SANTA ROSA.—The Santa Rosa *Democrat* speaks of the meeting of the Sonoma County Pomona Grange, held in that city on the 19th ult., as a very important one. The Bennett valley, Sebastopol and Santa Rosa Granges were well represented. Committees were appointed to make preparations for receiving the State Grange, and to arrange for the entertainment at the April meeting of the Pomona Grange. S. T. Coulter introduced a resolution, petitioning the Legislature to memorialize Congress to amend the Constitution, and provide for the election of U. S. Senators by the direct vote of the people, which was unanimously adopted. It was proposed that the Grange, at its next meeting, adopt the new badge recently adopted by the National Grange. At a meeting of the subordinate Grange, on the 22d, J. Roberts, E. A. Rogers and Chas. Bonner were commissioned to co-operate with the Pomona Grange in regard to the Citrus Fair, to be held in Santa Rosa. The committee arranged to hold a meeting in the City Council chambers which the farmers and business men generally of the county were invited to attend, for the purpose of discussing the feasibility of the enterprise, etc.; but we have not yet learned what was decided upon.

Resolutions of Respect.

EDITORS PRESS:—The following resolutions were adopted by Sacramento Grange, Jan. 22, 1887, in memory of Sister Delia Tibbetts, deceased:

WHEREAS, The Allwise Ruler of the Universe in His wise dispensation of Providence has seen fit, by the hand of death, to remove from our friendly circle beloved Sister Delia Tibbetts, we deem it fitting to bestow a tribute to her memory; therefore,

Resolved, That in the death of Sister Tibbetts, Sacramento Grange loses one of the dearest members, the community one of its choicest friends, to know her was to love her; and

Resolved, That the sincere sympathy of the members of Sacramento Grange be extended to her afflicted husband, Bro. Wm. Tibbetts, and to all members of the family.

Resolved, That the flowers each Patron dropped into her grave were the transfiguration of a tender thought, and though we laid her to rest in the lovely cemetery of Sacramento, we trust her gentle spirit has found that sweet peace and refuge of the "house not made with hands."

Resolved, That our united sympathy as a band of Patrons, expressed in these testimonials, be presented to the bereaved husband and aged parents of deceased, and that a copy of the same be sent to the California *Patron* and RURAL PRESS, for publication.

HATTIE P. GREER,
C. A. HULL,
GEO. T. RICH,
MARY W. L. AIKEN,
Committee.

Sacramento, Jan. 22, 1887.

Grange Elections.*

FRANKLIN GRANGE.—Installed Jan. 22: Wm. Johnston, M.; Lake Freeman, O.; Mrs. H. P. Flaxman, L.; W. A. Johnston, S.; P. B. Bradford, A. S.; Mrs. A. P. Freeman, C.; I. F. Freeman, T.; C. P. Freeman, S.c.; J. B. Bradford, G. K.; Mrs. W. A. Johnston, P.; Mrs. S. G. Bradford, F.; Mrs E. S. Johnston, Ceres; Mrs. Annie Bradford, L. A. S.; Miss Mattie Johnston, Organist.

WOODBRIDGE GRANGE. — Installed Jan. 5: Victor Jahant, M.; Wm. H. Tredway, O.; Ezra Fisk, L.; W. B. White, S.; John E. Thompson, A. S.; E. J. McIntosh, C.; G. H. Ashley, T.; Mrs. E. J. McIntosh, Sec.; Daniel Sheen, G. K.; Mrs. Wm. H. Tredway, Ceres; Mrs. E. G. Williams, P.; Mrs. Lizzie Boyce, F.; Mrs. John E. Thompson, L. A. S.

*Secretaries, or other officers, are invited to send us lists of officers elected, date of installations, and all other interesting matter for publication.

THE ORDER IN THE GRANITE STATE.—A correspondent of the Boston *Journal*, writing just before Christmas, says that some 90 New Hampshire towns have a Grange; during the past year 10 Granges have been organized, and its growth in public confidence and estimation has been marked. The early financial policy was a delusion and a snare, and has been dropped, save as of secondary importance. The social and educational advantages are the underlying principles, presenting opportunities to the members that are apparent. The meetings, aside from the degree work, are fully occupied by discussions on farm, garden, State, national and household questions, while readings, recitations, dialogues and music give the younger members a chance for exercise and improvement. It is one of the most valuable schools afforded to the farming community. The influence of the Grange on future farming in the State will be most marked. With a higher educational standard among the farmers, brighter and more inviting homes, more thrift and better husbandry are natural results; consequently the boys and girls will look upon the farmer's vocation with more respect and a higher degree of interest. It is a temperance organization and its lessons inculcate the principle by precept and example among the members. It can never become a political organization, but each member is enjoined to do all in his power to purify his individual party and see that only true and honest men are nominated for positions of honor or trust, or receive his support, and who will stand by the farmers' interests. The Order seems to be more vigorous and progressive in New England than in any other section of the country. It has no connection whatever with the Knights of Labor.

RECENT INSTALLATIONS.—Pleasant accounts appear in the *Patron* of installation festivities at Danville, where P. M., Chas. Wood acted as installing officer; at Franklin Grange, where the retiring Master, Lake Freeman, officiated; and at Enterprise, where the ceremonies were performed by W. S. M., Johnston, who traveled 25 miles to be present on the happy occasion.

CAPT. J. W. A. WRIGHT, First P. M. of Cal. State Grange, has been appointed president of Alabama Normal College, vice Dr. C. G. Smith, resigned. We consider Bro. Wright ably qualified for the place to which he has been chosen.

Grange Work and Progress.

[Prepared weekly by M. WHITEHEAD, National Lecturer.]

To succeed in any work, trade, profession or calling, we must first *know* it.

The best and most successful mechanic, farmer, business man, preacher, lawyer or physician is always the one that is the best trained or educated in that direction.

The best Patron is the one that *knows* the Grange, its purposes, its laws and its principles.

Granges whose members read little, think little and know little of the Order, finally have the label "dormant" attached to their names.

Patrons who are in *earnest*, who desire to live and grow and prosper, should make a study of the Order. Commence at your next meeting with the "Declaration of Purposes." Take it up section by section. Read it paragraph by paragraph, alternately, all around the room; commit a few lines of it to memory and recite it at each meeting until all know it thoroughly and can repeat it off-hand.

A resolution adopted by the National Grange reads: *Resolved*, That in view of a more practical advancement of the purposes of the Patrons of Husbandry, we recommend that the officers and members of the Subordinate Granges make its instructions and principles, as set forth in the Declaration of Purposes, a matter of special and careful study, to the end that we may understand and perform our whole duty, and thereby fulfill our obligations so as to build higher and better. An advance will then be made which is sure to hasten the "good time coming."

William, Duke of Normandy, with 60,000 well-organized and disciplined troops, was able to conquer millions of unorganized Britons. So capital in various forms, railroad kings, with a well-organized and disciplined force of 1000 or 2000, are able to rule and rob all the millions of unorganized farmers and other toilers. We must meet organization with organization, overthrow evil organizations with good ones. The organized farmers in the Grange have done more in the last few years for agriculture and our country than all the unorganized farmers for 50 years past.

"The Order of Patrons of Husbandry has become national in its character, and its influence has been felt in all parts of our country. Composed as it is of the most retired and unassuming element of American society, it has not sought and does not seek prominence and power, except so far as is for the best interest and highest good of its members. While its history for 20 years has not been a complete success and its members and friends have sometimes been disappointed in the results of their labors, it has accomplished so much for the American farmer, it has made its power so forcibly felt in State and National legislation and has won so enviable a reputation for the conservatism and dignity of its action upon all important questions, that none can deny it the foremost rank in all Orders which have for their object the protection and elevation of their members. Through a misconception of its aims and from various causes of a local character, the membership of the Order in many States has decreased, from what it was when seemingly in the full tide of prosperity; but its real strength in the country at large was never so formidable as at the present time."—*Alpha Messer, Vermont State Grange.*

"There is something knightly in the heart of every boy; something helpful and womanly in the heart of every girl," and these qualities should be developed. The sympathies of children are quickly aroused and can be rightly directed for their great benefit. Interest the little folks of the farm in the Grange. Have "children's meetings" from time to time, and work to make them attractive. Start them right and they will gladly enter our gates when 14 years of age, and take up the work their elders have been trying to do.

Stark Grange, of Dunbarton, N. H., held a novel meeting, when the member bringing the largest potato captured all the others; and the largest ear of corn carried off the palm also. This was followed by a corn crop discussion of ways and methods for best crops—which, with music, recitations and declamations, made a valuable meeting.

Part of the earnest work of the Worthy Master of the Ohio State Grange, in the opening of the new year, is the appointment of five special Deputies. Ohio is behind no State in the Union in active, progressive and telling labors in our grand cause.

More than 750 of the Patrons' National Reading Circles have been established within the past year, and in all parts of the United States. Many of the State Masters speak in the highest terms of this valuable work of our Order, and give well-deserved praise to Bro. R. H. Thomas, Worthy Secretary of the Pennsylvania State Grange, for originating and perfecting the plan.

New Hampshire reports another new Grange.

State Master J. H. Hale, of Connecticut, has organized another large Grange at Windsor.

Another new Pomona Grange is to be organized in Connecticut.

Ten more Granges reorganized in Nebraska within a few weeks. National Grange work is telling there.

Colorado is coming to the front again. State Master Levi Booth writes encouragingly. He organized a new Grange at Ni Wot lately which now numbers 60 members.

Deputy National Lecturer D. H. Thing will do some "official" work in Massachusetts and New Jersey.

"Hark to the clarion, the echoes awakening,
Calling the brown-handed children of toil;
Brightly the dawn of a new day is breaking,
Rouse from your lethargy, sons of the soil."

VISITORS FROM MAINE.—Bro. Daniel Field, of Auburn, Maine, who is visiting relatives in this city, called on us a few days since, inquiring after Grange interests in California. He comes with good recommendations from one of the most popular officers and working Patrons of the National Grange—Bro. Mortimer Whitehead, W. L. N. G.—as well as from Gov. Frederic Robie, Master of the Maine State Grange. Bro. Field has wisely brought his wife to our fair clime, and they purpose remaining in it till the return of milder weather at the East, meanwhile becoming personally acquainted with the farming and other progressive industries of this coast. We hope that they will exchange greetings at many of our California Granges. A cordial invitation has been extended to them to visit Temescal Grange Saturday afternoon, Feb. 19th.

Stockton Notes.

EDITORS PRESS:—The spirit of improvement is up and pushing. Basalt pavement is being extended up Main to Front street and is planned for Hunter street and Weber avenue—property-owners paying for half.

A county Board of Trade, with the mayor at its head, is organized and has called a grand mass meeting, February 5th, on Hunter square, with a brass band and Judge Patterson, ex-Congressman Budd and other good speakers to set forth the need of united action and the advantages Stockton and her great valley offer to immigration, either rich or poor, the necessity of cutting the large holdings into small farms and lots, so that intelligent labor may gladden the broad plains and enlarge the city with homes of permanence and taste, and to solicit Sacramento railroad men to run excursion trains here with the privilege to stop over to look about. W. L. Overhiser, Overseer of State Grange, is one of the directors.

The committee of public-spirited citizens, by selling life-memberships ($50 apiece) raised $11,000 to build a fair pavilion, expecting to get Washington square, but the City Council thought it should be kept for a city hall, and offered Independence square near the Central Pacific, which the subscribers deem too far out of the business center.

A new street-car company has organized and will fit up Good Water Grove (10 acres) with a fine hotel, artesian well, baths, etc., as a pleasure and health resort. People from the bay counties need this breezy sunshine to sweat off morbid matter, as we do coast air to tone up relaxed systems. This charming grove of oaks is firm and grassy, with pure, cold water, and two and a half miles from the water front, and equally distant from the Central Pacific.

Several medicinal wells are flowing in and near the city. The Salmon well helps many ailments, lights the house and cooks the food without dirt of wood-box or coal-scuttle or lamp cleaning. It is 1200 feet deep and waters a vast tract.

The Standard Gas & Fuel Co. intend to bore a series of wells and confine the gas by connecting pipes to light cities. They have two started 1300 feet apart near the French Camp toll road. One emits gas enough, they say, to light the city. They intend to bore to dry or fuel gas. Another company is boring near Mormon Channel and the paper mills, with a good flow of water and burning gas.

Grain north and east of the city looks well, though we have had only 2 43 inches of rain, but believe it will yet come. MRS. W. D. A.

Stockton, Jan. 31, 1887.

Passed Away.

The death of Mrs. Georgiana Bruce Kirby last Tuesday at the family residence in Santa Cruz ends a remarkable career. She was born in Bristol, England, 1818, and in early life came to Boston, where she was a member of the celebrated Brook Farm community in Massachusetts, and prominently connected with the early anti slavery movement. At Brook Farm she became acquainted with many men and women who afterward became high on the roll of literary fame. Among these were Margaret Fuller, George Ripley, Hawthorne, Emerson, George William Curtis and Charles A. Dana. She was also an intimate friend of Horace Greeley, who loaned her money to come to California. Mrs. Kirby was a woman who took a deep and earnest interest in all questions that she believed would benefit humanity. Her character was ever above reproach, her mind keenly analytical. She had a rare faculty of divining the thoughts of others and coming warmly into sympathy with those in sorrow and trouble. The leisure hours of her life were largely devoted to literary work, and the results are "Brook Farm Papers," "Years of Experience," "Transmission," besides scores of papers, literary and historical, contributed to newspapers and magazines. Her book, "Years of Experience," was issued only last month by the Putnams, and is a racy and admirable sketch of her early life, closing with her departure for California.

SHEEP VS. CODLIN MOTH.—Will McClellan, of Belmont, says the Redwood *Times and Gazette*, found that pasturing sheep in his orchard during the fruit season did much to rid his trees of that dreaded pest the codlin moth. He says that his plan was to shake the trees every day. Most of the infected fruit fell to the ground and was greedily eaten by the sheep, which, he says, do quicker and more effective work than hogs do.

VALENTINES.—L. Prang & Co.'s valentines, satin art prints and art novelties, for the season 1887, surpass all other excellencies.

In this line, Prang leads the world. His productions are numerous, varied and beautiful in design. All can find some rare and striking novelties to fancy.

Our American artists excel in the bright and pleasing features of these publications. Examine Prang's in your efforts to select art prints which will ever remain delightful to the eye and pleasing to the most cultivated taste.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

AGRICULTURE ACTIVE.—Haywards *Journal*, Jan. 29: A ride over the valley this week shows the farmers everywhere busy plowing and seeding. Every available piece of land in this section is being sliced up, and the acreage planted will be much greater than any previous year. The hill chaps are also rushing the work so as to have their ground seeded when the next rain arrives. The land generally works up fine, and there appears to be plenty of moisture in the ground.

OLIVE TREES THRIVING.—Livermore *Herald:* The young olive trees set out along many of our vineyards, two or three years ago, are beginning to make a decided growth. The tree grows very slowly the first and second years, but after that it stretches up and out almost as rapidly as an apricot. It makes a very beautiful evergreen tree, and we believe will prove a decided success for shade purposes on our streets.

Butte.

THE "BOOM" AT GRIDLEY.—*Herald:* A. W. Campbell is preparing to set out from 800 to 1000 orange trees; D. M. Mack has made preparations for planting 600 or 800; C. J. Welsh has secured several hundred yearling seedlings, and will set them out. We hear of many others, including prominent ranchers, who are contemplating like improvements.

WHEAT PROMISING.—Oroville *Register*, Jan. 27: The prospects for fine crops of grain were never better at this season of the year. Grain was put in early; the ground was in excellent condition, and there has been plenty of rain to insure a splendid growth. At Nelson, Biggs, Gridley, Moore Station and other parts of the county, farmers report first-rate prospects of good crops, while the area planted is the largest ever known in the history of Butte.

Colusa.

HANDSOME HEADS.—A correspondent of the *People's Cause*, writing from Williams, recently, inclosed some fine samples of wheat, oat and barley heads, measuring from two to three inches in length, grown in the foothills of Colusa county, near the Clyde mine, at an altitude of 1000 feet or more, where they were regarded as quite a curiosity.

Contra Costa.

MUSCATS IN JANUARY.—Martinez *Gazette*, Jan. 22: Mr. H. P. Hardy this week picked several clusters of Muscat grapes from his vines. The Muscat is not a late grape, and the fact that these were in good condition goes to show how admirable is the climate of Contra Costa for grapes and fruits. A box of these Muscats, beautifully garnished with mignonette, whose delicate blossoms were untouched by frost, was presented to the *Gazette* on Wednesday by Mr. Hardy. Nearly every berry was firm and sweet as if plucked in October, and their color was rich and attractive.

El Dorado.

HORTICULTURAL PROSPECTS.—*Record-Union:* A Placerville correspondent says that El Dorado county never had so flattering an outlook as at present. The orchardists and vineyardists are putting out a large acreage, the former planting Bartlett pears and French prunes, the latter the choicest varieties of wine, table and raisin grapes. Land throughout the county has appreciated in value from 50 to 100 per cent, and in some more favored localities is valued at five times what it was two years ago. At this time almond trees are in full bloom, and the orange crop at its best. The farmer here has learned in the past few years that the orange can be grown as successfully in our foothills as can the apple. The only requisite is to get the groves located, not on the lowest ground, nor yet on the hilltops, but between the extreme, and sheltered from the north winds, which, by the way, are not prevalent in this section.

Fresno.

HOPS.—*Expositor*, Jan. 26: Kingsburg has shipped 236,040 pounds of hops this season. They were grown on the Laguna de Tache grant, and are said to have been of excellent quality.

COYOTE VERSUS JACKRABBIT.—Our colonists are seriously pestered with jackrabbits, which raid their orchards and vineyards and gnaw the bark off their trees and vines. The coyotes are enemies to the jackrabbits, killing them off and keeping their numbers down, and it is now suggested that it would be wise for the supervisors to take off the bounty on coyote scalps and place one on the much more destructive nuisance, the jackrabbit.

Kern.

THE SEASON.—Bakersfield *Californian*, Jan. 29: It is now generally conceded that we are to have a dry season. It opened here favorably. We had a fine rain at the right time; but the promise has not been fulfilled. It has been dry ever since and unusually cold. Nevertheless there is reason to believe there will be plenty of water in the river. It is possible, also, that we may have late rains, as it is not unusual here. Stockmen who depend on the open ranges will have a hard time of it. The delta of Kern river and the artesian belt will be safe, but other parts of the county will suffer.

Los Angeles.

BIG TOMATOES.—W. S. Benedict lately presented the Los Angeles *Times* with a box of tomatoes grown eight miles from the city on a Cahuenga foothill ranch. There were 62 tomatoes in the box, and their net weight was 29 pounds. What locality can beat this in January?

SOLD ON THE TREES.—Anaheim *Gazette:* Leonard Parker has sold his crop of oranges on his five-acre grove for $2000, the purchaser to pick and pack the fruit. There is some profit in growing oranges at that rate.

RACING ORANGE-TRAINS.—Los Angeles telegram, Jan. 29: The Atchison, Topeka & Santa Fe Co. and the Southern Pacific Co. both sent out trainloads of oranges to-day, the first shipped East this season. There is rivalry between the two systems as to which train shall reach its destination first, and fast freight time will be made. The S. F. used the Tiffany refrigerator cars, and the S. P. its own fruit cars. Both trains were gayly decorated with flags and inscriptions.

Mendocino.

POINT ARENA JOTTINGS.—Cor. Ukiah *Press*, Jan. 17: The roads are fine. The grass is good, and cattle are fat. Sheep are mutton when they are fat, and that is now. The farmers are improving the opportunities presented by the fine weather, and are well along with their seeding. The dairymen are saying naughty words because butter came down in price so soon in the season.

CAMPAIGN AGAINST COYOTES.—Sherwood Cor. *Dispatch and Democrat:* W. H. Snell and John Capell have packed up their bed and bedding, and moved into the coyote region, and will make a business of trapping the destructive beasts. They say if they can't make money at $15 a scalp they will soon know the reason why. Good for them. There is room for 20 more in Long Valley coyote district, where the wool-growers pay $30 for every coyote killed, which, added to the $15 offered by the county, makes the hunting of the coyote quite an interesting sport. The sheepmen mean business, and their business interests are at stake.

Nevada.

AN ARBOR DAY.—Grass Valley *Tidings:* The Y. W. C. T. U. of Grass Valley and Nevada City have resolved to observe Washington's birthday, the 22d, as Arbor Day and to plant trees along the roadway, four miles in length, between the two towns. The Grass Valley organization is to take charge of the road between Glenbrook Park and this place, and the Nevada City organization of that portion between Glenbrook and its town. The Grass Valleyans, to secure the necessary funds, have been canvassing the town, meeting with fair success. One tree, or its equivalent, 25 cents, is solicited from each individual or family. Of course, no limit is placed upon the amount or number of suitable trees each may give. In this manner the trees are to be secured. Then funds are needed to pay for the digging of the holes and planting the trees. A splendid musical program, in which our best talent will take part, has been arranged and will probably be presented to the public at Van's opera-house, the proceeds to be devoted to the purpose named above.

Sacramento.

PEACH BLOSSOMS.—There was brought to the *Bee* office, Jan. 24, a branch of a peach tree, from Chas. Zeinwalt's place, one mile from Folsom, covered with new leaves, buds and blossoms. The tree was a Pan Wan Chan—a late variety.

San Benito.

OLIVES.—*Free Lance*, Jan. 28: W. I. Reed brought to this office on Monday some specimens of the olive as fine as can be seen in California. The berries are of the Mission variety, which yield an oil of the finest grade. Many of the specimens are of the size of walnuts. Mr. Reed has but one tree of this fruit, and this was planted eight years ago at his ranch in the Santa Ana valley, about five miles from Hollister. It was planted for shade and as an experiment. The tree began to bear when four years old, is now about 14 feet in hight, and bears prolifically. A grove of these 25 acres in extent would prove more profitable than a ranch of 160 acres devoted merely to wheat.

San Diego.

OLIVE OIL WORKS.—*Union*, Jan. 22: Warren Kimball says that notwithstanding the heavily increased demand for pickled olives, there is no longer any money in the business, and he will hereafter manufacture the entire crop of his large olive grove into oil, for which purpose he is now constructing a mill, which will be not only the largest in the county, but the finest in the State.

National City *Record*, Jan. 27: The machinery for Frank Kimball's large, new olive-oil works has arrived, and is being placed. The stones are now being prepared for grinding the olives, and in a few days Mr. K. expects to be manufacturing a pure quality of oil in large quantities.

San Mateo.

CABBAGE FOR CHICAGO.—Redwood City telegram, Jan. 29: A carload of cabbages was sent to Chicago to-day from the vegetable garden of G. B. Solari. Although cabbages have been shipped from the county to Eastern points before, this is the first shipment from this town.

Solano.

EDITORS PRESS:—Vanden is a new station five miles east of Suisun, and is spoken of as a possible termination or junction of the Oregon and the Cal. P. R. R. when the former is completed. It is proposed to make a connection at Dunnigans with Winters and Vacaville road to this place, doing away with the angle to Elmira. Our land is embraced in the Vacaville fruit-belt, and is being bought up largely for fruit and vegetables. Plowing and seeding are still going on, the farmers having faith in abundance of rain yet for a good crop. We require but little rain, as the bay winds come laden with moisture from the ocean. There have been but two half days' interruption to plowing and seeding since the season opened. There is quite a stir in land here, owing to the prospects of a town soon springing up. F. O. Staples is selling 1100 acres in small lots, to suit buyers.—N. C. BROOKS, *Vanden, Feb. 1st.*

MORTALITY AMONG HORSES.—Vallejo *Chronicle*, Jan. 28: On Christmas day J. and C. Deming lost a mare valued at $300 from a disease that puzzled the horse doctors. Since then two more of their horses, animals of Norman blood, have died from the same cause. This makes seven they have lost in the past year, all but two dying of the disease. The first symptom was a cold. This was followed by a swelling in the neck, and then choking. Dr. Rose made an examination of one of the horses and found that the trouble involved the lungs.

Santa Clara.

A GOOD CATTLE COUNTRY.—San Jose *Times*, Jan. 28: Col. Younger said yesterday: Here we have green grasses all the year round. Every rancher does not have it, because every one does not make an effort to have it, but on my place you can find green pasturage every month in the year. To do this it will require a little irrigation, but that is no difficult matter with the vast amount of water in the county, and with artesian water so readily attained. There is no better alfalfa land in the world than we have right here in this valley; and from two to two and one-half tons can be raised to an acre. Our foothills, which form no inconsiderable portion of the county, are excellent pasture land. Another great advantage which we have over the other sections of the West, which pride themselves on being cattle countries, is our mild, open winter, as compared with any section outside of California. The capabilities of the county as a cattle-raising section are wonderful.

Sonoma.

CITRUS SAMPLES.—*Democrat*, Jan. 25: The sprig of oranges in our show window is from the farm of J. W. Calhoun, in Russian River township. It was taken from a seedling tree, and the oranges compare favorably with the best of the coast. Few people have any conception of the amount of citrus fruit raised in this county, and we shall be glad to see the Pomona Grange push to a successful ending its contemplated special exhibit of citrus fruits.

Tehama.

ORCHARD ENTERPRISE.—Red Bluff *Sentinel*, Jan. 29: Herbert Kraft, banker and farmer, will plant 250 acres to fruit trees, orange and peach, and raisin-grape cuttings or rooted vines on Hazleton ranch, seven miles north of Red Bluff, on the east side of the river. He will also sow 150 acres of the same tract to alfalfa. Part of the land is rich alluvial bottom, covered with undergrowth and trees, which will be cleared off, the ground plowed and the trees and vines planted, and the alfalfa sown within the next six weeks. The water of Payne's creek will be utilized to irrigate the orchard, vineyard and alfalfa fields, if it is needed.

Tulare.

VIGOROUS VINES AND TREES.—*Delta*, Jan. 27: On Monday G. A. Botsford's office was decorated with some wonderful specimens of vine and tree growth, presented by C. Blowers, residing near Grangeville. These were trees one year old from the dormant bud of the French prune, Bartlett pear and peach, an inch or more in diameter, each 16½ ft. tall, well limbed and of stocky growth. There were three grapevines of one year's growth, lopped away in this season's pruning. They were Black Prince, Gordo Blanco, Muscat and Seedless Sultana. The former vine was an inch in diameter and just 33 ft. long; the others were somewhat smaller and shorter, but of equally vigorous growth, considering that they are less prone to wood-making. These specimens of the remarkable fertility of Tulare county soil will be sent to the Los Angeles office of the Tulare County Immigration Society.

HORTICULTURAL COMMISSIONERS.—Visalia *Times*, Jan. 27: At the January meeting of the Board of Supervisors, N. W. Motheral, I. H. Thomas, and S. D. Ayers were appointed Horticultural Commissioners for the county of Tulare. The gentlemen met on Saturday and organized by electing N. W. Motheral President, and I. H. Thomas, Secretary. They agreed to proceed immediately to business, and those having diseased trees or vines in their vicinity are requested to make the fact known to the member of the board living nearest, when the best known remedy, and the manner of applying it, will be furnished to those desiring it. When the commission gets in good working order, monthly or quarterly bulletins will be published.

Ventura.

HUENEME NOTES.—*Ventura Republican*, Jan. 29: Business is not quite as active there as it has been. Of the 485,000 sacks of grain received this year at that port, there are only about 80,000 left in the warehouse. They have a capacity of 350,000 sacks and with only 80,000 left look quite empty. The crop received this year exceeds by at least 100,000 sacks that of any previous year. Hueneme is rapidly becoming the greatest grain depot on this coast outside of S. F. Farmers in many places are still turning up damp soil, and there are no present indications of suffering from drouth. Fortunately grain was not sown early and is only beginning to put forth.

Yolo.

DAVISVILLE ITEMS.—Cor. *Mail*, Jan. 27: The season so far has proved excellent for the vineyardists; their pruning and winter plowing is completed, and with favorable rains and spring cultivating, they anticipate a profitable yield.... The hog disease is still ravaging. Nearly all the farmers between here and Fremont have lost most of their herd.

HOPEFUL.—*Democrat*, Jan. 27: While we have not up to this time had the usual amount of rain, there is plenty of time yet for an abundance, and all will agree that late rains are the most profitable. The summer-fallow grain looks well, a large amount of land has already been plowed, and all kinds of stock never looked better. There is a large surplus of farm produce remaining.

Sonoma County Notes.

EDITORS PRESS:—During the past fortnight there has been one good shower of rain. Grains and grasses are doing well. Up to date there has been six inches of rain for the season. While this is not up to our usual rainfall, it has answered a good purpose. If we get as much more during the spring (and there is not much doubt of it) Sonoma county will produce a big crop. Thus far, the winter of '87 has not been a promising one for California, and yet Sonoma county never offered so much apparent reward for the farmer at this season of the year. Stock-raisers, fruit-growers, vineyardists, and grain-growers all anticipate a full crop or yield, each in his own line, and the promise is for a paying price. While we much regret the failure that seems certain for many portions of the State, yet their loss will be our gain, and if the good people of the dry sections will but come to our Egypt, they will find plenty of corn, fruit and welcome.

There is much talk at Santa Rosa of a citrus fair. The proper committees have been appointed, the various varieties of citrus fruits are in the county, and will be forthcoming if the committee conclude to hold the fair. A great many people think it rather too late, as many of our citrus fruit-growers are also owners of vineyards, and the busy time in vineyard work is now at hand. For that reason, it is possible the fair may be abandoned for this year; but if so, a citrus fair will surely be held at Santa Rosa next year. Don't forget that fact!

Although actual work has not been begun on the new railroad to Benicia, the people in this vicinity seem to think there is no doubt about the building of the road. Surely, no better "plant" for a paying investment can be found in this State.

Forty-eight miles of road (over a fertile section, without a tunnel on the road, but three bridges of any magnitude, and not one of them expensive) will give direct communication with the transcontinental system. Who says this is not a good field for capital? Just think of the thousands of tons of fruit, grain, hops, wool, wine, and coal, and the millions of feet of lumber, cords of wood, carloads of tanbark and railroad ties this new road would carry, to say nothing of a passenger traffic which would inevitably follow the construction of the Benicia & Sonoma railroad, and then undertake to say it would not be a paying road! The road will soon be built and operated, because it will pay to do so, and money makes the iron horse go.

Sonoma county has built a fine new courthouse, and is now building a splendid county hospital. This latter building is being erected on the county farm, about two miles north of Santa Rosa.

The new readers, compiled by the State Board of Education for use in the public schools, are now ready for distribution. We have not yet seen these new readers, but will venture that no good can come to the public schools by these continual changes in text-books.

The younger members of Santa Rosa Grange purpose giving a social at the Grange hall on the evening of the second Monday in February. Just what will be done, who will do it, or how many will be in attendance, is not made public. It is whispered about that oysters and supper will be served and no one will be admitted who is not ticketed. We await further developments.

Santa Rosa is growing very fast. Fine new residences and substantial brick blocks are to be seen on every street. Another new school building is to be erected this summer.

Several of the principal streets are being paved with basalt blocks.

The woolen mill which has been shut down for some weeks starts up soon. OCCASIONAL.

Santa Rosa, Feb. 1, 1887.

THE OAKLAND EVENING TRIBUNE has issued a most elaborate illustrated edition, showing up the resources and advantages of Oakland and Alameda. Fifty thousand copies have been sent abroad, which must be effective of great good to our beautiful neighbors over the bay.

STRING BEANS.—A sack of string beans, "the first of the season," received Jan. 26th by D. Biagi & Co., S. F., from J. Miller, Los Angeles, sold at 50 cents per pound.

To the Lark.

[Written for the PACIFIC RURAL PRESS.]

Sing now, sweet bird, sing loud and long,
How welcome is thy cheerful song;
Our glad hearts rise with thy sweet notes
As on the air thy music floats.

All Nature now lifts up her heart
And joins with thee, defying Art,
Spreading the foliage on her trees,
Throwing her perfumes to the breeze.

For the gentle rain has come again,
We feel our prayers were not in vain;
Our hearts are cheered, our faith made strong,
We fain would join thee in thy song.

The flowers blooming on the hill,
The gentle murmuring of the rill,
The flock, the herd, the bee and bird
Proclaim to us our prayer is heard.

The promise now of harvest fair
Will teach us never to despair,
But always trust the Higher Power,
Who sends the warm, life-giving shower.

So sing, sweet bird, for we rejoice
To hear thy ever-welcome voice;
It gives us courage in despair
To bide the answer to our prayer.

S. F., Cal., Jan. 22, 1887. NOTUS.

The Senator's Daughter.

CHAPTER V.

[Written for the RURAL PRESS by SARAH CAMPBELL SANFORD.]

I hurried along, not knowing, not caring, where I went, so preoccupied was I with my struggle with myself. At last I took cognizance of my whereabouts and found myself near the cemetery—"Maple Grove." I hastened my footsteps and soon was sitting on mother's grave. A few tears fell, but I thought of her asking me to consecrate my life to the work of saving father, and did it end there? Was not the promise to do what I could in any way to assist in the overthrow of the traffic? Was my running off seeking my own amusement fulfilling that promise? No! How would I feel if father took up his old habits again? But the tempter whispered: "He won't. He has perfect mastery over himself now, and why must you forever repress yourself? Why shouldn't you enjoy life as you go along?" Just as this idea seemed to be in the ascendant in my mind, the thought came: "What are you, that you should have so much in life? You have a pleasant home, plenty to eat, to drink and to wear; you have leisure to enjoy yourself; you have love and friends surrounding you. Just think of the many hundreds of young girls that have none of these things. What have you done, that your lot should be so much brighter than theirs?" I answered my thoughts by saying: "Done? Why, I haven't done anything. I'm a good for-nothing, selfish creature to repine one moment. I'll go home this minute, and drink tea with father—he always misses me if I am away." [Alvar had resumed his studies at a distant college, and father and I were all alone.] When I entered the dining-room he looked dismal enough, sitting there munching his dry toast all by himself. He brightened up as I came in, and we fell into a pleasant chat. We attended a concert that evening, and when I got home I was too tired to think about my disappointment.

The next morning I shed some more tears, as I answered Mrs. Stanhope's letter in the negative. But I never mentioned the matter to father, and if little fits of despondency would come over me occasionally, he attributed it to the early spring days, which were unusually sultry, and I was quite satisfied to have him think I was suffering from "spring fever."

So the weeks wore on, and the summer was over, and I never once regretted my decision.

In the early fall, one of the United States Senators from our State died, and the Governor appointed father to fill the vacancy. So instead of Rome I was to see Washington. Father said I must do a great deal of shopping and make myself a stylish young lady, for we would see a great deal of society. The coveted traveling dress was mine, after all, and many more pretty ones. Father even went shopping with me, and was very particular about the set and finish of the gowns. I told him it looked as if I was of more importance than the senator himself, and he said: "Oh! a man doesn't count for much in Washington unless he has a well-dressed woman in his household."

We found very pleasant quarters in a private family, thereby securing many of the comforts of home life, with none of its cares. I had nothing to do but enjoy myself in the beautiful city. I always accompanied father to the Capitol, and spent a good deal of time in the gallery, where I could look down and exchange smiles with him now and then.

One afternoon, wishing to see our wash-woman in regard to her work, I sought her in one of the poorer quarters of the city. While passing a large lodging-house, with business places on the ground floor, I caught the sound of children's voices singing. I looked up and down, and at last found a window bearing these words: "The W. C. T. U. Sewing-school." I rang a bell, asked admittance, and was shown into a bright, pretty room, filled with girls and boys from 5 to 12 years of age. There were pictures and mottoes on the walls, easy seats for the children, and a parlor organ over which a young girl presided. A blackboard occupied nearly one side of the room, which was covered with different pieces of paper pinned on. A pile of juvenile papers fresh from the press lay on the table, and beside them stood a vase filled with flowers. In one window was a stand containing house plants, and trailing vines ran over the window and around the room. Everything was bright and cozy. Mrs. May, the lady in charge, welcomed me with a sweet smile as a younger woman found me a seat.

After singing a number of songs, Mrs. May began to tell the children a story, and as she proceeded in her narrative she would uncover bits of the blackboard disclosing a crayon drawing, illustrating her story.

CURIOSITY.

There were one or two other women present, and a man with a red face and soiled, ill-fitting garments. He shuffled his feet and seemed, not to know what to do with his hands, when one looked at him; but when the children sang he forgot himself entirely, and, leaning forward with moist eyes, watched their animated faces.

After the short object-lesson the work was brought out and the ladies were kept busy threading needles, arranging work, etc. There were thimbles and work of some kind for all—boys as well as girls. I laid aside my hat, took off my gloves, and volunteered to assist. After an hour's work, they sang again, then marched out in good order. In the ante-room many left their clean gingham aprons and passed into the street with worn and dirty clothes; but their hands and faces were clean and hair brushed smoothly. After the children's departure the ladies came to me to make me welcome. Then I learned that the mystic letters on the window stood for "Woman's Christian Temperance Union," and that the building was owned by a very rich man who gave them the room and furnishings free, for any use for the benefit of the children. This sewing-school met twice a week.

In the same building a free kindergarten was held daily. The members of the W. C. T. U. of Washington would alternate with each other in attendance. Mrs. May, the regular teacher, said she had great trouble in getting her drawing done; and they also needed more help to wash the children. The W. C. T. U. bought the cloth and cut it into garments; they also finished them if the older girls did not. Then these clothes were given to the child who worked longest on them. The kind gentleman who did so much for them kept a standing offer of a handsome prize for the boy or girl who would abstain a month from drinking beer.

"Drinking!" I said; "it isn't possible those little things drink?"

"Yes," answered Mrs. May; "when we first opened here there was but one child in the school who did not drink more or less."

After a little further conversation I went away, with an urgent invitation to come again. I did my errand with Dinah as quickly as possible and hastened home.

After reaching my room I fell into one of my reveries, as father says. I knew there was an opportunity to help in the great work that mother prophesied; but I shrank from washing those children. And they needed help in just that place. Then I could draw; I quite excelled at school in crayon work. Oh, yes; I certainly could do Mrs. May's drawing! But to go into that part of the town, where unpleasant sights and sounds would greet me! Besides, I hadn't seen half the pictures and statues yet. And just at that hour I liked to drive in the park with some ladies who called for me quite often.

"Oh dear! I'm always poking in somewhere that I shouldn't! Now I can't enjoy myself, thinking of that work waiting for me. If I had just passed by on the other side I should never have known anything about it." And I proceeded to dress for dinner in no amiable frame of mind.

That evening I went with father to the Senate Chamber and listened to a fine speech. But amid the bright lights, the elegant costumes of the ladies in the gallery, and the august body of gentlemen on the floor beneath, crept in thoughts of those poor, dirty children. Who would do this work if not I? who had more time? and what would become of these street waifs if somebody didn't do something? Wasn't *I* somebody? And wasn't it *my* duty, if it was anybody's, to lend a hand? Who knows? perhaps one or more of those children would remember something I would say or do, and grow up better for having known me. I once read that every one should so live that the world (or the little spot we live and move and have our being in) should be better for our having lived. Now here was an opportunity for me to plant a few seeds, and I hesitated.

It ended by my putting in an appearance the next day, armed with a big apron to protect my dress while I washed and brushed the children. I followed up the resolution and rarely missed an hour in the sewing-school. I would remain after the departure of the children and draw the pictures for the next meeting. I never knew any positive result of just my individual labor, but I cannot estimate the good it did me. The soft clasp of the little arms about my neck, and the dewy kisses on my cheek, made my heart beat lighter all day. Then the intercourse with those noble, gifted souls who sacrificed their time and society's claims to lay solid foundation for the coming generation; the sweet, gracious women who were reaching out in so many ways to save the youth of the land. Oh yes, I grew and expanded under their influence, Then how I enjoyed the pictures and drives afterward! It enhanced my pleasure beyond anything I had ever known.

Jessie wrote quite often of their doings. They had changed their plan a little, and were wintering in the south of France on account of Mrs. Stanhope's health.

A letter came to me from Mentone while I was dressing for my first dinner-party—a momentous affair to me. What to wear, and how to wear it, was always a problem. I was large, above the usual size of women, and the light colors and fabrics suitable to my age made me appear larger than I really was. Then I had a mass of red hair to tone down. Yes, red hair! Some of my friends tried to call it auburn, and a Mrs. Cecil, an artist whom I met in Washington, said my hair was the shade that Titian loved. I wished he had mine! I thought I could well spare it. It was long, heavy and abundant, requiring a great deal of care.

Mrs. Cecil superintended my toilet that evening. She said the trouble with ladies who had red hair was, they rarely knew what colors to wear to harmonize with it. Blue should never be worn, nor blue-white, nor pale green, bright reds, pinks, nor blue-purple or lavender. But all the dark greens, grays, black, maroon, amber, amethyst and brown, could be effectively worn. Of course, the eyes should be taken into consideration. My eyes were brown; so she chose for me an olive foulard silk, cut square in the neck, and the sleeves were closed to the elbow and then fell in a sort of wing-like shape. ("Angel wings," the style was called.) They were lined with cream-colored satin.

Father gave me a beautiful set of pearls—my first jewels—necklace, bracelets and brooch; no ear-rings. My ears had never been marred by the probe. (What a remnant of barbarism much of our jewelry is!)

Mrs. Cecil fastened a bunch of tea roses at my belt, handed me a creamy-white fan, and took me downstairs to father, who was waiting.

"Why, your dress is a poem," said he.

"And what am I?"

"You are your papa's own girl, with a healthy form and an honest, frank face—just as I want you." He bowed low and kissed my hand in gallantry.

"Save all that for public occasions, papa dear; but give me a good hug now, and promise me you'll keep your eye on me, and not let me break all the rules of etiquette. An evening party is bad enough, but a dinner-party, where we sit two or three hours at table—O papa! the very thoughts make me tremble."

Father kissed me and said: "You will probably find it much pleasanter than you think. You have too much sense to attempt any style of conversation with which you are not familiar. Just appear what you are, a sensible young girl who has seen very little of the world. Don't think of yourself at all. Fall into some pleasant talk with your neighbor at table, and the time will pass all too soon."

"But, father, what shall I do if there is wine on the table?"

"Oh! that is troubling my mentor, is it? Well, Madge, if you have taken a vow, don't ever let society interfere with it. The world will always think more of you for standing by your colors; and that is what you and I are going to do to-night, I hope. If it is hard for you, my daughter, what is it for me, when the sight and smell of it set the old appetite crying out? It is hard to have woman set this temptation before us; but perhaps if you and other girls frown upon the custom long enough, it will be ruled out."

Just then the carriage was announced, and, throwing my wrap about me, father handed me to the carriage as courteously as if I had been a duchess.

It was as he had prophesied. I received such a cordial greeting from Senator M—— and his lovely wife that I felt more at my ease.

It fell to my lot to be taken charge of by a young newspaper correspondent, a Mr. Somerville. He was a fine talker, and I became so interested in his description of a trip he had recently made that I forgot all about my timidity. I suppose he read my face as an open book, for he requested the waiter to remove both his wineglass and mine, and called for lemonade to be substituted. I must have given him a very grateful look, as he said, in a low voice: "Are you a teetotaler, too?"

Before I could answer, his vis-a-vis addressed him:

"Well, now, Somerville, is it possible you still hang to those old puritanical notions of yours?"

"I'm still hanging, Doctor, as you see"—

glancing at his glass; "and to-night fate was kind enough to give me company."

I felt the blood mount to my face at the others' scrutiny; but it was a proud, happy blush, not one of shame.

Father was seated at the other end of the table, but I could see his glass still stood untouched. There was some merry jesting in his vicinity. He was always full of wit. I could not help wishing he would send his glass away too; but when a lady called attention to his full glass, he announced his belief that man was not a drinking animal. That raised a general discussion, and some very absurd arguments were used.

Dr. Anwell brought his battery to bear upon my companion again by saying: "Here is Somerville—he refuses wine on all occasions; but he seems to think he needs something to drink, as his glass would indicate."

"What did you do while tramping through Europe when you wrote up those out-of-the-way countries so delightfully?" queried a Mrs. Southard.

"I drank lemonade when I could get it, and water at other times."

"O Mr. Somerville! I came across your description of Mentone the other day, and I want you to tell me more about that delightful place. Why is it we didn't visit the Riviera country while on the continent?" turning to her husband to answer her question.

Mrs. Southard's attention was called to something else, and Mr. Somerville and I were left to ourselves again.

I caught my breath at the mention of Mentone. He noticed it and asked me what I knew of the place. I answered:

"I have just received a letter from a friend who is stopping there this winter. She thinks it a beautiful spot. Would you mind telling me about it?"

"I can tell you very little about the place; but I will relate a pretty little fable if you like. Have you outgrown your taste for fairy stories?"

"No indeed. I hope I never shall."

"I hope so too," answered he; "I think the good old-fashioned fairy tales are much better for young minds than the sensational novel so much in vogue. Well, this little tradition was told me by a dark-eyed flageolet-player who picked up a very precarious living. I rested an hour or more with him in an olive orchard, during the heat of a summer day; and he enlightened me considerably in regard to the myths of the region."

"Oh, how nice!" I murmured.

He laughed a little, and began: "Once upon a time, Adam and Eve, as I suppose you know, were banished from Paradise. Poor sobbing Eve put up her hand, just before she passed through the gate, and plucked a lemon. They two then wandered through the world together, far and wide; and at last, following the shores of the Mediterranean, came to Mentone. Here the sea was so blue, the sunshine so bright, and the sky so cloudless, Eve planted her treasured fruit. 'Go, little seed,' she said, 'grow, prosper, make another Eden of this enchanting spot; so that those who come after may know something at least of the tastes and perfumes of Paradise.'"

A little pause fell between us, when he said: "Isn't that a pretty story? But if you could have lain by the olive tree and watched the sunlight flickering through the somber leaves and looked down the dim cathedral aisles of the orchard, you would have appreciated better the soft musical tones of my barefooted boy."

"Yes," I answered; "but why did she take a lemon?"

"Well, you see she had eaten enough of the ill-fated apple. I hardly think she ever touched an apple again in her whole life—I know I wouldn't if it had brought such disaster to me; and you know lemons are very beneficial to one's health when indisposed, and if ever a poor mortal had good cause for indisposition, Mother Eve was she. But to speak reasonably, I suppose the tradition arose from the large number of lemons raised there. I believe the annual yield is about 30 millions. Doesn't it set your teeth on edge to think of it? They are very fine lemons, I assure you."

Some one broke in on our conversation, and as the party very soon rose from the table, it was not resumed.

In a day or two, Mr. Somerville called upon us. Father was quite charmed with him. He often sat with me in the gallery of the Senate Chamber; he knew the history and antecedents of the members so well that I became doubly interested. So the days sped along very rapidly.

We passed the holidays in Washington. Some little time before the new year a fine carriage drew up at our door, and a footman in livery left a note for me.

[CONCLUDED IN OUR NEXT.]

AN EFFECTIVE SOFA ORNAMENT.—A very effective ornamentation for a small sofa is made by taking a strip of satin, plush or of velvet, about five inches wide, and nearly the length of the sofa itself; on this embroider a vine in some distinct and quite open-work pattern. When this is done put a narrow strip of similar material, but of a different color, around it as a plain border. Line it with a stiff cloth, and apply it to the sofa with unseen and immovable pins. It should not be placed in the center of the seat, but be drawn forward so that it is just above the puff or band of plush which finishes the sofa cushion.

YOUNG FOLKS' COLUMN.

The Tragedy of a Bird's Nest.

[Written for the RURAL PRESS by ETHEL BRODT.]

It is with pain that I write the following story, for I was the principal actor in the unhappy tragedy. But I confess it in the hope of convincing others, as well as myself, that it was a passive crime and the result of a nature loving and tender toward God's dumb creatures. It seems hard to tell—that mine was the hand which destroyed forever that happy home, broke the heart of the dear little mother, and hushed the exultant song of that proud father. Perhaps you will forgive me; be kind and at least feel some pity for my sorrow and remorse.

One bright, sparkling morning last spring I discovered a tiny bird's nest in a small eucalyptus tree that grew in the grove back of the house. The little mother sat demurely upon her nest and I soon found that she was not a bit shy, but would let me come quite near to her. I was not long in discovering her mate by his bright yellow coat (they were wild canaries, hardly bigger than humming-birds), and from the joyous song he poured forth as he perched on a tree near by. If I ventured too near the nest he would flit uneasily from tree to tree, and there was a troubled and warning note in his song. Little by little I was able to approach nearer to the nest every day, until at last I could go within a foot of it without alarming the mother. Sometimes, however, I was a little too bold or a sudden movement would startle little mother bird and she would dart quickly from her nest and join her mate, who was always hovering near.

One morning great was my joy to find, instead of the tiny blue eggs it had always held, four blind, naked, ugly birdlings. Their mouths were the biggest part of them, and they opened them as if they wished to swallow me. I wondered how it was possible for their mother to love such homely babies, but I knew she did, for, on looking up, I saw her on a branch near by, watching me critically and chirping uneasily as if to say: "Do please go away, for it would break my heart if anything should happen to my birdies." As for Father Canary, I cannot begin to tell you of the songs he sang, the roundelays that burst from his musical little throat as he swung on the very topmost twig of the big oak tree. They were not elaborate—it was their simplicity that made them so sweet, and the song was in his heart. Those love songs! Those proclamations of bliss! How they used to cheer me in the mornings as I went about my duties; and oh, the silence afterward! He was a model of a true husband, always near by with sweet songs and words of cheer for the little wife, and such tenderness as he put into his happy voice! It almost brings the tears when I recall it.

Every morning I went out to see the little ones. Often I found that their mother had gone in quest of their breakfast, and then I went near and rubbed their little heads and laughed to see their mouths open for something to eat. Sometimes I caught a fly or a bug, or took some crumbs and poked them down their wide-stretched throats, and I really believe they never knew it was not their mother. As they grew older, their eyes opened and their feathers began to grow, and I felt sure they knew me, for they were not a bit afraid, and regarded me boldly out of their bright black eyes.

One afternoon, on going to the nest, I was delighted to find that their feathers had grown very much since the day before, and that they had a very canary-like appearance. As usual, I put out my hands to caress them, when, with a sudden chirp and flutter, every one of them was out of the nest and fluttering on the ground. My flock of chickens was scratching near, and, with their natural curiosity, began to investigate, with outstretched necks and many a cackle, the new kind of bugs that had so suddenly made their appearance. I gave a cry of horror, but, before I could prevent him, Jupiter (my especial pride and chief cock of the barnyard) had pecked one of them to death. With a heavy heart I gathered up the three remaining birds and placed them in their nest. The mother and father were flying wildly from tree to tree, and I got away as quickly as possible, for I could not bear the thought of their reproaches.

Dear reader, no doubt you think that that one lesson would have been enough. Why it was not, I cannot tell; it seems as if Fate led me on blindly to the destruction of that home, and I did not realize that it was but their shy, bird nature to be afraid of me as soon as they learned the power in their little wings.

The next day I could not resist the desire to make my usual visit to the nest, this time more cautiously and at a greater distance than the day before, when, on my near approach, again the little ones, with a cry, fluttered to the ground. This time there were no chickens near, but only two of the birds could be found, and one had a broken leg. It was no easy matter to find them, for their little brown backs were the color of the dry leaves. I searched long and sorrowfully for the third one, for I knew its wings were not strong enough for it to fly back to the nest; but my search was in vain. The bird with the broken leg I took into the house and nursed carefully, but it died the next afternoon. The other one I left in the nest, but on going out the next morning I found that the parents had deserted their home and the little one lay stiff and cold.

That is all there is to my story. Truly it is a sad one. I loved the dear birds, loved their sweet songs; but my love was their ruin. Why was it so? Why was it that my love should bring nothing but pain and death? Oh, that little empty nest, and the long days that followed when I listened in vain for that happy song and looked for the tiny yellow songster! Dear, dear little birds! they must know that of all God's creatures I love them best.

It is springtime again. Out in the grove there are grand concerts given by the red linnets, the robins and the orioles. Among the leaves I see a dash of yellow; it is a little canary, and he sings a song like the one I heard last year. I wonder if it is the same one; if he has forgotten, and the glad springtime has left no room for thoughts of last year's sorrows? Alas! *I* cannot forget, and the pain still lingers in my heart, filling it with sadness.

GOOD HEALTH.

Carriers of Contagion.

How Poisonous Particles are Carried from Place to Place.

To mention a few of the modes of contagion, I have to speak, in the first place, of towels, especially of that abominable institution known as the roller-towel, which has been used so much in asylums where 40, 50, or more children use the same towel, whether they have granular lids or not. True, in a great many of these cases the existence of granular lids was not known; but even in cases in which the existence of the disease was evident, the ignorance or carelessness of the persons in charge has allowed transmission by towels to be one of the most frequent sources of contagion. As a carrier of the contagion the housefly plays an important role, especially in cases of young children who are not able to protect themselves against the visits of this little animal. Attracted by the sweetish odor of the discharge, it will settle on the eyes of children affected with the disease, especially infants, and carry the contagion in its claws to the other eye or to the eyes of sleeping infants.

Spectacles may be the carrier of the contagion. I remember the case of a young lady who could not explain satisfactorily how she came to have granular lids. Upon her return to school she mentioned that she had granular lids, whereupon one of her classmates said: "Why, that is the disease which I have been suffering from for the last six months." This classmate was near-sighted, and used glasses. My patient was also near-sighted, but had not used glasses, and whenever she wanted to see anything at a distance she was in the habit of borrowing the spectacles of her friend, and there is no doubt in my mind that this was the means of carrying the poison from the classmate's eye to the patient's eye.

Children with granular lids are very apt to rub the eyes, because the secretion as it begins to dry on the edge of the lids causes an irritating, itching sensation. They will now play with other children, and from their hands transfer the poison to the hands of the other children, and these latter rubbing their eyes contract the disease. Handling objects which have been used by granular lids patients may be the means of carrying the contagion. A young lady who volunteered to teach children affected with granular lids, and who had been isolated from other children in a certain institution, was warned to be extremely careful with regard to using handkerchiefs, towels, or anything which belong to the children. She was well aware of the danger, and promised to be very careful. She handled nothing whatever, she said, that belonged to the children, left her cloaks outside, and in the classroom kept away from the children a distance of five or six feet. But upon examination of her eyes, 14 days after she had taken office, it was found that she began to suffer from granular lids. Upon inquiry I found that she had been taking the copybooks and slates of the children for correction, and in all probability she got the poison from the slates and books on her hands and then conveyed it to her eyes. A teacher of another section in the same institution was more careful; she simply walked into the classroom, did not touch anything belonging to the children, and for two or three months, during the duration of this epidemic, she was not affected by the disease. The atmosphere had evidently not been the carrier of the contagion in the first case.—*Medical Reporter.*

FOR SCALDS, BURNS, ETC.—The following was recently sent to the *Call*, of this city, by a Boston lady, who stated in her letter that it was not only a specific for scalds and burns, but also for bee stings, bites of insects, and even reptiles: "Make a strong decoction of lobelia herb; apply at once, cold, and keep the part wet with the fluid till the fire subsides, which will not be long. Then the cuticle will, in most cases, be sensitive, and should be covered with collodion, the ether in which is cooling and soothing, and will finish the cure and prevent the skin from breaking. In nine cases out of ten the lobelia will prevent blistering."

DOMESTIC ECONOMY.

Orange Wine.

I herewith send practical instructions for making orange wine in answer to the request of J. A. McClellan. I have sold sour orange wine made in this way for $5 per gallon. I have also made very fine wine from the sweet orange. Mr. McClellan has perhaps failed by allowing his wine to go through acetic fermentation. The wine will continue to improve with age:

Take one part orange juice, well strained; one part water; three pounds sugar per gallon. Any kind of sugar will do, and the darker the sugar the richer will be the color of the wine. For each 10 gallons put up, keep about one gallon of the same for refilling the casks during fermentation. Lay casks on the side, fill full, and leave bung open. Do not let it be exposed to much cold. Fill up the casks every day, from the quantity kept out, as the scum is thrown off, and watch closely until the wine passes through the stage of alcoholic fermentation. This will usually require from 10 to 20 days, or longer if the weather is cool, and can easily be determined by scum ceasing to rise, and the cessation of brisk fermentation. When it arrives at this stage, place the bung in loosely. Watch closely for a few days, and as active fermentation ceases, put the bung in fast. Let it stand two months, then rack off carefully into clean casks. If perfectly clear, seal and let it stand six months, when it may be bottled. If not clear, it should be racked off a second time in two months after the first time and sealed for six months before bottling. Be sure your casks are full, for contact with the air will cause the wine to pass into acetic fermentation. Use either sweet or sour oranges. I prefer the sour.—*F. C. Austin in Florida Dispatch.*

APPLE AND ALMOND PUDDING.—Take about three pounds of apples, two ounces of sweet almonds, one gill of cold water, the whites of two eggs, four ounces of fine sugar and a little lemon or orange marmalade. Put the water and three ounces of the sugar in a preserving-pan and stir till it boils; put eight of the apples, peeled and cored but not split, into the syrup, and cook till soft, but do not let them break. Lift the apples carefully on to a flat dish, and fill that part where the core was taken out with marmalade. Pare, core and stew the remainder of the apples till soft, then press all through a wire sieve; pile this pulp over the apples, and make smooth with a knife. Beat the whites of the eggs to a very stiff froth, sprinkle in half an ounce of the sugar, and spread this froth all over the top of the apples. Dredge on the remainder of the sugar and stick the almonds—previously put in boiling water, skimmed and cut in long, thin strips—very thickly and neatly all over the whites of the eggs. Put the pudding in a slow oven until the almonds take on a delicate golden tinge. Use hot or cold.

HOW TO BROIL.—Heat and grease a gridiron. Never cook anything on a cold gridiron. Lay on the steak or other food, and cover with an inverted pan to keep in the heat and flavor. Turn often while cooking, but do not stick a fork into meat, or the juices will escape. Do not add seasoning till you dish it. Fish and spring chicken should be dredged with flour before being placed on the gridiron. Small things require to be cooked quickly over a clear, hot fire. Large things, unless wished rare inside like beefsteak, should have a moderate heat at first and increased heat toward the last. Among other ways of managing this, the gridiron may first be put a good distance from the fire and afterward moved nearer the fire.

RICE OR HOMINY CROQUETTES.—Boil the rice or hominy till well done; then allow to become perfectly cold. To a pint and a half add a good pinch of salt, three well-beaten eggs, one spoonful of milk, flour enough to roll out in the hands into forms, and one teaspoonful of baking powder. Have ready a deep frying-pan half full of boiling hot fat, drop the croquettes carefully in, fry till a rich brown, serve hot. Many a delicious dessert is made of rice, though of itself it is about as tasteless as an eatable can be; for that reason it seems undesirable to serve it with, or as, a vegetable, as some do.

CRUMB GRIDDLE CAKES.—The night before using put some bread crumbs to soak in one quart of sour milk; in the morning rub through a sieve and add four well-beaten eggs, two teaspoons soda dissolved in a little water, one tablespoon melted butter and enough cornmeal to make them the consistency of ordinary griddle cakes. It is better to beat yolks and whites separately, stirring the whites lightly in just before baking.

RICE BREAD.—Rice bread makes a variety for the breakfast-table. Take one pint of well-boiled rice, half a pint of flour, the yolks of four eggs, two spoonfuls of melted butter, one pint of milk, a little salt and a large spoonful of sugar. Beat all these ingredients till very smooth, and then add the beaten whites of the four eggs. Bake in shallow pans and serve hot.

The Week.

Rain has come again in dashes; scoring but small fractions on the rain table, but serving to freshen up the surface of the ground and minister to present growth. The deeds of the clouds also serve to maintain confidence in the people, for in a dry year the elements are always in bad shape when they are observing a masterly inactivity. It looks very much as though many of our farmers would have plenty of leisure on their hands, unless they have live-stock to feed, and then they may be made very busy. The doubt and unpropitious outlook in the country is reacting severely on city trade, and nearly all reports are of dullness and depression. People should guard against being too much cast down. No matter how dry it is, things are not going to be so blue as they were in 1877. Our industries are more diversified, and, as stated elsewhere, there has been great advance, both in irrigation and in cultivation. A comforting motto will be that "all things come to him who waits."

The reports of the Signal Service show that the season's rainfall up to Feb. 1st, at San Francisco, was 6.53 inches; the average season's rainfall for the same period being 14.47 inches. The rainfall at other points compares with the average in about the same proportion.

Good Roads.

The even and majestic flow of Webster's oratory was sometimes interrupted by the lack of an appropriate word or phrase that often caused him to flounder a moment in painful embarrassment. The story is told that in the course of a railroad speech delivered in Boston he said: "Mr. Chairman, I am in favor of every road"—here he began to hesitate; the right word was not forthcoming; he repeated the expression the second and third time, and still the word he wanted did not come. Mr. Harrison Otis, sitting near him, whispered, "Except the road to ruin." Mr. Webster caught the hint, and said with powerful emphasis, as if he had just reached the top of a mighty climax: "I repeat it again, Mr. Chairman, I am in favor of every road, except the road to ruin."

We understand that about 25 bills, in the nature of amendments or substitutes to our present road laws, have been introduced into the two branches of the Legislature and referred to the Committees on Roads and Highways. We are in favor of every bill that will improve upon our present road system, and we hope that these committees will thoroughly study the question and draft a substitute for these bills that will embody all that is best and desirable in them all. Next to churches and schoolhouses, good roads mark the enterprise and intelligence of a people. The improvement in public highways has not kept pace with the rapid development of the State, and in many counties, during the rainy season, and especially where an adobe soil prevails, the roads are simply abominable. The country is settling rapidly, and needs, all seasons of the year, the best facilities for travel. An unusual and persistent effort is now being made in all parts of the State to attract immigration. Good roads will captivate the new-comers.

It is suggested that the road laws may be greatly improved in the direction of economy. Under the present system, a roadmaster is appointed for each district who is paid $3 a day, for a period not to exceed 100 days, and, at this rate, Napa county alone, last year, paid to roadmasters the sum of $4200. It is thought that a scheme may be devised by which a portion of this amount may be expended in actual improvements. As the roadmasters are the agents of the Supervisors, it is suggested that the latter be given discretionary power in their appointment. That some districts may need no such supervision while others do. That in many places the opening of new roads, or repairing of old ones, may be more economically accomplished by letting out the job to the farmers in the immediate vicinity. The roadmaster is chiefly concerned to earn his salary; the farmers, along whose line these ways passed, would take a deeper interest in having the work done well. However this may be, it is certain that the present system of opening new roads, or keeping them in good order, is very expensive, and if strict economy and efficiency can be combined, it would be desirable

Then it is contended that the present system of road laws need overhauling in regard to practical availability. It is almost impossible to condemn land for the public use should there happen to be one refractory individual in the community. The laws are strictly construed, and the least technicality, the slightest deviation from the letter of the law in posting or describing the route, vitiates the whole proceeding before the Board of Supervisors. Then it often happens that when all the proceedings are in strict compliance with the law the Board of Supervisors will throw aside the petition of the people and report of the reviewers in a mere caprice. It is contended that no informality should be allowed to vitiate a bona fide proceeding, and the rights of all parties should be determined in the court on proper evidence, independent of the Board of Supervisors.

BECOMING EPIDEMIC.—The wholesome affection of citrus fair is spreading. Tulare and Sonoma counties have caught it, and are expecting to have exhibitions of that kind some time this month.

Cultivation and Drouth.

The fact that thorough surface cultivation conserves moisture and wards off the ills of drouth has fortunately gained wide dissemination in this State during the last few years. It is owing to this fact and practice based upon it that the growth of produce in 1887 (if it should prove a dry year) will be much greater than in 1877. This will be the case in nearly all lines of agriculture. Orchards and vineyards which have been well cultivated will carry over enough water from the heavy rains of last year to give them a good growth this year, even with a very light rainfall. Low-lying corn or vegetable soils, well cultivated, will also carry over enough moisture to give good results, while those which have been permitted to bake down have lost nearly all their possession by evaporation, and slight surface wetting will only support temporary growth.

This year bids fair to bring into full prominence the value of a well-cultivated bare fallow to our grain-growers. The summer-fallowed area has been constantly increasing during the last ten years, and our columns have contained many reports of the increased yield on land thus treated. This year the drouth-resisting quality of summer-fallowed land promises to be brought out very clearly, and we are glad to read in the Stanislaus *News* that the practice has gained such extension in that district as to make the grain-growers happy even in this gloomy season. We quote as follows from last week's *News:*

Here in Stanislaus a precipitation of moisture to the extent of several inches was always deemed a condition precedent to abundant crops until members of the Salida Grange experimented with summer-fallowed ground. Some two years previous, Mr. Vital E. Bangs in an admirable and exhaustive essay before the Agricultural Society of Stanislaus county, then in existence, treated this topic. His subject was: "How to Make a Small Farm Pay," and among other philosophical and scientific suggestions, he referred to that of summer-fallowing the soil by cross-plowing. In this essay, Mr. Bangs was a successful competitor for the first prize. During the season when members of Salida Grange summer-fallowed their land by this method, the annual rainfall was only 3.50 inches, and the yield ranged from 18 to 30 bushels per acre. The result proved so profitable that others adopted the same system of cultivating and seeding, and to-day it has grown to be the rule. We have, perhaps, within the past week, conversed with 50 practical farmers of the county, and out of this number but two have expressed any great degree of solicitude or misgiving as to the outlook. Summer-fallowed land does not suffer as yet, and the expectation is of course hopeful. Those who have observed that plan of cultivation, reasonably hope for fair crops because of past experiences, and others will be brought to a realization of the importance of putting forth every energy for securing proper irrigation facilities. The latter must come if we are to have diversified farming—the secret of the growth and prosperity of many other sections in the State. The people of Stanislaus county have no cause for discouragement. Crops that are in the ground are looking well, and the sentiment in favor of irrigation is fast growing. The future has in store for us all, let us hope, bright and prosperous hours.

Of course the extension of the irrigated area will be another reason why drouth in 1887 will not be so serious a matter as in 1877. It is very satisfactory to contrast the present condition with that of a decade ago, when the comparison yields such a favorable verdict for the present. The wider extent of irrigated area, the wiser use of water, the fuller appreciation of cultivation in promoting growth and conserving moisture—all these are comforting themes in a dry year.

AN INFAMOUS PROPOSITION.—A bill has been introduced in the Assembly, by W. A. Brown, of S. F., providing that any person may procure a license for carrying on the game of faro, roulette, monte, keno, rouge et noir, or any other game of chance played with cards, dice or any other device for money or checks, upon payment to the sheriff of the county in which the same is located the sum of $100 for the first and $75 for each succeeding month. Three-quarters of this money shall go into the county treasury and the remainder into the State Treasury. This is nothing more nor less than a proposal that the county and State take hush money from criminals in advance or accept bribes to let vampires and hyenas prey on weak humanity. It is outrageous and disgraceful to entertain the proposal of such a thing for one moment.

Should Insanity Excuse?

It is becoming a serious question whether the plea of insanity under any circumstance should be allowed to so far excuse murder as to entitle the murderer to his liberty. It has come to be the practice when one is overtaken with a great crime to ransack his whole life for some eccentricity or slight aberration from the normal type, or hunt for some taint in the ancestral line, and then, by the aid of hypothetical questions propounded to the doctors, and other tricks known to the legal profession, spread that one speck of cloud over the whole mental sky. The more atrocious the crime the more easily is this done. In this way many a cold-blooded murderer is turned loose upon the community. No doubt there is such a disastrous state of mind as homicidal insanity, but the question we now raise, and the history of our criminal courts makes it an important one, is not, "is the accused morally responsible to society?" but "has he committed an act hurtful to society?" If it can be proved that he has, then it is certain that he is a menace to the community and should, in some way or other, be so dealt with that he can do no more harm. If the sane man who has committed murder is not a safe person to let loose upon society, then the man whose insanity has taken the form of a mission to kill some one is certainly not a proper person to be at large. If inordinate vanity or a false sense of wounded honor, or a choleric or jealous disposition be allowed an excuse for crime, then criminal trials become a farce, for, in that case, every man who is guilty of an act of violence may plead insanity as an excuse. Persons liable to such paroxysms of rage are not safe to run at large. Such a person, whether adjudged sane or insane, has proved to be a person society cannot safely allow the privilege of personal liberty. Every person who is found irresponsible on the plea of insanity, no matter what the provocation, real or imaginary, may be, should be sent immediately to the lunatic asylum for life. Society has the right and should clear the country of brutal men as it does of wild beasts.

Explosion at Alvarado.

About 2:30 o'clock last Saturday morning, an explosion took place at the Standard Sugar Refinery in Alameda county, which damaged the works to the extent of several thousand dollars, and seriously injured the fireman, Gabriel Denis.

The disaster was due to one of the seven boilers getting nearly dry. When water was turned into the exhausted boiler, it blew up with fearful effect, tearing the boiler-house into kindling wood, knocking over smoke-stacks, and strewing the neighborhood with wreckage.

The mill had finished grinding the last beets at 4 o'clock the afternoon before, and would have finished all work by Monday. The refinery still contained a quantity of semi-refined juice, with no means of saving it. Seventeen men were at work in various parts of the factory cleaning up, but all except the fireman escaped without serious injury.

The factory uses the product of 800 acres, or an annual average of 16,000 tons. The crop last year was unusually large, and it is said that 20,000 tons were ground. The mill, during the grinding season, runs day and night, and the monthly pay-roll amounts to about $4000.

In noticing the disaster, the San Francisco *Post* observes: "We are so accustomed to the association of sugar and sugarcane that we are apt to forget that one-half of the sugar export of the world is produced from the beet, and about one-third of the entire product of the world is derived from the same source. It is also well for those who think lightly of experimental stations, such as we have at our own university, to remember that beet sugar was originally a laboratory discovery, and is not to be credited to chance. Another such purely scientific discovery would repay the cost of all our greater colleges for all time."

The proprietors of the Alvarado sugarie have our full sympathy in the misfortune. They are not the men to be appalled by such things. It is fortunate that the accident came just at the end of the working season, so that there will be ample time for refitting and improving.

TO A CORRESPONDENT.—If "O. J. C.," Selma, will send us her true name and address—not for publication—we shall know better how to dispose of her favor.

The Hydra—A Fresh-Water Polyp.

Our readers who have microscopes, and enjoy the study of the wonders of minute nature, will find much interest in the illustrated sketch we give on this page of the hydra, a fresh-water polyp which can be easily found in suitable places in this State. We are indebted for the opportunity of giving our readers materials for such study to Mr. A. H. Breckenfeld, secretary of the San Francisco Microscopical Society, who recently read an essay on the hydra before that organization, and illustrated it with drawings and photographs and with the living object itself. We are obliged to abridge his account very much, but shall give enough to interest the general reader and point the way for those who desire to study the curious animal for themselves. In connection with the figures will be seen the sign of multiplication, followed by a number, as, for instance, "×29." This refers to the number of times the diameters of the object are magnified, and as most of these numbers are small, it will be seen that a microscope of only moderate power will yield very satisfactory results.

As to classification, the genus *Hydra*, Linn., ranks only a little above the protozoa. It is the lowest form of the great animal sub-kingdom cœlenterata (or sac-animals), which is divided into two classes—hydrozoa and actinozoa—and *Hydra* is the type of the former class, just as *Actinia* (the sea anemone) is that of the latter. Some 6 or 7 species of the genus have been described, but only three of them—*H. viridis*, *H. vulgaris* and *H. fusca*—seem to be well founded, the others being probably only varieties.

Hydra consists essentially of an elongated nodular sac of protoplasmic substance, imbedded in which are found large numbers of colored granules. At the upper end of this sac is a simple opening, the mouth, and just below this is a circle of tentacles, usually from six to ten in number (Fig. 17). At the lower extremity the body is furnished with a flattened suctorial disk, by means of which the animal usually attaches itself to filaments of algæ, rootlets of duck-weed, and similar objects, while its slender tendril-like tentacles are slowly and gracefully waving about in search of prey. Sometimes it uses this disk as a sort of float, and hangs head downward, suspended from the surface of the water. The body and tentacles of *Hydra*, when fully extended, seldom measure over ¼ to ½ of an inch in length, except in the case of the rare species, *H. fusca*, where the animal sometimes attains a length of several inches, owing to the extraordinary development of the tentacles, which, in that species, are many times the length of the body, while in *H. vulgaris* they are but very little longer, and in *H. viridis* usually somewhat shorter. The tentacles are hollow, each being traversed by a canal communicating directly with the body cavity. The body and tentacles of *Hydra* are possessed of most remarkable extensile and contractile powers. At one moment the animal may be extended to such a degree that the tentacles are almost invisible by reason of their fineness; when, upon being disturbed, it instantly contracts until it appears like a minute jelly-like lump, studded with a few stubby knobs. It then slowly expands until it is again fully extended. While it usually remains attached to the same object for a long time, it has the power of changing its position, either by a leech-like crawling movement, or by floating passively in the water until it comes in contact with some other object to which it wishes to adhere.

Hydra is extremely voracious. It subsists entirely upon animal food, consisting mainly of minute worms and the smaller entomostraca. When the prey has been caught by means of the tentacles extended for that purpose, these contract, and the unfortunate victim is forced with remarkable violence into the digestive cavity of the polype, the softer parts being there absorbed, and the undigested portions ejected through the mouth.

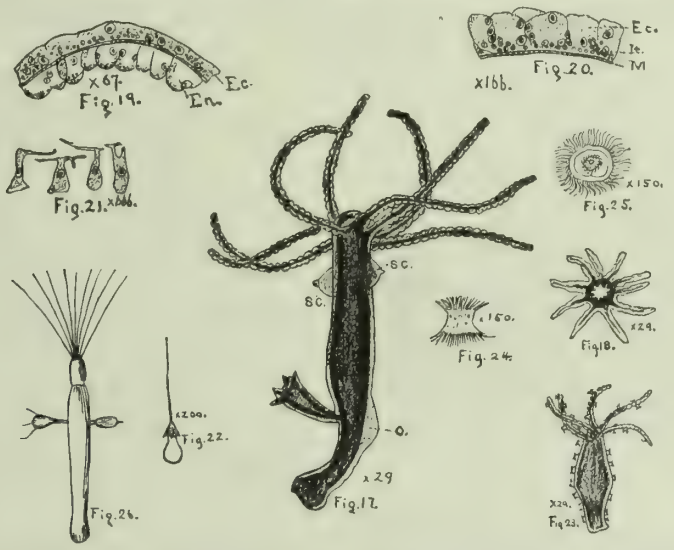
The body of *Hydra* is resolvable into two distinct layers, an inner—the endoderm—and an outer—the ectoderm. The tentacles are mere tubular prolongations of these membranes. The endoderm (Fig. 19) consists of a single layer of large nucleated cells of protoplasm, destitute of an investing membrane, but inclosing, in many cases, a vacuole filled with clear fluid. According to Kleinenberg, a few isolated cells of the endoderm are furnished with one or more very delicate cilia. Later observers have asserted that the entire endodermal layer is ciliated, and it is further stated that strong amœboid movements are shown by the cells of the endoderm, more especially in those lining the body cavity. The important fact is now considered well established by recent investigations of T. J. Parker and others, that the digestion of the solid food particles swallowed by *Hydra* takes place in the protoplasm of these endodermal cells, the latter acting almost exactly like an aggregation of amœbæ. In the endodermal cells of *H. viridis* are also imbedded the green granules which give to that species its distinctive color. Their function is not definitely known. It is an interesting fact that, after the most searching investigation of their optical and chemical properties by Kleinenberg, Cohn and others, it has been made a matter of the strongest probability that these green corpuscles are identical with the chlorophyll of the vegetable cell.

The outer membrane of *Hydra*, the ectoderm (Fig. 19 E. C.), is a somewhat more complex structure. Kleinenberg finds that externally it is composed of a layer of large cells of nucleated protoplasm. Below these and running up between them are numbers of small cells with comparatively very large nuclei, constituting what he names the interstitial tissue (Fig. 20 i. t.), in which the so-called nematocysts (or thread cells) and also the reproductive bodies are formed.

Finally, beneath these and in contact with the endodermal layer is a narrow, clear zone, in which contractile fibrillæ are imbedded (Figs. 19 and 20 m. L.): Kleinenberg makes the very important statement that these fibrillæ are processes of or extensions from the above-mentioned layer of large external cells. That is to say, the ectodermal cells taper toward the endoderm, being prolonged into fine processes which frequently divide, and when these processes meet the endodermal layer they bend sharply at right angles and run parallel with the long axis of the body (Fig. 21). These fibers are bound together by a soft, colorless connective tissue into a thin membrane which is everywhere interposed between the endodermal and ectodermal layers.

The curious nematocysts or thread cells (Fig. 22), to which a benumbing property has been ascribed by most observers, originate in the interstitial tissue, but as they become mature they are pushed toward the surface of the ectoderm. Each consists of an oval capsule, coiled within which is a delicate spiral elastic filament, provided with four short recurved spines. This can be suddenly unrolled with considerable force, and by its projection into the body of the polype's prey it is supposed that the latter is frequently benumbed, so that its capture by the tentacles is rendered easier.

At certain seasons of the year the reproductive organs of *Hydra* may be observed. They consist of spermatic capsules and of ovaria. The first of these arise as conical whitish elevations from the body wall, just below the circle of tentacles (Fig. 17, s. c.). They are usually from two to five in number, but in some abnormal cases as many as 20 have been observed. In them are formed the ciliated spermatozoa which are subsequently ejected through the apex of the capsule at about the same time that the egg is extruded from the ovarium.



Like the spermatic capsules, the ovarium (for in *H. viridis* there is usually but one) is formed in the interstitial cells of the ectoderm, but nearer the fixed extremity, appearing as a large round protuberance. (It is shown just beginning to form at o., Fig. 17.) With only very rare exceptions both sets of organs are formed upon the same individual, the spermatic capsules generally being developed first. When the ovarium has reached a certain stage, the soft protoplasm of the inclosed egg gradually exudes from the aperture in the apex of the investing membrane (still remaining attached, however, to the ovarium), and is then fertilized by the spermatozoa, which about this time issue from their capsules. The process of segmentation then sets in, and a thick, hard shell is secreted in about four days. After the formation of the shell the egg severs its connection with the parent *Hydra* and sinks to the bottom. The boundaries of the contained cell walls gradually disappear, and by a curious apparent retrogression the contents of the egg are once more a continuous mass of protoplasm. In this is formed a cavity which ultimately becomes the body cavity of the young *Hydra*. The succeeding stages of development are slower, and finally, usually in 6 to 8 weeks from the secretion of the shell, the young animal is liberated, closely resembling the parent in everything except size. It will thus be seen that *Hydra* has no larval stage, differing in this respect from all other hydroids. During the period of embryonal development a great mortality is caused by the growth of the mycelium of fungi, by the spores of which the naked egg has been infected. Out of 1500 eggs gathered and studied by Kleinenberg, about 1100 were destroyed in this manner. These figures are also interesting as an indication of the persistent industry of this investigator.

Hydra also multiplies by gemmation—a process strikingly analogous to that of "budding" in plants. A little swelling on its body surface gradually elongates, at the free end a mouth is formed, below which is developed the crown of tentacles, and thus a young *Hydra* makes its appearance, the entire process being usually completed in a few days. (See Fig. 17.) The communication between its body cavity and that of the parent is at first uninterrupted, and food captured by either individual seems to be appropriated by both. Gradually, however, a constriction occurs at the point of contact, and finally complete separation ensues. Very frequently several young *Hydræ* are attached to the parent, and buds are in turn often developed on these before they leave the parent stem. Carpenter copies an old figure from Trembley's work, in which an individual of *H. fusca* is shown with no less than 19 young polypes attached in various stages of development. Kleinenberg has made the interesting observation that where an individual of *H. viridis*, with a numerous progeny attached, was placed in a glass containing very little food material, in the course of a few weeks first the bodies and then the tentacles of the young animals were reabsorbed by the parent *Hydra*.

Of all the many marvelous properties possessed by this remarkable little organism, perhaps the most extraordinary is its power of reproducing lost parts. The researches of Trembley and Baker on this peculiarity are even at this date well worthy of perusal. To quote from one authority: "If the body be cut into two or more—even into 40—parts, each portion continues to live and develop a perfect new animal. If the section be made lengthwise, so as to divide the body, all but the end, the two portions become resoldered and form a perfect being; if the pieces be kept asunder, each becomes a *Hydra*, the two possessing but one posterior end; if the section be made toward the head, the two bodies will be perfected and remain attached to the one head. If a tentacle be cut off, a new animal is formed from it. When one end of the body of a *Hydra* is introduced into another, the two unite and form one; the head cut off one may be engrafted upon the body of another which wants one; and when the body is turned inside out, the outer surface, which has thus become the inner, will perform the ordinary digestive functions, and the animal will continue to live."

The geographical distribution of *Hydra* is known to be very wide. Certainly throughout the temperate zones this interesting organism is plentifully found in suitable localities. Probably its favorite habitat is on the radicles of the lesser duck-weed (*Lemna minor*). I have also found it quite often on *Vaucheria*, and occasionally on other algæ. It is distinctly visible to the unaided eye, and after having once been pointed out it will ever afterward be easily recognized. I have only succeeded in finding two species in California, *H. viridis* and *H. vulgaris*, and these appear absolutely identical with those species as found in the Eastern States and in Europe. Mr. King, of Santa Rosa, reports having found *H. fusca* recently in Mark West creek.

The little "plant animal" has been a celebrity in the scientific world for nearly a century and a half. Nor is this to be wondered at, for in the whole range of microscopic life there are few, if any, animals possessing equally attractive features to the investigator. Its graceful movements and interesting food-habits, its comparatively simple structure, its plant-like appearance, its wonderful methods of reproduction, and the important light which many facts in its histology have thrown upon the elucidation of structure in the higher animals, all invite attention and study.

It. Interstitial layer of cells at base of ectoderm.

CARRYING THE WAR INTO AFRICA.—The rivalry between different parts of the State, as to securing immigrants from the East, has taken on new features. Agents from several of the central counties, notably Sacramento and Santa Clara, are to be established in Los Angeles, for the purpose of making known to visitors from beyond the Rockies the capabilities and charms of Northern and Central California, and inducing them to "give us a call before purchasing" land and settling below the Tehachapi. It is now in order for our Southern friends to return the compliment by planting agencies in San Jose and Sacramento.

A NAPA COUNTY FAIR.—It appears from the *Register* that Napa is agitating the organization of an agricultural, horticultural and viticultural society. Certain of her citizens started a subscription some time ago with a view to raising sufficient money to buy and fit up grounds for an annual exposition. Sums aggregating $5000 were subscribed, and it is now proposed to renew the canvass.

SANTA BARBARA is jubilant in the expectation of having a railroad before long.

ENTOMOLOGICAL.

Winter Washes for Insect Destruction.

W. G. Klee has issued the following as Bulletin No. 4 of the State Board of Horticulture, which will be found to contain timely and practical information:

The publication of the biennial report being somewhat delayed, it has been thought advisable to give a short extract of the chapter relating to such remedies as are applicable during the *dormant season*.

The most successful winter wash against the armored scales, such as the *Perniciosus* scale, *Aspidiotus perniciosus*, the greedy scale, *Aspidiotus rapax*, and even for the oystershell bark louse, *Aspidiotus conchiformis:* the best protected of all have proved to be those containing part soda and part potash lye.

From personal experience we recommend two formulas of this kind:

	Per cent.
1 lb. of solid concentrated American lye, or	80
4-5 lb. of powdered caustic soda, or	98
1 lb. of powdered caustic soda, or	76
1 1-4 lbs. of powdered caustic soda, or	63

To any one of the above add 1 lb. of commercial potash, 52 per cent, to be dissolved in 2½ gallons of water.

This proportion was, I believe, first recommended by Mr. M. Cooke, and has in all cases which have come under my observation proved very successful.

Another Formula

Recommended by Prof. Hilgard is undoubtedly equally good, but I have not had an opportunity to see its results, except in one or two cases. As will be seen from prices given below, it will cost about one cent a gallon less than the above:

	Per cent.
1 lb. of solid concentrated lye (American), or	80
4-5 lb. of powdered caustic soda, or	98
1 lb. of powdered caustic soda, or	76
1 1-4 lbs. of powdered cautic soda, or	63

To any one of the above add ½ lb. of commercial potash, at 52 per cent, to be dissolved in 2 gallons of water.

Prices of Alkalies.

The prices of soda and potash vary considerably. Caustic soda is high just now. Greenbank, 98 per cent, is worth 9¼ cents in cases of 240 pounds; in small lots, say 10 pounds, 10 cents per pound.

Caustic soda	76 per cent
Caustic soda	63 per cent

Concentrated (solid) American lye, 80 per cent, is sold at about 7¼ cents per pound.

First sorts of potash (commercial potash), containing about 52 per cent of caustic potash, 6½ cents, in drums of 600 pounds; small quantities, 9 cents.

The Best Kind of Weather for Applying Alkaline Washes.

The vast difference in results with alkaline washes—notably with those containing soda alone—are due not alone to their very varying strength, but to atmospheric conditions also. We quote Prof. Hilgard:

In examining trees that have been sprayed with soda lye alone on a sunny day, it will sometimes be found that within an hour after the spraying, the dry portions are covered with a network of small, white needles, resembling white frost. These needles are simply solid carbonate of soda, and show that by the action of the dry air the "causticity" of the lye has been quickly destroyed. The bland, common, sal-soda has taken its place, and the action is practically at an end.

FOGGY WEATHER THE MOST FAVORABLE.

It is quite otherwise when the spraying has been done on a moist or foggy day, or late in the afternoon, so that the lye remains in a liquid condition. It then goes on working for many hours, eating away the edges of the old scale, and finally reaching to the old insect or eggs inside; and should favorable weather continue, the toughest old inhabitant may thus be destroyed in a single application.

ADVANTAGES OF USING POTASH.

The use of the potash compounds in connection with the soda lye aids materially in maintaining active corrosion more or less independently of the moist weather, by preventing the rapid evaporation and solidification that so often puts a premature end to it. Moreover, the potash compounds so used ultimately reach and remain in the soil, and act as a fertilizer when needed, so that the money spent on them is not gone with the insects.

Mode of Preparing Washes.

The easiest way to prepare the alkali washes, especially the solid concentrated lye, is by suspending the material in a barrel of water, either putting it on a perforated piece of tin or into a sack. Being thus suspended, the diffusion is quite rapid, and the material will require but little looking after. By using hot or boiling water the action, of course, is hastened very much. When dissolved thoroughly, each kind having been kept separately, they are mixed and stirred well, so that they become thoroughly mixed. The liquid should be strained through a fine sieve (brass) or a cloth, so that no clogging is possible when the wash passes through the nozzle.

The San Jose nozzle has been, and is being, very generally used, but for lye washes it is, in my opinion, inferior to the Imperial and the Cyclone. The latter has the advantage of throwing the stream better on the under side of branches and foliage. When a pump with two outlets is at work, the two kinds of nozzles may be used to advantage. One man may work principally on the upper part of the tree with the Imperial (because its spray, being thrown straight, hits the more vertical branches squarely), while the other man will reach the lower more horizontal branches better with the Cyclone spray, carrying, as it does, either upward or downward.

How to Prepare the Tree for Spraying.

If large trees, say over 20 feet high or even less, are to be treated, it will be found the best policy to cut them back to reaching distance, otherwise the probability is that part of the tree will not be reached. Likewise it is necessary to cut away such limbs as are preventing the free movements of the workmen. For trees of all sizes we prefer the pruning of all the heavier limbs first, and the complete thinning of the trees, leaving the leading shoots uncut, to avoid the possible danger of the killing back of buds which were intended for next year's growth.

Badly infested trees, when the scales are layers thick, may need two treatments, with an interval of 10 days.

Caution.

Owing to the advanced condition of peach trees in early sections, the strength of alkali cannot be used without running the risk of sacrificing the fruit buds.

The strength given in both formulas should not be used on any trees after the buds have commenced to swell sensibly, and in almost all sections, except in very late ones, the wash should be finished by the end of February.

Actual Cost of Spraying.

Putting the cost of material per gallon at 5 and 6 cents respectively, a half cent for preparation, making 5½ and 6½ cents, we find that a tree, say 6 to 7 feet in diameter and 8 to 9 feet hight of crown, will require about 1 gallon, and the cost of application will be 6 to 7 cents, we have a total cost of 13 cents per tree; larger trees in proportion. We have endeavored to find a plain and easy mode for testing commercial lyes. There does not seem to be any which can be used by any one. We recommend that the purchaser demand of the sellers to see their custom house certificates, which will indicate the strength of the lye. He will then at least know what strength has been received. We shall have to rely greatly upon the honesty of dealers. The so-called lye-testers are really misleading, except when we deal with pure articles. As they only test the density of the liquid, soluble salts or other inert substances may be present without being discovered by this test.

Woolly Aphis.

For the subjection of this most troublesome and widespread enemy of the apple tree, a number of years' experience has convinced us that gas lime (used with moderation), the refuse from gas works, is both a lasting destroyer of the insect and a fertilizer. Use from 1½ to 2 shovelfuls of fresh gas lime per tree, spreading it over the surface around tree to cover about 6 feet in diameter. If the soil is deep and well drained, a much larger quantity may be safely used. Care should be taken not to pile the gas lime around the neck of the tree, as the solution of gas water formed by the rains might scald the bark. To prevent possible migration from the roots to the upper branches, place a shovelful of fresh ashes around the base of the tree. The dressing with gas lime should be done as early as possible, that the rains may have full effect on it and carry it into the ground. For the form of woolly aphis infesting the top, the daubing of kerosene on the infested knots is a fair remedy; washing, especially in the summer, with the summer wash recommended in Bulletin No. 3 (see forthcoming report). However, when the red ladybugs are numerous, we prefer to trust the extermination of the aphis to them.

Codlin Moth.

The fighting of this insect must be principally done in the spring and summer, the line of defense being indicated in my report. The winter work must consist in reducing the hiding-places for the cocoons. As these are often found many inches below ground, the soil should be removed and bark scraped. If the trunk has very rough bark it should also be scraped, and if it is covered with lichens or moss give it a spraying with a weak lye solution, half the strength of what is indicated above.

Peach Moth (Anartia Lineatella).

The first brood of worms bore into young limbs of peach trees, the second into the fruit. The bulk of the pupæ evidently harbors in the ground, and dusting with gas lime about in the same manner as for woolly aphis might prove a remedy. Any infected limbs should be cut off and burned, and no hiding-places for them allowed. It is in the spring that they show their work most plainly by the withering young shoots. These must be cut off and destroyed.

Cottony Cushion Scale (Icerya Purchasii).

For all deciduous trees, such as locust, which is much subject to this pest, we recommend one-fourth pound of concentrated lye, one-fourth pound of whale-oil soap, to one gallon of water. Before treating the tree, cut off the tops down to the main branches and burn them. For evergreens, the summer wash recommended last summer is useful, and will not hurt healthy foliage: Dissolve 30 pounds whale-oil soap (80 per cent soap, at the most costing 5 cents per pound,) in 60 gallons of water, by heating the two together thoroughly. Boil 3 pounds of lye (American concentrated lye is what we have used) with 6 pounds of sulphur and a couple of gallons of water. When thoroughly dissolved, it is a dark-brown liquid (chemically sulphide of soda). Mix the two, the soap and the sulphide of soda, well, and allow them to boil for about half an hour, then add about 90 gallons of water to the mixture, and it is ready for use. Apply it warm, at about 130° F., by means of a spray pump. Used warm its effect is better, and less material is required than when cold. It must, however, be remembered that the minute scales are especially numerous on the under side of leaves. This fact makes the extermination on a large tree in full foliage almost next to impossible. Only small trees may be successfully treated in this way. Large trees must be either deprived of their foliage or cut down to a few limbs. Neither of these methods can be safely applied on tender trees during a season when sharp frost may be looked for. A spraying should, however, be done, as it will check their spread most effectually. Too great pains cannot be taken in removing infected limbs, as the insect spreads often in this way. A canvas should be spread around the tree, so that none of the insects can escape. When the tree has been treated, spread hot ashes around its base and apply tight-fitting bands, smeared with a greasy substance around the trunk to prevent any insects reascending.

W. G. KLEE,
Inspector of Fruit Pests.

The Proposed Insect Law.

The following is an outline of a bill for the repression of insect pests introduced in the Senate by Hon. L. J. Rose, of Los Angeles county. It was referred to committee and is entitled "An Act to prevent the spreading of fruit, fruit tree and vine insect pests, and to provide for their extirpation."

Section 1 enacts that all fruit, fruit trees, ornamental trees, vines, plants or shrubs, infested by an insect or insects, their germ or larvæ, or infected by disease known to be injurious to fruit or fruit trees, etc., and liable to spread contagion, must be cleansed or disinfected before the 1st day of April, 1887, and thereafter, before the 1st of April of each succeeding year, and as often also as directed by the State or local inspector. All owners or occupants of land on which fruit trees are grown failing to comply with the provisions of the Act shall be guilty of a misdemeanor, and fined as provided in the Act, and all such fruit, fruit trees, etc., are declared a public nuisance, and on complaint of a member of the State Board of Horticulture, or Inspector of Fruit Pests, etc., it shall be the duty of the District Attorney of the county to bring action against such offending parties.

The fines for non-compliance are set out as not less than $50 and not more than $300 for each offense.

Section 4 provides for the shipment of fruit, etc., the packages in all cases to be stamped with an official stamp after inspection. Infringement of this section is also a misdemeanor.

Section 5 regulates the inspection of fruit, etc., and enacts that a certificate shall be granted on application by the inspector to the effect that the fruit, etc., is free from contagious disease, etc.

Section 6 provides for the appointment by the Boards of Supervisors of three commissioners, upon a petition being presented signed by fruit-growers representing a majority of acreage, who shall have full power to inspect and order the destruction of all fruit or fruit trees infested with pests, etc., and be known as the County Board of Horticulture.

It shall be the duty of the local inspectors in each county, whenever informed by complaint of any person residing in such county that the premises of a certain person are infected with injurious insects, to inspect the premises, and, if found infected, shall notify the owner to disinfect the same within a certain time, and, if he does not do it, civil action will be taken.

The appointment of inspectors at salaries of not less than $3 and not more than $5 a day for each day on which they are employed is also provided for.

The Fruit-Growers to Pay.

It is reported that a bill to amend the law, or rather a new bill, was in contemplation to tax the fruit-growers to meet the expense of inspection, etc., when a petition from a majority of fruit-growers in a district would request it to be done.

Whitewash Spray for Scale Insects

A. T. Covell, of Fresno county, has successfully tried a new remedy for destroying the scale-bug on fruit trees, and has made public the result of his experiment and the ingredients of the preparation used. He tried the remedy on his peach trees last spring when they were just budding out, and the result was a fine crop of peaches. The new branches grown since the remedy was applied are bright and perfectly free from scale. The old branches and bodies of the trees were so badly damaged by the scale-bugs that the new growth of limbs on many of the trees has the appearance of coming from almost dead bodies. The old scale-poisoned bark is now peeling off, leaving a new and healthy bark under it.

Mr. Covell's remedy is 50 pounds of unslacked lime, 20 pounds of French sulphur and 15 pounds of salt, prepared as follows: Place 10 pounds of lime and 20 pounds of sulphur in a heater with 20 gallons of soft water. Boil for half an hour or more, until both lime and sulphur are dissolved. The sulphur must be thoroughly dissolved and mixed with the lime; the mixture will then be of an amber color. Next place in a cask or box 40 pounds of good lime and pour upon it enough soft hot water to thoroughly slacken the lime and keep it in a liquid form. After the lime is thoroughly slacked add 15 pounds of common stock salt while the material is hot. When the salt is well dissolved mix the two lots together, with sufficient water to make 60 gallons of spraying material, which will then be a thin whitewash. The material should be strained after being thoroughly mixed—a good piece of burlap answering well for the purpose. Apply the mixture with a spray pump, using a rubber plate in the nozzle instead of the brass plate. The rubber plate must be cut from blocks of pure rubber, or nearly so, and not a cotton mixture; it may be cut from blocks used where buggy shafts connect with the axle. It should be cut evenly and about one-tenth of an inch thick, with a very small incision made in the center with a flat awl or a sharp-pointed knife, the awl being best, as it makes an even hole which prevents the spray going to one side. The rubber plate will permit any small particle to be forced through the hole in it, as it will expand and thus save time of cleaning out a brass plate. Apply the material warm or cold. Care should be taken to wet every part of the tree; and for the body of the tree hold the nozzle close to the bark, to force the liquid into all the crevices.—*Exchange.*

Ladybugs and Codlin Moth.

EDITORS PRESS:—The remarks of some writer in the PRESS that the ladybug larvæ destroy the codlin moth larvæ remind me that my orchard has plenty of the former and few, if any, of the latter. The ground is mostly reclaimed springy tule land, oversupplied with weeds all summer, and the weeds well supplied with the ladybug. The apple trees have been in bearing six years, and I have seen but one apple showing sign of codlin moth. An older orchard, three miles distant, irrigated and clear of weeds, is completely captured by the moth. Until that article appeared in the PRESS, I had no idea that either weeds or ladybugs were profitable in an orchard. M. W.

Paskenta.

MEXICAN ORANGES.—A gentleman lately come from Sonora has informed the Los Angeles *Times* that quite a trade is being built up between Hermosillo, the capital of that State, and the East in oranges, which are shipped by the carload by way of the Guaymas road and Benson. These oranges are very sweet and are preferred in Arizona to the California fruit. They are purchased in the neighborhood of Hermosillo, in small quantities, at 50 cents per hundred. Better rates could be made for them in bulk, but the difficulty is to secure delivery from the Mexicans at any definite time. They will make a contract to deliver on a certain day, which they may fill next day, or next week, or not at all. If a few live Americans should go down there a large industry would be built up, as oranges seem to grow in Sonora with scarcely any attention.

War Ahead.

There is great danger of war with Mexico in the near future, but at present we can pursue the arts of happiness, prosperity and wealth. Wherever you live, you should write to Hallett & Co., Portland, Maine, and receive free, full information about work that you can do, and live at home, earning thereby from $5 to $25 and upward daily. Some have earned over $50 in a day. Capital not required; you are started free. All is new; both sexes. All ages. Pay, as above guaranteed, from first start.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, $3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

It Should Always be Borne in Mind

That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the fittest"—the "DOMESTIC" SEWING MACHINE.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from $5000 to $500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

A HUGE TULE HOG.—Wm. Christopher, a well-known farmer of San Joaquin county, killed a monstrous wild boar New Year's day in the tules near the head of Twenty-one-mile slough. One of the men employed on his ranch had gone into the tules with a shotgun in search of game. He had not proceeded far when he heard a noise, as of some heavy animal forcing its way through the thick tangle of tules. A moment later he was startled by seeing an enormous wild boar step from the brush a few feet in front of him. The animal appeared to be as much surprised as the man, and stood for a few seconds gazing at the hunter. The latter turned and ran for a small willow tree. The boar with an angry snort gave chase. The man dropped his gun and "shinned" up the tree with alacrity, while the boar went to work on the trunk with his sharp tusks. The hunter's cries for help were heard by Mr. Christopher, who went to the rescue armed with a rifle. His aim was sure, and with a shrill scream the huge animal dropped, mortally wounded. Another shot from Christopher's rifle finished the business. The boar weighed 750 pounds. His head was taken to Stockton and exhibited as a curiosity. The tusks were four inches long, and their edges were almost as sharp as razors. Judging from the seams that extended the full length of each tusk, it was estimated that the animal was about 21 years old. It is said that the dead boar's mate has her haunts near Twenty-one-mile slough, and Mr. Christopher has offered a reward of $50 for the capture of the animal alive.

DOES IT PAY?—E. W. Holmes, writing of Riverside in the Los Angeles *Herald*, says: That orange growing is profitable here is satisfactorily shown by the fact that from the place for which Hon. A. P. Johnson paid $8000 six years ago he has this year sold his raisin crop for about $2500, and his oranges for $8000—over $10,000. The Hewettson orchard, which cost its purchaser $27,000, this year has a crop worth $10,000. This is the oldest place in the valley. A. M. Aldrich, a hard-working man, paid $400 an acre three years ago for land in a choice location in Brockton Square, and his vines, less than three years old, this year paid him fully $200 per acre. Such instances can be cited indefinitely, and will be verified by any who may investigate.

LIVE-STOCK SALES IN CHICAGO.—They are endeavoring to improve the live-stock trade in Chicago by organizing a National Live-Stock Exchange which shall have the following uniform scale of prices for the sale of live-stock: Fifty cents a head for cattle, except calves, yearling and stock cattle, which will be $10 per carload, and all live-stock driven into the yards at following rates: Cattle, 50 cents; calves, 25 cents; hogs and sheep, 10 cents per head. It was decided to dispense with the services of traveling men and all manner of drumming for business.

"He who is false to present duty," says Henry Ward Beecher, "breaks a thread in the loom, and will find the flaw when he may have forgotten its cause." A case in point occurs to us. Mr. Wm. Ryder, of 87 Jefferson street, Buffalo, N. Y., recently told a reporter that, "I had a large abscess on each leg, that kept continually discharging for 20 years. Nothing did me any good except Dr. Pierce's 'Golden Medical Discovery.' It cured me." Here is a volume expressed in a few words. Mr. Ryder's experience is entitled to our readers' careful consideration.—*The Sun.*

A Sudden Death

From heart disease is now quite common. Dr. Pierce's "Golden Medical Discovery" is a certain remedy. Chronic irritation, palpitation, excessive or defective action of the heart, shortness of breath, and pain are removed by it in a short period. It also cures all the diseases relating to the liver, stomach, bowels, blood and skin.

No lengthy advertisement is necessary to bolster up Dr. Sage's Catarrh Remedy.

BEST TREE WASH.

"Greenbank" 98 degrees **POWDERED CAUSTIC SODA** (tests 99 3-10 per cent) recommended by the highest authorities in the State. Also Common Caustic Soda and Potash, etc., for sale by

A GOOD MUSIC TEACHER

—WILL USE—

THE BEST INSTRUCTION BOOKS.

There is no mistake about the great **Richardson's New Method for the Pianoforte** Sales nearly 400,000 copies! The favorite of thousands of teachers! Many times revised. The most correct of instruction books. Price $3.

Since the advent of "Richardson," many excellent instructors have been published, and have attained great favor. Pre-eminent among them are

New England Conservatory Method

(Price $3, or in parts, each $1.50) and

Peters' Electric Piano School. Price $3.

The first book has had the important indorsement of the great Conservatory, and the second has sold immensely, solely on its own merits.

For Reed Organ. Clarke's New Method.....$2 50
For Mandolin. Winner's Complete Method.... 75
For Zither. Winner's Complete Method..... 75
For Violin. Listemann's Method..... 3 00
For Flute. Kummer's Flute School..... 3 00
For Guitar. Curtiss Method..... 3 00
For Banjo. Curtiss Acme Method..... 1 25
For Cornet, Flute, Clarionet, Flageolet, Banjo, Accordeon, Violin, Guitar, Reed Organ, and Piano, Sep. Winner has prepared very good easy Methods, costing 50 cents each. All are called IDEAL Methods.

Reasons why Sherwood's Steel Harness is the Best and should and will be Universally Used:

1.—It is a common sense Harness. 2.—It is made of material that will last a lifetime. 3.—In plowing, dragging, logging and scraping there are no whiffletrees. 4.—In all farm work you can change from plow to wagon quick. 5.—In plowing in the orchard, you can't bark fruit trees. 6.—In plowing and cultivating hops it has no equal. 7.—In plowing along the fences you can get two furrows closer. 8.—Horses cannot step over the traces, or calk themselves. 9.—A small boy will handle plow readily. 10.—There is no weight on plow beam. 11.—Team works one-third easier. 12.—There is no chafing, crowding or fretting of team. 13.—For man and team it has no equal. Do not hesitate, but order at once from your nearest agent. Address

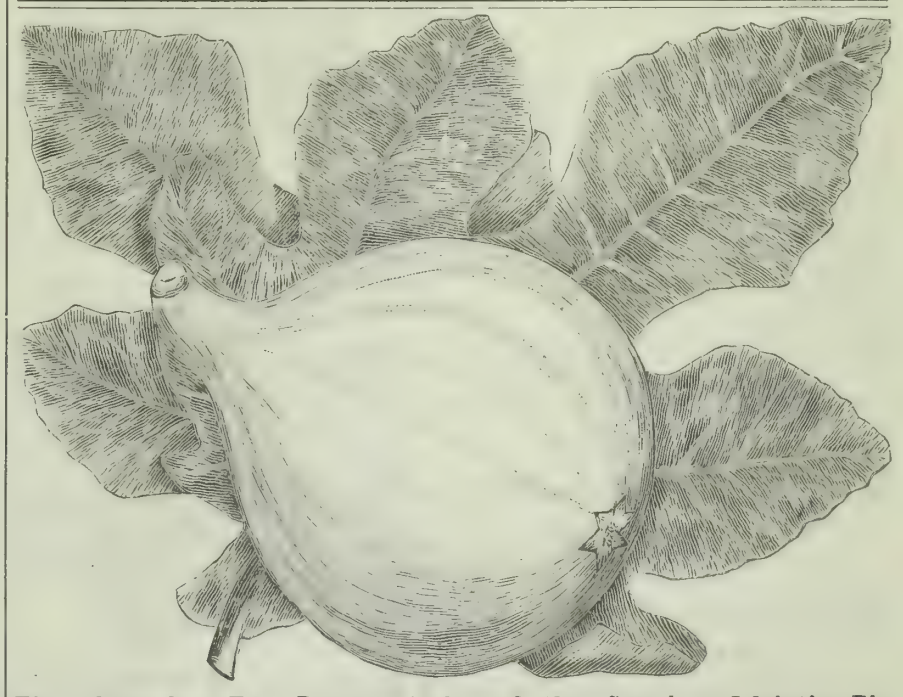
C. H. PHILLIPS	San Luis Obispo		

The West Coast Land Company now offers for sale in subdivisions the

PASO ROBLES RANCH,

Of 20,400 acres, less 6000 acres sold to settlers in the past four months,



THE SANTA YSABEL RANCH, of 20,200 acres,

THE EUREKA RANCH, of 11,000 acres,

And 12,000 acres of the Huer-Huero Ranch all lying in a body, on the S. P. R. R., at its terminus in San Luis Obispo County. These are all agricultural and fruit lands, in quality equal to any in the State, with an average annual rainfall exceeding that of Santa Clara County, and require **NO IRRIGATION.** Templeton, the present terminus of the Railroad, less than three months old, has a population of 300, a newspaper equal to any in the State outside of San Francisco, *The Templeton Times;* the Templeton Institute, established, and Primary Department now open; the best hotel in the county and south of Salinas on the road, and lies central to these ranches and to **500 SQUARE MILES** of rich agricultural and fruit land—the most picturesque section of country on the Pacific Coast. Eight hundred acres have been subdivided into lots of from 5 to 12 acres each, adjoining the town and Templeton Institute, for the convenience of patrons of the school, and are offered at low prices and on same terms of ranch lots. The Ranch subdivisions are offered at an average price of $20 an acre. **Title, U. S. Patent. TERMS OF SALE.**—One-third cash; balance in 4 equal payments, at 2, 3, 4 and 5 years; interest 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of $25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager West Coast Land Co., San Luis Obispo, Cal.

A new Catalogue and Maps showing the location of these lands, the town of Templeton, the 800 acres in 5 to 12 acre lots, and all the ranch subdivisions, will be sent free on application. Take the 8:30 A. M. train, S. P. R. R., for Templeton, 220 miles; time, 9 hours; fare, $8, and apply at Company's office.

INSECTICIDE!

For Eradicating and Destroying all Pests that Infest Fruit Trees and Plants, such as SCALE BUG, HARVEST FLIES, TREE HOPPERS, PLANT LICE, Etc.

It has been fully tested by the Agricultural Department of the State University, and pronounced a success, the endorsement of which we append. It is put up in convenient forms for use both in liquid and paste state.

For Sale in Barrels and 2 and 5-pound Cans in paste form, and in Barrels and 5-gallon Cans in liquid form.

Copy of Letter Received from the University of California, College of Agriculture, Berkeley, dated December 4, 1886.

J. N. KNOWLES, Esq., Manager Arctic Oil Works, San Francisco—DEAR SIR: We have lately tested the Insecticide preparation of Whale-Oil Soap sent by you to us, and have found it to be very effectual against the Scale infesting Orange and Bay Trees here; also against the Thrips. From our previous experience with a similar composition, I think it will be found fully effectual against any small Insect Pests not specially protected like some of the armored Scales, and against which any Wash short of strong lye cannot be used. Respectfully,

E. W. HILGARD, Professor of State University.

A NEW COLONY

On the new extension of Southern Pacific Railroads, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. 20,000 acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; $20 to $30 per acre. INTERNATIONAL IMMIGRANT UNION, 401 California St., San Francisco.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. It costs you nothing for a trial, and I will cure you. Address Dr. H. G. ROOT, 183 Pearl St., New York.

The Central California Citrus Fair.

EDITORS PRESS:—Anxious to furnish the readers of the RURAL PRESS with all obtainable information in regard to the Citrus Fair to be held in the Garden City, your correspondent interviewed several prominent horticulturists, to whom he is indebted for many of the facts presented in this article.

Captain Frank Dunn,

Secretary of the Horticultural Hall Association, talked as follows:

The Central California Citrus Fair to be opened next Monday in Horticultural hall, San Jose, is the natural result of the rapidly increasing interest in the fruit industry in Santa Clara county. This county, though situated at the "back door" of San Francisco (the commercial metropolis of the Pacific Coast) and possessing a climate and soil unsurpassed by any country in the world, remained indifferent, with a few exceptions, until within the last seven or eight years, to its great advantages in the production of fruit. It is true that a few of the older and more enterprising pioneers of Los Gatos, the Willows and New Almaden, whose names I cannot now recall, developed its capability to produce any and every description of fruit known to the civilized world. Still it was not until about the time above mentioned that the facts began to be admitted, and even then a great many who possessed good fruit land began its cultivation in fear and trembling. Now I think nobody doubts its capability of production. It is true that complaints of an overstocked market are often heard, but that will be regulated in time. With increased facilities for Eastern transportation, and a more intimate acquaintance with the excellent quality of our fruit, these complaints will disappear.

In the report of the Secretary of the California Fruit Union, Santa Clara county stands second only in the amount of fruit shipped East last year; and this was its first attempt at shipping on a large scale, or on a co-operative plan. When the 1400 fruit-farms now under cultivation come into full bearing, it is more than likely that this county will head the list by long odds in its Eastern shipments, and the excellent character of its fruit, four-fifths of which is grown without irrigation, should enable it to control the market.

In the near future its citrus fruits will form no inconsiderable portion of its Eastern trade. When the committee appointed by the Horticultural Hall Association to collect citrus exhibits for the coming fair visited some of the orange groves of Los Gatos, Saratoga and the foothills east of San Jose, they were very much surprised at their extent and general healthy appearance. There are also small orange groves along the road to Los Gatos and Saratoga, and many gardens along the Alameda contain two or three orange trees for family use. In the vicinity of Los Gatos the committee found potatoes and tomatoes growing, and a great variety of tropical flowers in full bloom in the middle of January,-specimens of all of which will be on exhibition.

It is now scarcely two years since the Grange conceived the idea of creating a better understanding between this great number of fruit-growers by bringing them together for the purpose of exhibiting their productions and comparing notes. With this object in view, the present fine hall was built with a capital stock of $12,000, divided into 480 shares of the par value of $25 each. The building is 166 feet long by 80 wide; and the roof, which is of corrugated iron, being supported by a truss, leaves the whole floor without a single obstruction. The studding is 24 feet in the clear; the floor of best quality of vertical grain Oregon pine. Four large frosted-glass skylights in the roof afford during the day a pleasant, subdued light in every part of the building. The sides are furnished with galleries 10 feet wide the whole length, supported by iron rods from the roof. The kitchen and dining-room constitute an addition to the rear of the building, and afford accommodation to 60 or 75 guests. There are dressing-rooms for ladies and gentlemen, and the waste-water pipes from the kitchen and dressing-rooms connect with the main sewer on San Fernando street, with a grade of 1 to 16, insuring a safe discharge of all sewage from the building. The hall is located at the junction of San Pedro and San Fernando streets, in a very central part of the city and very near the intended site of the new City hall. There is, probably, no better hall in the State of California for holding horticultural exhibitions.

Acting on the broad principle contained in our declaration of purposes, viz.: "that individual happiness depends on general prosperity," the directors have invited all the adjoining counties to assist at the coming exhibition. No doubt favored localities in some of our sister counties will surpass us in the production of some variety of winter fruits, and gladly will we award them the palm of superiority for such, sincerely hoping that the whole enterprise will lead to a more friendly intercourse and a freer interchange of opinions on subjects of mutual interest.

Although the hall is furnished with 75 gas-jets, it will be lighted during the exhibition by electricity.

Last Saturday a directors' meeting took place and some

Interesting Facts

In relation to the fair were developed. President Jones stated that invitations to the fair had been sent to the State officers, members of the Legislature and leading journalists; that the S. P. C. railroad (Narrow Gauge) had consented to transport all exhibits along the line of the road free of charge; and that it is necessary that the articles intended for exhibition be sent to the hall between February 3d and 5th.

Judge Peckham, president of the San Jose Woolen Mills, has engaged space 12x16 feet for his exhibit of woolen products. Mr. W. H. Wright, superintendent of the San Jose Fruit-Packing Company, promises a fine display of canned goods.

Mrs. E. Hagenmyer, who lives on the Alameda, had a tree which bore 500 oranges this season. Being troubled by mischievous boys, and desiring to save the fruit for the fair, she had posts set in the ground around the tree and upon them placed barbed wire four inches apart as far up as persons could reach. The expense was $15. The lady deserves mention for the interest she has taken.

W. F. Gunkel, of Cupertino, will show tomatoes and almonds. He has about 1000 bearing almond trees, six years old, which this year produced over three tons of nuts. He also has about 300 Silver and 1200 French prunes. The tomatoes are in all stages of growth, the frost not having injured them.

David Powell, who has gone to Los Angeles to get up excursions from that place to the Citrus Fair, writes the *Mercury* that the first excursion will leave there on Thursday of this week.

A lemon measuring over 11 inches in circumference was grown this season on Mr. L. F. Parker's beautiful home place near Los Gatos. The tree from which it was picked will net him this year over $25. His orange trees are loaded with fruit of fine flavor and large size.

The experiment of raising citrus fruits in the mountain districts of this county has been tried and proved a success. In the Summit district, which has an elevation of 1500 feet above the sea level, orange and lemon trees are now in blossom and in bearing, untouched by frost. Geraniums, abutilons and heliotropes are in full bloom.

Apples, prunes and grapes are the principal fruits cultivated in this section for profit. It is attracting attention as a health resort for people afflicted with asthma, weak lungs or nervous difficulties, many finding relief, if not perfect cure.

The directors are meeting with encouragement from every quarter. Farmers who have never shown anything at fairs before are manifesting a lively interest. It is no longer necessary to urge them to exhibit. On the contrary, voluntary applications for space are now made daily. President Jones says: "On the street fruit-growers from all quarters of the county come up to tell me that they will make exhibits. They all seem to realize that this is to be the most interesting and successful fair our county has ever given, and each wants to be represented. I have frequently been surprised at the amount of the citrus fruits that we have in the county; but I think our greatest surprise will arise when we see the amount, variety and beauty of the flowers which will be exhibited."

Robert Ames, of Saratoga district, will exhibit oranges and English walnuts; J. H. Greenleaf, oranges, lemons and limes; E. H. Merryweather, of Fresno county, ten boxes of oranges and two of lemons; S. B. Emerson, a fruit-grower of Calaveras valley (Santa Clara county), three boxes of raisins, claimed to be the finest grown last year in the State.

There will also be an exhibit of prunes grown by Mr. Atkins, of San Benito county; one of oranges and lemons from Stanislaus county; and several exhibits from Alameda county.

In order to make the display more effective, fruits of a kind will be arranged together; the oranges all being in one place, the lemons in another, and so on through the list of exhibits.

The hall is to be elaborately adorned with palm leaves, holly, ferns, and bamboo, the last mentioned not having been damaged by the frost as yet. Messrs. Moore, Kingsbury, Pomeroy and Rock will contribute evergreens for the decoration.

The Board of Directors have decided to offer an oil painting of flowers as a testimonial for the most artistic arrangement of natural flowers, and the following were appointed a Committee on Award: H. F. Keesling, Mrs. E. O. Smith, and Mrs. L. B. Ingalls.

The following ladies will compete for the floral testimonial: Mrs. H. S. Foote, Mrs. I. A. Wilcox, Mrs. C. E. Stevens, Mrs. J. Holland, Mrs. O. F. Alley, Mrs. Sara Trimble, Mrs. Ingalls, Miss Jennie Powell, Miss Alice Younger, Miss Emma Fiske, Miss Jennie Sanders, Mrs. Dora Crossett, Miss Parker, Mrs. L. J. Watkins, Mrs. G. W. Tarleton, and Mrs. T. O. Smith.

A literary and musical entertainment will be given every evening during the week, a brass band and other musical performers being in attendance. Dr. C. C. Stratton, president of the University of the Pacific, will deliver the opening address Monday evening, Feb. 7th. People who have heard the scholarly efforts of this talented speaker expect a rich treat. Miss Ida Benfey, teacher of elocution, will give a recitation and Miss Lena Voltz a vocal solo on the same evening.

Mrs. Arnirich, whose place is nine miles from San Jose, on the Los Gatos road, near the Lone Hill vineyard, has an orchard of Italian figs, pomegranates and oranges, besides half a dozen trees of the St. John bread-fruit.

The Entries,

Made since the last issue of the RURAL PRESS, are as follows:

San Jose—Mr. Lefranc, five boxes oranges and English walnuts. L. Kraft, two boxes oranges—he has 60 trees. A. S. Williams, dried fruits. T. C. Casey, three clusters oranges, four boxes oranges and persimmons. Capt. Jos. Aram, one box oranges, English walnuts and vegetables. E. W. Harrison, English walnuts and vegetables. L. Barnhisel, English walnuts. D. C. Vestal, English walnuts. Miss Tennant, pears, pomegranates, etc. A. C. Penniman, dried fruits. W. H. Wright, canned goods. Paul O. Burns, wines. Capt. J. C. Merithew, wines. S. F. Ayer, olives. J. H. Flickinger, canned goods. Dr. W. F. Gunkel, tomatoes and almonds.

Los Gatos—Dr. W. S. McMurtry, 25 boxes oranges, two boxes lemons and persimmons. D. D. Holland, eight boxes oranges, two boxes lemons. Mrs. F. L. Taylor, eight boxes oranges, one cluster and one large orange. Judge Tobin, two boxes oranges. Dr. J. J. Shaner, two boxes oranges, chestnuts and English walnuts. G. Knowles, one box oranges. Thos. Cox, one box oranges. Mrs. Smith, one box oranges. Judge Rankin, two boxes lemons. Jas. Higgins, four boxes oranges. Mrs. Webber, four boxes oranges. J. J. Groom, one box oranges, Mrs. Ditto, one box oranges and canned fruit. Thos. Gibson, oranges, green peas and beans. The Catholic Fathers, Wm. Morris, Supt., 30 boxes oranges, five boxes limes, from an orchard of 1600 orange and 50 lime trees. C. Kimble, one box oranges, J. H. Lynden, two boxes oranges. F. H. McCullough, two boxes oranges, one box lemons, from an orchard of 125 orange and four lime trees. C. Yocco, 50 boxes oranges, from 300 trees, three boxes lemons, three boxes limes, and one whole tree full of oranges. James F. Kennedy, oranges. A. E. Gish, oranges. L. F. Parker, one box oranges, two boxes lemons. Mrs. Webber, four boxes oranges.

Saratoga—J. Cunningham, four boxes oranges, one box lemons. S. W. Weed, six boxes oranges. Jas. McWilliams, two boxes oranges, one box lemons. Mrs. H. McCarthy, four boxes oranges from 50 trees. Geo. E. Pinder, 30 boxes oranges, five boxes lemons, from 100 orange and eight lime trees. W. R. Springer, six boxes oranges, one box lemons, from 30 orange and 25 lime trees. Capt. W. Warren, one box oranges. Dr. J. W. Handy, five boxes oranges, two boxes limes, from 50 orange and 25 lime trees. J. W. Fuller, 10 boxes oranges, from 100 trees. J. P. Bubb, one box oranges. Gubserville—Jacob Graves, 12 boxes oranges, one box lemons. Sylvester Graves, English walnuts, almonds, and chestnuts.

Milpitas—James Jones, one box oranges, one box lemons. Wm. H. Brundage, three boxes oranges, two boxes lemons.

Evergreen—J. A. Quimby, one box oranges, two boxes lemons.

Fresno county—Fresno Raisin and Fruit Packing Co., raisins.

Stanislaus county—Geo. A. Goodell, two boxes oranges.

Harrisburg, Alameda county—Henry Curtner, two boxes oranges, one box lemons, from 35 orange and four lemon trees.

Alameda and San Benito counties have made application for space in the hall for their county exhibits.

Intense interest in the coming Citrus Fair is being manifested by fruit-growers and others, not only in Santa Clara county, but in the other counties that are to exhibit. Evidence of such interest in the adjoining counties reaches San Jose through various sources. The prediction that our Citrus Fair will be the finest that this part of the State has ever seen, is freely made. A great many visitors are expected. The hotel accommodations are ample, and our people are hospitable. There is a general desire among our people to see a large number of visitors in attendance. H. M. H.

San Jose, February, 1887.

FRONT VIEW OF THE SAN JOSE HORTICULTURAL PAVILION.

Ohleyer's Anti-Debris Bill.

An Act to Prevent Injuries to Navigable Streams.

SECTION 1. Every person who, by the use of water under hydraulic pressure, shall place, deposit, dump, discharge or wash, or in any manner assist in placing, depositing, dumping, discharging or washing any tailings, boulders, cobblestones, gravel, sand, clay, earth, debris or refuse matter into any navigable stream, or into any fork, branch, affluent or tributary of any navigable stream, or into any place or situation on shore where the same shall be liable to be washed into navigable streams, or into any fork, branch, affluent or tributary thereof, either by storm or floods or otherwise; and every person who shall suffer or allow any other person to use any water supply, in whole or in part owned or controlled by him for any of the purposes aforesaid, is guilty of felony, and is punishable by a fine of not less than $100 nor more than $1000, or by imprisonment in the State Prison for not more than one year, or by both such fine and imprisonment.

SEC. 2. The jurisdiction of a violation of any provision of this Act is in any county, first, in which any act is done toward the commission of the offense; or second, into, out of, through, or along which the navigable streams flow which—or any fork, branch, affluent or tributary of which—is affected by the commission of such offense.

Horticultural Hall.

Our illustration of the new horticultural hall at San Jose is made from a photograph for which we are indebted to the courtesy of Loryea Bros., photographers of San Jose. The view represents merely the front end of the pavilion, and therefore does not convey an idea of its extension, fore and aft. It is one of the neatest and best pavilions we have seen, and when filled with San Jose products, arranged with San Jose taste and surrounded by San Jose beauty, it is simply charming. We know it because we have seen it in just that state.

AT the U. S. Land Office in Los Angeles the business for January embraced 28 cash entries, covering 2238½ acres; 3 desert land entries, 1269 acres; 5 final nome entries, 548½ acres; and 1 State selection of 40 acres. There were filed also 57 declaratory statements, 1 coal claim and 6 timber applications. One military bounty land warrant was located.

Breeders' Directory.

NEW IMPORTATION

—OF—

NORMAN STALLIONS.

Theodore Skillman has just arrived from France with the choicest importation of Norman Stallions that has ever reached the Pacific Coast. Mr. Skillman has selected these horses from the best in France, with a view to the improvement of draft horses on this Coast. They are young and sure to suit the tastes of intending purchasers as regards color, etc., a number being coal-black. He has also on hand some Imported French Coach Stallions. These horses are now very popular in the East and have long been the favorite carriage horses of France. Their merits speak for themselves. Come and inspect this rare collection of horses and be convinced that they are the best ever seen on this Coast.

☞ Catalogue for 1887 sent free on application.

S. F. Market Report

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 2, 1887.

Continued dry weather is creating more uneasiness among dealers and business men in general. This uneasy feeling is beginning to make itself felt in various ways, and unless heavy rains are soon had, it will be more marked. The European market for wheat has been more or less depressed, but with no marked changes in prices. The following is to-day's cable:

LONDON, Feb. 1.—Wheat cargoes on passage, and for shipment, slow. Off coast, slow. Four arrivals, 1 sale, 5 waiting. Cal., off coast (500 lbs.), 36s 9d. Cal., just shipped, or promptly to be shipped, 38s 3d. Cal., nearly due, 37s. No. 2 spring, off coast (480 lbs), 32s. Red Winter, off coast (480 lbs), 35s. Red Winter, for prompt shipment, 32s. Red Winter, for present and following months, 32s. Red Winter, fair average, average price ₱ ctl, 7s 4d. Red American Spring, Nos. 3 and 2, 7s 3½d ₱ ctl. Wheat and flour in Paris, rather easier. English and French country markets firm. Weather in England wet but mild. Stock of wheat in Liverpool, 440,000@460,000 qrs; do flour, 150,000@160,000 bbls.

Foreign Review.

LONDON, Jan. 31.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: The deliveries of English wheat continue to be in bad condition, making values generally lower. Sound wheat, however, maintained its rates. The usual comparison of the sales of English wheat is not given this week. Flour is cheaper, owing to the excessive supply of Foreign brands. The receipts of breadstuffs at London, during the present week, equaled 108,385 quarters of wheat, mostly American. Corn is cheap. Oats have declined 3d. Linseed has gained 6d. Seven cargoes of wheat arrived; five were sold, eight were withdrawn, and three remained. At to-day's market there was no demand for wheat. Foreign was 6d lower. English, if in bad condition, was unsalable. Flour was in large supply, and 6d lower. Corn was quiet. Barleys were weaker. Oats were dull, and 6d cheaper. Linseed was firm, and advanced 6d.

Eastern Wheat Market.

NEW YORK, Jan. 30.—Wheat for prompt delivery has ruled very dull the past week, shippers being practically idle on account of the difficulty of moving the stuff. In options, trading has been moderate. Spot closed ½c lower, options steady, as follows: January and February, 91¾c; March, 93c; April, 94¼c; May, 95⅝c; June, 96¼c. July, 97⅝c.

New York Hop Market.

NEW YORK, Jan. 29.—Desirable goods are held with some showing of firmness and meet with a fair demand, but interior stock is difficult to move at any price. Pacific Coast, crop 1886, prime to choice, 23@25c; do fair to good, 18@22c; do, crop 1885, good to prime, 8@10c.

Eastern Wool Markets.

BOSTON, Jan. 29.—The tone of the wool market has been further strengthened by active opening of public auction sales in London Tuesday last. Firm holders have become firmer, and as there have been no really weak holders, the market is in better position than ever before. There has been an active demand during the week, and the sales of all kinds amount to 3,834,100 pounds. Prices are no higher, (unless we except some of those grades which are in short supply, and wanted), but on all grades there is a very firm feeling. A number of the largest mills have been represented among the buyers, and from this time on we anticipate a good demand and a steady market. California wool has been more active. The sales of spring wool have been 354,000 lbs, including a round lot of 16,000 lbs, at 20c per lb. Fall California wool sold to the extent of 205,000 lbs, all of which was reported on private terms, but is understood to be in the range of our quotations. The receipts of the week have been 4778 bales domestic, and 741 bales foreign.

NEW YORK, Jan. 30.—There has been a good tone to the wool market, and business was fair. Advices from Europe, of improvement at the auction sales, had the desired effect of bringing manufacturers to the views of holders. Although no advance was asked, buyers willingly paid more than they would have paid several weeks ago had the holders chosen to take their bids. The sales of the week included 50 bags spring California at 22½c; 150 bags scoured California at 48c; 25,000 lbs fall California at 14c. The Boston market is more active, and sales of domestic larger than for over three months. The feature of the week has been the movement of California spring, which has been taken in some large round lots by manufacturers, thus reducing the supply of choice wools of this description. The best of these wools, some time ago, were held at 28c. but transactions last week were from 25 to 26c. These wools have not only been taken by cassimere manufacturers, but also by mills making soft dress goods, which command a ready sale. Among the sales were 280,500 pounds of Territory at 21@26½c, and 783,000 pounds of California spring and Oregon at 24@27c. The Philadelphia market is less active. There is good inquiry for low and quarter-blood and medium, which are scarce, and in some cases held above the views of buyers. Fine fleeces of Colorado and Territorial wools are in relatively fair supply, but are comparatively quiet. Among the sales were 28,000 pounds of Nevada fine at 18½c, and 12,000 pounds of Territory fine at 22c.

Dried and Canned Fruit at the East.

NEW YORK, Jan. 30.—There is a fair jobbing demand for Valencia raisins, which command full former prices, but loose Malaga, and California and London layers, here, received very little attention. Valencia, off stock, 5¾@6c; layer, 8@8¼c; two-crown loose Muscatel, $1.35@1.40; California loose, quoted at $1.55@1.90; do London layers, $1.70@2.

Prunes—The supply of Turkish has further increased, but as the bulk is in the hands of the syndicate, the market has not been unfavorably influenced. Several additional lots, aggregating 400 casks, have been bought up, part at a trifle below 6c; but 6c is the market price, and at the close it was doubted whether any lots could be even obtained at that figure, either on spot or to arrive. The syndicate is not offering any. The advance in the price is bringing to the fore cheaper substitutes, and methods are being adopted, by some sellers, to place them before the public as the genuine article. We refer particularly to the packing of Bohemian casks, from which Turkish prunes have been emptied. These goods are offered at a figure one-quarter to one-half cent below the price for Turkish, and some buyers are led into the belief that they are purchasing the latter. Empty Turkish casks, however, are very scarce, and are held at an extreme price—a figure equivalent to about one-quarter cent per pound. French prunes are in brisk demand, with sales of 4000 boxes, at 8⅛@8¼c. Currants steady at 6⅞c. Citron is selling at 16½@16⅝c. Dates—Persian are in fair demand at 5@5½c; Fard, 6@7½c. Figs are in fair jobbing request at 6½@12c.

Canned goods—The interest is still centered chiefly upon tomatoes for immediate delivery; $1.05 is the inside quotation named, while some holders refuse less than $1.10. Sales of next season's pack, to the extent of 25,000 cases, have been made at 92½c@$1. California canned peaches, $2.50@3.25; pears, $2.-75; plums, $2.50; grapes, $2.55; apricots, $2.15.

California Products in New York.

NEW YORK, Jan. 30.—Seeds—California yellow mustard, 3¾@4½c. Honey, extracted, 5½c.

California Fruit in Chicago.

CHICAGO, Jan. 30.—There is little more trade in dried fruits among jobbers reported, and there seems to be a little more doing in the way of filling outside orders. On the open market no special improvement of demand appears as yet, but if jobbers are able to sell and reduce their stocks, it will only be a short time before they will be required to buy. There are no consignments of lots on sale, except of apples. California dried fruits and raisins were quoted a shade easier, while other kinds remain about steady. Moderate sales are being made. Prunes, French, per pound, 8½@11½c; plums, pitted, 11@13c; peaches, halves, 12@14c; peaches, halves, pared, 20@21c; figs, 6@8c; nectarines, 9@10c; pears, 8@12c per pound. Raisins—London layers, 20-pound boxes, per box, $1.45@1.50; raisins, loose, Muscatel, per box, $1.30@1.35. Oranges—There was a fair local demand and some outside trade. The supply, however, is liberal, there being a good supply of Floridas and Foreign, and California oranges are also coming on the market. Prices are reasonable, and should insure a good trade. A street circular quotes the following prices: California bright, $3@3.50; Navel oranges, $5@6.

Local Markets.

BARLEY—The market has ruled steady throughout the week, with holders strong in their views, owing to the dry weather and an increasing consumption. There is more inquiry for brewing, but so far as can be learned no sales have been made. On Call transactions were large with fair fluctuations reported. To-day's sales were as follows:

Morning Session: Buyer season—800 tons. $1.18¾; 1300, $1.18½; 400, $1.18⅜; 800, $1.18¼; 100, $1.18⅛. Seller season—100 tons, $1.11 ₱ ctl. Afternoon Session: Buyer season—1200 tons, $1.18½; 100, $1.18⅜; 200, $1.18¾ ₱ ctl.

CHEESE—Under continued light supplies and a good demand, the market rules exceedingly strong.

BUTTER—The market rules weak and in buyer's favor at low quotations, owing to excessive supplies of pickled. Another carload of fresh rolls was shipped to the East the past week.

EGGS—The market rules weak at another decline. It is claimed that the consumption is increasing, and receipts, consequently, cleaning up better.

WHEAT—The market for sample parcels appears to be at a deadlock. Sellers are out of market, except at extreme high prices, while shippers claim they cannot pay even our quotations. Very few sales were made the past week, but those made were at quotations. On Call transactions were heavy with fluctuations varying from one to two and one-half cents per cental. To-day's sales were as follows:

Morning Session: Spot, season's storage paid—500 tons, $1.58¾. Buyer season—600 tons, $1.66¾; 2600, $1.66⅞; 800, $1.67; 300, $1.67½. Afternoon Session: Buyer season—800 tons, $1.67¼; 4500, $1.67⅜ ₱ ctl.

[COMMUNICATED.]

Market Information.

Cereals.

The exports of wheat and wheat flour from the United States, from July to January, were as follows:

	Wheat, bushels.	Flour, bbls.
1887	51,585,504	5,551,444
1886	20,529,982	3 953,618
Increase	31,035,582	1,597,826

By reducing flour to wheat it will be seen that for the six months of the present season the exports are all of 36,829,060 bushels in excess of the season of 1885-86. On January 16, 1886, the visible supply of wheat east of the Rocky mountains was 57,108,-286 bushels, against 62,825,506 the like date this year. The above shows an increase in the visible supply of only 5,717,220 bushels this year, notwithstanding farmers' deliveries extended into a later date in 1886 than in 1885, which, with all else equal, ought to show an increase of not less than 30,000,-000 bushels. In the spring of 1886, farmers' deliveries were quite free, but this year they will be light, owing to a less supply in farmers' granaries. Crop reports from the West continue virtually unchanged, but, as usual, they do not attract much attention until well into March, when deep interest is taken in them. In this State our advices continue favorable for the plant on irrigated and early sown land, but on late sown land, where seeded, it is still unfavorable. The local market ruled dull up to Saturday, when a stronger tone set in, resulting in better bids being made, but owing to holders' advanced views trading was confined to parcels put on the market so as to save expense. Continued dry weather, with stocks well concentrated, are the influences which, at present, govern our market. On Monday prices shaded off in the morning—some for futures, but closed stronger in the afternoon, resulting in an improvement on Tuesday. Owing to the light engaged tonnage, the sample market is quiet. A. J. Gove, Produce Exchange Inspector of Grain, reports stocks of grain in city warehouses February 1, as follows:

	Wheat.	Barley.	Oats.	Corn.	Bran.
Feb. 1	11,312	19,150	1794	1362	391
Jan. 1	15,493	21,275	1830	1494	950

The stock of wheat in this city and Port Costa on the first of the present month was 83,312 tons, against 87,438 tons on January 1 last. Farming advices report the plant, when up, as looking well, but without rains soon it will not be sufficiently strong, except in a few favorable sections, to withstand a day or two of the north winds which blow later on in the season.

Barley ruled, the past week, fairly steady for sample parcels, with large holders firm in their advanced views, owing to continued dry weather. On Call, in options, large trading characterized the week, with fair fluctuations in prices. Crop advices continue the same as reported in last week's issue.

California corn, of choice grades, has ruled steady, but poorer grades were dull and in buyers' favor. Heavy receipts from the West are against our market. Nebraska corn, to arrive, is offered at 97½c to $1.02½c per cental, by the carload.

Western oats continue to press the market at low prices compared with choice coast oats. Our market is lightly stocked with choice, and as the demand is steady, full prices rule for them, but fair oats are in liberal supply and favor buyers.

Rye is scarce and very hard to get, even at advanced prices.

Buckwheat is slow, with stocks light.

Feedstuffs.

Owing to a large increased consumption and continued dry weather, hay, particularly choice to extra choice grades, has ruled exceedingly strong with an advance obtainable on last week's prices. Choice hay sold at over $14.50 afloat, and also in carload parcels. Other grades sold proportionately lower.

Middlings are selling at a slight advance. Bran is stiff under a good consumptive demand. Oilcake meal and ground barley hold to strong prices.

Fruits.

Under freer receipts of oranges, prices are easier, yet dealers only make concessions when compelled, and buyers only pay asking prices to meet urgent wants. Shipments to the northern coast continue free.

Limes and lemons are slow and decidedly in buyer's favor.

Apples are in lighter supply, yet it is difficult to get an advance on current quotations.

Dried fruits are quiet but strong under firm holding and light stocks. Choice, well-packed dried fruits always command an advance on quotations. Eastern advices continue to report a strong market.

Raisins, unless very choice and well packed, are slow and sell for less money. The stock in this city is light, but then the demand is also light.

Live-Stock.

Choice well-conditioned beef cattle are in lighter supply, causing a stiffer feeling to rule; but fair cattle continue to offer liberally, at current quotations. Mutton sheep have, apparently, a firmer tone. Veal and spring lambs are in good request. Hogs are slower, but, as yet, no lower quotations are made public. In milch cows and horses, there is nothing new to report.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 7@7½c; first grade, grass fed, 6½@7c per lb.; second grade, 5½@6c; third grade, 5@—c.

MUTTON—Ewes, 5@—c; wethers, 5½@—c.

LAMB—Spring, 6@7c. Yearlings, —c.

VEAL—Large, 7@8c; small, 9½ to 10c.

PORK—Live hogs, 3¼ to 3¾c for heavy and medium; hard dressed, 5½ to 7c per lb; light, 3 to 3¼c; dressed, 5 to 6c; soft hogs, live, 2 to 2¾c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

Potatoes ruled steady and strong throughout the week, under moderate receipts and a fair inquiry. New potatoes are coming in more freely.

Onions continue strong for choice grades, with even cut doing slightly better.

Cabbages and also cauliflowers have been in good demand for shipping, with the latter selling higher.

The southern counties continue to send us liberal supplies of garden truck, but not in sufficient quantities to materially shade off prices.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1887.	1886.
On the way	204,696	151,182
In port, disengaged	88,957	105,151
In port, engaged	19,119	46,642
Totals	312,772	302,975

The above gives a carrying capacity as follows: 1887, 500,415 short tons; 1886, 484,760 short tons; increase over last year, 15,655.

There was not a vessel taken the past week for wheat loading, owing to the asking rates being above shippers' views.

Poultry has ruled steady throughout the week. Dressed turkeys from Omaha are sent to this market.

In hops there is more inquiry, with no sales reported, owing to buyers' views, as yet, being too low.

Wool is stagnant, but dealers express confidence in better prices for the spring clip.

Tallow is selling at a slight advance, owing to lessened supplies.

Honey is quiet, but owing to the prospects for this year's crop being reported below an average, the tone of the market is strong.

LIVE-STOCK MERCHANTS.—We have received a circular which announces the formation of a firm of live-stock commission merchants at Denver, under the name Geo. L. Goulding & Co. Many of our readers who attended last fall's fairs will remember Mr. Goulding as having charge of the fine herd of Galloways sent out here by Leonard Bros., of Missouri. Mr. Goulding made many friends during his sojourn in this State, and we doubt not he would be pleased to see them if they visit Denver.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

EXPLANATION.—Cl. for clear; Cy., cloudy; Fr., fair; Fy., foggy; — indicates too small to measure. Temperature Wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in DEWEY & CO.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING JANUARY 25, 1887.

356,623.—ROLLER MILL—Geo. Cottrell, S. F.

356,683.—HARNESS PAD—W. R. Empey, San Jose, Cal.

356,582.—PORTABLE BATH-TUB—S. D. Freeman, Fort Thomas, A. T.

356,631.—CULTIVATOR—P. Frichette, Sheridan, Cal.

356,590.—SEWING MACHINE—Chas. Kohler, Oakland, Cal.

356,655.—HARVESTER—X. H. Martinent, Fish Lake Valley, Nev.

356,498.—ANIMAL EXTERMINATOR—J. B. Payne, Blanco, Cal.

356,566.—COMBINED OIL-CAN, WRENCH, ETC., FOR BICYCLES—D. C. Wilgus, Los Angeles, Cal.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

INSECTICIDE.—We have heard a good deal about the insecticide prepared by the Arctic Oil Works, of this city, and from all accounts believe it to be a very valuable article for destroying scale, plant lice, and other bugs, troublesome to those who would grow fruits or flowers. The formula was decided upon after careful analysis and practical experiments, so as to get the fullest strength without injury to vegetation, and to give it a form readily reduced to complete solution by the fruit-grower or gardener. The advertisement in another column gives other information about it. It will be found very satisfactory as a summer wash, and will do good work on soft shell scales, applied at any season of the year.

A HANDSOME PUBLICATION.—Ben C. Truman has published a very handsome illustrated pamphlet of 100 pages, entitled "From the Crescent City to the Golden Gate via the Sunset Route of the S. P. R. R." Major Truman has done much to make California more widely known by his writings, and we think his latest is his best work, both in text and illustration. The latter are so fine that we shall reproduce some of them in our columns. On the first page of this issue is one of the balcony at Del Monte, which well presents some of the outdoor charms of that popular resort at Monterey.

A UNIQUE DIRECTORY.—Last week's *Mercury* has a horticultural description of the 60 odd school districts of Santa Clara county in alphabetical order, giving their situation, character of soils, various fruit-growing statistics, and names of those engaged in the business in each locality. Of the Midway school district, in which John Rock has his famous nursery, it is remarked: "The soil is of sediment and adobe and finely watered by artesian wells. It has great capacity for strawberries and other small fruits."

WHEELER'S CARBON BISULPHIDE.—We have received a copy of a small pamphlet, by J. H. Wheeler, manufacturer of carbon bisulphide, making a number of interesting statements about ground squirrels, their destructiveness and fecundity, and alluding to the efficacy of bisulphide as a destroyer of these pests and gophers. It is an advertising pamphlet and yet contains much valuable information. Copies can be had by addressing Mr. Wheeler at 204 Montgomery street, S. F.

WATERPROOF MUSLIN.—We have received samples of the "waterproof plant bed muslin," advertised in another column by the United States Waterproofing Fiber Co., 56 South St., New York. It strikes us that it will be found of great value to our plant propagators who need partial protection for their propagating beds. Samples can be obtained by writing to the company.

COHASSET POULTRY YARDS.—We have received a copy of a neat letter sheet and circular used by C. N. Cousens, proprietor of these poultry yards, located at 1625 Webster street, S. F. Mr. Cousens' business address is 125 Geary street, S. F. He makes a specialty of Plymouth Rocks, Brown Leghorns and Light Brahmas.

New Subscription Terms.

Our recent new terms for inducing payment of subscriptions in advance are meeting with favor in all quarters. New subscribers are coming in and old patrons are again entering their names.

We are confident of greatly increasing our large list of subscribers within the next few months.

A few subscribers have complained of paying at the rate of $3.50 when fully one year in arrears. To induce all such to settle up, we will, *during the next 30 days*, give all such the privilege of paying all back dues at the rate of $3.25 per annum.

Jan. 22, 1887.

THEO. SKILLMAN, of the Magnolia Stock Farm, Petaluma, aided by the *Argus* printers, has issued a catalogue of the Norman and coach horses imported by him from France during the past two years. It is embellished with portraits of a dozen of these noble creatures, and may be had free for the asking.

THE *Overland* for February reaches our table full-freighted with original articles of interest and importance to Pacific Coast readers. The publisher's department well illustrates the enterprising progress of the city and county of Fresno.

C. B. TURRILL has accepted his appointment as special commissioner from California to the American Exposition, which is to be held in London next May.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, *to those who pay fully one year in advance of date*, IF REQUESTED the following articles (while this notice continues), at the very greatly reduced figures named at the right:

1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price $1).....$0.25

NOW READY! A New Revised and Greatly Enlarged Edition of
"Gardening for Profit."
BY
Peter Henderson
A GUIDE TO THE SUCCESSFUL CULTURE OF THE MARKET AND FAMILY GARDEN.
Profusely illustrated. 375 pages. Price, post-paid, $2.00.
The immense and unprecedented sale of the earlier editions of "Gardening for Profit" indicates the estimate of its value as a thoroughly practical work. The NEW BOOK, just issued, contains the best of the former work, with large additions drawn from the author's added years of experience.
OUR NEW CATALOGUE OF SEEDS AND PLANTS (140 pages) is replete with new engravings of the choicest flowers and vegetables, and contains, besides, 2 beautiful colored plates. Mailed on receipt of 10 cents (in stamps), which may be deducted from first order, or sent FREE to all purchasers of the New "GARDENING FOR PROFIT," offered above.
PETER HENDERSON & CO. 35 & 37 Cortlandt St., NEW YORK.

Seeds, Plants, Etc.

BARREN HILL NURSERY

NEVADA CITY, CAL.

SPECIALTIES:

NUTS, PRUNES, AND GRAPES.

The Finest Collection of Nut-Bearing Trees to be found in the United States.

19 Varieties of Walnuts,

—INCLUDING—

CLUSTER WALNUT,

The newest, most prolific and valuable variety ever introduced into this country.

PRŒPARTURIENS,

Or Early-Bearing, or Fertile Walnut, introduced into California in 1871 by Felix Gillet. "Second Generation" Trees, grown from nuts borne on the ORIGINAL tree; 90% guaranteed to be "genuine Prœparturiens," or having retained the surprising characteristics of **precocity, fertility** and **hardiness** of the **original** Prœparturiens. "Third Generation" Trees, grown from nuts borne on **second generation** Prœparturiens, entirely California-grown; vigorous, hardy and fertile variety.

"Second Generation" Prœparturiens.

Serotina, Franquette, Mayette, Chaberte, Gant, Parisienne, Mesange Walnuts.

The leading varieties of Europe, highly recommended for beauty and quality of the nuts, fertility and hardiness of the kinds.

9 Varieties of French Chestnuts or Marrons (Propagated solely by grafting).

7 Varieties of Filberts.

4 Varieties of April Cherries, the earliest and most prolific in California.

207 Varieties of Grapes, including the very earliest Table varieties known, such as Blue Muscat, Ischia, Magdeleine, Malingre, Pearl of Anvers, Bulbery, Luglienda, Dupont, Gros Sapat, etc.

81 Varieties of English Gooseberries, all sizes, shapes and colors, and "true to name."

PRUNES! PRUNES!

LOT D'ENTE, OR "D'ENTE TRUE FROM THE ROOT."

We have ourselves given this name of "Lot D'Ente" to this type, so extensively propagated in the valley of the Lot (France). **True from the root** and not grafted, and which we have introduced into this country. This type of the D'Ente Prune is not at all propagated by grafting, which would do away with its chief qualities of being more vigorous, more **long-lived** than grafted trees, and a **gum-resistant** stock.

ST. CATHERINE, "True from the root."

This kind is altogether propagated **true from the root** in its home, valley of the Loire (France), and offers greater advantages than grafted trees, as being also more vigorous, more long-lived, and a **gum-resistant** stock.

APRICOTS — Boulbon, Esperen, Duclos, Mexico, the shipping varieties of the south of France.

Constantinople Quince—The largest, most precocious and prolific of all quinces.

Ever-bearing Black Mulberry of Spain—Medlar, Sorbus (all those kinds should have a place in all gardens).

Mulberry Trees for Silkworm Feeding. Silkworm Eggs. Sericulture Chart, 50 cts.

☞Send for General Catalogue and Supplement with Chapters on "Nut-bearing Trees" and "Prunes," illustrated with 20 walnut cuts, 5 prune cuts, and numerous other cuts representing Medlar, Sorbus, Black Mulberry, French Chestnuts, Filberts, etc.

FELIX GILLET,
Nevada City, Cal.

L. U. McCANN, Santa Cruz, Cal.

B. V. CUTTINGS.

Bordeaux Varieties.

I OFFER FOR SALE, AT $10 PER M., 200,000 CUTTINGS of the following renowned varieties, tule-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from $2.50 to $5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

D. M. FERRY & CO. are admitted to be the LARGEST SEEDSMEN *in the world.*

D. M. FERRY & CO'S Illustrated, Descriptive & Priced SEED ANNUAL For 1887 will be mailed FREE to all applicants, and to last season's customers without ordering it. *Invaluable* to all. *Every person using Garden, Field or Flower* SEEDS *should send for it.* Address

D. M. FERRY & CO
Detroit, Mich.

THE DINGEE & CONARD CO'S
BEAUTIFUL EVER-BLOOMING
ROSES

Our Great Specialty is growing and distributing ROSES. We have all the latest novelties and finest standard sorts, in different sizes and prices to suit all wants. Over 150 *choicest varieties* to choose from. We send strong Pot Roses safely by mail to all Post Offices, purchaser's choice of varieties, all labeled, 3 TO 12 PLANTS $1, $8 to $15 per Hundred. according to value. Two year Roses by express. Our New Guide, 78 pages, elegantly illustrated, Free. Address THE DINGEE & CONARD CO., Rose Growers, West Grove, Chester Co. Pa.

BEACH & CO'S ROSES

Send stamp for our beautiful catalogue of all the Newest and Best Roses, Geraniums, Carnations, and all kinds of House and Bedding Plants, before ordering elsewhere. We make no extravagant promises, but sell GOOD SOLID GOODS at fair prices, safe arrival guaranteed by mail or express. Our page of special collections will surely contain something you will desire.

Address BEACH & CO., RICHMOND, IND.

VEGETABLES, FLOWERS,
TOBACCO BED PLANTS, GRAPES, ETC

Patent Protecting Cloth equal to glass sash at tenth cost on cold frames, hot beds, etc. Promotes hardy, rapid growth, don't shrink or decay rapidly. Retails at 3, 6 and 9 cts. per yard, 36 inches wide. Cheap water-proof covers for wagons, hay caps, stacks and all agricultural purposes. Circulars, samples free. U. S. WATERPROOFING FIBRE CO. (Limited) 56 South St., N. Y.

OLIVE TREES FOR SALE.

One and Two years old. Warranted all Clean and Free from Pests. C. W. CRANE,
616 Eighteenth St., Oakland, Cal.

No. II.—Ornamental Trees, Evergreens and Plants..... 4 Cents

JOHN ROCK.
San Jose, California.

33d YEAR. # STOCKTON NURSERY. 33d YEAR.
WHITE ADRIATIC,
SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Præparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE.—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.
STOCKTON, CAL., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

WM. H. ROBINSON, Quarantine Guardian San Joaquin Fruit District.
JOS. HALE, County Commissioner of Horticulture.

SHINN'S NURSERIES
NILES, CAL.

We offer to the public our usual excellent and well-assorted stock of

FRUIT, NUT & SHADE TREES,
SHRUBS AND PLANTS.

ALL OUR TREES ARE GUARANTEED FREE FROM SCALE, and are grown without irrigation on new land distant from old orchards.

☞We would call especial attention to our "Bulletin" Smyrna Fig, imported by us direct from the Levant and now proved, in numerous instances of fruiting, to be the

TRUE FIG OF COMMERCE.

Poultry and Stock Book

Niles's new manual and reference book on subjects connected with successful Poultry and Stock Raising on the Pacific Coast. A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid, 50 cts. Address PACIFIC RURAL PRESS Office, San Francisco, Cal.

TRUMAN, ISHAM & HOOKER.

NOTE THE REDUCTION IN PRICES!

GARDEN CITY GANG PLOW,

With Flexible Pole, Land Gauge and Leveling Lever.

10-inch Two-Gang, with Steel Bottoms	List, $95 00	Reduced to $80 00
12-inch Two-Gang, with Steel Bottoms	List, $95 00	Reduced to $80 00
10-inch Two-Gang, with Chilled Iron Bottoms	List, $95 00	Reduced to $80 00
12-inch Two-Gang, with Chilled Iron Bottoms	List, $95 00	Reduced to $80 00

(Including Extra Shares and Land Gauge.)

16-inch Castor Rolling Coulters for above—Extra—Each	$7 25
Doubletrees for above—per set	4 00
Chilled Shares for 10-inch Steel Bottoms—Each	1 25
Chilled Shares for 12 inch Steel Bottoms—Each	1 25

Extra Steel or Chilled Bottoms can be used on any Gang. Reduced 25 per cent in price.

The work done by this Gang exceeds any plowing that can possibly be done with a hand plow. It will do good work where the ground is so hard that a hand plow cannot work. It works splendidly in trashy ground without clogging.

It is the Lightest, Strongest, Cheapest, and without exception the Best Gang Plow in the market.

THE ONLY GANG THAT WILL CLEAR ITSELF IN WEEDY GROUND.

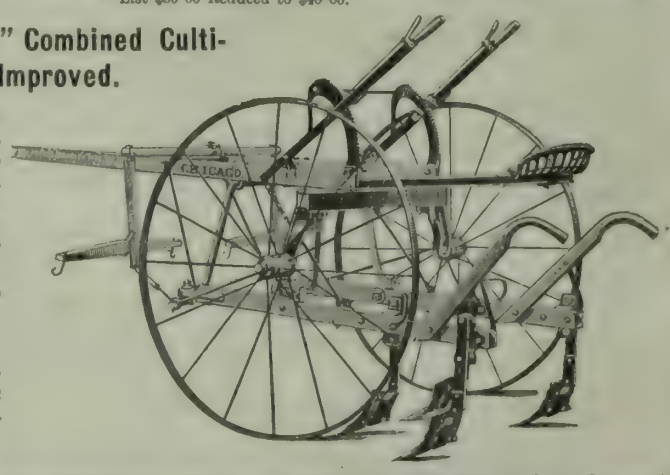
Hight of Beam, 2 ft. Hight of Wheels, 2 ft. 8½ in. Wheels, 4 ft. apart. Size of Beam, 3½x¾ in.

New Bradley Vineyard Plow

This Plow is one of the latest things out, and is the most complete tool of its kind in the market. It has crooked standard and shifting handle, so that it can be run close under the trees or vines without breaking or injuring them. There has been a large number placed in California vineyards during the past year, and all gave the best of satisfaction.

Especially adapted for Cultivation of Vineyards and Orchards.

PRICE, with Extra Share and Whiffletree, **$15 Reduced to $12.**



THE "CHICAGO" VINEYARD CULTIVATOR,

With Improved Levers, Lever Racks, Shovel Standards, Standard Blocks, Seat Raiser and Axle Arms.

No. 4—"Chicago" Combined Riding or Walking Cultivators, wood frame, wood wheels, and four 5 or 5½-inch Shovels, List $45 00 Reduced to $35 00.

No. 5—"Chicago" Combined Riding or Walking Cultivators, wood frame, steel wheels, and four 5 or 5½-inch Shovels, List $50 00 Reduced to $40 00.

The "CHICAGO" Combined Cultivator, Improved.

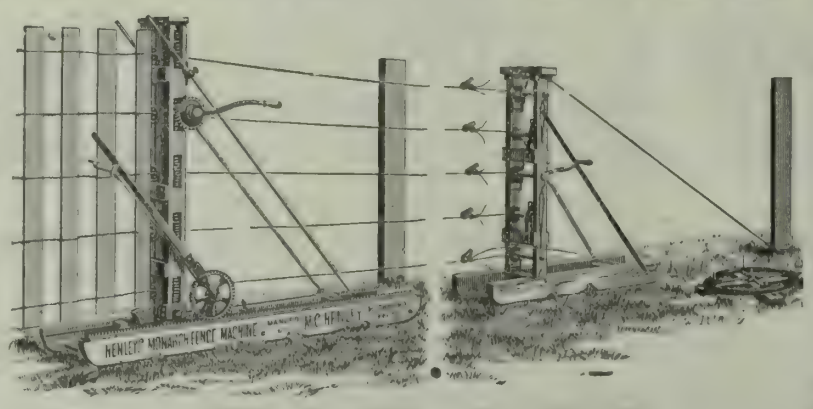
When used as a Walking Cultivator, the whiffletrees are put at lowest point of pitch, to take the weight of pole off the horses' necks. With these adjustments it can be perfectly balanced, so that in turning, the pole does not fly up.

It works admirably in cultivating fallow ground, and in putting in small grain, by using a fifth or center shovel.

Agents for David Bradley Manufacturing Company. A complete stock of extras always on hand. Vehicles of every description a specialty. Agricultural Implements and Hardware of every description. Send for Catalogue. Address,

TRUMAN, ISHAM & HOOKER, 421-427 Market Street, San Francisco, Cal.

HAWLEY BROS. HARDWARE CO.



WHOLESALE DEALERS IN HARDWARE AND AGRICULTURAL IMPLEMENTS.

GENERAL AGENTS FOR

HENLEY MONARCH FENCE MACHINE.

IS THE BEST AND HAS NO EQUAL.

1. **BECAUSE** the wire is stretched the full length of the field before the weaving is commenced.
2. **BECAUSE** any sized wire can be used, and with this advantage: using a large size wire, the strongest fence can be made.
3. **BECAUSE** any size, length, or style of picket, or slat, or board, can be used, weaving all equally firm and solid.
4. **BECAUSE** the picket or slat can be woven in more firmly and solidly than in any other machine.
5. **BECAUSE** it will make a fence over rough and uneven ground, or up and down hill alike, making as good a fence as on even, level ground; and the machine being adjustable, the pickets are always woven plumb.
6. **BECAUSE** the **Monarch** machine stretches the wire tighter, thus making the strongest and best wire and picket fence.
7. **BECAUSE** any one can operate it, and there are no parts to get out of order or repair.
8. **BECAUSE** a boy can work it as well as a man, it being light and easily managed.
9. **BECAUSE** it is made of the very best materials, and with proper care, will last a lifetime.
10. **BECAUSE** the price is within the reach of every farmer.
11. **BECAUSE** it is the only machine that forces the slat or picket firmly against the wire, thus securing the slat in such a solid and permanent manner that it cannot be pulled out, and breakage is impossible.
12. **BECAUSE** the fence made by this machine will turn all kinds of stock, and is much stronger than any barb wire fence, and completely obviates all danger of injury to stock.

A FEW OF THE ADVANTAGES

OBTAINED BY THE USE OF

THE WIRE and PICKET FENCE:

It will turn all kinds of stock, sheep, hogs, and poultry, without injury to same.

The strongest wind will not blow it down, if properly put up, and the farmer can go to bed at night and rest undisturbed, knowing well that his crops are safe and well protected.

The amount of ground saved by this style of fencing over the common rail fence, is alone a great object, and would soon save the price of the wire and picket fence.

This wire and picket fence is generally set from two to four inches from the ground, thus allowing the farmer to mow down the weeds and undergrowth, and keep his farm in first-class condition.

While it is possibly not quite as cheap as barbed wire, it has many advantages over it, as any one can readily see.

It is cheaper than board fencing, as any kind of lumber may be used for pickets, and, if it is properly put up, will last a lifetime with very little expense. By weaving past the posts in wire and picket fencing, and not fastening the pickets to posts, the wood parts of fence do not come in contact, thus preventing rotting, as is the case with board fencing, as they rapidly rot off at posts.

Price $40 Each.

SEND FOR CATALOGUE.

IS THE BEST AND HAS NO EQUAL.

13. **BECAUSE** by weaving past the posts, and fastening the wire strands to the posts with staples, and not nailing the slats to posts, thus keeping the wood parts from coming in contact with each other, it will not hold moisture or rot. This is a very important matter, as all boards in board fencing soon rot off at post, and occasion continued expense for repairs. And finally,

BECAUSE it makes the handsomest, best, strongest and most durable fence, and is the only first-class, practical Fence Machine in the world.

The foregoing are only a few of the points of superiority of the IMPROVED MONARCH FENCE MACHINE over all others, and a trial will convince any one of its merits, and that it has no equal. The HENLEY MONARCH FENCE MACHINE will make the best rabbit and poultry proof fence for nurserymen, gardeners and vine-growers, by weaving the slats close together; will also weave a handsome picket fence for lawns, gardens, and fronts of lots, with great rapidity and regularity. Will make the most substantial fence for farms and stock ranches. The MONARCH Machine is making a complete revolution in the methods of fencing. The fence made by this machine is destined to rapidly supersede all other styles and kinds of fence, both wire and board, and the cost of machine, and expense of fencing, puts it within the power of every farmer to inclose his land with the very best and most substantial kind of fencing, at a total cost far below that of any other kind.

HAWLEY BROTHERS HARDWARE COMPANY, San Francisco, Cal.

PACIFIC RURAL PRESS

TWENTY-PAGE EDITION.

Vol. XXXIII.—No. 7.] SAN FRANCISCO, SATURDAY, FEBRUARY 12, 1887. { $3 a Year, in Advance / Single Copies, 10 Cts.

Southern California.

The southern counties have received their full share of the drenching of the present storm and the land will be made all the pleasanter to the thousands of Eastern people who are now sojourning at the many delightful resorts south of the Sierra Madre. The rain will also assure a fullness of non-irrigated crops and at the same time fill the mountain reservoirs with abundant water for next summer's flow in ditches and from artesian wells. The south continues right along in its course of prosperity and advancement which began nearly a decade ago and has since progressed with accelerating speed. The fame of the south grows constantly by what it feeds upon, and each year's comers bring a greater number the next. The advancement of real estate values, the growth in population, the development of the industries, are all almost phenomenal, and yet there is field for much greater progress and apparently there is no witholding of the agencies by which it may be attained.

We are pleased to announce, and to describe more fully upon a following page, a citrus fair, which will be open in Riverside, on Tuesday, February 22d, and continue during the week. The regulations open competition to fruits grown anywhere, and we hope there will be a general disposition on the part of all districts to participate. We attended the Southern citrus fairs of a few years ago where there were collections from various neighborhoods, and we have always regretted the fact that during the last few years it has seemed impossible to hold a general display. The fairs in the several districts have been fine and have done much good, but it would still seem desirable to supplement them all by a general fair at which at least the five southern counties could collect their productions and give the visitors a more comprehensive idea of the resources of the whole region. If we remember correctly, the last grand effort was held at Los Angeles, and the fact that that city permitted the collapse of the Southern California Horticultural Society, or at least did not erect another upon its ruins, has always seemed to us unfortunate. Riverside has held general fairs and has made some excellent exhibitions of fruit from both within and without its own boundaries. This effort is creditable, but Riverside is too far away from the center of the district to be a convenient point.

We did not intend to preach upon this text, but rather to exhort all to take up the offer of Riverside and let us have the sight of a Southern California Citrus Fair which will include the productions of all the sections within the geographical district. What was shown five or six years ago would hardly be an index to the displays which can now be made. We hope this year's fair at Riverside will show a collection worthy of the whole region, or if that is not realized, arrangements may be made for such an event in the future. Such a display would impress visitors well and do much to overcome sectional feeling, which is too prevalent.

WHAT DOES HE MEAN?—A VALENTINE'S DAY CONSULTATION.

Valentine's Day.

We express our interest in the coming event which is no doubt largely engaging the attention of our younger readers, by presenting on this page an engraving which may be called an incident of St. Valentine's day. Of course there are many phases in the observation of the 14th of February. There are the grotesque, the conventional, the semi-sentimental and the downright-earnest sentiment, which often lurks in the fragrance and beauty of a valentine. It would not comport with our journalistic dignity to notice prominently any phase except the last, and our artist shows two friends consulting over the significance of the message which is no doubt somewhat vaguely expressed; in fact, we surmise that the sender has been guilty of writing a valentine on the Sam Weller order and has unconsciously dropped into poetry. The portrait which accompanies the missive adds to our conviction that the incident is not one of ordinary Valentine's-day significance.

Evidently the young lady upon the left of the picture is the recipient of the valentine and has brought it for interpretation to her married friend, who, judging from the rings upon her ring-finger, may have had considerable experience in such matters even though her years may not be many. The two have withdrawn to a retired spot in the garden and are in deep consultation. We shall not endeavor to follow their thoughts, but will express the hope that the conclusion may be favorable to the absent one whose act has summoned the conclave.

We must tell the truth whate'er befalls. The picture represents St. Valentine's day in California—we shall say it if the words freeze San Francisco bay solid. Our friends are sending us messages blaming our last week's engraving "Midwinter Scene in Central California" for the unwonted storm which followed its appearance, as though the elements resented such imputations of mildness. We are willing to acknowledge that there was a snowstorm, but we shall maintain that by Feb. 14th a seat in the garden, like that shown in the engraving, will be enjoyable. We are willing to stand the laugh; and if we can bring on such a storm in a dry year by the use of a summery engraving, we propose to do it every time. It is a case in which the end justifies the means.

ENTOMOLOGICAL.

Vegetable-Eating Insects and Their Enemies.

EDITORS PRESS:—My father had a large apple orchard in the State of Massachusetts, 50 years ago. Early in life I learned to eat the sweet, juicy fruit and study the habits of animals, birds and insects. One of the insects I especially disliked was the codlin moth, and one of my favorite birds was a variety of woodpecker miscalled the sap-sucker.

I disliked the insect because it liked apples, and I liked the bird because it liked the insect. It was an interesting sight to see the bird hopping about on the upright trunk of the apple tree, propped upright by his half worn-off stump tail, thrusting his bill into crevices, and tearing off the loose bark in his eager search for larvæ. After the loose bark had been removed from the tree, the bird appeared to understand the habits of the insect so well as to know it must be provided with artificial hiding-places, and forthwith proceeded to provide a codlin moth trap—the original, first, cheapest and best ever invented. This was done by boring with its bill one or more circles of holes entirely around the tree. These holes were about the size of a pencil, one or two inches apart, and the depth of the bark. The habits of the codlin moth are such that it is exposed to very few dangers from natural causes. The winged insect hides during the day and lays her eggs on the apple when its bird enemies are asleep. The larva is safe in the apple unless it falls and is eaten by some animal. If the apple remains on the tree till the larva is mature, which it generally does, the larva descends to the ground by spinning a thread, and immediately seeks the trunk of the tree for shelter beneath a scale of bark, or in some crevice or small hole, where in a short time it is secured, by means of its web, against every natural enemy except the woodpecker.

From 40 to 60 years ago people trusted hogs, sheep and woodpeckers to keep the codlin moth in check, and so reliable was that trust that not more than one apple out of 20 on an average was perforated by the insect. I speak from observations of 20 years in the States of Massachusetts, Ohio and Indiana. I estimate that nine-tenths of all the codlin moths destroyed were eaten by woodpeckers.

I believe it was in the year 1873, I observed for the first time this insect in my orchard at Stockton. The next year there were more, and I took some of the worm-eaten fruit to our fair, where I met Mr. Worley, then of the *Evening Bulletin*, and Mr. McGeddes of the Stockton *Independent*. I tried to impress them with the fact that the greatest enemy of the apple had arrived in California by rail, and its natural enemy had not come, and consequently apple-growers and eaters would have trouble. Those two papers gave the first notice of the fact published in California.

I believe the cheapest and best way to fight against these noxious vegetable-eating insects of all kinds is to introduce, propagate and encourage their natural enemies. It is visionary to think of exterminating any of them by all natural or unnatural means. All that can be done is to keep them in reasonable check. Shall we forever keep up spraying and poisoning friend and foe alike, or shall we trust to Nature's methods more, import codlin moth eaters, find out how to increase our stock of ladybugs and other insect-eaters? Four years ago I had millions of red spiders, red scale, white and black scale. Every tree was infested.

It looked like a question of fight or no fruit. So I bought a force-pump and spray-nozzle, and washed every tree twice, with alkalies and soap. After the leaves came out I found plenty of the noxious insects were alive, but I concluded to let them rest till the next winter, and I have rested myself on the bug business ever since. The ladybug, or some other friendly insect, has been destroying these noxious insects better than I could have done. It takes a close search to discover one of them now. When a vegetable-eating insect or animal is imported into a new country, it increases enormously, if climate and conditions are favorable, for the reason its flesh-eating enemy has not come. In time, however, its old enemy will come, or some other creature will develop the will and the skill to catch and devour it. After that, the supply and demand will regulate themselves without human aid. D. A. LEARNED.

Stockton.

From Another Correspondent.

EDITORS PRESS:—In a number of the PACIFIC RURAL PRESS of December 18th I read with interest an essay which was read by W. G. Klee, State Inspector of Fruit Pests, at the Fruit-Growers' Convention at Sacramento, in regard to the codlin moth and the different modes by which people have tried to repress it. The remedies are many, but none thus far tried have proved fully satisfactory. I have carefully read all the experiments and treatment in Mr. Klee's essay to repress the codlin moth, and none is so good as whale-oil soap and sulphate of soda, which he recommends. Spraying, if properly done, is very promising, and will give quite satisfactory results.

In spraying, I would recommend whale oil, if easily obtained; if not, try out the soap grease and apply it warm, with one of Gould's spray pumps, well mixed with concentrated lye reduced to the proper strength. This has a deadly effect upon the pest, as it cannot live if the grease touches it.

To destroy the moth by banding the trees, I have an objection, for the reason that it takes up too much valuable time, and time is money. It takes much time and labor to visit 100 trees once a week or ten days to examine the bands and search for and kill any pests that may have congregated under the bands. My remedy is to wash the trees with concentrated lye reduced to the strength of strong wood ashes lye. Tie some woolen rags on a broom-handle or some other suitable stick quite tight and rub the body of the tree and limbs as far up as practicable. This washing and the lye running down to the roots of the tree will kill all insect pests that find shelter. This treatment supersedes the necessity of banding the trees.

The mothtrap invented by Mr. Trussell is also objectionable on account of the expense, costing, as it does, from 15 to 30 cents each, besides a waste of time in adjusting the trap. There is also another objection: it does not allow for the expansion of the tree when young trees are to be protected.

In Mr. Klee's essay upon the treatment and experiments to destroy the codlin moth, I don't find anything that is as effectual in destroying the codlin moth as the remedy recommended by me. I don't wish to be bigoted in regard to my own treatment. I am sanguine that my remedy is preferable to any that has yet been tried, and my opinion is founded upon the good results of many years' experience and observation, as I shall be 84 years old if I live to the 16th day of March next. Many of the materials mentioned in Mr. Klee's essay are injurious to the foliage, and others are a failure. If orchardists prefer poison on their trees I would recommend them to use Paris green; it is a far more powerful poison than arsenic, and will remain much longer on the trees and not hurt the foliage.

Stockton. LESTER CROSS.

THE GARDEN.

Family Gardening — Hints Applicable to a Dry Year.

EDITORS PRESS:—The indications for a dry year increase as seasonable rains are longer withheld. To many portions of the State and to general farming, a dry year means disaster. But if it comes it must be faced; and it becomes the better part of valor to make the best of such resources as lie within our reach to help us over the sterile stretch that lies as a desert before the weary pilgrim pioneer.

An acre or two of garden can be watered from a good well with the aid of wind and horse-power. This may seem like small business to some of our grand farmers, but such an oasis will prove a great blessing, and produce a variety of food for man and beast which will greatly aid any family in a year of famine.

Of course, in the aggregate, there will be enough, and more than enough—even if it is a dry year—grown upon this coast to feed the people. But, under our present condition of civilization and social status, it will benefit only the ones who are so located as to be able to produce crops. The many upon waterless ranches must suffer even as much as though the infliction was general. The mortgages will not grow lighter, nor the interest cease to gnaw at the vitals.

There will be instances where relatives and friends will be able and willing to aid each other over the dry road. Oh that we were all one family of worthy brothers, each equally anxious to help the other. Is it an unpardonable transgression to wish for such a condition? To even have faith in man's capacity for goodness and his tendency toward progression to the extent of believing in the possibility, and even probability, that upon this earth the time will come when the well-being as well as "an injury to one will be the concern of all"? Even then it would be the duty of each to do his best to help himself, that no unnecessary burden be imposed upon others. But whatever the stimulus, the necessity of each must prompt to action then as now.

A large windmill has great advantage over a small one, as the wind surface and leverage power is much increased by a slight increase in diameter of wheel. Also a large tank should be used when possible, so that the water can be held in reserve for thorough irrigation. Remember that a small piece of ground thoroughly soaked with water and then as thoroughly cultivated on the surface to kill weeds and prevent the waste of moisture into the air by evaporation, is much preferable to twice the surface only half watered. To be in the highest degree successful, do in a thorough manner what you do, both as to irrigation and cultivation. One very thorough wetting, with good cultivation, will produce better than several superficial waterings under all circumstances. And in this way the water can be used the most economically and, of course, do the most good with the least trouble, especially where a large tank can store enough for a considerable run at one time.

The RURAL should from time to time give advice upon this subject of an irrigated garden, from the pens of those who have practiced it, as to what and how to plant, etc. Apply manure to the surface liberally, for all sorts of vegetables. Potatoes, peas, beets, carrots, onion sets, radishes and lettuce should be planted early. Start cabbage and cauliflower plants right away now in boxes for transplanting. Tomatoes and tender plants later on. Even should rains fall in abundance later in the season so that some field crops will produce well on uplands, this year will find whatever you do in the gardening line, with dependence on irrigation and cultivation, time well bestowed and labor amply repaid.

Los Gatos. S. HARRIS HERRING.

SHEEP AND WOOL.

Angora Goats.

EDITORS PRESS:—Owing to the increased price of good farming lands in the West, and the exhausted condition of most old farms in the East, the serious question has approached our farmers: "What can we do to increase the produce of our farms, without an exorbitant outlay to start with?" The glorious vision of an everlasting virgin soil has vanished, and though it is not quite impossible to restore fertility to an exhausted field in a short period, the process is very expensive; it may pay to do so in some instances, but often it will not.

Those who cannot afford to incur such an extra outlay are compelled to hunt for new channels, hitherto unexplored, on their farms, and as a good many farms have a large percentage of so-called waste pasture lots, means have to be found to render these productive.

These waste lots are usually so stony and brushy that horses, cattle and sheep cannot find enough food there to warrant their being fenced, and to reclaim them by the use of elbow grease, certainly would never pay. But goats would be there in their paradise.

However, common goats are not favorites on farms; they have too much the nature of communists, are entirely too independent in their wanderings, and while their meat is too coarse and strong, ever to find general favor, that of their silver-fleeced Asiatic cousins is really a delicacy, and the revenue from their hair is almost enough to winter them on a northern farm. To make it short, they combine almost all the advantages of sheep with those of the common goats.

It is therefore no wonder that quite a number of farmers have already begun to pay attention to this valuable animal, and almost daily I receive letters inquiring into this branch of husbandry. This, as well as the many arguments which have recently appeared in agricultural papers for and against these animals, have induced me to publish a series of monthly articles describing, as closely as may be conveniently done in a newspaper, the nature, good and bad habits and qualities of these animals, and how and where their culture can be made a success.

The favorite food of the Angora goat consists mainly of foliage of shrubs, bushes and small trees, and of weeds. Where they find these in sufficient quantities they will rarely touch grass, which, however, they will eat and do well on it for a time, if compelled to do so. On any farm or ranch, with plenty of brush, these animals can be kept at a profit and almost entirely as a supernumerary; and in localities where brush grows very thickly and on mountainous woodland, they become a necessity, especially if it is the purpose of the owner to exterminate the underbrush and reclaim the land for a pasturing ground for sheep, cattle and horses, or for farming purposes.

If we consider that the United States contain about 300,000,000 acres of rough and rocky mountain land, thickly covered with all kinds of brush and absolutely unfit for any other animal but a goat to pasture on, we can get a general idea of the annual waste caused by the exclusion of the Angora goat from our list of domestic animals.

As to climate, some locations are more favorable to Angoras than others. They need dry and high places, and endure extreme heat and cold equally well, but are not able to withstand much moisture, and the failure of their acclimation in Europe is mainly due to the long, wet spells so frequently occurring there.

The quality of a winter pasture depends entirely upon the amount of evergreens, as spruce, hemlock, cedar, holly, liveoak, etc., it contains; however, they will eat greedily buds and tender twigs, as well as the green bark of any other brush they can find, thus requiring only very small rations of hay in winter.

As cold and snow do not hurt Angora goats, they can be turned on their pastures any dry and sunny winter day; thus, except in low, level countries, entirely bare of brush and woodlands, there is hardly a farm in the United States where a few Angoras cannot be kept to better advantage than the same number of sheep; which, however, does not mean that the former should take entirely the place of the latter, but that farmers should use their own judgment whether goats or sheep, or both of them together, should be kept; for *together* they can be kept, in spite of the general opinion to the contrary, as I shall explain hereafter.

Having said the above as a preliminary, I shall discuss in future the following subjects:

1. What class of Angora goats farmers or ranchmen shall procure.
2. How to handle Angora flocks on farm and ranch.
3. When to shear them, and how to dispose of the mohair to best advantage.
4. The advantages of a co-operation of all breeders and of the register.

G. A. HOERLE,
Cor. Sec'y Am. Mohair-Growers' Association.

METEOROLOGICAL.

A State Weather Service.

Sergt. J. A. Barwick, U. S. Signal Service observer at Sacramento, writes to the *Record-Union* in support of the proposition for the organization of a State weather service as follows:

I am informed that a bill to create a "State weather service" for California is now in the hands of the Senate Finance Committee, and the said committee makes the following objections: First, it creates a new bureau which will require a permanent appropriation. Second, it is needless. Third, it would cause the United States Signal Service to neglect California.

I have the honor to say, Messrs. Editors, that the State weather service could and should be attached to the State Agricultural Society, and let the secretary be the director of the State service, with a small addition to his salary. It would then require comparatively but a small appropriation to keep it running, for the purchase and repair of instruments, etc. If the State service is in co-operation with the United States Signal Service, then a signal service man would be furnished to put the data in proper shape for the signal service department. He would therefore be an assistant to the secretary of the State Agricultural Society if it had charge of the State weather service.

As far as its causing the United States Signal Service to neglect California, it would be a great help to the officer in charge at San Francisco in making monthly reports and abstracts of the weather, and would be an extra encouragement to the Chief Signal Officer at Washington to help California that much more.

A State weather service is sadly needed now, especially as various sections are working hard to boom their individual portions of the State. The whole State would be benefited by a State weather service.

The object of a State weather service should be to observe and utilize every feature that affects the prosperity of the inhabitants of the State as to crops, health, life, etc. The State service is, therefore, essentially a plan for gathering and utilizing local data, and eventually it will define precisely the localities most favorable to special crops, diseases, etc. The idea is certainly a noble one. The plan of the State service is to have a central office and a State Director, and at least from one to four voluntary observers in each county, who will keep a record of temperature and rainfall, and report the same to the Central Office of the State weekly and monthly. Attention is invited to the following advantages of a "State weather service":

1. It will be the means of soon securing better predictions of weather changes and storms.
2. It will bring the benefits of the Signal Service of the United States into every county of California participating in the State local organization, and will be widely beneficial to agricultural interests.
3. It will give to every county the Government standards for temperature, rainfall, wind velocity, humidity, etc., which are sources of useful public information.
4. It will put within the reach of local agricultural societies means of accurate observations, which in the course of years must be valuable to any locality in the study and adaptation of cereals.
5. It will bring the science and methods of the Signal Service within the reach of the high schools of the State, offering teachers and pupils alike excellent opportunity to study a wide range of the application of science to foster and protect agricultural industry.
6. It will lead to the collection of rainfall statistics to enable engineers to better estimate the supply of canals, also the sudden downpours to guard against in laying out sewers in cities. It will lead to a correct knowledge of rainfall over different watersheds of the State, for the purpose of giving data for supplying the waterworks of cities, towns and villages.
7. It will lead to the forming of reliable meteorological records for use in legal cases.
8. It will lead to a better practice of medicine, when physicians throughout the State can study diseases with reliable and accurate meteorological facts by their side; and for sanitary purposes, correct meteorological statistics are invaluable to the practitioner in applying preventive remedies for the public good.

For about $13 the instruments for temperature and rainfall can be secured, viz.:

Thermometers.	Cost.
External	$ 2 50
Maximum, self-registering	5 00
Minimum, self-registering	4 00
Rain gauge	1 25
Measuring stick	25
Total	$13 00

To take observations requires but little time daily, and the exercise is especially agreeable to those that are interested in natural science. Twenty or more States have already entered on the work with most gratifying results. The complete success which is anticipated will only come when each State does its part, and it should not be said of California that we have neglected a matter of such importance to the entire community, especially the farmers.

All trades and professions are more or less affected by changes in the weather, and the

study of the phenomena is becoming more and more interesting to every man and woman in the country.

All of which is respectfully submitted to the consideration of the Senate's Financial Committee. Very respectfully, your obedient servant,

SERGEANT JAMES A. BARWICK,
Observer Signal Service Corps, U. S. A.

HORTICULTURE.

Crystallization of Fruit.

NUMBER 2.

Report on Methods in the Cognac District.

We continue our descriptions of French methods of producing crystallized or *glace* fruits with the following report from Consul J. E. Irish, of Cognac, France:

I have extended my inquiries as far as practicable for this portion of France, and am enabled to state that the actual processes of crystallizing fruits have been generally abandoned throughout the country, on account of the expense attending thereon and the general scarcity and usually high price of fruit.

However, there are, in all the towns of this region, such as Cognac, Angouleme, Saintes, Rochefort, La Rochelle and Limoges, persons who are familiar with the business, who deal in the crystallized fruit, and who have formerly engaged in its manufacture. The testimony on the subject is to the effect that the process of crystallization is now largely and almost entirely confined to a few points, namely: Clermont-Ferrand, in the department of Puy-de-Dome, in the consular district of St. Etienne, and Carcassonne, department of Aude, in the extreme south of France, and in the bounds of the Cette agency of Marseilles.

A reasonable amount of manufacturing is done at Paris, and also at Bar-le-Duc, department of Meuse, where the production is chiefly confined to the preserving of currants, gooseberries, and such like fruit.

Clermont-Ferrand is the most important place for this industry in France, and as fruit is usually abundant and cheap in that locality, they are enabled to furnish the dealers throughout all this region to much better advantage than the dealers themselves can manufacture it.

As a consequence of the confinement of the work to localities beyond my bounds, it will be seen that I have not the data for its cost and extent of production.

Neither are the manufacturers usually disposed to furnish detailed information concerning their business, and many obstacles lie in the way of an investigation.

I am enabled, however, to furnish a tolerably clear statement of the various processes of the work, which, as a whole, is quite uniformly practical whenever the labor is performed.

Whitening Fruits.

Much precaution is necessary to be taken to well preserve the fruit, whether it be dry or watery, in order to obtain good results.

Success depends largely upon the first act of bleaching. The bleaching, or whitening, of the fruit must be regulated according to the quality and maturity of it; the water must not boil, must simmer only.

It is well to choose each kind of fruit a few days before being ripe; it should be hard or firm and gathered in dry weather in the morning, and whitened as much as possible the same day, for if too ripe it will fall in marmalade; if not enough it cannot be properly preserved, the pores will become closed, and the sugar cannot penetrate. The fruit will become hard, acid, black and moldy. It is necessary to place the fruit in a considerable quantity of water to whiten it that the water cover it at least eight inches, in order that there be no necessity to increase the quantity during the process. In such a case added water should be of the same temperature. Cover the fruit with an osier screen or linen cloth, and put about four inches from the bottom of the vessel a copper colander, to prevent injury from the fire. Stir the fruit from time to time lightly, with a skimmer, to aid the riper portion to rise. Usually the fruit is whitened with the naked fire, but it is much easier to do it with steam, because in that case it is not exposed to the danger of scorching, and the degree of heat for the various kinds of fruit is easier regulated.

M. Rangot, confectioner, 4 Rue de la Verrerie, Paris, has invented an apparatus, called a *confisoire*, very convenient for preserving fruit. The use of this is to avoid the necessity of decanting, and 25 gallons or more can be preserved at a time in 60 hours, and watery fruit in 72 hours.

Each kind of fruit is whitened in a different manner. Stone fruit is placed in cold water over a slow fire, and removed with a skimmer as soon as it rises to the top of the water. The condition of the cooking is ascertained by the use of a pin, which must easily penetrate, or by softly pressing with the fingers; when it is found to be sufficiently soft it is taken out and put in cold water. If there is a great quantity of fruit to be whitened, the same water may be used again, especially for plums and green fruit.

Plums that are whitened in the first water, not being so nice and transparent as those whitened in the second, the poorest and ripest and ill turned may be whitened first to acidulate the water. Some confectioners employ lemon-juice, verjuice, pysoligneous acid, alum, marine salt, epsom salt, etc., to preserve the whiteness of the fruit, and blue vitriol, vinegar, or salt, to turn it green. It is dangerous, however, to use the blue vitriol; too great a quantity causing the water to turn bluish, and the fruit then becoming black. If used, put not more than three grains to a quart of water, and when the fruit is whitened, put it in water for 24 hours, changing four or five times.

To be assured the water or fruit does not contain any part of the vitriol, plunge a well-polished bar of iron into the water; if it is not covered with a copper tint there is no danger.

When plums or other fruit are to be whitened, if the water is to be used again, let it cool before using until it becomes lukewarm, and leave the fruit in it awhile before heating; this is why the use of steam is so helpful.

Fruit with a tough skin requires longer to whiten, and time, according to its quality; hence the following notices of the time required to preserve each kind of fruit.

Sugaring Fruit.

After the whitening process is completed, great care is still required to properly preserve them in sugar. If the fruit is too firm or hard, or not ripe enough, on being removed from the whitening process it must be put in sugar reduced to a syrup of 23°; the water contained in the fruit will be eliminated and the syrup reduced to 20°; it will be necessary the next day, for the first operation, to increase it to 25°. Cover the fruit and boil it, pour it out gently into an earthen dish, and place it in the cellar in a cool and dry spot to avoid fermenting. Continue cooking it from day to day, making it one or two degrees thicker. Covered when boiling.

Ordinarily this process is repeated from five to eight times, thickening to 36°, or more, according to the maturity of the fruit. If the fruit is soft or too ripe it will be necessary to cook the sugar more to harden it and preserve it from falling into marmalade. Reduce the sugar to 28° for the first shape or condition, increasing 2° each day, for each shape. It is sometimes necessary to give two shapes each day, morning and evening. In that case increase the sugar only 1° each time, and only simmer the fruit; afterward put it in the cellar. If it is desired to preserve the fruit very clear and white, it is necessary to change the syrup in the middle of the shape. In such case it is necessary to thicken the sprup with apple jelly or glucose, to prevent its candying. When the fruit is sufficiently preserved, it is left in a cool and dry place from 8 to 15 days, in order that all the water may escape and it become impregnated with the sugar.

It is necessary that the fruit be well drained at each shape or stage of the process, because if reduced syrup remains at the bottom of the vessel into which the fruit has been poured, and a covered boiling or simmering has been neglected, it will contribute to its fermentation.

A spigot at the base of the vessel, for the purpose of draining the syrup, is very useful in the case of apricots, chestnuts, strawberries, raspberries and all tender fruit. The quantity of sugar necessary to preserve each sort of fruit is not indicated, as the fruit will take only the amount of syrup necessary for it; it is only important that it bathes in the syrup.

Preparing Particular Fruits.

I present herewith instructions for preserving a number of the more important kinds of fruit:

Apricots, Whole.—Choose the white apricots from high trees, or grown in a garden, along the wall. They will be recognized in opening by the meat forming species of rays around the stone.

It is necessary to take them some days before their maturity, when they begin to turn yellow, and the stone is easily detached, and they are firm.

Make a little incision at the head with the point of a knife. Hold the fruit in the left hand with the thumb and fore-finger, then pushing the knife at the place of the stem, the stone goes out at the top or head. Proportion the apricots in water slightly alumed, or acidulated with lemon juice. Prick them in the green parts which are not ripe enough, then whiten them on a slow fire, stir them from time to time to aid the ripest to rise to the surface; try them on the skimmer with the fingers or a pin, and put them in fresh water as soon as whitened. When they have become cooled, after having changed the water several times, put them in sugar, warmed to 20°, and make them simmer or slightly boil, if they are not too ripe. The next day, put them in sugar at 22°, boil them, covered, if the fruit is firm, or simmer them if it is tender; continue thus each day for five or six days, or processes, increasing 2° each time until 36°, then let them remain for 15 days, as heretofore indicated.

When the fruits are a little large, turn them with a thin and suitable knife, that the sides may correspond; with a toothed knife the sides are better and neater. Cherries, oranges, nuts, pears, etc., are turned in the same manner.

Stuffed Apricots.—Take whole, preserved apricots, and introduce in each plum or other small preserved fruit separated from the stone, which replace by lemon or lime.

They are equally stuffed with the marmalade of apricots, pineapples, strawberries, apple jelly, currants, cherries, raspberries, etc., and a peeled almond is put in the middle

Apricots in Quarters.—Choose apricots already yellow, without being ripe, firm, and with the stone easily detached. Peel them or turn them, and prick them lightly with a pin and immediately throw them in fresh fountain water lightly alumed. Whiten them and put them in the syrup like the whole ones. When they are preserved, drain them, put them in a stewing dish with syrup at 20 degrees, and add the juice of a fine orange. The apricots are iced and candied, drained and placed with preserved fruits in boxes. Increase the syrup at each process, so that the fruit is bathed in it.

Pine-Apples.—Choose the pine-apples before they are entirely ripe, remove with care the first pellicle, leaving half of the middle of the crown, prick them with a large needle to the heart in several places. Whiten and preserve them like the apricot.

Cherries.—Take fine cherries with considerable acidity, take off the stems, push out the stones with a quill, and place them reversed side by side on a strainer. Afterward put them in an earthen dish in layers, with equal parts of powdered sugar, until the next day. It is necessary to decant them several times to dissolve the sugar. Heat them slowly, and proceed as with syrup.

Quinces in Quarters.—Choose quinces of a fine yellow, and well ripe and sound. Take off the down with a linen cloth, prick them to the heart with a large needle, put them in a proportional quantity of alumed water, place them afterward over a quick fire, boil for a time, and when tender throw them into fresh fountain or river water in preference to well water (as such contains less calcareous salt and is softer). Fountain water is preferable for preserving all fruit, especially white fruit. Peel them and take out the cores, cutting them in equal quarters; put them again in alumed water, and continue whitening them until the head of a pin passes easily through the quarters, and the hole closes up again. Quinces are also whitened in the following manner: The fruit is just peeled, and a lemon rubbed over each slice to prevent its becoming red; then put in alumed or acidulated water, then they are whitened.

The former process is preferable. They are preserved like apricots, having care to cover them with a white linen cloth at the surface of the water, and to cover each vessel into which they are poured with linen or white paper, to hinder the fruit from reddening. It is necessary to take these precautions for all white fruit. When it happens that water reddens in whitening them, it is necessary to change the alumed or acidulated water.

Lemons.—Choose fine lemons well united, turn them, make a hole with a punch at the right of the stem, put them successively in fresh water. Whiten them, empty them like oranges, preserve them and ice them the same.

Quarters of Lemons.—Take fine lemons, well ripened, united, and without spots; separate the largest part of the white, after having cut them in equal quarters. Whiten these skins like citrons, and preserve them and ice them the same.

Citrons.—Choose fine citrons uniformly ripened. Test them with a piece of glass to raise only the surface of the rind. Make a hole with a punch a little larger than for lemons. Whiten them with much water. When they are half whitened, empty them with a coffee spoon, put them in fresh water, and finish them and whiten them like lemons, and preserve them the same. Citrons in quarters are emptied only when they are whitened. Leave them 48 hours in fresh water, changing it two or three times a day to remove the bitterness of the rind.

Raspberries.—Choose fine red raspberries, not too ripe, that you may examine carefully. Put them in an earthen dish; about 9 pounds in each; cook with an equal part of sugar *au souffle;* empty, decanting four or five times during an hour, into a similar dish; put them on a slow fire, bringing them to a boil again; put in the cellar until the next day, draining slowly so as not to crush them; and cook in sugar at 28°, covered while boiling. The next day cook them at 30°, the third day at 32°, afterward drain them so as to dry and candy them. I need not specify their numerous uses.

Strawberries.—Choose them firm, without being quite ripe, and preserve them the same as raspberries and cherries.

Oranges.—Choose very fine oranges, very firm, and with a thick skin. Turn them, making all sorts of designs, and put them in fresh water. Whiten them, and empty like lemons and citrons. They are preserved and iced the same.

Oranges in Quarters.—Choose similar oranges. Mark four separations in the orange without detaching the quarters. Whiten as heretofore shown, and when they are well preserved, divide the quarters for the various uses. The skins and peels are preserved and iced the same, and are used to perfume sweetmeats, etc.

Plums.—Choose fine fresh plums, not too ripe, but commencing to turn yellow. The plums of Metz are superior to all others in France, for preserves. They are very transparent, and once preserved, have a very delicious taste. Prick them to the stone with five or six pins fastened in a cork. Put them in a proportionately quantity of fresh water lightly alumed. Let me here refer to a former statement about using water more than once in whitening plums. Care must be taken to put the fruit only in lukewarm water to commence to whiten it, and leave it in some minutes before increasing the heat. The plums are whitened and preserved the same as apricots.

Pears.—Choose fine pears, like the butter pears of England or Rheims or Bergamots, and when not too ripe, when the pips are black, and when in paring them they are white under the skin. Put them, with a good deal of water, on a quick fire, or with steam, until they are softened, then remove them and put them in fresh, cold water. Pare them as lightly and promptly as possible, prick them from the head to the core, cut and scrape the end of the stem, and throw them into a quantity of fresh water, alumed and acidulated. Put them again on the fire, cooking them until the head of a pin enters easily, and the whole closes on withdrawing it; then put them again into fresh water, lightly alumed or sharpened with lemon juice. Preserve them with the same precautions as quinces and apricots. As the pears are easily candied, the sugar must be thickened with apple jelly or glucose.

Peaches.—Choose fine peaches, before their maturity, and quite firm; whiten them and preserve them whole, or in quarters, like apricots, being careful not to boil them; for it is a very tender fruit and liable to fall into marmalade.

Green Gages.—Take green gages of a good size without being ripe or colored, of a fine green rind, firm, the stone being detached easily. Cut the end of the stems, and pick them in divers places, notably near the stem, with a little bodkin. Put them into a basin full of water on the fire, or with steam, so that they may have ample room. As soon as they become yellow, remove them from the fire, and throw in a pinch of salt, vinegar, and spinach, or verjuice. Blue vitriol is also employed, but in small quantity; to make them green again, let them remain quiet for some hours, then put them on a slow fire without boiling, stirring them from time to time, until they again become green, then increase the heat, and as they rise to the top of the water, remove them and put them in fresh water, removing it several times until they become thoroughly cool. They are preserved with sugar like other plums.

Iced Fruits.

The preserved fruits are iced to dry them. They are drained, then passed through lukewarm water to wash them, then put an hour or two in a drying stove in an earthen dish. Sugar cooked to the grade *au petit souffle* is put with them, and they are made to take a covered boiling, are skimmed, the basin taken from the fire and placed on a table in an inclining position, where the sugar is massed on the border of the basin with a spatula. When the sugar commences to whiten, turn one or several of the fruits in the whitened portion, remove them with a fork, and spread them on a grate or strainer placed over a dish or mold to candy.

When the fruit is small and the sugar commences to grain, mix the whole together, raise the fruit quickly with a skimmer and put it on a strainer. When the fruits are soft it is necessary to cook a little harder and mass the sugar more than for hard or dry fruits and rinds.

This ice is now kept for use, and when wanted a little sugar is added each time. When thick or gelatinous, it is cooked and massed more, or replaced.

Candied Fruits.

Drain the preserved fruits, wash them in lukewarm water, and put them on a strainer on the stove to dry. When they are dry put them side by side, and put them between two strainers made for the purpose, and place them thus in a mold to candy.

Take sugar cooked *au petit souffle* at 36° to 37°, and pour it slowly over the fruits from above, and then place the mold in a drying stove; heat to 40°, drain when sufficiently candied, ordinarily at the end of five or six hours.

Fruits that are dry and firm are also candied cold, the candy is finer and less subject to mass; in that case the sugar is cooked 1° or 2° less, is put to candy at night and drained the next morning.

Sugars.

I now, perhaps, have sufficiently presented the processes required by my instructions, but it seems important, to make matters clear, that something be said concerning the various forms of preparation of sugar that are used in the business.

Only clarified sugar is used, and this is reduced to syrups of various densities. The degree of density is ascertained by a *pese* syrup, an aerometer invented by Beaume.

The first condition of cooking which I shall mention is called *La nappe*, and the sugar weighs 20°. When, in dipping the skimmer into boiling sugar, after a turn of the hand, the syrup spreads along the skimmer, it has reached this stage.

Petit lisse.—The sugar weighs 25°. Some boilings after *la nappe*, pass the forefinger on the skimmer charged with syrup, and apply it against the thumb. If, in spreading these two fingers, you see a little thread which breaks immediately, leaving a drop on the finger, you have *petit lisse.*

Grand lisse.—The sugar weighs 30°. When the thread has more consistency, and spreads more, you have *grand lisse.*

Petit perle.—The sugar weighs 33°.

Grand perle.—The sugar weighs 34° and 35°. If at last in spreading the two fingers the thread sustains itself without breaking, you have the *grand perle.* The attentive workman will distinguish these two cookings by the aspect of the liquid. It produces large, high, round bubbles going out from the boiling in the form of pearls.

Petit souffle.—The sugar weighs 37°. It will be recognized when, in blowing through the holes of the skimmer after it has been shaken, the liquid forms little bubbles on the side opposite, which lightly detach. This is the *petit souffle* employed in icing fruit.

Grand souffle.—The sugar weighs 38°. After some boilings operate as in *petit souffle.* If the bubbles are larger, resembling soap-bubbles and maintaining themselves a moment, it is the *grand souffle.* Or dip your finger in fresh water, plunge it in the sugar and dip it again in the water, if there remains a little compact sugar at the end of your finger you have the same thing.

The same means are employed for the cooking of *gros candi.*

Petit boule.—The sugar weighs 39°. Dip your finger in fresh water, then in the boiling sugar, and then again in the water. If it forms a soft ball which one can turn in the fingers, you have the cooking for bon bons with liquors.

Grand boule.—The sugar weighs 40°. After some boilings more renew the preceding operation. If the ball is larger and harder, you have the cooking for preserves which are not clear.

Petit casse.—After some boilings operate as before. If in cooling the sugar it breaks; if it attaches to the teeth, it is a *petit casse.*

After the *grand boule*, the degree of the sugar is no more observed. It is then the cooking of the twisted sugars, or *sucrestors.*

Grand casse.—When after being further cooked the sugar produces a little simmering in water and adheres no longer to the teeth, it is a *grand casse.* This is the cooking of barley sugar, caramels, burnt almonds, etc. An experienced workman will readily recognize it by the crackling which the sugar makes in the fingers. J. E. IRISH, Consul.

U. S. Consulate, Cognac, France, Nov., 1885.

FORCE IN HEAT.—The amount of force exerted by heat and cold in expansion and contraction of metal is equal to that which would be required to stretch or compress it to the same extent by mechanical means.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Our Legislative Needs.

At a recent meeting of Temescal Grange, some discussion was had as to the legislation needed in California, and a committee was appointed to express opinions on the same. At the meeting on Saturday last, for the committee, Bro. J. V. Webster presented the following report, which was adopted by the Grange:

Report of Committee.

Worthy Master and Members of Temescal Grange: Your committee, appointed on the subject of legislation, beg leave to report that there are many matters, of vital interest to the people of the State, that should be considered by the Legislature now in session. Probably that of most importance is some legislation which will compel the Central and Southern Pacific Railroad Companies to pay their delinquent taxes, which at present aggregate two million three hundred and forty-seven thousand six hundred and eighteen dollars ($2,347,618). A part of each year's tax since 1880, and inclusive, has been allowed to go delinquent, the company paying just such portion of each year's tax as it was "minded to pay."

In making up the estimate of revenue to defray the cost of running the State and county governments, the railroad taxes are, of course, included; and the companies' failure to pay them has caused a deficiency of nearly half a million dollars in the State Treasury within the last two years, and an aggregate of more than twice that amount in county fund deficiencies. This condition of things will inevitably cause a higher rate of taxation the present year to make up the deficiency—that is to say, the farmers, mechanics and tradesmen of the State must bear this additional burthen, because this monopoly is above the law, and contributes to the State only what it is "minded to pay."

Now, if one single individual or corporation is above the law, or can control its operation by influencing court decisions, then the law is set at defiance, and the only reason why anarchy does not reign supreme is, simply because the good people of the State choose rather to submit to outraged and violated laws than defy them, as this overbearing corporation has been doing for the last six years.

Second—Another ominous evil, which to-day threatens the stability of our Republican institutions, is the United States Senate, as now constituted. The members thereof being absolutely independent of the popular will, owing their positions to the influence of money and great corporations, their sympathies and material interest most assuredly lie in the same direction; so that before the general public can hope for just and equitable legislation from the hands of that august body, the Federal Constitution must be so changed as to make the positions elective by the people of the several States rather than by the Legislatures thereof, as now provided.

As a beginning, in furtherance of this plan, we earnestly recommend that the Legislature now in session be urged to adopt a concurrent resolution, expressing the sense of that body in favor of this proposed change.

Third—Since it is manifest to every one that the assessment blanks, as now prepared by the several County Assessors, need correcting, in the matter of uniformity and impartiality, we recommend that the law governing the subject be so amended as to require the State Board of Equalization to prepare said blanks so that they will be uniform throughout the State, to the end that all personal property, whether in town, city or country, shall be equally and uniformly assessed, either in detail or under general headings.

Your committee would further recommend that the following preamble and resolutions, adopted at the late session of California State Grange, be indorsed, with this report, and copies thereof sent to members of the Senate and Assembly, and also published in the RURAL PRESS and *California Patron:*

On Irrigation.

WHEREAS, The question of water, for the purpose of irrigation, stands paramount to every other in this State at the present time; and

Whereas, The necessities of our people are such that a speedy solution of the question must be reached, which will admit of the innavigable streams of the State being equitably distributed for the purposes of irrigation; therefore be it

Resolved, By California State Grange, that irrigation districts should be established under authority of law, and State control which will secure such equitable distribution of the waters of said streams.

Resolved, That no individual or corporate right to the waters of the streams aforesaid, shall be recognized or allowed, with the exception of a sufficiency thereof for the actual and legitimate use of riparian owners. But to satisfy the greater necessities of farming communities, even this single reservation may be taken, under the law of eminent domain, upon the payment to said riparian owners the actual damages resulting from such diversion.

On School Laws.

WHEREAS, The School Law, as at present enforced, makes each fiscal school year commence on the 1st of July, and requires that all school funds shall be expended in and for the year in which they are collected; and

Whereas, Said funds are collected, with other State and county taxes, in December and January of each school year, all of which must be expended on or before the 1st of July following, thereby leaving no funds in the treasury, with which to pay the salaries of teachers for the fall term of school; therefore, be it

Resolved, By California State Grange, that the law should be so changed as to make the school year commence on the 1st of January, instead of the 1st of July.

All of which is respectfully submitted.

Alfred David Nelson.

The portrait of Father Nelson, which we to-day present, will be recognized by all who knew him as an excellent likeness of our departed brother, and the many who esteemed and loved him well will look upon it with a tender and reverent satisfaction.

He was born in Jefferson county, N. Y., April 20, 1812, and died on the 31st of December last, in the 75th year of his age, at his home in Butte county, a mile from the town of Nelson, which was named in his honor.

Father Nelson was a person of rotund and imposing presence. Up to the age of 50 his

THE LATE ALFRED DAVID NELSON.

weight was about 170 pounds, but after that increased largely, at one time reaching 315, and being for years nearly 300 pounds.

He was looked upon as a leader in the anti-monopoly movements, and was one of the candidates upon the Butler ticket for presidential electors. A clear, able and cogent writer, his style went on improving through his latter years, and reached a degree of excellence that any journalist might well be proud of.

His wife, although an invalid for more than 20 years, survives him with seven children. Of their five sons, two are extensive flock-owners in Nevada; one a well-known lawyer at Ogden, and the remaining two were associated with their father in farming in Butte and Tehama counties. One of the daughters is married in Oregon, and the other, Mrs. C. N. Walter, lives in Oakland. The last-named lady has, in compliance with our wishes, prepared the exceedingly graphic and happy sketch which we now lay before our readers:

EDITORS PRESS:—At your request, I write this brief sketch of my father's life. He was born in 1812. The "times that tried men's souls" were not long past. The love of liberty, the love of country, was warm in every heart. In his early childhood, he listened to stories told of resistance to and hatred of wrong, of the struggle of right against might. It is easy to see that the principles which actuated him all his life were his by birth, for he came of clear-headed, strong-handed New England parentage, and these principles were made stronger by his early surroundings and education. His school privileges were few; but he was always a reader, remembered what he read, and could use his knowledge to the best advantage. He was indeed "quick to learn and wise to know."

Before he was 12 years old he went with his father's family from Western New York to Michigan, then almost a wilderness. His young life was full of work, much of it of such a nature that at this day it would seem all wonderful adventure. He knew how to make a canoe out of a log, and no Indian could handle one better. He helped to build part of the old turnpike road from Chicago to Detroit, surveying the country, finding the best way to cross the rivers, and avoid the little lakes, in which Southern Michigan abounds. He was at one time interested in the salt works above Saginaw, but found the business not profitable.

Often in this wild new world his only companions for days were the Indians, whose language he easily learned, and whom he often employed to go upon errands or help him in various ways, no other help being available.

Neither were tools at hand as now. There were trees to be cut down, and he could make his own ax-helve and put it in the ax, and few men could better use one. Was there a team needed? Then he could make a yoke, shape and fit the bows, and break the wildest oxen to gentleness.

All he did was done well.

After his marriage, which took place in 1837, he moved to Hillsdale county and engaged in farming. Always interested in public affairs and a strong Whig in politics, he was ever ready to give a reason for his partisanship. He knew the political history of the country so much better than the majority of people, his memory was so nearly infallible, that he was a strong man in an argument. Not often did he find a "foeman worthy of his steel." When the old Whig party no longer existed, he was thoroughly in accord with the Republicans. Later in life he took more advanced grounds, working more for measures than for men.

In 1859 he came to California with his family, across the plains, settled in Butte county, and engaged in wheat-raising.

He was an active member of the Grange, believing that through it the farmers would be brought to realize the dignity of their position, and all labor, whether of the head or hands, be ennobled. He was a Master Mason, a member of Oroville Lodge. Many positions of honor and trust were tendered him during his life, but for reasons that seemed good to him he always declined accepting any of them.

A grand man—a strong mind in a strong body—he lived his life well. He shrank from no duty, and turned back from no hardship. Honest of purpose, strong in his integrity, and so firm in his convictions of right and duty, so loyal to truth, he had that force of character which made men martyrs in the olden days. No more faithful and devoted husband and father ever lived. Social in his nature, he was a true and steadfast friend. His work is done and well done. He will be held in fond remembrance in many homes, and loving friends will keep his memory green.

C. N. WALTER.

While visiting his daughter, Mrs. Walter, in Oakland, it was Bro. Nelson's custom to attend Temescal Grange, and cheer the little circle with words of wisdom and kindly encouragement. The resolutions (elsewhere published by Temescal Grange) are only a fitting acknowledgment of the esteem in which he was held by its members as well as by Patrons generally.

Father Nelson Resolutions.

In Memoriam.

Worthy Master and Members of Temescal Grange:—Your committee appointed to prepare a paper expressing the sense of our membership on the life-work and death of our beloved brother, A. D. NELSON, late of North Butte Grange, beg leave to report:

The immutable laws of God, which mark in our lives and upon the face of nature continual change, have caused to crumble into dust the tenement of a noble soul. Yet there is consolation in the thought that death has no terrors for one whose life of nearly four-score years was spent in devotion to duty and in the defense of human rights. In fact, there is no death so beautiful, or so nearly in accordance with the Divine plan, as that of ripened years. Such are like the golden apples of autumn, which, having withstood all the vicissitudes of the seasons, fall to the ground fully matured, rich in all essentials pertaining to their kind.

A living example of vigorous manhood, devoted to duty and ever mindful of the interests of the farm and of the Grange, Brother Nelson has been a tower of strength to our beloved Order in this jurisdiction. The weak have gained strength, and despondent members have taken courage through the influence of his earnest speech and commanding presence. In sympathies and affections, none were more tender; but in advocacy of justice and equality, the adamantine rocks were not more firm and unyielding.

His able and faithful service as a member of the Executive Committee of California State Grange, when the Order was in its infancy, and needed a guiding hand of undoubted trust, will endure and be remembered so long as the records of the committee are preserved.

Surviving the death of his charter Grange, of which he was Master, his love for the Order, and desire to promote its welfare, induced him to affiliate with North Butte Grange and regularly travel 20 miles to be present at its meetings. Seldom, indeed, has he failed to attend the annual meetings of the State Grange, where he was always active and vigilant in securing harmony and co-operation among its members. Ever conscious of his near approach to the still waters of the dark river, it was a common saying with him—"It is Saturday in the afternoon and almost sundown with me, so I have but little time left to work in a good cause."

The sympathies of this Grange are hereby tendered to his widow and bereaved family, with the hope and belief that a full knowledge of his noble life-work will add consolation to their sorrow.

Your committee would further suggest that a copy of the foregoing be sent to the bereaved family and published in the RURAL PRESS and *California Patron*.

All of which is respectfully submitted.

Oakland, Feb. 5, 1887. Committee.

San Jose Grange on Woman Suffrage.

We have received from San Jose Grange a copy of resolutions which we take pleasure in publishing at the first opportunity since the receipt of the MSS.

WHEREAS, The National Grange, P. of H., at its last session at Philadelphia, struck from the report of the Committee on Agriculture the last paragraph, which substantially recommends conferring the elective franchise on woman; and

Whereas, The majority of reports from State and Subordinate Granges concur in the statement that without the assistance of woman the Grange would not exercise the influence it does, in improving the farmer's condition; and

Whereas, The Constitution of the U. S. confers the elective franchise on the uneducated negro of the cotton plantation and denies it only to women, Indians and Chinese, thereby creating the impression that the mothers of the great American people are the mental equals only of those races, and the inferior of the negro and European alien; and

Whereas, In our opinion woman would not so earnestly support the Grange, only she sees in it the readiest means of obtaining this blessed boon of freedom, for which her forefathers fought and bled and died; therefore, be it

Resolved, That San Jose Grange, No. 10, views with sorrow and indignation this retrograde action on the part of the National Grange.

Resolved, That the National Grange violated the spirit of paragraph 7 of our Declaration of Purposes, which states that "we proclaim it among our purposes to inculcate a proper appreciation of the abilities and sphere of woman."

Resolved, That copies of these resolutions be forwarded to the State and Subordinate Granges of California and the State Granges of the East, and all legitimate means be adopted to induce the National Grange to reverse its decision at its next meeting, and assist in placing woman in her proper sphere, viz.: the political as well as the mental and moral equal of man.

Committee.

TEMESCAL GRANGE.—At the regular meeting of Temescal Grange, to be held Saturday, Feb. 19th, at 2 P. M., the first and second degrees will be conferred upon candidates. Our genial brother, Daniel Field, from Maine, of whose visit we last week made mention, is likely to be there with his good wife, and added

interest and pleasure may be anticipated from their social presence. A goodly attendance of members and visiting Patrons is desired and hoped for.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

Patrons and farmers everywhere have good reasons for rejoicing over the passage of the bills regulating interstate commerce, and that creating the Department of Agriculture and Labor, with its head a member of the President's Cabinet. All fair-minded persons must admit that it was in the Grange years ago that both these important measures first received attention, and more than all other influences combined has the Grange created and crystallized the public sentiment that has resulted in these important forward steps—progressive steps, that must in either case bring good fruits, not only to the great productive interests of our country, but to the transportation companies and all other interests that depend so largely for their success upon a prosperous agriculture and a fair and efficient commerce between all our States. Now let farmers and all good citizens give these new departures cheerful and hearty support, and as they are tested by time and practice, needed changes and additions may be made that will make them still more effective and useful. As Patrons let us not be satisfied to rest upon our laurels, but forward to other fields that must be won. Uniting faith with work, so "that each to-morrow find us farther than to-day."

Inasmuch as the Grange was recognized in the appointment of Bro. Norman J. Colman to the position of Commissioner of Agriculture, and his department has recognized the Grange, and seeks a still closer union and co-operation with our Order—that through it *all* farmers may be the better served—and as it was in the Grange that the idea of having agriculture represented in the President's Cabinet first took form, it would seem, "in the eternal fitness of things," that Bro. Colman should be the *first* to represent the farmers in the councils of the nation. So far as the Grange is concerned, "so say we all of us."

Agriculture pays the greater part of the taxation that supports our country, and should receive the practical, fostering care from Government, both State and National.

At the meeting of the National Grange in Boston, Nov., 1885, the following was adopted:

Resolved, That in view of the past action of the National Grange we still insist that the interests of agriculture demand that the Commissioner of Agriculture should be clothed with additional powers and more enlarged jurisdiction, so that all the varied productive interests of the country may be protected and developed; and we claim that the office should be raised to a position in the Cabinet of the United States. * * * We also favor such National aid as may be necessary to establish Agricultural Experiment Stations in the several States in this nation so far as practicable, to be placed under the jurisdiction of the Agricultural Board of officers of the several States.

Carlyle said, over a third of a century ago: "America, too, will have to strain its energies in quite another fashion than this, to crack its sinews and all but break its heart, as the rest of us have had to do, in thousand-fold wrestles with pythons and mud-demons, before it can become a habitation of the gods." We are just now beginning to grapple with the "mud-demons," and if all the moral and intellectual forces of the nation are not rallied the contest will be a doubtful one.

In several States we learn that Bohemian oat-swindlers are again at work. Sometimes they are using the same scheme with some wonderful new wheat. Patrons *will* not, and farmers *should* not, be caught with their well-baited hooks. Besides the many warnings given by the agricultural press, the National Grange has given the "sign of caution" in these words: "The very nature of the proposition and the provisions contained in the by-laws of these speculating schemes are enough to condemn them in the eyes of all thinking men. But the isolated condition of the American farmer renders him too often an easy victim to the wiles of the oily-tongued canvasser. We desire to warn Patrons everywhere against this and kindred schemes for securing their hard-earned dollars. There is, and can be, no good in it."

"*Think* more, and then *act*, for the inquiry is not made so often to learn what men or organizations say, as to know what they *do*. When the history of this Order is written the historian will be concerned to learn and record what you accomplished rather than what was said."—*W. H. Toothakre, Past Master Kansas State Grange.*

Progress.
